purpose. Beyond academics, mindfulness fosters emotional intelligence, ethical reasoning, and compassion, addressing critical gaps in traditional education. Self-determination theory further illustrates how mindfulness supports intrinsic motivation, empowering students to engage with learning as a meaningful and fulfilling process. Institutions that integrate mindfulness into their curricula and culture can create supportive environments that not only enhance academic performance but also prepare students to face the complexities of the modern world with resilience and empathy. Through its emphasis on ethical grounding and self-awareness, mindfulness offers a pathway to holistic personal and professional growth, enabling graduates to contribute positively to society. By embedding mindfulness into higher education, we move closer to an educational model that nurtures well-rounded, socially conscious, and intrinsically motivated individuals critical for fostering a sustainable and compassionate future.

VI. MINDFULNESS AS A PATHWAY TO SUSTAINABILITY

6.1. Defining mindfulness and its connection to sustainability

Mindfulness is the practice of cultivating present-moment awareness with an attitude of openness and non-judgment. It involves attention regulation, emotional regulation, and a deepened sense of self-awareness. Kabat-Zinn describes mindfulness as “paying attention in a particular way: On purpose, in the present moment, and non-judgmentally.”¹⁹ Mindfulness supports sustainability by encouraging intentional living and fostering a sense of connection to the broader ecosystem. It helps individuals recognize the consequences of their actions, thereby promoting behaviors that align with sustainable values such as minimalism, empathy, and environmental stewardship.²⁰

Mindfulness has its roots in Buddhist teachings, particularly the Four Foundations of Mindfulness (*Satipaṭṭhāna Sutta*), which emphasize awareness of the body, feelings, mind, and mental phenomena. From a Tiantai perspective, mindfulness can be seen through the lens of “止觀” (*zhǐguān*) calming and insight. This practice emphasizes a balance between meditative stability (calming the mind) and analytical observation (gaining insight), leading to a deeper understanding of interdependence and compassion. In the context of education, Tiantai teachings on interdependence (*pratītyasamutpāda*) align with sustainability principles by encouraging individuals to see their role within interconnected systems. This worldview nurtures a sense of collective responsibility, which is critical for addressing global challenges like climate change.

In educational settings, mindfulness is applied to enhance emotional intelligence, reduce stress, and improve attention among both educators and

¹⁹ Kabat-Zinn, 1994, p. 3, 4.

²⁰ Fisher, A. (2017). *Radical Ecopsychology: Psychology in the Service of Life*. SUNY Press.

students.²¹ Programs like MindUP or CARE for Teachers integrate mindfulness to foster reflective practices and emotional resilience, which are critical for cultivating sustainable and compassionate classrooms.

6.2. Application in education

Mindfulness practices encourage educators and students to develop a deeper awareness of their interconnectedness with others and the environment. Activities such as mindful breathing, body scans, and gratitude practices help students recognize their shared humanity and interdependence with the natural world.²² For example: (1) Interdependence: Students learn to see how their choices (e.g., consumption habits) impact the environment and society. (2) Empathy: Mindfulness fosters an open-hearted awareness, encouraging compassion for others's experiences and challenges. (3) Responsibility: By slowing down and reflecting, individuals can make more ethical and sustainable decisions.

Case Studies and evidence: (1) Mindfulness and sustainable habits: mindfulness training increases pro-environmental behaviors, such as recycling, reducing consumption, and supporting sustainable initiatives.²³ Participants reported heightened awareness of their ecological footprint and a greater sense of connection to nature. (2) Critical thinking and decision-making: mindfulness programs in schools improve cognitive flexibility and critical thinking.²⁴ These skills are essential for addressing complex sustainability challenges, such as balancing economic growth with ecological preservation. (3) Mindfulness-based environmental education (MBEE): Programs integrating mindfulness and environmental education have shown success in fostering eco-conscious behaviors. For example, the "EcoMeditation" initiative helps students reflect on their consumption patterns and develop sustainable habits through mindful observation of natural ecosystems.

By linking mindfulness with sustainability, educators can create transformative learning experiences that prepare students to navigate and address 21st-century challenges.

6.3. Practical implementation

Mindful breathing is an effective practice to enhance focus and reduce stress in educational settings. A simple activity involves dedicating 5–10 minutes at

²¹ Lomas, T., Medina, J. C., Ivztan, I., Rupprecht, S., & Eiroa-Orosa, F. J. (2017). Mindfulness-based interventions in the workplace: An inclusive systematic review and meta-analysis of their impact upon wellbeing. *Journal of Positive Psychology*, 12(6), p. 573 – 584.

²² Brown, K. W., & Ryan, R. M. (2003). *The benefits of being present: Mindfulness and its role in psychological well-being*. *Journal of Personality and Social Psychology*, 84 (4), p. 822 – 848.

the start of each class for students to focus on their inhalations and exhalations. By guiding students to anchor their awareness in the present moment, mindful breathing fosters calmness and improves concentration, creating a conducive learning environment. An example of its implementation can be found in the MindUp Program, which integrates short mindfulness practices into the classroom to enhance self-awareness and attention. This program has been shown to improve emotional regulation and academic performance among students.²⁵

Gratitude journaling is another impactful activity that encourages students to reflect daily on three aspects of their lives for which they are grateful, with a focus on their relationships and the environment. This practice cultivates a positive mindset and fosters an appreciation for interconnectedness, strengthening emotional resilience and social cohesion. Research supports the benefits of gratitude journaling in enhancing emotional well-being and fostering ethical decision-making. Emmons and Ster found that gratitude practices help individuals develop empathy and a greater sense of responsibility, which are foundational for ethical and sustainable behavior.²⁶

Mindful nature walks involve organizing silent walks where students observe their surroundings, reflect on the interdependence of living organisms, and consider their role within the ecosystem. This activity deepens students' environmental awareness and fosters a sense of responsibility toward preserving natural resources. The Eco Meditation program exemplifies this approach by integrating mindfulness with environmental education. Participants report a heightened connection to nature and the development of sustainable habits through this practice.²⁷

Facilitating mindful decision-making exercises encourages students to evaluate ethical dilemmas using mindfulness techniques. For instance, students might reflect on the trade-offs between personal convenience and environmental impact when considering consumption habits. These exercises promote critical thinking and ethical awareness, enabling students to make more intentional and values-driven decisions. This approach aligns with the principles of mindfulness, which emphasize the importance of thoughtful, non-reactive responses to challenges. By engaging in such practices, students develop the ability to navigate complex social and environmental issues with greater clarity and compassion.

Collectively, these mindfulness-based activities and programs strengthen emotional intelligence, foster critical thinking, and nurture ethical

²⁵ Schonert-Reichl, K. A., et al. (2015). Enhancing cognitive and social-emotional development through a simple-to-administer mindfulness-based school program for elementary school children. *Developmental Psychology*, 51 (1), p. 52 – 66.

responsibility among students. By integrating these practices into educational contexts, educators can prepare learners to navigate the multifaceted challenges of sustainability with clarity, compassion, and innovation.

Reflective practices play a pivotal role in cultivating a growth mindset, wherein challenges are perceived as opportunities for learning rather than failures. By engaging in reflective activities, students develop the resilience to navigate setbacks and the adaptability to approach problems with innovative solutions. An example of such a practice is journaling, where students are prompted to respond to questions like, “What did I learn from this experience?” after completing each class or project. This activity fosters self-awareness and encourages a constructive approach to personal and academic development. Research by Dweck highlights the importance of a growth mindset in enhancing resilience and adaptability qualities that are critical for addressing the complex challenges of global sustainability.²⁸ Reflection also enables learners to examine the broader implications of their actions, promoting ethical decision-making and a greater sense of responsibility. Guided reflections, such as “How does this decision align with my values and the well-being of others?” prompt students to think deeply about their choices and their potential impact on the environment and society. Evidence supports the effectiveness of reflective practices in reducing impulsive decision-making and increasing awareness of social and environmental consequences. Brown and Ryan demonstrated that mindfulness-based reflection enhances the ability to make intentional, value-driven decisions, laying the groundwork for more sustainable and ethical behaviors.

6.4. Link to sustainability goals

Mindfulness practices significantly enhance emotional intelligence, focus, and collaborative skills, contributing to inclusive and equitable learning environments. Programs like CARE for Teachers equip educators with mindfulness-based strategies to support diverse learners effectively. Research by Jennings highlights how such interventions enhance emotional resilience and foster improved classroom dynamics.²⁹

By raising awareness of the environmental and social implications of choices, mindfulness encourages intentional consumption. Through guided reflection, students can assess their habits such as food waste or energy use, and develop actionable strategies to align their behaviors with sustainable practices. Additionally, mindfulness cultivates a holistic understanding of interconnected systems, enabling learners to reflect on the ripple effects of their actions, such as the global impact of single-use plastics. This systems-based perspective empowers individuals to approach sustainability challenges thoughtfully and proactively. Furthermore, mindfulness strengthens

²⁸ Dweck, C. S. (2006). *Mindset: The New Psychology of Success*. Random House.

²⁹ Jennings, P. A., et al (2011). Improving classroom learning environments by cultivating awareness and resilience in education (CARE): Results of a randomized controlled trial. *School Psychology Quarterly*, 26(3), p. 189 – 201.

emotional regulation, helping individuals navigate uncertainty and adversity with composure. Practices like body scans or mindful pauses equip students with tools to remain calm and focused in high-pressure situations. Mindfulness training significantly enhances adaptability and resilience, vital for addressing complex global challenges. Lastly, mindfulness fosters openness and curiosity, essential for creative problem-solving. By enhancing cognitive flexibility, it equips learners with the skills to devise innovative and practical solutions to sustainability issues. For example, students can approach challenges, such as designing sustainable products, with a reflective mindset that prioritizes novel and effective outcomes. Most research underscores mindfulness's role in promoting cognitive flexibility and fostering innovation.

Through the integration of mindfulness into education, students and educators can actively contribute to achieving sustainability goals. These practices nurture critical thinking, emotional intelligence, and a sense of interconnectedness, laying a strong foundation for addressing the multifaceted challenges of the 21st century.

VII. CONCLUSION

This study has explored the role of mindfulness in promoting sustainable learning, with particular attention to its philosophical roots, practical applications, and alignment with sustainability goals. Drawing from Buddhist traditions, mindfulness offers a profound framework for fostering awareness, interconnectedness, and ethical responsibility in education. By cultivating present-moment awareness, emotional regulation, and cognitive flexibility, mindfulness empowers learners and educators to engage with global challenges thoughtfully and compassionately.

The philosophical foundations of mindfulness, rooted in Theravāda and Mahāyāna Buddhism, highlight its transformative potential in transcending discursive thinking and fostering deeper concentration and insight. The concept of interconnectedness, central to Buddhist teachings, underpins sustainable education by encouraging collective responsibility and awareness of the ripple effects of individual actions. This awareness fosters social and academic harmony, preparing learners to navigate the complexities of modern life with resilience and empathy.

The integration of mindfulness into sustainable learning offers a holistic pathway for addressing 21st-century educational challenges. Practical applications such as mindful breathing, gratitude journaling, and reflective practices promote emotional intelligence, ethical decision-making, and pro-environmental behaviors. Case studies and research evidence demonstrate that mindfulness-based interventions not only enhance academic performance but also nurture values essential for sustainability, such as empathy, environmental stewardship, and adaptability.

In higher education, mindfulness bridges the gap between theoretical knowledge and practical implementation, equipping students with the skills to balance personal well-being with societal and ecological responsibilities. By

fostering critical thinking and systems-based approaches, mindfulness enables learners to develop innovative and sustainable solutions to pressing global issues.

Ultimately, mindfulness serves as a powerful tool for transforming education into a platform for sustainability. By embedding mindfulness practices into curricula, educators can cultivate inclusive, equitable, and sustainable learning environments. This approach not only prepares students to face the complexities of an interconnected world but also empowers them to contribute meaningfully to the creation of a compassionate and sustainable future.

PRACTICAL APPLICATION OF *VIPASSANĀ* MEDITATION UNDER THE GUIDANCE OF VENERABLE ASHIN OTTAMATHARA MYANMAR

M.A. Lâm Bội Linh*

Abstract:

Vipassanna is considered a non-method, non-school technique, the way to self-transform by observing. The whole path of systematical *Vipassanā* practice applies to all religious or non-religious subjects, regardless of school. For this reason, it is developed by everyone, anytime, anywhere, without being governed by beliefs, customs, dogmas, or institutions. *Vipassanā* likewise demonstrates that everyone can gain equal profits. The respected Buddhist monk and meditation teacher Sayadaw U Sayadaw Ottamathara is one of the most famous in Myanmar and worldwide, specializing in teaching *Vipassanā* Meditation in the *Theravāda* Buddhist tradition. He is not only fluent in English but also has interdisciplinary knowledge in many fields, being named “Tsunami *Vipassanā* Meditation Master” for his “excellent” and “rare” teaching; and “superior” religious commitment.

Keywords: *Vipassanā, Ottamathara, Myanmar, meditation, value.*

I. INTRODUCTION

Vipassanā is the most ancient Indian Buddhist meditation technique taught by the Buddha 2600 years ago. *Vipassanā* meditation is one of the critical practices in Buddhism as it aids in transforming the mind for purely adapting to adversities, raising a perfectly calm mind and a healthful body, and less disease. *Vipassanā* treats it as a productive instrument to achieve genuine happiness and bring that pure wholesomeness to survive naturally and spread those around them, making society better.

* Chairman of SHZ City system of schools teaching commercial patterns.

Vipassanā meditation is popular in schools in Myanmar. His *Vipassanā* meditation practice is perfect, knowledgeable about *Dharma* and *Dharma* practice. He was more deeply interested in practical application. The name *Thabarwa* since 2007 has been very familiar to the people of his “state religion” as well as in many Buddhist and non-Buddhist countries in the world. *Vipassanā* Meditation Master Ottamathara has great merit in founding *Thabarwa* Meditation Centers in the spirit of thoroughly understanding No-Self-Dependent Origination and through his ability to thoroughly contemplate the working of the principle of conditioned things. He is also the originator of the establishment of the *Dharma* Hospital with the meaning of “entering the world” to actively serve sentient beings, embodying the ideal of Bodhisattva’s conduct. He is also the proponent of practicing the *Dharma* applied “unlimitedly” – merit activities.

The meditation of Ottamathara does not distinguish between monasticism or lay life, gender; regardless of sects, regions, countries... He came to life by practicing and thoroughly understanding the teachings of the Buddha; to benefit sentient beings voluntarily, naturally, without standing; overcome the world’s attachments and still be in harmony in the Precepts - Concentration - wisdom; harmonization and worldly consummation and transcending the world. With his particularly profound teaching style, great wisdom, and vast compassion, *Vipassanā* Meditation Master U Ottamathara is becoming more and more famous nationally and internationally. He has been teaching insight meditation in many monasteries, institutions, schools, hospitals, homes, and public places in Myanmar as well as in many other countries. Every year, he has arranged time and busy work in the country to give lectures and meditate in Singapore, Malaysia, Vietnam, Thailand, Taiwan, USA, and some European countries...

II. INTRODUCTION OF VIPASSANĀ MEDITATION

Vipassanā Meditation means to “see everything as it really is” by being mindful, awakening, and observing thoughts, and feelings without judgment; seeing the nature of things thoroughly as *dukkha* (unsatisfaction), *anatta* (non-self), and *anicca* (impermanence). “Who lives for a hundred years/ Does not see the birth and death of *Dharmas*/ It is not equal to living a day/ Seeing the birth and death of *Dharmas*”.¹ These three characteristics in *Theravāda* (School of Elders - Buddhism’s oldest existing school) are similar to the Emptiness/ Buddha nature in *Mahayana* (Great Vehicle). For the Vietnamese, *Vipassanā* is also known as Meditation for Inner Wisdom or Insight Meditation.

Vipassanā Meditation was discovered and taught by the Buddha himself as the core teaching during his 45-year propagation. He realized the principle of Dependent Origination “Because this exists, that exists/ Because this arises that arises/ Because this does not exist, that does not exist/ Because this ceases,

¹ *Dhammapāla*, Thich Minh Chau (2012) (translated), Hong Duc Publishing House, Vietnam, p. 81.

that ceases”.² This preaching was delivered in “*Mahāsātipatthana Sutta*” (the Great Discourse on the Establishing of Mindfulness) - the Long Discourses of the Buddha, “*Sātipatthana Sutta*” (the Discourse on the Establishing of Mindfulness), “*Annapanassatisutta*” (Breath-Mindfulness Discourse) - the Middle Length Discourses of the Buddha. Objects of *Samatha* – Concentration practice (40 objects) and *Vipassanā* – Wisdom practice (16 *Vipassanānāṇa*) in *Visuddhimagga* (The Path of Purification) exist in Tipitaka. The Buddha once said that: “in the past as in the present, I speak only of suffering and the cessation of suffering”.³ “The *Dharma* we speak is like a raft crossing a river, the *Dharma* must also be abandoned, let alone illegal (*Vajracchedika Sutra*)”.⁴ *Vipassanā* practice in *Theravāda* was reintroduced in Toungoo and Konbaung, Myanmar, in the century of XVIII, based on the current content in *Sātipatthana Sutta*, *Visuddhimagga*, and other documents.

Many *Theravāda Suttas* have emphasized that *Vipassanā* meditation is closely associated with the Four Foundations of Mindfulness and “brightening and clarity.” It is intended to help practitioners cleanse their minds, uproot the defilements, cease the round of birth and death, and realize the fruit of deliverance, enlightenment, and *Nibbana*. Buddhism was divided it into hundreds of *dharmalakṣaṇa* including 8 Consciousness (心法; *s: cittadharmā*), 11 Matter Literally Form or Shape (色法; *s: rūpadharmā*), 51 Mental Factor (心所有法; *s: caitasikadharmā*), 24 Non - Associated Compositional Factor (心不相應行法; *cittaviprayukta-saṃskāradharmā*), and 6 Uncompounded Phenomenon (無爲法; *asaṃskṛtadharmā*).⁵ This meditation is the path to complete awakening, transcending time and space, appreciated by the wise and practical in the present.

Vipassanā is pondered as a subtle approach that comprehensively cultivates the mind. *Vipassanā* practice highlights direct awareness, as opposed to knowledge accumulated from reasoning or arguing; it is “the superior way of seeing,” “seeing the core nature,” apparent and precise, seeing discerningly, with an alert and lucid mind to penetrate reality accurately.

Vipassanā is genuinely a method of Insight Meditation, not Tranquility Meditation. Tranquility Meditation fails to result in liberation as it does not generate insight, but it has the ability to assist insight meditation. Most meditation systems attach substantial significance to *Samatha* (Concentration), but only *Vipassanā* meditation can break the illusion of self-grasping to experience reality vividly to attain emancipation. *Vipassanā* (Insight) is always associated with *Samatha* (Concentration), the true Noble Eightfold Path

² Thich Chan Thien (2009), *Buddhist Studies Concept*, Oriental Publishing House, p. 21.

³ Nārada Mahā Thera (2013), *The Buddha and the Dharma*, Pham Kim Khanh (translated), Ho Chi Minh City Publishing House, p. 285.

⁴ Thich Thien Sieu (2003), *Lectures on the Lotus Sutra*, Religious Publishing House, Hanoi, p. 173.

⁵ Thich Thien Hoa (1992), *The Consciousness-Only*, Ho Chi Minh City Buddhist Association Publishing House, Vietnam, p. 9.

of the Middle Way. *Samatha* is regarded as present stillness, stabilizing and concentrating the mind. *Vipassanā* means insight, seeing, discovering, and distinguishing the phenomena of dependent origination on the five aggregates among body, mind, and objects, particularly incentivizing the intimate mind-body relationship.

Numerous people around the world are currently concerned and practicing *Vipassanā* meditation every day to reap benefits, such as (1) helping to regulate the mind and fostering concentration to produce insight, leading to enlightenment; (2) as an effective medicine for the common ailments of mankind; (3) helping practitioners correct their long-standing habits of attachment and ignorance; (4) resulting in accepting all changes of conditions with a tranquil mind; (5) building a healthy and peaceful inner life and internal purification; (6) promoting focus and memory; (7) relieving tension, stress and combatting symptoms of depression, anxiety disorders; (8) supporting the mind in being manifest, aware, and not drowsy; (9) boosting immunity; (10) prevention of cardiovascular diseases or blood pressure; (11) slowing the aging process; (12) eliminating the three fundamental roots of suffering: desire, aversion, and delusion.

It can be stated that the practice of *Vipassanā* meditation is likened to a surgery that deeply explores the unconscious mind of each person, pulling out mental impurities, afflictions, and unskilled qualities to purify and abandon them gradually.

III. LIFE AND PRACTICE OF VIPASSANĀ MEDITATION MASTER OTTAMATHARA

Ashin Ottamathara was born in Katha, Myanmar on Sunday, October 26, 1969 (the full moon day of Thadingyut) in Sagaing State, Northern Myanmar. He is the eldest son in a family of three children. His parents are Myanmar Chinese. His father is U Tin Maung, a mining engineer. Her mother is Mrs. Daw Khin Khin Myint, who was a small merchant. His father and mother's nature were inherently compassionate, business-minded, sound intellectual, straightforward, and sincere. When they heard that he was willing to leave home, they were sad to prevent him because they wanted to orient him to inherit "a rich inheritance". But later, thanks to his guidance, the whole family took refuge in the Three Jewels and protected him with one mind.

Born into a family with a rich economic background, he was well-educated and had a clear future orientation. His nature is inherently intelligent, long remembered, and profound. He always considers a problem that can be covered and guessed correctly. He has an organized mind and the ability to deal with matters very quickly.

In 1986, he passed the university entrance exam with an excellent score.

In 1992, he received a B. A. (English) with excellent division from Yangon University.

From 1992 to 1999, he was a young business owner and a successful businessman at that time.

However, with the origination of the enlightened seed from many previous generations, although life was favorable in all aspects, he could not keep his aspiration to become a monk. Since 1999, he began to approach many methods of *Vipassanā* meditation practice of blissful meditation masters, such as Ledi, SunLun, Mahasi, Mogok, and TheInnGu... After experiencing and practicing meditation seriously and enthusiastically at Mogok Meditation Centers (HQ) of U Ba Khin's International Meditation Center, S. S.'s *Vipassanā* Goenta Meditation Center...; He became more and more knowledgeable about the Buddha's teachings and the theory of No-self; After only 3 years of meditation, he realized the basic truth. On October 21, 2002, the full moon day of *Thadingyut*, he donated all his possessions, officially ordained, and ordained a *bhikkhu*. With great respect for the Buddha and his teachers, he began to teach *Vipassanā* meditation; wishing to help more people get access to the Absolute Truth.

IV. THE OUTSTANDING “TSUNAMI” BUDDHIST ACTIVITIES OF *VIPASSANĀ* MEDITATION MASTER OTTAMATHARA

Since entering the monastic life, Ottamathara has always been respectful, devoted himself to serving the Three Jewels, guiding people to discharge evil and do good, and improving the quality of life with the blessings of body-mouth-mind in a selfless manner; The path of renunciation of the Middle Way, Selflessness and Altruism is always promoted and encouraged by His disciples.

In 2002, under the appointment of *Vipassanā* Meditation Master U Nayyasagara, Ottamathara began to teach *Vipassanā* meditation. He became famous in the Buddhist community as well as the community of other religions in Myanmar. He founded the organization “From *Avijja* to *Vijja*” (From Ignorance to Wisdom) - the Foundation for the Spread of Wisdom to lay the first foundation for the Dhammadut journey - and later trips to propagate the *Dharma* at home and abroad. This organization quickly became one of Myanmar's most important sources of *Vipassanā* school.

In 2005, he became known as “Tsunami *Vipassanā* Meditation Master” (Tsunami Sayadaw) after a series of VCDs teachings on the causes of tsunamis and lessons for humanity.

In two years: 2007, and 2008, he established the Meditation Center at 45th Street, downtown Yangon (2007) and *Thabarwa* Meditation Center, Thanlyin (2008). These two *Thabarwa* centers: are the 45th Street Meditation Center in the inner city of Yangon and Thanlyin Center in the suburbs of Yangon.

In 2009, he started international tours to teach mindfulness and renunciation and guide the *Vipassanā* meditation.

In 2012, intending to provide quality education to disadvantaged children, he established the first “*Baka School*” in the 15th Goodwill Village. Since then, many new *Baka* schools are currently in different stages of development across Myanmar.

In 2013, he began to support the Buddhist monasteries for monks, nuns, and orphanages who require materials; and help local communities with difficulty in building roads, bridges, schools, clinics, dormitories, temples,

main halls, public toilets, manual wells, and water purifiers (to provide clean water) etc.

In 2015, there were many great *Dharma* activities under his direction. First of all, he established the Buddhist School for monks and nuns at *Thabarwa* Center (Thanlyin). Also in 2015, to inspire good deeds, practicing social welfare, and social security, and supporting emergencies, such as natural disasters, refugees, and anyone in need; Therefore, the first Charity model was born, encouraging everyone to join hands to “create unlimited merit”, temporarily called “Benevolence Bank”, which was inaugurated on August 29, 2015. This is one of the highly appreciated activities of *Thabarwa* Center. Several new “Blessed Banks” are also developing across Myanmar. Also in 2015, His Holiness established the first Animal Sanctuary in Hlegu and plans to establish a Wildlife Sanctuary in the south of Myanmar.

In 2016, under his guidance, the 4-story *Dharma* Hospital in the central campus of *Thabarwa* (Thanlyin) was opened and put into operation very effectively; helped many people, and solved many difficulties for those who needed help from heavy to light; especially in the current situation of Myanmar.

In 2017, there were also consecutive great *Dharma* activities under His Holiness’s decision. First: He established the 6-storey *Dharma* Ending Life Convalescence Hospital at the campus of *Thabarwa* Center (Thanlyin). This construction was funded mostly by the Kun Kho Yar Foundation. Second: Establishment of the first drug addiction treatment center in Tarchileik, East Shan State in Myanmar. And is currently planning to establish a number of other such Centers in Myanmar. Third: Established *Thabarwa* Nature Center in some Western countries. Bringing *Vipassanā* Meditation to wide application in the world; joining hands for peace and progress of mankind; aims to help humanity end suffering, and live a peaceful, free, and good life, in the spirit of the Buddha’s words.

V. MASTER OTTAMATHARA’S PLAN TO PROPAGATE THE DHARMA AT HOME AND ABROAD

To meet the physical, and mental needs as well as understanding of the growing number of meditators, *Vipassanā* Meditation Master Ottamathara planned to set up branches of *Thabarwa* Center throughout Myanmar and other countries.

Facing the circumstance of the increasing number of elderly people and patients in need of shelter at *Thabarwa* Center, *Vipassanā* Meditation Master Ottamathara is planning to build a 16-storey *Dharma* Hospital, establishing a 15ft Goodwill Village (Thanlyin, 2012) and Thitnipin Goodwill Village (Hlegu Town, 2014). The plan is that plots of land are distributed free of charge to the needy, displaced, and homeless households and individuals. At the same time, several new Goodwill Villages are currently in the process of forming and developing throughout Myanmar. Notably, the main center of *Thabarwa* (Thanlyin) - Yangon, currently has about 3,000 students from all over Myanmar and the world studying. At this *Vipassanā* Meditation Center,

he often guides meditation practice for more than 1200 Myanmar monks and nuns on average. The center takes care of more than 1000 patients at *Dharma Hospital*. Moreover, the center is responsible for taking care of about 2500 elderly people, single mothers, and a group of 50 orphans. The *Thabarwa* Center creates security for the number of about 200 laymen and women volunteers. “Man creates everything, all sorrows and pains and his unhappiness as well as his happiness and success”.⁶ The main *Thabarwa* Center is considered “a village/ a community for commoners” with the spirit of karma, harmony, sharing, love, empathy, less desire, contentment, and purity of mind. There is often mutual support between *Thabarwa* Centers; and also among the *Thabarwas* in the world. The spirit of practicing and serving Buddhism shows: “Religious policy is associated with the promotion of morality but must have freedom, equality, and sincere love; (4) “Religion is not sanctifying or performing a virtue out of poverty”.⁷ According to Buddhism, “all unjust in caste is caused by the inevitable consequences of past karma”.⁸ Buddhism offers the law of karma, reincarnation, cause, and effect is the law that governs all sentient beings. “Where the *karma* is matured, there the resultant result of that *karma* is felt in the present or in the next life or in a life to come.”⁹ Brahmins divided Indian society into four varna (caste system) i.e., the Brahmin (cleric, priest), Kshatriya (king), Vaishya (merchant), and Shudra (servant, slave).¹⁰ There is also the Dalit class discrimination. Of the four castes, the Buddha “confirms that in the Sangha, there is no distinction between brahmins (scholars, priests, and teachers) and Kshatriyas (warriors and aristocracy), or between masters and servants. Anyone who has been admitted to the Sangha has the same opportunity to learn and practice”.¹¹ And “No parents, heaven or earth or anyone else make them noble or low, only their actions make them noble or low; It is not someone else who makes us polluted or clean, but only because we make us polluted or clean”.¹² If people practice the *Dharma*, one will be able to create happiness for themselves and others, due to “being aware that humans can control and overcome suffering. It is determined that one can put an end to suffering by training in virtue, concentration meditation, and discernment”.¹³

Buddhism takes ethics or morality practice as the standard measure of equality. “The luxury and cowardice of man are due to his personality, not his family base; for ethics or morality practice, lineage has absolutely no meaning at all, but the only difference is whether you are enthusiastic or not in advancing in cultivation”.¹⁴ *Thabarwa* Meditation Center Myanmar everyone lives together equally in the spirit of Buddha’s words under the guidance of Master U Ottamathara. “The Buddha declared justice and the Buddha was strong against the caste system”.¹⁵ *Thabarwa* Centers are always ready to welcome all people when they need help. “Cause and effect in the Buddha’s teachings are both dependent-arising, they are selfless; they always need to be seen in the light of dependent origination”.¹⁶ Following the teachings of the *Vipassanā* Meditation Master, *Thabarwa* Thanlyin provides shelter and health care for all people with any circumstances for the rest of their lives. This place has housed all types of people regardless of age, occupation, qualifications, circumstances, and economic abilities, such as the elderly, the homeless, orphans, single mothers, the unemployed, sick, disabled, mentally ill, people with chronic or terminal illnesses (including tuberculosis and AIDS) and those facing complex health, social or financial challenges. The center also actively protects the environment, treats waste, and lives in harmony with nature. “The Buddhist revival in India has the advantage that the Buddha”.¹⁷ “Wisdom is a prerequisite for overcoming suffering, eliminating delusion; is peace in the present life and the future”.¹⁸ In modern times, the actions and practices of Meditation master Ottamathara are also contributing to the revival and development of Buddhism in Myanmar and in the world in general, contributing to world peace.

VI. FEATURES AND THE VALUE OF VIPASSANĀ MEDITATION MASTER OTTAMATHARA’S

Today, Ottamathara teaches *Dharma* and conducts *Vipassanā* meditation at many research institutes, schools, and hospitals at home and abroad. In particular, he is willing to face difficulties, willing to come to preach the *Dharma* to many patients even when they are far away. His teachings are leading people from attachment to renunciation, from anger to compassion, from ignorance to wisdom, etc. through the power of doing *kusala* and true understanding of the nature of not-self. Through his teachings, many people, whether young or old, sick, or healthy, can access the practice to transform: “From Ignorance to Knowledge”, “From Craving to Compassion”, “From Anger to the free

attachment” and “From Self to Non-Self”. Buddhism believes that a calm mind is very important, “thanks to a calm mind, we can see things as they exist... If the mind is calm, the desires and cravings caused by the objective world will not dominate the mind either.”¹⁹

In the spirit of volunteering to serve sentient beings without limits; practice *kusala* or love-compassionate naturally; constant effort in insight into body and mind; Tam innocuously complete students; full literature-private-tu; understanding jurisprudence and jurisprudence; worldly – worldly harmony; transcendent but still close to the simplicity of entering the world... The Buddha lists the criteria by which any person can decide which teachings to accept as true. Do not blindly believe religious teachings, just because they are claimed to be true, or even through the application of various methods or techniques. Direct knowledge grounded in one’s own experience can be called upon. He advised that the words of the wise should be heeded and taken into account. He proposed not a passive acceptance but, rather, constant questioning and personal testing to identify those truths that verifiably reduce one’s suffering.²⁰ Ottamathara has shown the rare bi-brave of a Buddhist practitioner who has attained the *Dharma* in modern times. Therefore, he was trusted by the Sangha, the Buddhists submitted to him, and the leaders respected him. His teachings and teachings have brought *Vipassanā* Meditation to positive application in life, making practitioners always see the results immediately in the present, helping many people to benefit, inner peace, actively discharge evil and good deeds towards turning mortals into saints in the path of liberation taught by the Buddha.

Buddhism in Myanmar is always respected by leaders, Buddhist monks, and nuns all over the country who wish to join hands for peace and happiness for themselves and others. *Vipassanā* Meditation Master Ottamathara has always fervently called for and advocated for peace. He was not only a *Vipassanā* Meditation Master, a shaman, a psychologist, a sociologist... but also a Buddhist leader who had a great influence on the Sangha, Buddhists, and common people in Myanmar and some parts of the world today.

On May 14, 2023, in Myanmar, *Vipassanā* Meditation Master Ottamathara - the owner of more than 100 meditation centers in Myanmar, 12 centers in Thailand, and some in the world, with the common name *Thabarwa* was recognized by the NGO as The Hope Charity Myanmar Foundation honors the title of “The great and noble person who teaches the *Dharma* clearly - The shaman, the Elder Sayadaw Ottamathara”. On March 9, 2022, this organization also presented him with the noble and honorable title of “The great philanthropist of social charity - Venerable Sayadaw Ottamathara”.

²⁰ *Anguttara Nikāya* I, Thich Minh Chau (1996) (translated), chapter III, *Keraputta*, Religious Publishing House, Hanoi, Vietnam, p. 338.

VII. CONCLUSION

The entire process of *Vipassanā* meditation is indeed a purification of the mind - the evolvement of a skillful mind. While practicing *Vipassanā* meditation, meditators need to sit still with their back straight and completely quiet for a certain period. *Vipassanā* exercise retreats frequently exhort monks, nuns, lay Buddhists, and cultivators should strictly undertake precepts, have a really obvious mind, meditate diligently, and seriously comply with the rules and schedules. During the retreat, practitioners observe the 5 or 8 precepts for a peaceful mind. They can pay attention to one object, observe feelings throughout the body, balance the sensations, and invariably remain mindful, alert, benevolent, and wholesome towards everyone. The teacher's guidance in meditation can profoundly and proficiently assist practitioners in unlocking their minds, thereby creating a premise for self-practice at home later on, with the most crucial state of an open mind without clinging and desire. Diverse positive and negative emotions will arise during meditation, so persevering and diligent practice in life is vital.

Vipassanā is the approach detected by the Buddha, and the practice is not limited to lay Buddhists. The process of self-purification through inner self-observation requires meditators to assiduously sustain, their efforts and the awareness that no one can practice for us. The discipline and rules only support the cultivator during the retreat to tame body and mind. Regulations are formulated to facilitate an environment for intensive meditation and strengthen effective meditation practice. This consent is one of conduct and understanding, not blind coercion. Meditators can practice industriously and intensely only with an attitude of trust. Confidence in yourself, trust in the teacher, and faith in the *Vipassanā* method are the foundation for successful application. Eventually, meditators should note that one's progress depends solely on one's virtuous qualities, personal growth, and five factors: fervent endeavor, confidence, sincerity, health, and wisdom. At *Thabarwa* centers, Ottamathara has been teaching *Vipassanā* Meditation, to promote monks and nuns, and local and foreign yogis cultivate the ability to "do *Dharma* without limit" to solve all problems for themselves and society; embody the spirit of Buddhism and practical application.

Sayadaw U Sayadaw Ottamathara specializes in self-transformation and vows to fully propagate the path with the *attitude of doing all kusala indiscriminately*, calmly, and in harmony with all faculties. The practice of parami (*paramita*) is the merit that any true Buddhist disciples of any tradition have experienced in common with the Buddha's teaching. He is also famous for his great loving-kindness. Master Ottamathara's spirit of meditation practice has the effect of promoting the Buddha's teachings applied in the human world, popularizing *Vipassanā* meditation, joining hands with the community, supporting peace, respecting life, and imbued with humanity and morality. It also comes from purely understanding and perceiving deeply the teachings of the Primordial Buddha preached over 2600 years and the parami (*paramita*) of *Vipassanā* Meditation Master Ottamathara accumulated from lifetimes.

His past as well as his vows in the benefit of forgiveness. As for the issue of international preaching, Master Ottamathara also has plans to establish several new Natural *Thabarwa* Centers in the United States, Europe, Australia, and Asia ... He is willing to make sincere *Dharma* connections without distinction based on the teachings of Buddha Shakyamuni Buddha.

AN INCLUSIVE, COMPASSIONATE, AND NON-VIOLENT BUDDHIST KNOWLEDGE SYSTEM: ITS SIGNIFICANCE FOR THE SUSTAINABLE FUTURE

Dr. Rakhee Chauhan*

Abstract:

This research paper explores the amalgamation of Buddhism in the field of education to encourage compassion and wisdom. The first part of the paper examines the history of Buddhism and its fundamental doctrines. Therefore, the Buddhist knowledge system is the learning and preparation of arising to the truth and accepting things as they truly are. Numerous approaches related to education, accessibility, and inclusivity make Buddhism an integrated structure, and that will be the second part of this paper. Buddhism, which started with just five followers, has now spread into numerous regions and is the belief of almost 600 million people in more than fifteen countries. There is a blend of skills, training, resilience, and the development of personality in this educational system. Buddhism is primarily centered around the Four Noble Truths and the Eightfold Path. Buddhism is an education and practice of non-violence and truth. The purpose of teaching, therefore, is to awaken distinctive potential; the goal of knowledge, to symbolize that intrinsic wisdom - a wisdom categorized by an uncommitted, open, progressive mind - and an empathetic respect for all lives. Gautama Buddha is considered a great guru of all time. His teachings were for the good of humankind in the fourth century BCE and are equally true today for the happiness of the majority of people in the world. In this paper, we adopted analytical studies, descriptive, and methodical approaches, and conclusions of the paper are drawn after the analysis of primary and secondary writings, the great works of Buddhist authors, e-journals, and e-books available.

Keywords: *Integration, compassion, wisdom, resilience, humankind.*

* Associate Professor, Department of Political Science, Kalindi College, University of Delhi.

I. INTRODUCTION

Mahatma Gandhi asserts that Buddhism made a lasting influence on Hinduism by his immense sacrifice, his profound renunciation, and the impeccable purity of his life, and that Hinduism will always be indebted to that great master.¹ The principles of peace and nonviolence are the most celebrated concepts of the Indian scriptures and traditions. Represented by thousands of cultural and indigenous groups, hundreds of languages, and numerous religions practiced in harmony, these reveal the tradition of “Live and Let Live.” Buddhism is not just a belief from older times or a simple devotion, as many think, but it is a time-tested scientific religion and philosophy, which, in the context of the present world situation, is more relevant today than ever before for establishing world peace.² India is the land of Buddha, thus the land of peace and non-violence. Buddhist education was the first after Brahmanism and broke many obstacles in society. The most prominent symbol of Indian pride is the Ashoka Chakra, which was inspired by King Ashoka, who relinquished violence and embraced Buddhism after witnessing the destruction of war. Buddhism is one of the oldest religions with a tradition in the world. It is founded on the life and traditions of Gautama Buddha. In this contemporary world, there has been a developing interest among researchers and scholars in exploring alternatives or new methodologies to educate young minds with a holistic approach. Buddhist education established an impeccable society. Religious history in India began around 1500 BCE, and about 600 or 500 BCE was the time of Buddha, marking a timeline of almost 1,000 years - a history of continuing communication between two views on religion, which interacted and also merged.³

II. SIDDHARTHA BECAME BUDDHA

Buddha's life began in 563 or 566 BCE, in a rich family in Lumbini, today situated in Nepal, and he was raised in a small principality named Kapilvastu. At this spot, almost 316 years later, King Ashoka built a pillar made of stone to mark the divine spot. The engraving on pillar is engraved in five lines and almost ninety Asokan characters: “Here was born the Buddha, the sage of the Sakyan.”⁴ His father gave him the name Siddhartha. He belonged to a wealthy royal family in a warrior caste known as the Kshatriya. His father was Shuddhodana, and his mother was Mahamaya. In his younger years, Siddhartha mastered the science and arts of his time, along with other training in warfare. He had a sharp intellect. He married a young princess, but soon after witnessing human suffering, one day he left all the comforts and luxuries and realized the truth of the world. Now, Siddhartha began to teach after attaining nirvana and became the Buddha, meaning “the Enlightened or Awakened.” Four series of events that Prince Siddhartha Gautama experienced led to his

curiosity about life, prompting him to leave his lavish and comfortable life to follow the path of asceticism and discover the reality of life. One day, when he was visiting his garden, he saw an old man who was weak due to age. His second sight was of a sick man, hopeless and abandoned. Third, he witnessed a death, and after that, he saw a solitary person walking alone without help. After seeing all this, he learned from his charioteer that all of us would go through these conditions. It was this benevolence that led Siddhartha Gautama to abandon his luxurious life and seek nirvana for the sake of all human beings.⁵ His pursuit of freedom from oppression to nirvana had begun. He also sought guidance from two mentors, Alara Kalama and Uddaka Ramaputta, and practiced meditation. Finally, after a few months, he reached Gaya and found the place suitable for his quest for enlightenment. "Five other ascetics who admired his determination joined him. They were Kondana, Bhaddiya, Vappa, Mahanama, and Assaji." He struggled for six years and, at last, abandoned extreme fasting and continued with a more balanced routine. At the age of thirty-five, one day under the Bodhi tree, on the riverside of Naranjara, in Gaya, he realized and attained nirvana on the full moon of Vesakha. He became the Buddha. He shared his understanding of various subjects with the people, and soon they, too, realized the right path and followed him. Earlier, it was just a perspective on different subjects, but with time, it became a religion: Buddhism. Buddha was born as a common man, achieved Nirvana as a common human being, and died as any other man. Despite having attained parinibbana, he did not think of himself as a deity or any special person or as any extraordinary human being.⁶

III. FOUR NOBLE TRUTHS

The four noble truths are a necessary feature of Buddhist teachings. It is because we fail to comprehend the four noble truths that we get stuck in the cycles of birth and death. From the doctrine itself to the practice, the four noble truths are the summary of the teachings of the Buddha.⁷ In the four noble truths - namely, the truth of suffering (*dukkha*), the truth of the cause of suffering (*samudaya*), the truth of the cessation of suffering (*nirodha*), and the truth of the path that leads to the cessation of suffering (*maggā*) - we have the foundation for understanding and practicing the teachings of the Buddha. The Buddha, in a sense, was an unmatched faith healer. His manner of describing the four noble truths is similar to that of a doctor. Firstly, he identified the ailment; next, he revealed the reason behind that illness; after that, he deliberated on its elimination, which is the treatment. The cure for this is the noble eightfold path.⁸ Thus, the teachings of the Buddha are open to all and are not enforced upon anyone.

IV. THE EIGHTFOLD PATH

The Tathāgata (Buddha) understood it as the middle path, eluding the

⁵ Peter D. Santina (1984): p. 23.

⁶ Ibid (1995): p. 25.

⁷ Peter D. Santina (1984): p. 28.

⁸ Piyadassi Thera (1995): p. 38 - 39.

extremes, which gives vision and knowledge and leads to calm, realization, enlightenment, and nibbāna. These are eight aspects of life that are to be incorporated into life according to Buddhism. These are: right understanding (*sammā diṭṭhi*), right intention (*sammā saṅkappa*), right speech (*sammā vācā*), right action (*sammā kammanta*), right livelihood (*sammā ājīva*), right effort (*sammā vāyāma*), right mindfulness (*sammā sati*), and right concentration (*sammā samādhi*). These eight constituents of the noble eightfold path are interconnected. The path is noble, and those who follow it are also noble and wise. People can practice this path simultaneously, as each part supports the other. The noble eightfold path is also represented by the Dhamma wheel (*dhammacakka*), consisting of eight spokes. This path is the means to the goal of Buddhism. To understand these eight phases of the path, they have been categorized into three training (*tiśikkhā*): *sīla* (noble behavior or ethics), *samādhi* (mental development or meditation), and *paññā* (intelligence or wisdom).⁹ Good conduct is the foundation of every religion. All living beings are equal, and this should be reciprocated toward all others. We are encouraged by the good words of others and, at the same time, hurt by the uncontrolled speech of others. Therefore, to cultivate a culture in which congruence, contentment, cooperation, and communication are the objectives to be comprehended, one must regulate, promote, and employ one's ability to communicate effectively. The Buddha instructed Rāhula to avoid lying. According to him, someone's good character is reflected in his good behavior alone. Right action develops an admiration for relationships and life.¹⁰ Right action (*sammā kammanta*) involves respect for life and relationships. Such rules and conduct are essential for the betterment of society and are extremely important for individual progress. Right livelihood (*sammā ājīva*) is also related to right conduct. Five categories of occupation are explicitly discouraged for the followers of Buddhism. These are: dealing in animals for butchery, trading in slaves, selling armaments, dealing in toxins, and commerce in intoxicants such as drugs and alcoholic beverages. These are prohibited means of livelihood because they bring disrespect and are harmful to society as a whole.¹¹ Mental development is another important aspect of the practice of the noble eightfold path. The Buddha himself said that, for all mental states, the mind plays a crucial role. Today, all scientists recognize the importance of the mind. According to Buddhism, when the mind is free of all evil, such as greed and anger, the whole universe will be purified. So, the last three steps of the noble eightfold path inspire and empower individuals to be more observant, self-reliant, and peaceful. With the right effort (*sammā vāyāma*) and a positive attitude, one can achieve successful results. By making the right efforts in our career, studies, practice, and Dhamma, we can become successful. Right mindfulness (*sammā sati*) is significant in our day-to-day life. It means we must be attentive at all times, even when doing our daily chores. To avoid accidents, we should always

⁹ Peter D. Santina (1984): p. 48.

¹⁰ Ibid: p. 52-53.

¹¹ Ibid: p. 56.

be attentive. There should be no distractions on the way of Dhamma either. We should not become entangled with distractions and must play an active role in our relationships with others. It means we should always be mindful. This is an important characteristic of mental development that we can practice to make ourselves better. According to Buddhism, if we are not able to practice meditation, we can practice the right effort and right mindfulness instead. It is all about focus, concentration, awareness, and attentiveness of the mind. In the Buddhist scriptures, it is written that the practice of mindfulness is the way to achieve the end of suffering. Right concentration (*sammā samādhi*) is the way to focus the mind on an object pointedly. When you concentrate on one point, you are not distracted, and all other thoughts are eliminated. For this type of concentration, we need a specific, specialized teacher. When we achieve the ability to concentrate, it has dual benefits. Firstly, it leads to the happiness of the mind and the body, bringing relief, pleasure, peace, and calmness. Secondly, it becomes instrumental in such a way that it helps us see things as they truly are. It formulates the mind to accomplish wisdom.¹²

V. BUDDHIST SYSTEM OF EDUCATION

Saṅgha - In ancient India, caste was highly instrumental in shaping society and determining access to education. The Buddha intensely condemned the prevailing caste system and declared that all castes should unite as rivers merge into the sea.¹³ At this time, the Buddha not only rejected this discriminatory system but also united all monks in the *saṅgha*, where caste, clan, and tribal distinctions ceased to exist, forming one community. To spread the Buddhist teachings the *saṅgha* plays an important role. Along with the Buddha and the dhamma, the third jewel is the *saṅgha*. It refers to the community of bhikkhus and bhikkhunīs who follow the Buddhist path. The Buddha himself acknowledged the profound significance of the *saṅgha* in preserving the purity of his teachings. This is evident in the fact that he incorporated the *saṅgha* as the third constituent of the holy triple gem (*tiratana*). The *saṅgha*'s vital role, both during the Buddha's time and in the present, as the source of the dhamma across space and time, can never be undervalued.¹⁴ By living together in the *saṅgha*, bhikkhus engage with the community and learn together. These Buddhist *saṅghas* function as both religious and educational institutions, and their followers, in turn, develop new ideas and systems. Within these *saṅghas*, disciplinary rules and laws were established for the monastic community. The Buddhist *saṅgha* serves as the carrier of the Dhamma, teaching by example and guiding others on the path to enlightenment. Rājagaha was the first center of Buddhist learning. After his enlightenment, the Buddha visited Rājagaha, the capital of Magadha. The king of Magadha, Seniya Bimbisāra, became a follower of the Buddha. Soon, in Rājagaha, many Buddhist philosophical schools of thought flourished.

¹² Peter D. Santina (1984): p. 67 - 68.

¹³ Piyadassi Thera, (2009): p. 61.

¹⁴ Ven. Dr. K. Shri Dhammananada (2000): p. 16 - 17.

Monastery - During the Buddhist period, the main centers of education were monasteries, vihāras, and maṭhas. To gain admission, a learner had to appear before the board and request permission to study. Monasteries were not only centers for academic learning but also provided instruction in practical and religious knowledge. This system was innovative and unique in many ways compared to other educational systems prevalent in ancient times. The organization and administration of these institutions were the responsibility of the monks living in the monasteries.

Pabbajjā and Upasampadā - Pabbajjā means “going forth,” and upasampadā means “higher ordination” or “nearing full admission.” These are important stages in the Buddhist primary educational journey. Pabbajjā is the ceremony in which, after being admitted, a novice must change both clothing and conduct. The minimum age for this ordination is eight years. The student also formally takes refuge by reciting: (1) I take refuge in the Buddha, (2) I take refuge in the Dhamma. (3) I take refuge in the Saṅgha. One of the most remarkable aspects of this system was that students of any caste could seek admission. Upon ordination, they no longer belonged to any caste. In ancient India, where social identity was deeply tied to caste, this was a revolutionary idea. Buddhist education was open to all classes of society. In Buddhism, upasampadā signifies that a monk has already completed twelve years of education in a monastery. At this stage, the student becomes a fully ordained member of the saṅgha and has the option to become a bhikkhu or bhikkhunī. This step requires severing all ties with the lay world. The duration of this advanced education is ten years, making the total period of monastic education twenty-two years.

Medium of Instruction in Monasteries - The language used by teachers and students during their studies was the common or local language. Primarily, Pāli served as the medium of instruction, though the mother tongues of the students were also widely used.

VI. OBJECTIVES OF LEARNING

The main objective of learning in this age was to spread the Dhamma and, through it, the accomplishment of nibbāna. With the beginning of the Buddhist education system, the institutionalization of learning in ancient India also started. The main aim of Buddhist education is to attain wisdom. According to the Buddha, it is wisdom that unlocks the gates of nibbāna or enlightenment. Wisdom ends ignorance, the fundamental cause of suffering. Buddhism is seen as an ethically principled religion. For common people, the Buddha set some moral standards through the five precepts: (1) Refrain from taking life. (2) Refrain from taking what is not given. (3) Refrain from the misuse of the senses. (4) Refrain from wrong speech. (5) Refrain from intoxicants.¹⁵ Buddhist education is for all and plays an important role in overall personality development. It also teaches all followers to live a disciplined, non-violent life.

¹⁵ Madhusudan Sakya (2011): p. 17 - 25.

VII. DOCTRINES OF EDUCATION

“The process by which freedom (and peace and happiness) is achieved is called development, and in Buddhism, human development is synonymous with education”.¹⁶ The main objective of Buddhist education was the holistic development of students, so the curriculum was also based on the values of the Buddha’s philosophy. Systematic Buddhist literature is available in the three baskets of the *Tiṭṭaka* - *Suttapiṭaka*, *Vinayapiṭaka*, and *Abhidhammapiṭaka*. These are the codified teachings of the Buddha. The *Tiṭṭaka* is studied and admired by bhikkhus, scholars, and students. It serves as a guiding principle for all followers of Buddhism. The *Suttapiṭaka* contains the Buddha’s teachings on morality and nibbāna practices, while the *Vinayapiṭaka* outlines the necessary rules to maintain discipline for monks living in monasteries. The *Abhidhamma* provides philosophical knowledge to monks regarding the mind and the reality of the world. The basic principles of Buddhist education emphasized ethical, intellectual, and physical growth for students in monasteries. It was the duty of everyone to follow the rules and regulations in these Buddhist schools. The curriculum was primarily spiritual in nature. Every student had to study religious books related to the Buddha and his doctrines.

Role of a Teacher - A teacher had to live like a monk for at least ten years and possess purity in character and thoughts. It was also the teacher’s duty to take care of students if they fell ill. There was a unique relationship between the teacher and the student in monasteries. Students usually accompanied their teacher and carried their belongings and essential items, such as water, robes, clothes, chairs, or āsanās, etc. Discipline and simplicity were the guiding principles of that time. Teachers instructed monks in manners, ethical values, self-discipline, as well as religious and skill-based education. While some resident monks lived in the monasteries and taught students, well-known teachers were often invited to give special classes. These classes were mainly based on their expertise in religion, but other subjects such as medicine, skill development, and military training were also covered by these specially invited teachers.

Methods of Teaching - The ultimate aim of every student in Buddhist education was to attain bodhisatta realization. The primary method of teaching during the Buddhist period was oral transmission. Although there is evidence of writing during that time, education in monasteries was predominantly verbal. Teachers taught orally, and students memorized the lessons. If students had doubts, discussions were held to clarify them. Monks and teachers were also engaged in propagating Buddhism, so some monks emphasized travel as a means of education. Ācariya Rāhula and Ācariya Sāriputta regarded travel as a significant educational tool for students. After completing their education in monasteries, students were encouraged to undertake extensive journeys to gain real-world understanding.¹⁷ Talks and discussions also took place in the *saṅgha*

¹⁶ P. A. Payutto (1994): p. 63.

¹⁷ Devasis Chakma (2023).

twice a month - on the first day of the month and the day of *pūṇimā* (full moon). Bhikkhus and bhikkhunis from other monasteries and *saṅghas* would gather in one place, present their doubts, and engage in discussions until solutions were reached. Attendance was compulsory for all monks and students. The teaching approach was interactive in nature.

Skill Education - Buddhist education maintained a balanced relationship with the real world. It was not only aimed at the development of the mind and self-attainment but also focused on personality transformation through skill development. The main aim of education was to emphasize both learning and practical application. A key feature of the *saṅgha* was living and learning together, fostering teamwork. Bhikkhus were trained in handicrafts, and most of them acquired the skills of weaving and stitching their robes during their stay in monasteries. In addition to this, farming, animal rearing, trade, and commerce were also part of their education. Sculpture, painting, and architecture were included in their studies as well. Many monasteries were constructed and decorated by students during this time. Medicine was also part of the curriculum, ensuring that bhikkhus were educated in various practical skills.

VIII. WOMEN MONASTICISM

Most Buddhists accept the biological differences between males and females. The Buddha held a respectful position for women in society, but initially, he was not ready to admit women into the *saṅgha*. It is said that upon the request of his stepbrother Ānanda, he allowed female followers to join the Buddhist *saṅgha*. Mahāpajāpatī Gotamī, the Buddha's maternal aunt and foster mother, became the first female follower. After that, women from all castes and clans joined the *saṅgha*. In his great compassion and generosity, the Buddha always treated women with respect and politeness, teaching them the path to harmony, purity, and spiritual attainment. The Blessed One said: "A mother is the friend at one's home. A wife is the highest friend of the husband."¹⁸ However, for female followers or nuns, the Buddha established eight rules of respect (*garudhamma*), which were as follows: (1) Even if a nun has been ordained for a hundred years, she must pay respect to a monk who has just been ordained. (2) She must not slander a monk. (3) She must not accuse a monk of any misdeed. (4) She must receive the full monastic code for nuns from a monk. (5) She must confess her offenses before the assembly of monks and make amends accordingly. (6) She must seek instruction from a monk every half month. (7) She must not spend the vassa (rains retreat) in a place where there are no monks. (8) After the vassa, she must confess her offenses to a monk and make amends. These restrictions applied only to nuns and were established for the discipline of the *saṅgha*. Women were also not appointed to high administrative positions in their monasteries. However, admission to the *saṅgha* was open to all women, regardless of social status, caste, or creed. Many nuns attained great spiritual progress and established themselves as renowned

¹⁸ Piyadassi Thera (1995): p. 68.

scholars. In many ways, Buddhism was the first religious tradition to recognize and support the education of women.

IX. CONTEMPORARY RELEVANCE OF BUDDHIST TEACHING

Followers of the Buddha - The Buddhist education system is extraordinary in many ways. Buddhism emerged as a response to the limitations of other philosophical concepts prevalent at that time. Gautama Buddha was primarily an ethical and disciplined teacher who focused on questions related to human suffering. His teaching on nibbāna centered around the Four Noble Truths - suffering (*dukkha*), the cause of suffering (*samudaya*), the cessation of suffering (*nirodha*), and the path leading to the cessation of suffering (*magga*). The main aim of Buddhist education was the spread of dhamma and the attainment of nibbāna. Dhamma emphasized humanity and humanitarianism, which attracted a large number of followers to Buddhism. The religion promoted values such as harmony, tolerance, justice, and universal compassion - principles that remain relevant in contemporary society. Buddhist teachings particularly appealed to the downtrodden in society. Buddhism also introduced the idea of conversion in India, and many, including Babasaheb B. R. Ambedkar, chose to embrace Buddhism. Beyond its social impact, Buddhism also brought significant changes in the field of education, as Buddhist philosophers advocated for progressive thought. Non-violence (*ahiṃsā*) was a fundamental principle of Buddhist education. The concepts of education for all and inclusive education are deeply embedded in Buddhist teachings and are now central components of contemporary India's educational philosophy. The idea of humanity in Buddhism is based on mutual respect and the belief in the inherent dignity of all living beings. Buddhism strives for a compassionate, peaceful, impartial, and sustainable society through social and political activism, rooted in human rights.¹⁹ As Chandradhar Sharma wrote in his book, "Buddhism was embraced by the rich and the poor, the high and the low, the intellectual and the dull alike. It spread like wildfire far and wide from the lofty Himalayas to Cape Comorin and ranged beyond the frontiers of its homeland to Ceylon, Burma, Siam, Malaya, Java, Sumatra, and then again to Nepal, Tibet, Mongolia, Korea, China, and Japan."²⁰

Holistic Knowledge System - Buddhist educational institutions, including monasteries, sanghas, and viharas, were democratic in nature, allowing people from any religion or caste to reside and receive education. The Buddha recognized the significance of monasteries and sanghas as the purest means of imparting education. Sanghas were particularly quiet places where residents lived a secluded life, avoiding the distractions of the outer world. The Buddhist education system was universal in nature, free from racial or cultural discrimination. Life in monasteries was simple. The monks, who served as teachers, were well-qualified, secular, and non-violent. They acted as guardians to their students and were responsible for the holistic development

¹⁹ Centro di Atene per i Diritti Umani (2024).

²⁰ Chandradhar Sharma (1976): p. 69.

of their sissas (students). Since all students lived together in monasteries, the relationship between teachers and students, as well as among students themselves, was harmonious. Education in the 21st century also emphasizes the overall development of students and universal access to education. Many countries provide free and compulsory elementary education for young children. The core learning outcomes and objectives of Buddhist teachings - morality and wisdom - were clearly defined and universally accessible. In India, the government is striving to improve the quality of education by recognizing learning outcomes and ensuring their achievement at the end of each course. Today, primary and secondary education are not merely based on rote learning; instead, they emphasize principles of equality, justice, secularism, respect for all living beings, human dignity, well-being, and rational thinking - values described in the *Tipiṭaka*. As Albert Schweitzer noted, "In this sphere, the Buddha gave expression to truths of everlasting value and advanced the ethics not of India alone but of humanity. The Buddha was one of the greatest ethical men of genius ever bestowed upon the world."²¹ During the Buddhist era, the medium of instruction was primarily the language spoken by common people, though some teachers also used Pāli and Sanskrit. According to the National Education Policy 2020 (NEP 2020), using a student's local language or mother tongue as the medium of instruction enhances comprehension and strengthens cultural identity. Skill development was a core component of Buddhist curricula - a concept that remains relevant today. Every country should integrate skill-based education to equip youth with employable skills and reduce unemployment. Hands-on training in specialized fields, tailored to individual abilities, should be an essential part of university education, particularly in developing nations. Since monasteries were centers of education, students often studied outdoors in natural settings, allowing them to develop an awareness of medicinal plants and their properties. This deep connection with nature was an integral part of Buddhist learning and remains essential in modern education. Buddhist education and Buddhism as a religion hold immense significance in today's world. The Buddha's message of kindness and generosity toward all beings is universal. In an era marked by conflict and division, his teachings of compassion and wisdom are more relevant than ever in human history.²²

X. BUDDHISM FOR DEVELOPMENT OF SELF AND SOCIETY

The Eightfold Path teaches us right conduct with continuity. This perspective of Buddhism is significant for all of us even today. Compassion and ethical values are crucial for everyone and must be an important part of education. Amidst the various intricacies of contemporary society, there is a growing need to instill moral values among students. There must be a serious concern to preserve the core and spirit of Buddhist knowledge while catering to the growing desires of modern-day humanity. Generally, education in

²¹ O. H. de A. Wijesekera & Jayatileke, E. A. Burtt (2008): p. 52.

²² Dhammananda (1994): p. 27.

every era is for the benefit of both the self and society. The teachings of the Buddha are for the development of both the individual and humanity. They aim for the holistic development of the individual and also for the well-being of all people. The connotation of the Buddhist knowledge system is to design the best way of life for individuals and to nurture their capabilities. This is to enhance the highest quality of an individual's character. The goal is the overall growth of personality. Buddhist knowledge is centered on the teachings of the Buddha; one has to learn them, understand them, and make those teachings beneficial to humanity.²³ Thus, Buddhist education develops individuals who benefit others. The Buddha's way of teaching was also different from that of other teachers. He did not deliver well-prepared lectures or talks. Instead, he observed his surroundings, and spontaneous topics became the themes of his discussions. Even today, this remains one of the best pedagogical tools for teaching. Buddhism emphasizes the interdependence of all things and beings. The Buddha was possibly the foremost teacher to point out that all existing species on earth - whether worms, plants, other creatures, mammals, or birds - comprise multiple sub-species, whereas all human beings belong to a single species. The Buddha's teachings can be regarded as a science of human living and are more relevant today than they were about 2,600 years ago. In Thailand, monks live in a natural environment, practicing Dhamma in harmony with nature. They grow fruit trees and plants, making their surroundings peaceful and healthy places to stay and practice meditation. The education system during the Buddhist period was effective not only in nurturing the spiritual growth of students but also in fostering their personality development. Even today, it is essential that students follow Buddhist education, and countries should take inspiration from it to redefine their education systems for the 21st century.

XI. BUDDHISM FOR PEACE

Today, Buddhist monks are serving society differently. Social coherence and worldwide harmony are the duty of every one of us living on this planet. Buddhist monks can play their part and take responsibility. Not only in India, China, and other countries in Asia, but also in Africa, Europe, the Americas, and Australia, the Buddhist knowledge system is playing a significant role in contributing to widespread harmony and peace. There is tremendous potential in the *saṅgha* and monks to help others in times of distress. Monks can use psychological tools to help ordinary people develop superior qualities. The Buddha himself never criticized non-spiritual wealth. In Buddhist suttas and scriptures, it is written that the Buddha asserted that if wealth is honestly earned, it gives a person confidence, honor, pride, dignity, and the ability to do good. Monks who help others achieve success with the right understanding are following the path of their teacher for the benefit and welfare of humanity. The Buddha and his teachings have transcended all racial as well as natural borders of the modern world. His Eightfold Path is equally important today as it was 2,500 years ago. These are the guiding principles of our daily lives.

²³ Zana, V. T. (2023): p. 39-49.

The COVID-19 pandemic has shown all human beings the uncertainties, intricacies, and complications of today's world, so the right effort is necessary. While utilizing resources, people are exploiting and overusing them, forgetting that our actions have consequences - therefore, right understanding is the need of the hour. To overcome negativity, we must follow the path of meditation as prescribed in Buddhist scriptures. With the right intentions, including the right speech, we can live a peaceful life free of war and conflict if we practice right communication. With ethical conduct in the contemporary world, we can work toward a life free from nuclear weapons. We should refrain from using harsh words and instead choose gentle speech, which will build trust and respect for one another while also reducing conflicts. To live peacefully in today's stressful world, it is essential to follow the right intention, purify our minds and thoughts, and act accordingly. We can achieve a harmonious society by engaging in the right actions, such as respecting all forms of life, fostering harmonious relationships, and honoring others' belongings. Ethical means of earning constitute the right livelihood. For the moral development of society, we should earn a livelihood based first on our talents and second without exploiting or harming other living beings. For spiritual growth, right effort and right mindfulness are extremely important. Presence of mind is a top quality that every one of us needs. In today's fast-paced and busy lives, concentration is vital. Only a clear and calm mind can focus effectively and reduce suffering. In the modern world, people are adopting various forms of meditation, and practicing yoga is one of them. Right concentration provides peace, mental stability, and mental clarity. In today's world, no other teaching method is more practical than Buddhist pedagogy. The fundamental goal of Buddhism is peace, and the Eightfold Path contributes to maintaining peace in the world.

XII. BUDDHIST SOLUTIONS FOR TODAY

For common people, the Buddhist knowledge system provided a standard for morality through five principles: (1) Refraining from taking life, which means not killing any living being. (2) Refraining from taking what is not given, which means not stealing from anyone. (3) Refraining from the misuse of the senses, which means not indulging excessively in sensual pleasures. (4) Refraining from wrong speech, which means not lying or gossiping. (5) Refraining from intoxicants that cloud the mind.²⁴ The most important characteristic that differentiates the Buddha from all other teachers is that he was a common man. He was connected neither to any spiritual power nor to any god. He was also neither an incarnation nor a prophet. He was a human being, and all his achievements were the result of his efforts and understanding as a human being. There is a saying of the Buddha: It does not matter if a person possesses an entire mountain of gold - it will never be sufficient to completely satisfy their needs and desires. Moral structures in the contemporary world, such as environmental responsibility, religious tolerance, and human rights,

²⁴ Harvey Peter (2000): p. 67.

are essential elements of cooperation for a sustainable future. They must be maintained through more optimistic, principled values and a novel approach to thinking.²⁵ The Buddha himself was not in favor of blind followers; he wanted people to think with mindfulness and wisdom. Buddhism, both as a teaching and as a way of life, is a principled path where equality, humanism, harmony, and honesty prevail.²⁶ Through his own mental and intellectual resilience, he attained nibbāna. He never claimed to be a protector who could save others. He was a pure soul who learned through his own experiences, and his teachings were conveyed in simple language for common people.²⁷ The world is indebted to the Buddha for the rise of rationalism as a protest against religious superstitions. It was he who emancipated people from the control of priests. It was he who first showed the way to free humanity from the grip of hypocrisy and religious dictatorship.²⁸

There can never be a war in the name of Buddhism. No ravaged country has ever borne witness to the prowess of the followers of the Buddha; no murdered men have poured out their blood on their hearthstones, killed in his name; no ruined women have cursed his name to high heaven. He and his faith are clean of the stain of blood. He was the preacher of the Great Peace, of love, of charity, of compassion, and so clear is his teaching that it can never be misunderstood.²⁹

XIII. CONCLUSION

This paper has demonstrated that an inclusive, compassionate, and non-violent Buddhist knowledge system offers a profound framework for addressing contemporary challenges and building a sustainable future. Integrating Buddhist educational principles with modern pedagogical approaches underscores the transformative power of Buddhist philosophy - not only in guiding individual spiritual development but also in fostering social, environmental, and political harmony. At its core, the Buddhist system emphasizes the cultivation of inner wisdom, mindfulness (*sati*), and compassion (*karuṇā*). These values, rooted in the teachings of the Buddha - most notably through the Four Noble Truths and the Noble Eightfold Path - provide both a means for personal liberation and a blueprint for ethical living. By advocating for self-observation and the disciplined practice of *vipassanā bhāvanā*, Buddhism equips individuals with the tools to discern what is wholesome and to transform suffering into opportunities for growth.

Moreover, the Buddhist approach to education, as evidenced by its historical development in monasteries and sanghas, remains relevant today. It fosters a spirit of inclusivity and equality by transcending traditional barriers of caste and social status. The commitment to nonviolence (*ahiṃsā*) and

²⁶ Dhammananda (1994): p. 5.

²⁷ Piyadassi (1995): p. 20 - 22.

²⁸ Dhammananda (1994): p. 5.

²⁹ Fielding, Hall H (1898): p. 88 - 89.

mutual respect, core to Buddhist ethics, creates a nurturing environment where diverse communities can coexist and thrive. Such a model of education not only contributes to individual well-being but also strengthens societal resilience by promoting ethical conduct and collaborative problem-solving. In an era marked by environmental degradation, social inequities, and geopolitical uncertainties, the Buddhist knowledge system offers valuable insights for sustainable development. Its emphasis on interdependence (*pratītyasamutpāda*) and holistic growth underscores the idea that true progress arises when personal transformation and collective responsibility are harmoniously integrated. The practices of mindfulness and ethical living, as advocated in Buddhist scriptures, provide a pathway toward reducing conflicts and nurturing a culture of peace and mutual understanding. Ultimately, this study calls for a renewed engagement with Buddhist teachings as a dynamic and relevant paradigm for modern education and social development. By embracing the principles of compassion, wisdom, and mindful awareness, societies can lay the groundwork for a future defined by peace, sustainability, and shared prosperity.

THE INTERSECTION OF BUDDHIST TEACHINGS AND MODERN EDUCATION: A PATH TO COMPASSIONATE LEADERSHIP

Ven. Sanjib Barua (Phra Somochitto)*

Abstract:

The need for compassionate and visionary leadership has never been more urgent in a world marked by complex challenges and ethical dilemmas. This article explores the transformative potential of integrating Buddhist teachings into modern education to cultivate empathetic, moral, and effective leaders. Drawing from the core principles of Buddhism - mindfulness, compassion, and wisdom - it examines how these timeless values can address critical gaps in current educational paradigms, which often emphasize competition and material success over emotional intelligence and moral responsibility. The article discusses how Buddhist principles can be applied in educational institutions and how mindfulness, compassion-based curricula, and ethical reasoning can nurture both educators and students. By sharing case studies of successful implementations and insights from neuroscience and psychology, it advocates for their use in emotional regulation, ethical decision-making, and interconnected leadership. It also discusses the accompanying challenges, including potential cultural challenges and the need for inclusivity. Additionally, it offers a roadmap for developing education systems that can inspire compassionate leadership at all levels. By drawing on the hallmarks of Buddhist teachings and their alignment with the needs of contemporary education, this article envisions an era in which leaders possess the clarity, resilience, and ethical foundation needed to navigate complexities with true devotion to the common good.

Keywords: *Buddhist Teachings, Modern Education, Compassionate Leadership, Mindfulness in Education.*

I. INTRODUCTION

Leadership is crucial in tackling the intricate difficulties of the 21st century. The swift progression of technology, globalization, and societal turmoil necessitates leaders capable of maneuvering through uncertainty with fortitude and lucidity. Traditional leadership paradigms frequently emphasize profit, authority, or efficiency at the expense of ethical and compassionate decision-making. This has led to considerable problems, including a worldwide confidence deficit in institutions, increasing inequality, and environmental deterioration. Compassionate leadership has become a vital alternative, grounded in emotional intelligence and ethical responsibility. This leadership prioritizes serving others, encouraging collaboration, and advancing sustainable growth. However, realizing this transition necessitates a fundamental change in the education and development of leaders.¹

Education is the forge in which future leaders are created. It provides individuals with the knowledge, skills, and perspectives necessary to address the concerns of society. Conventional education systems prioritize quantifiable outcomes such as grades, employment rates, or financial success over intangible attributes like empathy, ethical reasoning, and mindfulness. Consequently, numerous leaders possess strong technical skills but lack the readiness to navigate the moral and emotional intricacies of authentic leadership.² Multiple studies highlight the significance of emotional intelligence and ethical thinking in leadership. Goleman's study determined that emotional intelligence is a more dependable predictor of leadership performance than conventional metrics like IQ or technical abilities.³ Moreover, research from the Harvard Graduate School of Education emphasizes the need for curricula incorporating cognitive and ethical development to equip students for leadership in diverse, interconnected contexts.⁴

Buddhism, with its 2,500-year legacy, provides a significant framework for fostering compassion, mindfulness, and wisdom - attributes vital for effective leadership. The Four Noble Truths, the Eightfold Path, and the *Bodhisattva* ideal offer enduring perspectives on suffering the interdependence of all beings, and the ethical tenets that underpin a purposeful existence. Mindfulness, a fundamental aspect of Buddhist practice, is increasingly adopted in modern

education and leadership development. Programs like Mindfulness-Based Stress Reduction (MBSR) and Mindful Leadership Training (MLT) have demonstrated the transformative efficacy of mindfulness in alleviating stress, enhancing concentration, and cultivating compassion in personal and professional settings. Research conducted at Stanford University has shown that mindfulness techniques markedly enhance participants' empathy and emotional regulation, which are crucial attributes of leadership.⁵ Buddhist teachings underscore the significance of servant leadership, exemplified by the *Bodhisattva* ideal. A *Bodhisattva* seeks to mitigate the suffering of others, placing service above self-interest. This ideology aligns with contemporary notions of transformative leadership, which emphasize collective welfare and the advancement of team members.

Thesis Statement

This article argues that integrating Buddhist teachings into modern education can address critical gaps in current leadership paradigms. By cultivating mindfulness, compassion, and ethical reasoning, educators can nurture leaders who are not only skilled and knowledgeable but also deeply empathetic and committed to the greater good. To sum up this exploration, the article addresses several key questions: (1) How can Buddhist principles such as mindfulness and compassion be incorporated into modern educational systems? (2) What evidence supports the effectiveness of Buddhist-inspired practices in fostering leadership qualities? (3) What challenges and criticisms might arise when integrating spiritual teachings into secular education? (4) How can combining Buddhist teachings and modern education create a generation of leaders equipped to address global challenges?

II. FOUNDATIONS OF BUDDHIST TEACHINGS

Buddhism, one of the world's oldest spiritual traditions, offers profound insights into human behavior, ethics, and the cultivation of a meaningful life. Rooted in the teachings of Siddhartha Gautama, the Buddha, these principles are as relevant today as they were over 2,500 years ago.⁶ This section explores the core teachings of Buddhism and their application to leadership development, focusing on the Four Noble Truths, the Eightfold Path, and the concept of the *Bodhisattva*.

2.1. The Four Noble Truths: A foundation for understanding leadership challenges

The Truth of Suffering (*Dukkha*): Life is inherently unsatisfactory, characterized by pain, change, and impermanence. In *Dhammacakkappavattana Sutta* (SN.56.11, *Saṃyutta Nikāya*) - "Now this, bhikkhus, is the noble truth

⁵ Margaret E. Kemeny et al. (2012), "Contemplative/Emotion Training Reduces Negative Emotional Behavior and Promotes Prosocial Responses", *Emotion* 12, no. 2: 509–17, <https://doi.org/10.1037/a0026118>.

⁶ Harvey, P., (2017). *Common Buddhist text: Guidance and insight from the Buddha*. UNESCO, p. 9 – 10.

of suffering: birth is suffering, aging is suffering, illness is suffering, death is suffering; union with what is displeasing is suffering; separation from what is pleasing is suffering; not to get what one wants is suffering; in brief, the five aggregates subject to clinging are suffering.”⁷ The Truth of the Cause of Suffering (*Samudaya*): Craving (*taṇhā*) and attachment to transient things are the root causes of suffering. In *Dhammacakkappavattana Sutta* (SN.56.11, *Samyutta Nikāya*) - “Now this, bhikkhus, is the noble truth of the origin of suffering: it is this craving that leads to renewed existence, accompanied by delight and lust, seeking delight here and there; that is, craving for sensual pleasures, craving for existence, craving for extermination.”⁸ The Truth of the End of Suffering (*Nirodha*): Liberation from suffering is possible by relinquishing attachment and craving. In *Dhammacakkappavattana Sutta* (SN.56.11, *Samyutta Nikāya*) - “Now this, bhikkhus, is the noble truth of the cessation of suffering: it is the remainderless fading away and cessation of that same craving, the giving up and relinquishing of it, freedom from it, nonattachment.”⁹ The Truth of the Path to the End of Suffering (*Magga*): The Eightfold Path provides a practical guide for achieving liberation.¹⁰ In *Dhammacakkappavattana Sutta* (SN.56.11, *Samyutta Nikāya*) - “Now this, bhikkhus, is the noble truth of the way leading to the cessation of suffering: it is this Noble Eightfold Path; that is, right view, right intention, right speech, right action, right livelihood, right effort, right mindfulness, right concentration.”¹¹ From a leadership perspective, the Four Noble Truths encourage self-awareness and reflection. Leaders can use these truths to recognize and address the sources of dissatisfaction within themselves and their organizations. For instance, a leader facing organizational challenges may reflect on how attachment to outdated practices or unproductive habits contributes to collective inefficiency. By fostering adaptability and encouraging innovation, they can move toward sustainable solutions.¹²

2.2. The Eightfold Path: Ethical and practical guidance for leadership

The Eightfold Path provides actionable steps to cultivate ethical conduct, mental discipline, and wisdom. It comprises three key dimensions: Ethical Conduct (*Sīla*): Right Speech, Right Action, and Right Livelihood. According to the Buddhist Canon in *Dhammacakkappavattana Sutta* (SN 56.11, *Samyutta Nikāya*) - “And what, bhikkhus, is the noble truth of the way leading to the cessation of suffering? It is this Noble Eightfold Path; that is,

right view, right intention, right speech, right action, right livelihood, right effort, right mindfulness, right concentration.”¹³ To more detailed Discussion of Ethical Conduct from *Mahācattārīsaka Sutta* (MN.117, *Majjhima Nikāya*) - “And what is right speech? Refraining from lying, refraining from divisive speech, refraining from abusive speech, and refraining from idle chatter: this is called right speech.”¹⁴ Leaders guided by ethical conduct prioritize honesty, inclusivity, and fairness. Right Speech, for example, advocates communication free of deceit or harm a principle highly relevant to conflict resolution and team building. Mental Discipline (*Samādhi*): Right Effort, Right Mindfulness, Right Concentration. According to the Buddhist Canon in *Satipatṭhāna Sutta* (MN.10, *Majjhima Nikāya*) - “What is right mindfulness? Here, bhikkhus, a bhikkhu dwells contemplating the body in the body, ardent, clearly comprehending, and mindful, having put away covetousness and grief for the world. He dwells contemplating feelings in feelings... mind in mind... phenomena in phenomena.”¹⁵ Mental discipline fosters resilience and focus. Mindfulness practices help leaders manage stress, maintain clarity, and respond thoughtfully to challenges. Research by Kabat-Zinn demonstrates how mindfulness improves cognitive performance and emotional regulation, key traits for leadership.¹⁶ Wisdom (*Paññā*): Right View, Right Intention. According to the Buddhist Canon in *Mahācattārīsaka Sutta* (MN 117, *Majjhima Nikāya*) - “And what is the right view? Knowledge of suffering, knowledge of the origin of suffering, knowledge of the cessation of suffering, and knowledge of the way leading to the cessation of suffering: this is called the right view.”¹⁷ Wisdom enables leaders to adopt a broader perspective, aligning their decisions with long-term goals and ethical considerations. This framework encourages leaders to act with compassion and altruism rather than self-interest. A leader who embodies the Eightfold Path exemplifies integrity, mindfulness, and insight. These qualities enhance personal leadership capacity and inspire trust and loyalty among team members.

2.3. Buddhist psychology and emotional intelligence

Buddhist ideas on the mind provide a great understanding of emotional

control a pillar of good leadership. By using mindfulness, leaders develop self-awareness and can thus recognize and control their emotions. Popularized by Goleman, emotional intelligence connects with Buddhist ideas by stressing self-awareness, empathy, and interpersonal skills as essential for good leadership. Programs based on mindfulness like those run by Google's Search Inside Yourself Leadership Institute (SIYLI) show how these techniques improve team interactions and decision-making. Studies of mindfulness-practicing leaders reveal that they are more suited to control stress, facilitate good company culture, and communicate effectively.¹⁸

2.4. Historical examples of Buddhist leadership

Throughout history, Buddhist leaders have demonstrated the practical application of these teachings. King Ashoka (268–232 BCE): After seeing the destruction that war caused, Ashoka became a Buddhist and transformed his rule into one characterized by compassion and ethical government. He advocated for nonviolence, religious tolerance, and social welfare, establishing a model for ethical leadership throughout his life.¹⁹ His Holiness the Dalai Lama: In addition to campaigning for human rights, environmental sustainability, and peace, the Dalai Lama is a model of compassionate leadership. Because of his emphasis on global ideals and interconnection, he has inspired leaders from a wide variety of cultures and businesses.²⁰

2.5. The relevance of Buddhist teachings in contemporary leadership

In the modern era, the relevance of Buddhist teachings extends beyond spiritual practice to influence leadership development. The increasing adoption of mindfulness practices in corporate, educational, and governmental settings highlights their universal applicability. For instance, programs such as the United Nations "Gross National Happiness" initiative, inspired by Bhutan's Buddhist-informed governance, illustrate how these principles can inform global policy. Similarly, mindfulness-based interventions in schools, like the Mind-Up program, show how Buddhist-inspired practices cultivate emotional intelligence and ethical awareness in students preparing them for future leadership roles.²¹ Buddhist ideas offer timeless wisdom for modern leadership. By practicing mindfulness, ethics, and compassion, leaders can foster trust, collaboration, and sustainable development. These values may alter leadership education to produce leaders with integrity, insight, and a commitment to the common good in the face of unprecedented global problems.

III. MODERN EDUCATION AND ITS CHALLENGES

Education is a pillar of society. It forms the basis of personal, economic, and leadership development, as well as knowledge. Still, the present educational paradigms, mostly created by industrial and technological revolutions, have numerous important problems. These difficulties limit personal potential and fail to equip students for the complexity of leadership in a globalized society. (1) Current Paradigms of Modern Education: Modern education systems are largely influenced by the industrial-era model, prioritizing efficiency, standardization, and measurable outcomes. While this approach has succeeded in producing skilled workers for the economy, it often falls short in fostering critical thinking, emotional intelligence, and ethical decision-making qualities essential for compassionate and effective leadership. (2) Focus on Cognitive and Technical Skills: Most curricula prioritize cognitive skills such as mathematics, science, and language while diminishing the significance of emotional and ethical development. This method frequently leads to students succeeding in technical disciplines while encountering difficulties in interpersonal connections, conflict resolution, and ethical challenges in practical situations. (3) Standardized Testing and Competition: The dependence on standardized testing promotes rote memorization while inhibiting creativity and critical analysis. Competitive settings promote individualism, frequently undermining teamwork and empathy. Kohn's research indicates that competitive academic environments might elevate anxiety and diminish intrinsic motivation in pupils.²² Material Success as the Ultimate Goal: Educational systems often associate success with financial prosperity and career accomplishments. This limited definition of success frequently overlooks the significance of personal fulfillment, ethical behavior, and contributions to social welfare.

3.1. Neglect of emotional and ethical development

One of the most significant shortcomings of modern education is the lack of emphasis on emotional intelligence (EI) and ethical reasoning. Emotional Intelligence: Emotional intelligence, as defined by Goleman, is the capacity to identify, comprehend, and regulate one's own emotions while empathizing with others, and is an essential attribute for effective leadership.²³ Notwithstanding its significance, emotional intelligence is infrequently emphasized in the conventional curriculum. Brackett discovered that children with elevated emotional intelligence had superior academic performance, enhanced social skills, and a reduced likelihood of experiencing anxiety or sadness.²⁴ Ethical Reasoning: Ethical decision-making is a cornerstone of compassionate

²² Kohn, A., (1999). *Punished by rewards*. Houghton Mifflin Co., p. 20. Available at: http://archive.org/details/punishedbyreward00kohn_0.

²⁴ Marc A. Brackett, Susan E. Rivers, and Peter Salovey, 'Emotional Intelligence: Implications for Personal, Social, Academic, and Workplace Success', *Social and Personality Psychology Compass* 5, no. 1 accessed on [January 2011]: 3, accessed at: <https://doi.org/10.1111/j.1751-9004.2010.00334.x>.

leadership, yet it is often absent from educational frameworks. Many institutions fail to provide students with the tools to navigate moral dilemmas, leaving them ill-prepared for leadership roles that require integrity and ethical judgment.

3.2. Challenges in leadership development

Modern education systems struggle to produce leaders equipped for the complexities of the 21st century. Globalization and Cultural Competence: The interconnectedness of the contemporary world necessitates that leaders possess cultural competence, adaptability, and collaboration skills. Nevertheless, educational systems frequently neglect to emphasize the cultivation of global consciousness and cross-cultural comprehension. The OECD report highlighted the necessity for education to foster global citizenship and intercultural discussion; nevertheless, such activities are still restricted in several curricula.²⁵ Shortcomings in Real-World Applications: Traditional education often prioritizes theoretical knowledge over practical applications, leaving students unprepared for real-world challenges. Experiential learning opportunities, such as internships and community projects, are frequently underfunded or inaccessible to many students.

Ethical Failures in Leadership: High-profile cases of corporate scandals and political corruption highlight the failure of current systems to instill ethical leadership values. Without a focus on moral development, there is a risk of perpetuating cycles of unethical behavior in leadership roles.

3.3. The impact of stress and mental health challenges

Modern education systems often place undue stress on students, contributing to widespread mental health issues. Academic Pressure: Intense academic pressure, driven by competition and high expectations, has been linked to rising levels of anxiety, depression, and burnout among students. A study by the American Psychological Association found that nearly 45% of high school students in the U.S. experienced chronic stress related to academic demands.²⁶ Lack of Support Systems: Many schools and universities lack adequate mental health resources to support students. Educators themselves often lack training in recognizing and addressing mental health concerns, exacerbating the problem. Digital Distractions and Overload: The rise of digital technologies has introduced new challenges, including reduced attention spans, increased screen time, and exposure to cyberbullying. While technology offers significant educational benefits, its misuse can undermine focus, emotional well-being, and social interactions.

3.4. Emerging trends and opportunities

Despite these challenges, there are emerging trends and innovative approaches that seek to address the limitations of traditional education. Holistic Education Models: Holistic education, which emphasizes the development of the whole person's mind, body, and spirit, is gaining traction. Examples include the Waldorf and Montessori education systems, which prioritize creativity, emotional intelligence, and ethical reasoning alongside academic learning.²⁷ Mindfulness in Schools: Initiatives such as Mind-Up and Calm Schools Initiative have incorporated mindfulness practices into educational settings, aiding children in cultivating attention, emotional regulation, and resilience. Research conducted by Schonert-Reichl indicated that mindfulness interventions in educational settings enhanced students' emotional well-being and academic achievement.²⁸

3.5. Global initiatives for education reform

International organizations like UNESCO and UNICEF advocate for education systems that promote equity, inclusivity, and global citizenship. Bhutan's Gross National Happiness (GNH) framework integrates Buddhist values into education, emphasizing the well-being of students and their communities.²⁹ Modern education struggles to prepare students for leadership in a complicated and linked society. Cognitive talents and measurable accomplishments typically trump emotional intelligence, ethical reasoning, and mental wellness. To bridge these gaps and build compassionate and competent leaders, education systems must integrate holistic approaches that promote personal growth, ethical development, and global awareness. Education may develop leaders who are knowledgeable, skilled, empathic, ethical, and dedicated to the greater good by embracing transformative change.

IV. THE INTERSECTION OF BUDDHIST TEACHINGS AND MODERN EDUCATION

As education evolves to meet the challenges of a globalized, interconnected world, integrating the wisdom of ancient traditions offers profound opportunities. Buddhist teachings, with their emphasis on mindfulness, ethical conduct, and compassion, provide a rich foundation for transforming modern education. By incorporating these principles, educational systems can cultivate leaders who are not only skilled and knowledgeable but also compassionate, self-aware, and ethically grounded. Mindfulness: Bridging Contemplation and Learning Mindfulness, a fundamental aspect of Buddhist practice, has

²⁷ OECD. (2024). *Preparing our youth for an inclusive and sustainable world: The OECD PISA global competence framework, assessments and findings*. ResearchGate. p. 34.

²⁹ UNESCO. (2024). *Education for sustainable development: A roadmap*. p. 35.

garnered considerable popularity in contemporary educational environments. Mindfulness is defined as the practice of maintaining present-moment awareness without judgment³⁰, promoting focus, emotional regulation, and overall well-being qualities vital for both students and instructors. Mindfulness in the Classroom: Initiatives such as Mind-Up and Mindful Schools have effectively integrated mindfulness techniques into educational curricula, enhancing emotional resilience and cognitive concentration among students. Research conducted by Schonert-Reichl indicates that students participating in mindfulness activities show greater attention, decreased stress, and heightened prosocial behaviors.³¹ Educators: Educators who engage in mindfulness exhibit reduced burnout and enhanced job satisfaction. Mindful teaching approaches provide a compassionate and inclusive classroom atmosphere, advantageous for both students and educators.³² Mindfulness and Leadership: Applying mindfulness to leadership development programs fosters introspective, compassionate, and adept leaders who make judicious judgments in high-pressure situations. Examples include the Search Inside Yourself Leadership Institute (SIYLI), which combines mindfulness with emotional intelligence training to cultivate effective leaders.

4.1. Ethical education: Building a moral compass

Buddhist teachings on ethics, encapsulated in principles such as the Five Precepts and the Eightfold Path, provide a valuable framework for ethical education. The Five Precepts serve as a foundational ethical code for lay practitioners. They are found in several places in the *Pāli Canon*, including the *Sigalovāda Sutta*. In *Sigalovāda Sutta* (DN.31, *Dīgha Nikāya*), “There are these five gifts, young householder. What five? The gift of abstaining from taking life, the gift of abstaining from taking what is not given, the gift of abstaining from sexual misconduct, the gift of abstaining from false speech, and the gift of abstaining from intoxicating drinks and drugs that lead to carelessness. These are the five gifts, the five great gifts.”³³ These teachings emphasize integrity, non-harm, and accountability, aligning closely with the goals of character education in schools.

Ethics as a Core Curriculum Component: Incorporating ethical reasoning into curricula encourages students to consider the moral implications of their actions. Case studies and role-playing exercises based on Buddhist ethical

³³ Walshe, M. O'C. (2012). *The long discourses of the Buddha: A translation of the Dīgha Nikāya*. p. 461.

principles can help students navigate complex dilemmas, fostering critical thinking and moral sensitivity. Developing Ethical Leadership: Leadership education often neglects the cultivation of ethical values, focusing instead on technical skills and strategic thinking. Integrating Buddhist ethics into leadership training programs prepares students to lead with compassion and a commitment to the greater good. Real-world Applications: Bhutan's Gross National Happiness framework, inspired by Buddhist values, illustrates how ethical principles can guide policymaking and governance. Schools adopting this approach have reported increased student engagement, emotional well-being, and community involvement.

4.2. Emotional intelligence: Enhancing self-awareness and empathy

The Buddhist emphasis on self-awareness and compassion aligns seamlessly with emotional intelligence (EI) principles. Buddhist Psychology and EI: Buddhist teachings on the mind, such as the cultivation of metta (loving-kindness) and karuna (compassion), parallel the key components of EI: self-awareness, self-regulation, motivation, empathy, and social skills. Mindfulness practices enhance EI by helping individuals recognize and manage their emotions while fostering empathy for others.³⁴ EI in Education: Programs like Social-Emotional Learning (SEL) integrate EI into school curricula, teaching students to build healthy relationships, manage conflicts, and make responsible decisions. Studies have shown that SEL programs reduce bullying, improve academic performance, and enhance overall student well-being.³⁵ Cultivating Compassionate Leaders: Leadership programs inspired by Buddhist practices prioritize empathy and compassion as essential traits for effective leadership. The Dalai Lama's emphasis on "secular ethics" highlights the universal applicability of these principles, transcending cultural and religious boundaries.³⁶

4.3. Holistic leadership development

Buddhism's holistic approach to personal and spiritual growth offers valuable insights for leadership development. (1) The *Bodhisattva* ideal, characterized by selfless service and a commitment to alleviating the suffering of others, resonates with modern theories of servant leadership. Leaders inspired by this ideal prioritize the well-being of their teams and communities, fostering trust and collaboration.³⁷ (2) The Buddhist concept of *pratitya-samutpada* (dependent origination) underscores the interconnected nature

³⁴ Goleman, D., 1995. *Emotional intelligence*. Bantam Books, p. 121.

³⁶ Dalai Lama, H. H. (1999). *Ethics for the new millennium*. p. 45.

³⁷ Greenleaf, R. K. (1977). *Servant leadership: A journey into the nature of legitimate power and greatness*. p. 67.

of existence,³⁸ encouraging leaders to adopt a systems-thinking approach. This perspective helps leaders understand the broader implications of their decisions, promoting sustainability and social responsibility. (3) Meditation practices, rooted in Buddhist traditions, enhance focus, resilience, and decision-making skills. Corporate programs such as Google's Search Inside Yourself and Aetna's mindfulness initiatives demonstrate the transformative potential of these practices in leadership contexts.

4.4. Case studies and examples

(i) Mindfulness in Higher Education: Institutions like the University of Massachusetts Medical School's Center for Mindfulness have pioneered the integration of mindfulness into medical education, improving students' stress management and patient care skills. The University of Virginia's Contemplative Sciences Center explores the intersection of mindfulness, education, and leadership.

(ii) Ethical Leadership in Practice: Companies like Patagonia and Unilever exemplify ethical leadership inspired by mindfulness and sustainability principles. Their success underscores the value of aligning business practices with ethical and compassionate values.

(iii) Education Systems Inspired by Buddhist Values: Bhutan's education policies, guided by the Gross National Happiness framework, emphasize holistic development, integrating academic, emotional, and ethical learning.

4.5. Challenges and Considerations

While the integration of Buddhist teachings into modern education offers significant benefits, it is not without challenges: (1) Cultural Sensitivity: Implementing Buddhist-inspired practices requires careful consideration of cultural and religious diversity to ensure inclusivity. (2) Resistance to Change: Traditional education systems may resist the incorporation of contemplative practices, viewing them as non-essential or incompatible with existing structures. (3) Scalability and Accessibility: Expanding mindfulness and ethical education programs requires resources and training that may not be readily available in all contexts.

4.6. Future directions

The intersection of Buddhist teachings and modern education holds immense potential for shaping compassionate, ethical leaders. Future efforts should focus on: (1) Research and Evidence-Based Practices: This involves conducting rigorous studies to measure the impact of mindfulness and ethical education on student outcomes and leadership development. (2) Policy Advocacy: Policymakers should be encouraged to prioritize holistic and contemplative education models in national curricula. (3) Collaborative Initiatives: Fostering partnerships between educators, researchers, and Buddhist organizations to develop innovative programs and resources.

³⁸ *The long discourses of the Buddha: A translation of the Dīgha Nikāya.* (trans), Walshe, M. O'C. (2012). p. 223.

Integrating Buddhist teachings into modern education offers a transformative path for cultivating leaders equipped to navigate the complexities of the 21st century. By emphasizing mindfulness, ethical reasoning, and emotional intelligence, these principles address critical gaps in traditional education systems, fostering compassionate, self-aware, and ethical individuals. As educational paradigms evolve, drawing inspiration from ancient wisdom can provide a profound foundation for a more inclusive, sustainable, and enlightened future.

V. PRACTICAL APPLICATIONS IN EDUCATIONAL SYSTEMS

The integration of Buddhist principles into modern educational systems provides a unique opportunity to address pressing challenges in education, such as emotional well-being, ethical reasoning, and leadership development. By combining ancient wisdom with contemporary pedagogical strategies, educators can create a more inclusive, compassionate, and effective learning environment.

5.1. Incorporating mindfulness practices in schools

Mindfulness is one of the most accessible and impactful Buddhist practices, with numerous applications in educational settings. **Mindfulness for Students:** Daily Mindfulness Practices: Incorporating short mindfulness sessions at the beginning or end of the school day helps students center their focus and manage stress. **Mindful Breathing Exercises:** Teaching students to use breathing techniques can enhance their concentration and emotional regulation during challenging tasks. **Mindful Movement:** Activities such as yoga or mindful walking foster a connection between the body and mind, reducing anxiety and improving physical health. **Mindfulness for Educators:** Providing mindfulness training for teachers equips them with tools to manage stress, prevent burnout, and cultivate empathy. Mindful teaching practices, such as active listening and compassionate communication, foster a positive classroom environment. Programs like CARE (Cultivating Awareness and Resilience in Education) have shown significant benefits in teacher well-being and student-teacher relationships. **Institutional Support:** Schools can dedicate spaces, such as “mindfulness rooms,” where students and staff can engage in quiet reflection or guided meditation. Integrating mindfulness into extracurricular activities, such as sports and arts, ensures a holistic approach to student development. **Ethics Education Inspired by Buddhist Teachings:** Ethical reasoning is a critical component of leadership and personal growth. Buddhist ethics provide a universal framework that can be adapted to diverse cultural and educational contexts. **Ethics as a Core Curriculum Component:** Developing standalone ethics courses based on principles like the Five Precepts can guide students in navigating moral dilemmas. The Buddha offers practical ethical guidance for laypeople in the *Sigalovāda Sutta*. It emphasizes responsibilities, virtues, and social ethics. According to *Sigalovāda Sutta* (DN.31, *Dīgha Nikāya*), “A noble disciple abstains from killing living beings, abstains from taking what is not given, abstains from misconduct in sensual pleasures, abstains from false speech, and abstains from alcoholic drink that

causes negligence. Such conduct gives rise to goodwill and respect in human society.”³⁹ Integrating ethical reasoning into existing subjects (e.g., using historical events to discuss ethical decision-making) broadens students’ understanding of moral complexities. Case Example: Schools adopting Bhutan’s Gross National Happiness framework teach students to value harmony, responsibility, and sustainability, resulting in higher levels of civic engagement and community well-being. Experiential Learning: Service-learning projects, such as volunteering in local communities, provide practical opportunities to apply ethical principles. Reflection exercises, where students analyze their experiences, and deepen their understanding of ethical behavior and interconnectedness. Ethics in Leadership Training: Leadership programs can incorporate case studies inspired by Buddhist parables, emphasizing selflessness, accountability, and compassion. Encouraging students to explore the impact of their decisions on others fosters a sense of global responsibility.

5.2. Fostering Emotional Intelligence (EI) through Buddhist practices

Buddhist teachings align closely with the components of emotional intelligence, such as self-awareness, empathy, and social skills. (1) Developing Self-Awareness: Guided meditation sessions that focus on introspection help students and educators identify their emotions and thought patterns. Journaling exercises, inspired by mindfulness practices, encourage self-reflection and emotional clarity. (2) Enhancing Empathy and Compassion: Practices like *metta* (loving-kindness meditation) cultivate empathy by encouraging individuals to wish happiness and well-being for themselves and others. Role-playing activities in classrooms can help students understand diverse perspectives, promoting inclusivity and reducing conflict. (3) Building Resilience and Stress Management Skills: Introducing Buddhist-inspired stress management techniques, such as mindful breathing and visualization, equips students to handle academic and personal pressures. Workshops on emotional regulation, grounded in Buddhist psychology, provide actionable strategies for managing anger, anxiety, and sadness. Evidence: Research by Brackett highlights the significant role of EI in academic success, mental health, and social relationships.⁴⁰

5.3. Integrating technology and Buddhist practices

Technology offers innovative ways to adapt Buddhist teachings to modern educational systems. (1) Mindfulness Apps: Apps like Headspace and Calm provide accessible resources for students and educators to practice mindfulness. Institutions can customize these platforms to align with their specific goals, such as stress reduction or leadership training. (2) Virtual Reality (VR) and Meditation: VR technology enables immersive meditation experiences, helping

³⁹ *The long discourses of the Buddha: A translation of the Dīgha Nikāya*. Walshe, M. O’C., (trans) (2012). Wisdom Publications, p. 463.

⁴⁰ Brackett, M. A., Rivers, S. E. & Salovey, P., (2007). Emotional intelligence. In: J. Cacioppo, L. Tassinary & G. Berntson, eds. *Handbook of psychophysiology*. Cambridge: Cambridge University Press, pp. 88 – 103.

students explore mindfulness in engaging ways. Research indicates that VR-based mindfulness programs can enhance focus and emotional well-being.⁴¹ (3) Online Learning and Ethical Education: E-learning platforms can host courses on Buddhist ethics and mindfulness, making these teachings accessible to a global audience. Interactive modules, including videos, quizzes, and discussion forums, facilitate deeper engagement with the material.

5.4. Case studies and real-world applications

(i) Mindfulness in Public Schools: The Mindful Schools program in California integrates mindfulness into K-12 education, with over 750,000 students benefiting from its initiatives.⁴² Evaluations reveal improved academic performance, reduced stress, and enhanced peer relationships.

(ii) Gross National Happiness (GNH) Education in Bhutan: Bhutan's education system incorporates Buddhist values to promote holistic development. Schools emphasize mindfulness, ethical reasoning, and sustainable living, preparing students to contribute meaningfully to society.

(iii) Contemplative Education at Naropa University: Naropa University in Colorado integrates Buddhist principles into its curriculum, offering programs in contemplative education, psychology, and leadership. Students report higher levels of self-awareness, compassion, and community engagement.

(iv) Spiritual Education at the University of the West: Provides a whole-person education, highlighting where the intellectual, spiritual, emotional, and creative converge. Delivers a strong liberal arts education that draws from Buddhist wisdom and strives toward a global perspective, to ensure that our graduates can compete and contribute to the modern world.

(v) Vietnam Buddhist University: The Vietnam Buddhist University in Ho Chi Minh City strives to build an advanced Buddhist educational environment and many other fields of study, contributing to the goal of improving people's knowledge, training human resources, linking the application of Buddha's teachings to life, and building leadership.

5.5. Challenges and Limitations

While the application of Buddhist teachings in education offers transformative potential, several challenges must be addressed: (1) Cultural and Religious Sensitivities: Ensuring inclusivity requires presenting Buddhist practices as secular tools rather than religious doctrines. Educators must respect

⁴¹ Durlak, J. A., Weissberg, R. P., Dymnicki, A. B., Taylor, R. D. & Schellinger, K. B., (2011). The impact of enhancing students' social and emotional learning: A meta-analysis of school-based universal interventions. *Child Development*, 82 (1), pp. 405 – 432. Available at: <https://doi.org/10.1111/j.1467-8624.2010.01564.x>.

⁴² Schonert-Reichl, K. A., Oberle, E., Lawlor, M. S., Abbott, D., Thomson, K., Oberlander, T. F. & Diamond, A., (2015). Enhancing cognitive and social-emotional development through a simple-to-administer mindfulness-based school program for elementary school children: A randomized controlled trial. *Developmental Psychology*, 51(1), pp. 52 – 66. Available at: <https://doi.org/10.1037/a0038454>.

diverse beliefs and adapt programs to local cultural contexts. (2) Resource Constraints: Implementing mindfulness and ethics programs requires investment in training, materials, and infrastructure. Funding disparities between schools can limit access to these initiatives. (3) Resistance to Change: Traditional educational systems may resist incorporating contemplative practices, viewing them as supplementary rather than essential. Advocacy and evidence-based research are crucial for overcoming skepticism. The practical application of Buddhist teachings in educational systems offers a transformative path for addressing the emotional, ethical, and leadership challenges of the 21st century. By integrating mindfulness, ethical reasoning, and emotional intelligence into curricula, educators can nurture students who are not only academically competent but also compassionate, self-aware, and ethically grounded. As these practices continue to evolve and expand, they hold the promise of shaping a more inclusive, equitable, and harmonious world.

VI. TRANSFORMING LEADERSHIP THROUGH BUDDHIST PRINCIPLES

Leadership in the 21st century requires an adaptive, compassionate, and inclusive approach to address the complexities of globalization, technological advancements, and socio-political challenges. Buddhist principles offer transformative frameworks that redefine leadership, prioritizing self-awareness, ethical decision-making, and a commitment to the collective well-being of all stakeholders.

6.1. The core tenets of Buddhist leadership

Buddhist principles can reshape leadership by integrating selflessness, mindfulness, and ethical conduct. These core tenets are pivotal in fostering a leadership style that values empathy, long-term vision, and collective progress. (1) Selflessness in Leadership: The Buddhist teaching of *anatta* (non-self) challenges the ego-driven leadership paradigm. Leaders inspired by this principle focus on serving the greater good rather than pursuing personal gains. For example, The Servant leadership model, coined by Robert Greenleaf, aligns closely with the Buddhist *Bodhisattva* ideal, where leaders prioritize the needs of others.⁴³ Modern leaders like Satya Nadella (CEO of Microsoft) emphasize empathy and collaboration over hierarchical dominance. (2) Mindfulness as a Leadership Practice: Mindfulness enables leaders to remain present, make deliberate decisions, and manage stress effectively. Regular meditation practices, as promoted in Buddhist teachings, help leaders cultivate clarity and resilience in high-pressure environments. Companies like Google have introduced mindfulness-based leadership programs through initiatives like the Search Inside Yourself Institute, yielding improved decision-making and interpersonal dynamics. (3) Ethical Leadership Guided by the Five Precepts: The Five Precepts serve as ethical guidelines for non-harming, honesty, and responsibility. According to *Dhammika Sutta* (*Snp.2.14*, *Sutta Nipāta*), “Let

⁴³ Greenleaf, R. K., (1977). *Servant leadership: A journey into the nature of legitimate power and greatness*. Paulist Press, p. 56.

him not destroy life nor cause others to do so. Let him not take what is not given, either in the village or the forest. With faith and restraint, let him avoid sexual misconduct. Let him not speak falsely, either for his own sake or for the sake of others. And let him not drink intoxicating drinks that lead to carelessness.”⁴⁴ Leaders adhering to these precepts prioritize transparency, accountability, and respect for all forms of life.

6.2. Fostering emotional intelligence through Buddhist teachings

Emotional intelligence (EI) is essential for effective leadership, encompassing self-awareness, self-regulation, empathy, motivation, and social skills. Buddhist teachings provide actionable practices to enhance these competencies. (1) Self-Awareness: Meditation and reflective journaling, inspired by Buddhist practices, help leaders recognize their emotions and thought patterns. Example: Ray Dalio, founder of Bridgewater Associates, attributes his leadership success to regular meditation, which enhances his self-awareness and decision-making. (2) Empathy and Compassion: Metta (loving-kindness meditation) trains leaders to cultivate unconditional positive regard for others, reducing workplace conflict and fostering collaboration. Research by Boyatzis and McKee highlights that compassionate leaders inspire greater loyalty and productivity among teams.⁴⁵ (3) Resilience and Stress Management: Leaders can use mindfulness-based stress reduction (MBSR) techniques to handle workplace challenges. Studies by Kabat-Zinn demonstrate that MBSR programs improve psychological well-being and resilience, crucial traits for leaders in volatile environments.⁴⁶

6.3. Buddhist-inspired leadership models

(i) The *Bodhisattva* Leadership Paradigm: A *Bodhisattva* is committed to alleviating the suffering of others while striving for personal development. Application in Leadership: Encouraging participatory decision-making processes. Addressing systemic inequalities by prioritizing inclusive policies and practices. For example Jacinda Ardern, former Prime Minister of New Zealand, exemplified compassionate leadership through her response to the Christchurch mosque shootings, focusing on empathy and unity.

(ii) The Four Divine Abodes (*Brahmaviharas*) in Leadership: These principles of lovingkindness (*metta*), compassion (*karuna*), sympathetic joy (*mudita*), and equanimity (*upekkha*) serve as a framework for holistic leadership. Practical Applications: *Metta*: Building trust and goodwill within teams; *Karuna*: Addressing employee well-being during crises; *Mudita*: Celebrating collective achievements; *Upekkha*: Maintaining balance and

⁴⁴ *The group of discourses (Sutta-Nipāta)*. Norman, K. R., (trans.) (1992). Pali Text Society Translation Series, No. 45. Oxford: Pali Text Society, p. 59.

⁴⁵ Boyatzis, R. E., (2005). *Resonant leadership: Renewing yourself and connecting with others through mindfulness, hope, and compassion*. Harvard Business School Press, pp. 30 – 35. Available at: <http://archive.org/details/resonantleadersh0000boya>.

⁴⁶ Kabat-Zinn, J., (1990). *Full catastrophe living: Using the wisdom of your body and mind to face stress, pain, and illness*. Delacorte Press, p. 66.

impartiality in decision-making.

6.4. Educational pathways for leadership development

Integrating Buddhist principles into leadership training programs ensures a steady pipeline of compassionate and ethical leaders.

6.4.1. University Leadership Programs

Institutions like Harvard and Stanford have introduced mindfulness and ethical reasoning courses in their leadership curricula. Naropa University offers programs explicitly based on contemplative education, blending Buddhist principles with leadership training. The University of the West provides a whole-person education in a context informed by Buddhist wisdom and values and facilitates cultural understanding and appreciation between East and West. More examples are Mahachulalongrajavidyalaya University (MCU), Vietnam Buddhist University, etc. Buddhist principles provide a transformative lens for leadership in an increasingly complex and interconnected world. By emphasizing self-awareness, ethical reasoning, and compassion, these teachings offer practical tools for developing leaders who are not only effective but also deeply committed to the well-being of their teams, organizations, and the planet. As these principles continue to be integrated into leadership training and practice, they hold the potential to redefine the very essence of leadership in the 21st century.

6.4.2. Challenges and criticisms

The integration of Buddhist teachings into modern education and leadership has garnered significant interest for its potential to address contemporary challenges. However, like any paradigm shift, it faces a range of challenges and criticisms. These issues arise from cultural, practical, and conceptual dimensions, which need to be acknowledged and addressed to fully harness the benefits of Buddhist principles in these domains.

6.4.3. Cultural and religious sensitivities

One of the primary challenges is navigating the cultural and religious sensitivities associated with introducing Buddhist teachings into secular contexts. While many practices, such as mindfulness, have been secularized, their Buddhist origins can still provoke resistance, particularly in regions where religion in public institutions is contested. Critics argue that integrating such practices risks blurring the lines between secular education and religious indoctrination.⁴⁷ For instance, in multicultural settings, some individuals may perceive these teachings as imposing a specific worldview. This concern highlights the importance of framing Buddhist-inspired practices as universal and secular tools for personal and professional development rather than promoting them as religious doctrines. Careful adaptation and inclusive dialogue are crucial for ensuring acceptance across diverse cultural and religious contexts.

⁴⁷ Purser, R., (2019). *McMindfulness: How mindfulness became the new capitalist spirituality*. Watkins Media Limited, p.77.

6.4.4. Overemphasis on mindfulness

Another critique is the overemphasis on mindfulness at the expense of other Buddhist teachings. Mindfulness has become a popularized concept in education and leadership but is often stripped of its ethical and philosophical foundations. Critics such as Purser have termed this phenomenon “McMindfulness,” where mindfulness is commodified and used as a tool to improve productivity or reduce stress without addressing the deeper systemic issues that cause these problems.⁴⁸ This reductionist approach risks neglecting the transformative potential of Buddhist teachings, which encompass compassion, ethical conduct, and interconnectedness. Addressing this critique requires a more holistic application of Buddhist principles, ensuring that mindfulness practices are contextualized within a broader ethical and philosophical framework.

6.4.5. Resistance to change in traditional systems

Educational and leadership structures are often deeply entrenched in traditional, outcome-driven models. The introduction of Buddhist-inspired practices, which emphasize process over outcomes, compassion over competition, and reflection over action, can be met with skepticism or resistance. For instance, educators and leaders accustomed to measurable goals may view mindfulness or compassion-based practices as abstract or impractical. Moreover, existing curricula and leadership training programs may lack the flexibility to incorporate these practices meaningfully. Overcoming this challenge requires strong evidence of the tangible benefits of Buddhist principles, coupled with strategic advocacy and pilot programs demonstrating their efficacy.

6.4.6. Practical implementation challenges

Implementing Buddhist principles in education and leadership poses practical challenges. For example, mindfulness training requires skilled instructors, time, and resources, which may not be readily available in all institutions. Additionally, cultural differences in how mindfulness and compassion are understood and practiced can complicate standardization across diverse contexts. Furthermore, in leadership, the application of Buddhist principles such as compassion and non-attachment may conflict with the profit-driven goals of many organizations. Leaders may struggle to reconcile ethical decision-making with financial imperatives, highlighting the need for frameworks that balance these priorities effectively. While the integration of Buddhist teachings into education and leadership offers transformative potential, it is not without challenges. Cultural sensitivities, reductionist approaches, resistance to change, and practical barriers all need to be addressed to ensure successful adoption. A more holistic understanding of Buddhist principles, combined with robust empirical research and inclusive implementation strategies, can help overcome these obstacles. By addressing

⁴⁸ Ibid., 78.

these challenges thoughtfully, the transformative power of Buddhist teachings can be harnessed to create more compassionate, ethical, and sustainable systems in education and leadership.

VII. THE FUTURE OF EDUCATION AND LEADERSHIP

As the world continues to evolve, the challenges faced by education and leadership systems are becoming increasingly complex. Globalization, rapid technological advancement, environmental crises, and shifting social dynamics demand innovative approaches to both teaching and leading. The future of education and leadership lies in embracing holistic, ethical, and adaptive frameworks that prioritize human well-being, resilience, and sustainability. Buddhist principles offer a profound foundation for these changes, providing tools for navigating uncertainty and fostering compassion, mindfulness, and interdependence.

7.1. Embracing mindfulness and emotional intelligence

The future of education and leadership will likely be shaped by an increasing focus on emotional intelligence (EQ) and mindfulness. Research has shown that EQ is a critical predictor of success in personal and professional life. In education, teaching students to understand and manage their emotions fosters resilience, empathy, and collaborative skills. Similarly, leaders who exhibit high EQ are better equipped to navigate complex interpersonal dynamics and make ethical decisions.⁴⁹ Mindfulness practices, grounded in Buddhist teachings, will play a crucial role in this shift. Incorporating mindfulness into educational curricula can help students develop focus, self-awareness, and emotional regulation. For leaders, mindfulness enhances clarity, decision-making, and the ability to manage stress effectively. As these practices become more widespread, they will reshape the goals of education and leadership from achieving external success to cultivating inner growth and well-being.⁵⁰

7.2. Ethical leadership and global sustainability

The future demands leaders who prioritize ethical considerations and sustainability. Buddhist teachings on interconnectedness and compassion provide a roadmap for this transformation. As societies grapple with global challenges such as climate change, inequality, and political polarization, leaders must adopt long-term perspectives that transcend short-term gains. Ethical leadership, inspired by Buddhist principles, emphasizes the importance of serving others, fostering inclusivity, and considering the broader impact of decisions. For instance, companies adopting environmental, social, and governance (ESG) frameworks demonstrate a growing recognition of the need for responsible leadership. Educational systems can support this shift by embedding ethics and sustainability into curricula, preparing students to become conscientious global citizens.

⁵⁰ Boyatzis, R. E., (2005). *Resonant leadership: Renewing yourself and connecting with others through mindfulness, hope, and compassion*. Harvard Business School Press, p. 55.

7.3. Redefining success in education and leadership

Traditional models of education and leadership often focus on quantifiable achievements such as grades, test scores, profits, and growth. However, the future calls for a redefinition of success that includes well-being, community impact, and personal fulfillment. Buddhist teachings, which emphasize the balance between external accomplishments and inner peace, can help guide this redefinition. In education, success might be measured by the ability to cultivate curiosity, empathy, and a sense of purpose in students. Similarly, leadership success could be evaluated by the ability to create environments that prioritize employee satisfaction, social responsibility, and sustainable practices. Adopting these broader measures of success will require a cultural shift, supported by policies and practices that value holistic development.

7.4. Technology and human connection

Technology will continue to play a transformative role in education and leadership. However, as digital tools become more integrated into daily life, there is a risk of losing human connection. Buddhist principles, which emphasize presence and genuine engagement, can help counterbalance the depersonalizing effects of technology. In education, leveraging technology to enhance learning while maintaining personal connections will be crucial. Virtual and hybrid learning environments can incorporate mindfulness practices to ensure that students remain engaged and grounded. In leadership, technology can be used to facilitate communication and collaboration, but it must be coupled with efforts to foster trust and empathy among team members.

7.5. The role of research and collaboration

The future of education and leadership will also depend on ongoing research and collaboration across disciplines. Buddhist-inspired practices such as mindfulness and compassion have already demonstrated significant benefits in various settings. Expanding research to explore the long-term impacts of these practices on organizational culture, student outcomes, and societal well-being will strengthen their credibility and adoption.⁵¹ Collaboration between educators, policymakers, business leaders, and researchers will be essential for integrating Buddhist principles into mainstream systems. Pilot programs, case studies, and international forums can facilitate the sharing of best practices and insights, fostering a global movement toward more compassionate and ethical systems. The future of education and leadership lies in creating systems that nurture the whole individual intellectually, emotionally, and ethically. Buddhist teachings provide a powerful framework for this transformation, by emphasizing mindfulness, compassion, and interdependence. By redefining success, prioritizing sustainability, and embracing human connection alongside technological advancements, education, and leadership can evolve

⁵¹ Zenner, C., Herrnleben-Kurz, S. & Walach, H., (2014). Mindfulness-based interventions in schools—a systematic review and meta-analysis. *Frontiers in Psychology*, 5, p.603. Available at: <https://doi.org/10.3389/fpsyg.2014.00603>.

to meet the needs of a changing world. The integration of these principles will not be without challenges, but the growing recognition of their value suggests a promising path forward. As educators and leaders strive to create a more compassionate, inclusive, and sustainable future, the wisdom of Buddhist teachings will continue to inspire and guide these efforts.

VIII. CONCLUSION AND REMARKS

The integration of Buddhist teachings into modern education and leadership holds the potential to address some of the most pressing challenges of our time. From promoting mental well-being in educational environments to cultivating compassionate, ethical, and resilient leaders in the corporate world, Buddhist principles such as mindfulness, compassion, and interdependence offer invaluable insights and tools for transformation. The exploration of these intersections reveals not only the immediate benefits of such practices but also their long-term implications for fostering a more harmonious and sustainable future.

8.1. The transformative power of Buddhist teachings

Buddhist teachings, which emphasize mindfulness, compassion, ethical living, and interdependence, offer a fresh approach to education and leadership in an increasingly complex and interconnected world. By focusing on the holistic development of individuals intellectually, emotionally, and ethically Buddhism invites us to rethink the traditional goals of education and leadership. In education, the incorporation of mindfulness practices can enhance emotional well-being, academic performance, and social skills, providing students with the tools they need to navigate the challenges of the modern world. In leadership, Buddhist principles encourage a shift from power-driven models to compassionate, service-oriented leadership, emphasizing the well-being of individuals and communities as the ultimate measure of success.

8.2. The Growing Importance of Ethical and Compassionate Leadership

As the world faces increasing challenges related to inequality, environmental sustainability, and social justice, the need for ethical and compassionate leadership has never been more urgent. The future of leadership lies in the hands of those who are not only skilled in technical aspects but also emotionally intelligent and ethically grounded. Buddhist-inspired leadership principles emphasize the importance of understanding our interdependence, fostering collaboration, and making decisions that prioritize long-term well-being over short-term gain. These principles challenge the current leadership paradigms that often prioritize profits over people and encourage a more holistic, human-centered approach to leadership.

8.3. Overcoming challenges and criticisms

Despite the transformative potential of integrating Buddhist teachings into education and leadership, several challenges must be addressed. These include cultural sensitivities, resistance to change, and the need for empirical evidence to demonstrate the effectiveness of these practices. Addressing these challenges requires thoughtful, inclusive approaches that present Buddhist

principles as universal tools for well-being rather than religious doctrines. Moreover, continued research and the sharing of successful case studies will be crucial in dispelling misconceptions and demonstrating the long-term benefits of mindfulness, compassion, and ethical leadership.

8.4. The path forward

Looking ahead, the future of education and leadership will likely be shaped by a greater emphasis on mindfulness, emotional intelligence, and ethical decision-making. As educational institutions and organizations continue to adapt to the changing needs of society, there is great potential for Buddhist principles to guide these transformations. However, for these changes to take root, a concerted effort will be needed from educators, leaders, policymakers, and researchers to advocate for and integrate these practices in meaningful ways. The increasing adoption of mindfulness and compassionate leadership across various sectors suggests that we are on the cusp of a paradigm shift. With the continued expansion of research, the development of innovative educational models, and the growing recognition of the importance of ethical leadership, Buddhist teachings have the potential to play a central role in shaping a more compassionate, sustainable, and interconnected world.

8.5. Final remarks

Ultimately, the integration of Buddhist teachings into education and leadership represents not just a philosophical shift, but a practical strategy for addressing the challenges of the 21st century. By fostering mindfulness, compassion, and ethical awareness, we can cultivate leaders and learners who are not only more effective in their respective roles but also more attuned to the needs of the broader world. In doing so, we can create a future in which education and leadership are truly aligned with the values of empathy, interconnectedness, and sustainability, making a positive impact on individuals, communities, and the planet as a whole.

MINDFULNESS IN EDUCATION FOR A COMPASSIONATE AND SUSTAINABLE FUTURE: WITH REFERENCE TO THE MORAL SCHOOL PROJECT IN THAILAND

Supadcha Srisook*

Abstract:

When I was young, I didn't know why my mom had to compel me to go to the temple every important day relevant to Buddhism, whether it was Magha Pūjā, Visākha Pūjā, or another important day of religion. Meanwhile, when I was in school, the school organized Buddhist activities for the students to participate in, a practice I found acceptable. On the other hand, when I grew up and was in high school, I usually avoided engaging in Buddhist activities because of boredom. Fortunately, I had an elder brother who was a senior in high school. He served as an idol, inspiring me to participate in Buddhist activities such as volunteering, attending Buddhist camps, and assisting in developing youth in our village. Even though this was in the past which passed many years ago, many of the lessons I learned from Buddhism continue to shape and refine my habits and mindfulness and could be adapted in the present.

In the present day, education in Thailand continues to uphold Buddhist activities, allowing students to engage both inside and outside the school. The majority of these activities take place in provincial or rural areas. For example, in my hometown, all schools, including high schools, continue to implement Buddhist activities aimed at supporting and encouraging the development of mindfulness in students. To give them learning to be empathetic to others, compassionate, forgiving, and know right from wrong, and other skills. Despite the abstract nature of Buddhist activities in schools, we are unable to understand the inner workings of students once they complete these activities or refine their religious beliefs. However, in this article, I aim to illustrate the relevance of Buddhism to education in Thailand, the impact Buddhism has on

* Ph.D. Buddhist Studies, University of Delhi.

students in the school, how students resist or participate in Buddhist activities, and how students contribute to Buddhist activities in the school. Finally, in this article, I will express the perspective and assumption trend of the sustainability of students who are involved in Buddhist activities through education.

Keywords: *Buddhist education, students, mindfulness, sustainability of Buddhism.*

I. INTRODUCTION

We have cultivated our behavior from childhood through learning from our parents, the environment, school, and other experiences. Therefore, many things we have learned from childhood reflect our current lives. Most parents would like their child to be a good person from childhood. As a result, they typically instill in their children the importance of doing things correctly and avoiding making mistakes. Parental guidance alone is insufficient for children's development. Therefore, parents must rely on the knowledge acquired from school to develop their children's potential and foster quality growth. Similarly, if parents want to develop mindfulness in their children, they have to rely on the doctrine of religion to refine their children's minds as well.

Thailand, predominantly a Buddhist country, typically incorporates doctrine into the standard course syllabus. Generally, in Thailand, common students will study general matters in doctrine not the same as monks and nuns must study doctrine in detail. In the case of monks and nuns, they have a Buddhist school specifically designed for them to deepen their studies of Buddhism, including both its doctrine and practices. Additionally, teachers in common schools frequently instruct students in doctrine. Some schools invite monks to impart doctrine to their students. This case is usually found in education in each province in Thailand. Moreover, schools not only teach doctrine but also engage in activities related to Buddhism. Whether it's praying and meditating before class, participating in religious activities at the monastery, or participating in a Buddhist camp to practice dharma, these activities are all part of the school's educational program. These activities appear to be a process that refines students to develop into mindful individuals. However, this is merely an expectation of adults, even though performance measurement is unclear or abstract.

II. THE CONTEXT OF BUDDHISM IN SCHOOL

According to the Office of Educational Innovation Development of Thailand, King Rama Ten emphasized the importance of "helping to create a good person for our country" and outlined principles for both teachers and students to follow. These principles include: (1) teachers should show love to their students, and students should return the favor; (2) teachers should teach students to be kind to their friends and not compete with each other; and (3) students should help each other, and teachers should teach them harmony.¹

¹ Public Relations. (2022, November 10). *มาตรฐานและตัวชี้วัด โรงเรียนคุณธรรม สพล*

This outcome led to the creation of the “Moral School” project, which has been ongoing since 2012. However, during my time in high school from 2006 to 2011, my school implemented the Home-Temple-School project. This project was inspired by King Rama IX, who aimed for the three communities – the home, the temple, and the school – to work together; to amend, develop, and solve the problems in the community to build the society to be strong.² The goal was to help them learn how to be good members of society and to develop the skills necessary to lead our nation into the future. In my high school, the Home-Temple-School project was initiated by a group of monks who collaborated to establish a morality camp and extend it into the school.

After that, according to my experience from my high school, in a week we had Buddhist activities one time per week, which length of Buddhist activities was half a day such as praying for 20 minutes and meditation for 15 minutes after then listening to a sermon from a monk 30 - 45 minutes. The daily routine for the students involved praying in front of the flagpole and then meditating for 5 minutes before entering the classroom. Moreover, once per academic year, my high school will provide a Buddhist camp for students to participate in, which is mostly held in a monastery. During the Buddhist camp, students engage in activities such as praying, meditation, walking meditation, dharma practice, learning about religious doctrine, and other related activities. The process of the Buddhist camp will be manipulated by monks and laity volunteers, who may be students or people in that community, which in this duty I have been before. In addition to the Buddhist activities at the camp, there were other activities such as decorating with fabric, arranging flowers, setting up the altar, and engaging in various hobbies. Students can use this skill as a part-time job to supplement their studies. However, a Buddhist camp lasts approximately 3 – 5 days.

Today’s Buddhist camp activities are less intense than in the past for a variety of reasons, including a limited budget, a decline in religious faith, and other factors. Today, Thailand faces the problem of faith in religion, specifically Buddhism. Individuals who become monks and then behave inappropriately are causing the decline of Buddhism. For instance, in Thailand, Buddhists believe that when we donate money to the temple as much as we can, then this action will increase merit. As a result, there is a huge circulation of donations in the temple, which the ascetic has to handle.³ This presents a challenge to ascetics, leading the monks to succumb to the temptations of greed. Apart from

³ Da, L. Y., & Henry, M. (2023, August 8). In Thailand, misbehaving monks are trashing Buddhism’s reputation. Retrieved from <https://www.abc.net.au/news/2024-08-08/thailand-misbehaving-monks-foreign-correspondent/104184056>.

the money, there is one more case of making monks behave badly: sexuality.⁴ This case often happens in temples. Due to the discipline of ordination, being a monk is reduced and not very strict. Whenever someone wants to be a monk, they can go to the temple and request to the abbot in the temple that they want to be a monk, and then the abbot lets them be a monk without strict examination of the monastic code, not the same as in the Buddha's era. This enables the temple to welcome individuals seeking monastic ordination without any form of screening. Even though the core of Buddhism is the teachings or doctrine of Buddha, we cannot deny the significant role ascetics play in spreading religion. Moreover, many large monasteries in Thailand have transitioned into Buddhist commerce, rather than solely promoting the doctrine.⁵ In addition, the diversity of beliefs in gods is a trend that is spreading to Thailand, which has made most people turn to beliefs in gods more.⁶ This shift not only reflects a growing interest in spiritual exploration but also indicates a blending of traditional Buddhist practices with new religious movements. As a result, many practitioners find themselves navigating a complex landscape of faith, where the teachings of the Buddha coexist with a variety of deities and spiritual practices.

However, Buddhist activities have continued but have changed into a new responsibility in the school, which will emphasize morals for individuals. The Moral School Project does not aim to prioritize any specific religion but rather encourages everyone, including executives, teachers, and students - those who will shape the future of the country - to become moral individuals. School seems like a place to nurture students who are seedlings - to grow and flourish in the society of the country next. This aligns with some aspects of the Buddha's training, particularly the emphasis on his disciples to be aware and mindful. For instance, according to *Āṅguttara Nikāya*, 5.7⁷ Buddha taught that young monks are not careless of sensual pleasure. The discourse emphasized that all sentient beings are attracted to sensual pleasures. When a young man decides to become a monk, his sensual pleasures are left behind. To become monks, they had to develop consciousness knowingly of sensual pleasure through Buddha's teaching to warn themselves against being careless about them. The Buddha gave a sample of a nanny caring for a child, comparing it to a nanny who strives to save a child's life out of compassion and kindness from

the case of a child who puts a stone in his mouth. The Buddha concluded that young monks had not yet developed consciousness, faith, energy, prudence, and wisdom related to skillful standards. When these skills are completed, the Buddha will not be concerned about them, meaning the young monks won't be careless about sensuality after being trained by the Buddha.

III. HOW WILL THE STUDENTS BEHAVE WITH MINDFULNESS IN EDUCATION?

According to the project I was discussing above, we can see how we will know after the students pass the process of the Moral School project what the result is and what the indicators of the result are. The Moral School project categorizes its indicators into seven points: (1) the development of a moral ideology within the school; (2) the presence of a mechanism and tool for moral ethics practices within the school; (3) an increase in expected behavior in the school, including moral ethics, sufficiency, gratitude, honesty, truthfulness, patience, and selflessness; (4) a reduction in bad behavior; (5) the process of participation and responsibility creation within the school; (6) the innovation and integration of moral ethics in the classroom; (7) the school as a place to learn about moral ethics.⁸ The seven points of the Moral School project aim to mold students into virtuous individuals. Although the project's criteria do not explicitly mention mindfulness for the students, the project's process may help them learn about moral ethics by encouraging them to critically think about what they should and shouldn't do in accordance with the concept of moral ethics. This reflective approach can foster a deeper understanding of their values and the impact of their actions on others. By engaging in discussions and activities centered around moral dilemmas, students might naturally cultivate a sense of mindfulness that aligns with ethical considerations.

On the other hand, if the students lack mindfulness, they will not know what is wrong or right in the realm of moral ethics. Therefore, the foundation of students participating in the Moral School project is to cultivate mindfulness, which will enable them to understand what they should do for good deeds and what they should avoid or not do for bad deeds. For instance, the Moral School project handbook mentions that students should be good role models, prompting them to consider their options. For instance, if a friend fails an exam, what actions should they take to support them? Should they ignore their friends, aggravate them, or provide tutoring to help them pass? In the case of students who lack mindfulness, they may ignore those who fail the exam; on the other hand, some students who care about their friends may possess mindfulness to assist their friends in passing the exam. Therefore, to be a good role model, students must practice mindfulness to be aware of their actions, whether they are doing good or doing bad. As the Buddha has taught his mendicants about the Mindfulness of Death 1st (*Paṭhamamaraṇassati*

⁸ Public Relations, “มาตรฐานและตัวชี้วัด โรงเรียนคุณธรรม สพฐ.,” โรงเรียนคุณธรรม สพฐ. สำนักพัฒนานวัตกรรมการจัดการศึกษา (moral school), page no. 6, last updated November 10, 2022, available at: <https://moral.obec.go.th/home/2022111089>.

Sutta, AN 6.19), he raised a question to his mendicants that were: “Bhikkhus, mindfulness of death, when developed and cultivated, is of great fruit and benefit, culminating in the deathless, having the deathless as its consummation. But do you, bhikkhus, develop mindfulness of death?”⁹

After that, a mendicant responded to the Buddha’s question by saying that he developed his mindfulness of death. The Buddha then posed another question to the mendicant, asking, “But how, Bhikkhu, do you develop mindfulness of death?”¹⁰ The mendicant then replied, “If I have one day or one night left, I will focus on the Buddha’s teaching, and that means my goal is achieved; that is my way to develop mindfulness of death.”¹¹ Subsequently, five other mendicants joined in answering the Buddha’s question. Following this, the Buddha concluded his teaching on the Mindfulness of Death: “Therefore, bhikkhus, you should train yourselves thus: ‘We will dwell heedfully. We will develop mindfulness of death keenly for the destruction of the taints.’ Thus should you train yourselves.”¹² This is merely one example of how the Buddha taught his disciples to be mindful. Despite not explicitly mentioning mindfulness in education, the Moral School project emphasizes the importance of moral ethics and understanding what actions are appropriate and inappropriate for students to be mindful of. This approach encourages students to reflect on their behavior and its impact on themselves and others. By fostering an environment of ethical awareness, the Moral School project aligns with the principles of mindfulness, promoting a deeper sense of responsibility and compassion in young learners.

IV. A COMPASSIONATE AND SUSTAINABLE FUTURE

Students can engage in various activities related to the Moral School project to demonstrate their commitment to moral ethics and align with the project’s objectives. For instance, the Good Deeds Recording Activity requires students to document their good deeds, such as cleaning the classroom, collecting garbage, assisting the teacher with tasks, letting a friend borrow a self-pencil, and so on. This activity is a common and easy way for students to understand the tangible act of good deeds, and it has been widely used in those schools that participate in the Moral School project. In addition, the Moral School project also includes letting students learn to be compassionate to others through teaching students how compassion manifests itself from a moral perspective. Most compassion is usually inserted in the context of activities under the concept of the Moral School project. The principles of organizing

⁹ *The Numerical Discourses of the Buddha: a Translation of the Aṅguttara Nikāya*, trans. from the Pāli by Bhikkhu Bodhi. Massachusetts: Wisdom Publication, 2012, p. 870.

¹² Bodhi, B. (2012). *The numerical discourses of the Buddha: A translation of the Aṅguttara Nikāya*. Wisdom Publications, p. 870.

activities under the Moral School project can be classified into eight distinct categories: (1) activities that aim to create participation; (2) activities that aim to increase analytical and logical thinking skills; (3) activities that aim to increase life skills; (4) learner-centered activities; (5) activities that respond to students' interests, aptitudes, and needs; (6) activities that reflect the real context of school; (7) authentic assessment; and (8) the activities that have been organized can be applied in the classroom.¹³

According to the principles of organizing activities under the Moral School project above, one has mentioned activities that aim to increase life skills. This section includes illustrations that pertain to teamwork, problem-solving skills, leadership and follower roles, and the development of life skills such as patience, empathy, and volunteerism. For instance, Anuban Phra Samut Chedi School participated in the 2020 Moral School project, which incorporates the principles of organizing activities to foster compassion in students. The designated name of the activity was “มีน้ำใจใคร่รัก” which means being kind is loved by everyone.¹⁴ This activity has the purpose of cultivating moral kindness in students toward others with no expectation of return. Moreover, this activity has taken from Buddha's teachings about sustaining (*Saṅgaha Sutta*, AN 4.32) to be applied specifically in beneficent conduct (*atthacariyā*); there are four of sustaining: giving (*dāna*), kind speech (*peyyavajja*), beneficent conduct (*atthacariyā*), and impartiality (*samānattatā*).¹⁵ When students participated in this activity, they learned how to be kind to others independently, without the need for teacher guidance. The activity's indicators and evaluation employed the observation method to assess and determine if the students' actions aligned with the activity's objectives. Through this process, they developed essential social skills and a greater sense of empathy. As a result, students began to demonstrate thoughtful interactions that fostered a supportive classroom environment.

In terms of sustainability, it can happen in the future. When we examine the project and activity's context, we find coherence. For example, in the case of the activity under the Moral School project I have mentioned above, the context of the activity would help students comprehend what compassion looks like. After that, when students were cultivated with compassion, they would learn how it looks, and then they would learn and memorize it. When students consistently practice compassion, it cultivates long-term memories that are sustainable for their future. Meanwhile, sustainability would emerge when students cultivate moral ethics from childhood, subsequently forming

¹³ Yuwasathirakhun Foundation. (2017). *Handbook of organizing activities to develop moral school* (คู่มือการจัดกิจกรรมพัฒนาโรงเรียนคุณธรรม). Sahamit Printing and Publishing, pp. 28 - 29.

this behavior into a habit. As they grow older, they may develop the self-esteem necessary to make basic decisions about what is right and wrong. Moreover, those who teach students also play an important role in cultivating the student's mindfulness and leading to sustainability for their future.

On the other side, sustainability may not happen for every student who engages in the Moral School project. If they are not training themselves to be mindful always then they may lack mindfulness to think, analyze, and discern what should be done or should not be done under the frame of moral ethics. Moreover, without consistent practice and reflection, students might struggle to internalize the principles of moral ethics and fail to apply them in real-world situations. This lack of awareness could ultimately hinder their ability to make responsible decisions and contribute positively to their communities. This is a common occurrence when a student's growth is accompanied by mental development and a transformation in various dimensions, influenced by their surrounding environment. For instance, in the story of *Angulimāla*: he used to be a good guy before he became a bandit because he stayed in an environment of people who were jealous of his genius and used artifice to tackle him to become a bad man. No matter how well students are taught certain behaviors, if some absorb bad behavior, they can develop bad habits as well. Therefore, mindfulness plays an important role in being aware of stimuli from outside and inside the mind. By practicing mindfulness, individuals can cultivate greater self-awareness and make conscious choices that align with their values, rather than succumbing to negative influences. This proactive approach can help break the cycle of poor decision-making and promote healthier behaviors, ultimately leading to personal growth and resilience. According to the teachings of the Buddha:

Bhikkhus, a bhikkhu should dwell mindful. This is our instruction to you. And how, bhikkhus, is a bhikkhu mindful? Here, bhikkhus, a bhikkhu dwells contemplating the body in the body, ardent, clearly comprehending, mindful, having removed covetousness and displeasure regarding the world. He dwells contemplating feelings in feelings... mind in mind... phenomena in phenomena, ardent, clearly comprehending, mindful, having removed covetousness and displeasure regarding the world. It is in this way, bhikkhus, that a bhikkhu is mindful.¹⁶

This Buddha's teaching demonstrates to his disciples to be mindful in every moment; mindfulness will lead to success in the elimination of covetousness and displeasure concerning the world. This is a profound Buddha's teaching that seems simple to comprehend but difficult to follow. However, being mindful will bring about a compassionate and sustainable future together. By embracing mindfulness in our daily lives, we not only cultivate inner peace but also foster deeper connections with others. This collective awareness can pave the way for a more harmonious existence, encouraging individuals to act with kindness and understanding in a world often marred by conflict and division.

V. COMPREHENSION

Childhood experiences greatly influence our behavior and development, and parents often instill the importance of correctness and avoiding mistakes in their children. However, parental guidance alone is insufficient for children's growth, and they must rely on the knowledge acquired from school to develop their potential and foster quality growth. Thailand, predominantly a Buddhist country, incorporates doctrine into the standard course syllabus, with common students studying general matters in doctrine, while monks and nuns have a Buddhist school specifically designed for them to deepen their studies of Buddhism. Teachers in common schools frequently instruct students in doctrine, and some schools invite monks to impart doctrine to their students. Schools also engage in activities related to Buddhism, such as praying and meditating before class, participating in religious activities at the monastery, or participating in a Buddhist camp to practice dharma. These activities appear to refine students to develop into mindful individuals, but performance measurement is unclear or abstract.

The Office of Educational Innovation Development of Thailand emphasizes the importance of "helping to create a good person for our country" and outlines principles for both teachers and students to follow. These principles include showing love to their students, teaching kindness to their friends, and teaching harmony. This led to the creation of the "Moral School" project, which has been ongoing since 2012. During my time in high school from 2006 to 2011, my school implemented the Home-Temple-School project, inspired by King Rama IX, which aimed for the three communities - the home, temple, and the school - to work together to amend, develop, and solve problems in the community to build society to be strong. The goal was to help students learn how to be good members of society and develop the skills necessary to lead our nation into the future.

King Rama X and Rama IX of Thailand appear to be prioritizing students, who are the future of our country, by fostering moral ethics from a young age through the creation of projects that align with religious morals. This seems to be laying the foundation of society's strategy by developing human resources, and it is one of the missions that may accomplish the development of a population in the country that is of good quality in the context of the moral dimension. To drive the country without corruption, but this is merely an assumption, in the current day Thailand is still experiencing corruption problems, which are difficult to solve. This ongoing struggle highlights the need for a more robust framework that integrates ethical education and accountability at all levels of governance. Only by fostering a culture of integrity can Thailand hope to break the cycle of corruption and build a more prosperous society for future generations. Additionally, I couldn't deny that Buddha's teachings play an important role in dealing with moral principles to guide each activity for those who engage in the Moral School project. The example I mentioned earlier clearly demonstrates this. Although, currently, Buddhism faces the problem, and adhesion is reduced from the problem of

monks behaving inappropriately and causing the decline of Buddhism. Even though adherence to Buddhism seems to be reducing in the current day for many reasons, such as the individual, corruption in temples, and the advent of belief in God. These things cannot destroy Buddhism in Thailand at all; on the other hand, these crises make some new generations or some organizations step out to show spirit to hold Buddhism in various formats, such as making podcasts to promote Buddhism in a new perspective to open minds for those who are not familiar with Buddhism in different perspectives and unique. These efforts not only aim to preserve traditional teachings but also adapt them to contemporary society, allowing for a more inclusive understanding of Buddhism. By embracing modern technology and innovative communication methods, these initiatives foster a deeper connection between the faith and younger audiences, ensuring that the essence of Buddhism remains vibrant and relevant in today's world. The Moral School Project is a Buddhist initiative that aims to promote moral values in schools, encouraging students to become responsible and mindful individuals. The project aligns with the teachings of Buddha, who emphasizes the importance of being aware and mindful. In addition, the Moral School project plays a crucial role in guiding students toward morality, fostering mindfulness in their education, and cultivating compassion and sustainability for their future, all while upholding moral ethics. Although evaluation simply involves teachers observing students' behavior. It is significant for students to know the results of actions of good deeds and bad deeds in basic. After students do good deeds, what is the effect after that? On the other hand, after students do bad deeds, then what is the effect after that? This is also how they may learn from the process of the Moral School project. By reflecting on the consequences of their actions, students can develop a deeper understanding of right and wrong, fostering a sense of accountability. Ultimately, this reflective process encourages them to make more informed choices in the future, contributing to their growth as ethical individuals.

However, sustainability may not happen for every student who engages in the Moral School project if they are not training themselves to be mindful always. This is a common occurrence when a student's growth is accompanied by mental development and a transformation in various dimensions, influenced by their surrounding environment. No matter how well students are taught certain behaviors, if some absorb bad behavior, they can develop bad habits as well. Therefore, mindfulness plays an important role in being aware of stimuli from outside and inside the mind. By practicing mindfulness, individuals can cultivate greater self-awareness and make conscious choices that align with their values, rather than succumbing to negative influences. This proactive approach can help break the cycle of poor decision-making and promote healthier behaviors, ultimately leading to personal growth and resilience. The teachings of the Buddha emphasize the importance of being mindful in every moment, as it leads to success in eliminating covetousness and displeasure concerning the world. By embracing mindfulness in our daily lives, we not only cultivate inner peace but also foster deeper connections with others. This collective awareness can pave the way for a more harmonious

existence, encouraging individuals to act with kindness and understanding in a world often marred by conflict and division. In adopting this mindset, we open ourselves to opportunities for growth and learning, allowing us to respond to challenges with compassion rather than frustration. Ultimately, such an approach not only transforms our personal experiences but also has the potential to inspire those around us, creating ripples of positive change in our communities.

However, while the Moral School project might not be the best option for every student, by integrating its principles into daily routines, individuals can develop a deeper understanding of their actions and their impact on the world around them. This approach not only fosters personal growth but also encourages collective responsibility toward creating a more compassionate and sustainable society. Ultimately, this shift in mindset can lead to a more empathetic community, where individuals are more inclined to support one another and work together to address societal challenges. By nurturing these values from an early age, we can cultivate a generation that prioritizes kindness and cooperation in all aspects of life.

BUDDHIST EDUCATION A MINDFULNESS BRIDGE FOR CREATION OF A COMPASSIONATE SOCIETY: A STUDY

Mr. Rahul Ravi Rao*

Abstract:

Education is an ignition seeding and nurturing of the thought process to live within a civilized society with creative characteristics interconnected through the roots of human emotions. From the time of civilization until now, humans transformed and adapted the society on earth, there was the spark of education, and many great brains of people contributed their service to the store of knowledge for the development of society. This becomes more interweaved to all humans with every passing day establishing and developing the directions of education towards a more highly and competent Society.

Keywords: *Buddhism, mindfulness, compassion.*

I. EPISTEMOLOGY

To educate means to ‘bring up (a child) to form habits, manners, etc., to train intellectually, ethically and morally.’¹ If education is geared or boosted to develop only the mental powers of a child or entity, this education is not complete. It must develop his character, and behavior which means developing qualities like *Mettā* (loving-kindness), *karuna* (compassion), *muditā* (sympathetic joy), and *upekkhā* (equanimity). He must get rid of entangled defilements such as *rāga*, *dōsa*, *mōha*, or greed, anger, and pride and develop qualities such as non-greed, friendliness, humility, compassion, etc.

The word mindfulness is an English translation of the word *sati*, which occurs in Buddhist teachings and texts in a range of meanings, such as recollection, recognition, wakefulness, attentiveness, calling to mind, and alertness.² In the context of contemplative practices, it refers to a quality of conscious

* Visiting Faculty & Ph.D. Research Scholar, Department of Pāli, University of Mumbai.

¹ See the Oxford English Dictionary.

² Bodhi, B. (2011), p. 19 – 39.

awareness, and the repeated application of this awareness to each experience of life.³ Furthermore, the term relates to the cultivation of wholesome, skillful, wise attention to four domains of existence: body, feelings, cognition, and mental constituents. According to traditional Buddhist teachings, mindfulness strengthens tranquillity and mental balance and enhances wisdom, insight, lovingkindness, and compassion. Further, meditation practices are assumed to bring about a reduction of greed, aversion, and ignorance, considered by Buddhist psychology to be at the root of human suffering.⁴

II. OBJECTIVES

The primary objective of this research paper is to examine the essential importance of Compassion as depicted through the Pāli Literature and its role of Mindfulness in Buddhist Education for a Universal Compassionate Society. By exploring relevant Pāli Literature, and Literature Review, this paper aims to shed light on the following aspects: (1) To provide a comprehensive overview of Buddhism, and the relevance of mindfulness and meditation in the context of education; (2) To understand the epistemology of the word Buddhist Education, Mindfulness, and Compassion; (3) To analyze the case studies of Monks, Nuns, and Laypeople to whom Buddha addressed the essential need of Compassion to strengthen the Society; (5) To address the social strata of the uncompassionate ancient society and its potential challenges, seen through the teachings of Buddha; (6) To examine Buddhist Education and its bridge to deliver the teachings to each individual of the society irrespective of class, creed, color, age, and gender; (7) To examine how society is diluted if compassion is not taken into consideration and not given importance as a part of Education with Mindfulness; (8) To integrate the spiritual elements factors that promote a Compassionate society such as joy, harmony, happiness, and peace; (9) To propose application, and the need for the future integration of Buddhist doctrine, mindfulness, and compassion in educational institutions.

III. SOCIAL STRATA OF AN UNCOMPASSIONATE ANCIENT SOCIETY:

There was acute racial discrimination in the society. This discrimination was according to the profession of man and according to birth, class, creed, age, gender, and color. In the society, there were four divisions of men, of whom the Brahmin was superior. Brahmanism dominated the society and established its supremacy in the country. The Brahmins enjoyed rights to religious training and education. However other categories of people were deprived of their religious and educational rights. At that time there were 62 heretical doctrines in existence and the priesthood got the upper hand.

In this social background, a religious revolution started in ancient India in 600 BC., and a new doctrine or system developed which is called 'Buddhist Doctrine' or 'Buddhist Philosophy' for all irrespective of caste, creed, and profession. In the early period, Buddhist Education was limited within the monasteries and was meant only for the inmates of the monastery. But later on,

³ Bodhi, B. (2011), p. 19 – 39.

⁴ Ditrich, T. (2017), p. 3 – 32.

it was made open to all, even lay people got scope to have education in those institutions. Buddhist monks used to lead a life of meditation in solitary places or a life of teaching, preaching, and propagating Dhamma. As a result of the activities of these teaching monks, seats of learning gradually grew and a new chapter in the history of developing a compassionate society was taken place in the land of the Buddha through his universal teachings.

IV. BUDDHIST EDUCATION

The Buddhist Education system truly opens an era of free liberal or rational or logical thinking or reasoning in every field or nature of knowledge. People accustomed to thinking in terms of fixed digits or numerals began to think of the world creation as it is, as a process, a process of coming into existence and passing away. It may be interesting to find out what is passing away and what is coming into existence. Buddha taught Dhamma which was good for many in the beginning in the middle in the end to liberate humanity from suffering; it had a great social significance message for a society. Although, this is a silent message, nevertheless a revolutionary message, spread by Buddhism. It was Buddhist doctrine, which changed the lifestyle of the society with its strong education process in transforming towards a compassionate living society.

The goal of Buddhist education is this lofty one, the alleviation or coming out of all suffering, Buddhist practitioners were immensely diligent in providing a course that provided many penultimate goals en route to this ultimate final goal of liberation. These penultimate goals, as we shall see, ranged from very basic methods of social development to the eradication of doctrines thought to be spiritually dysfunctional to the development of pedagogical skills to the attainment of meditational accomplishment, and so on in developing a civilized compassionate society to live in harmony. While Buddhism is tautological in the sense that all teaching is understood in the context of progress towards nibbāna, it is not monomaniacal. Buddhism appreciates the diversity of human personalities and needs, and in surveying Buddhist educational undertakings, we see a very rich flowering of techniques and even penultimate goals within the peripheral of self-development through mindfulness nature.

V. BRIDGE OF BUDDHIST EDUCATION

The entire system of Buddhist Education was rooted in Saddhā (faith) in the *Ti-Ratanāya* (Triple Gems), and above all in the Buddha as the Fully Enlightened One, the Supreme teacher who guides towards right living and right understanding. Based on this faith, the participant or practitioner must be inspired to become accomplished in *sīla* (virtue) by following the moral or value guidelines. They must come to know the precepts well, understand the reasons for observing them, and know how to apply them in the difficult circumstances of human life today to exist within a compassionate society. Most importantly, they should come to appreciate the positive virtues these precepts represent: kindness, compassion, honesty, purity, truthfulness, and mental sobriety. They must also acquire the spirit of generosity and self-sacrifice (*Cāga*), so essential for overcoming selfishness, greed, and the narrow focus on self-advancement that dominates in present-day civilized society.

The ideal of generosity is to develop compassion and renunciation, qualities which sustained the Buddha throughout his entire career. It is to learn that cooperation is greater than competition, that self-sacrifice is more fulfilling than self-aggrandizement, and that our true welfare is to be achieved through harmony, loving-kindness, tranquillity, peace, and goodwill rather than by exploiting and dominating others in the name of class, creed, age, gender, color.

The flame of compassion must be generated or ignited by methodical mental training in calm and insight, the two wings of Buddhist meditation. But Buddhist Education can go far in laying the foundation for this wisdom by clarifying the principles that are to be penetrated by mindfulness insight. In this task learning and wisdom are closely interwoven, the former providing a basis for the latter. Wisdom arises by systematically working the ideas and principles learned through study into the fabric of the mind's thought process, which requires deep reflection, intelligent discussion, and keen investigation of the essence of Buddhist education through mindfulness.

VI. CORE TEACHINGS OF BUDDHA THROUGH MINDFULNESS MEDITATION

The teachings of the Buddha consist of *sīla*, *Samādhi*, and *Pañña* i.e. knowing at the experiential level *anicca*, *dukkha*, and *anattā*. Thus, his teachings have nothing sectarian in them. They are based on the universal laws. Craving and aversion will destroy us. If we crave misery they will multiply. But if we see where and how they arise we will be able to uproot them out. If today's society diligently incorporates or accepts and comes forward to adapt to learn the technique of *Mettā* or *Vipassanā* Meditation and the Buddhist Education Universal doctrine inspires them to practice it, it is sure to have a salubrious effect on them. It is a technique of meditation to look within. It is completely free from sectarianism and teaches universal Dhamma.

If our society participants are taught to see at the experiential level through the prism of Mindfulness Meditation the root cause of their mental defilements, they will tend to be wise, they will be non-attached to the things of the world as they will realize their impermanent nature at the experiential level, they will cut out desires from them, and look within and see where desires arise and multiply, they will make efforts not to let them arise in ignorance and overpower them. *Mettā* or *Vipassanā* will go a long way in lightening the darkness of ignorance which is responsible for multiplying our misery. Practise of *Mettā* and *Vipassanā* will make them see at the experiential level because they should observe moral precepts. Such blissful teachings given by Buddha to mankind are Buddhist Education for a larger section towards developing a compassionate society.

VII. BUDDHA THE UNIVERSAL TEACHER OF SOCIETY

The Buddha is known to many generations of Buddhists or Universal Society as a historical one. He was popularly called a teacher of both men and gods since he was endowed with supreme knowledge and because he was a destroyer of doubts. He is a peerless and phenomenal teacher in whom

many sought refuge. Many famous Brahmins reputed to be of great learning, venerated the Buddha unreservedly⁵. To Sabhiya one of the most renowned Brahmins, the Buddha was the greatest teacher in whom he saw hardly any attachment. The Buddha appealed to him as a beautiful lotus flower does not cling to water, so you do not cling to merit and demerit, both. Stretch forth your feet hero. Sabhiya pays homage to the teachers' feet.⁶ It is the personality of the Buddha and the events of his life were so remarkable that they made him the most practical and awakened educationist or teacher. The Buddha, according to Prof. G.C. Pande, has been regarded as the very embodiment of knowledge (Bodhi) and Karuṇā (Compassion). He said, "The greatness of the Buddha personality is manifest from the fact that no other individual has left as strong and impressive on the history of Indian culture as he did."⁷

It is wisdom that the Buddha held up as the direct instrument of final liberation, as the key for opening the doors to the Deathless, and also as the infallible guide to success in meeting life's mundane challenges. Thus, wisdom is the crown and pinnacle of the entire system of Buddhist education, and all the preliminary steps in a Buddhist educational system should be geared towards the flowering of this supreme virtue. It is with this step that education reaches completion, that it becomes illumination in the truest and deepest sense, as exclaimed by the Buddha on the night of his Awakening: "There arose in me vision, knowledge, wisdom, understanding, and light."

VIII. DILUTED FACTORS OF A COMPASSIONATE LIVING SOCIETY

The effort made through each moment by all individuals is invariably directed towards successful living. But it just cannot be assumed that the lives of all the people on earth are successful. To decide the success or the failure of a life, we must have a clear notion of the goals, aims, and purposes of life. An individual earning his living by fishing will consider that to make a success of his life, he must catch more and more fish. A person who earns his wealth by selling liquor is likely to believe that his life will become more successful if he sells more liquor. The man who lives by robbing others will think that his life would be successful only in proportion to the thefts and robberies he did, without being caught by law. Those who have gotten into the habit of indulging in sensual pleasures are likely to think that their life will be successful if they get more and more opportunities to indulge in sensual pleasure.

Considered this way, the success or the failure of a life depends on the kind of belief held by each person within the living society. People act according to the views they hold. To lead a successful life, one must possess wise and perfect views.⁸ This wise and perfect view must be wise and perfect in terms of Buddhist Thought. This is described as the 'Sammā ditṭhi' perfect view.⁹ Not

⁸ *Saṃyutta Nikaya*, PTS, p. 420 - 424.

⁹ *Saṃyutta Nikaya*, PTS, p. 420 - 424.

only the perfect view, but the eight-fold factors taught in the Buddhist concept of the middle path too enable a person to lead a successful life.¹⁰ There are several other virtues a person should cultivate before he can adopt a wise view. By acquiring those virtues indicated in Buddhism, an individual leads towards right thought, appropriately.

The behavioral patterns of the members of the human society are not all alike. Those individuals, in whom lust predominates, are attracted to alluring objects and are excessively given to the indulgence of sensual pleasures. They spend a good part of their time dancing, singing, and listening to music, and seek satisfaction through the enjoyment of such activities. They pay more attention to these pleasures than to most otherworldly activities. Others do not try to be critical about the good and the bad that prevail in society. They are perpetually given to finding fault with all the things that happen in society. They keep their mind as a festered wound. Like venomous serpents, they exude anger towards their daily tasks.¹¹ They are not sure about what they should do or not do. They have no awareness of their own lives. They float around aimlessly, like dry leaves in the wind. Such people allow their lives to be darkened by their behavior. These forms of behavior are the outcome of the unrestrained senses of individuals. The restraint of one's senses is described as discipline or Sila or morality this is the path towards a successful life.

From ancient times, heeding the words and advice of elders was upheld as a high virtue. Adults have greater knowledge and experience than the young in social activities. Respecting and honoring elders in a given community has been upheld by Buddhist traditions. Buddhist teachings refer to the act of respecting elders as a good deed that will bring meritorious results. In the Pāli, the virtue of respecting elders is referred to as "Vuddhappacayana Dhamma" the virtue of respecting elders.¹² Everything that the adult society expects cannot be right. But, since a young member of society cannot acquire the experience, the adults have gained about society, the younger members can benefit from some of the experiences gained by the elders and make their life a success.

Human beings tend to think in a variety of ways. Due to the differences in viewpoint, we could barely see two people acting in the same way within the society norms. The value systems and tastes of one person may not be appreciated by another. The political and economic theories adopted by one country may be rejected by another. The value systems and theories of each person may be logical from the point of view of that person. Yet another person might consider it a logical conclusion based upon a truth, a falsehood, or an empty notion. In consequence, one could perceive vast gaps between various countries, various societies, and members of the society. These gaps occur due to differences in viewpoints and beliefs.¹³ The salutary, wise viewpoint an

¹⁰ *Visuddhi Magga*, PTS, p. 101 - 110.

¹¹ *Anguttara Nikaya*, PTS, I, p. 124

¹² *Dhammapada*, PTS, p. 16, Stanza 109.

¹³ *Samyutta Nikaya*, PTS, p. 156 - 167.

individual acquires in the course of individual development will enable a person to narrow the differences that occur due to varying beliefs. To achieve complete development in the context of a society, built on a wholesome viewpoint that can be discerned only through a sharp intellect, the eight-fold path can be utilized. This path is the noble eight-fold path or the Middle described in the teachings of Buddha a key element in developing a compassionate society.

9.1. Happiness

Happiness (*sukha*) is a feeling of ease, well-being, and satisfaction and can range from mild to intense and be either momentary or enduring. The Buddha distinguished between worldly happiness which is dependent on sensory stimulation, and spiritual happiness which is derived from being virtuous and gradually freeing the mind. Some examples of worldly happiness that the Buddha considered legitimate and worthwhile are the happiness of ownership (*atthisukha*), the happiness of wealth (*bhogasukha*), and the happiness of being free from debt (*anaṇasukha*).¹⁴ The sense of achievement, from excelling in one's chosen profession and making a good living out of it can make one very happy.¹⁵ On a higher level, some of the things conducive to spiritual happiness include practicing the Precepts,¹⁶ being just,¹⁷ calming the senses,¹⁸ thinking about and rejoicing in one's good deeds, taming the mind, being able to love despite being surrounded by those who hate and being at peace. The highest and most refined happiness comes from attaining awakening.¹⁹

Concerning the two levels of happiness, the Buddha advised: 'If by giving up worldly happiness one can attain the higher happiness, the wise person should do so, seeing it as a more enriching happiness' (Dhp 290). Happiness has an important role in meditation in that it assists in the development of a stable, effortless concentration. The Buddha said: 'The mind that is happy becomes concentrated' (*sukhino cittaṃ samādhīyati*).²⁰

9.2. Harmony

Harmony (*avirodha*, *sahita*, or *samagga*) is the smooth, pleasant, and non-contentious functioning together of two or more things. The Buddha often spoke of the need and also the desirability of harmony within and between groups of people. Some of the things contributing to what he called 'the progress of a society' (*aparihāṇīyā dhamma*) are the ability 'to meet together in harmony, adjourn in harmony and conduct business in harmony'.²¹ The former murderer or bandit Āṅgulimāla was echoing the Buddha's sentiments when he said: 'Let my enemies hear from time to time the Dhamma of those who speak

²¹ D.II. 74: "samaggā sannipatanti, samaggā vuṭṭhahanti, samaggā... karaṇīyani."

of patience and in praise of harmony and let them live following it.²²

Humans are notorious for their inability to get along with each other, and in this respect, religious groups, communities, or society are often little better than others. Why is it, someone once asked the Buddha, ‘that wanting to live in peace and without hate, violence, hostility, ill-will, and malignancy, humankind is constantly in conflict and plagued by hate, violence, hostility, ill-will, and malignancy and lacking in love?’²³ The root cause of most disharmony is clinging and craving; clinging to one’s ideas, to one’s belongings, or to one’s position; craving for pleasure, power, or recognition. And at the deepest level, craving is spawned by the notion of self or ego. Complete harmony and lasting peace will only be possible when one has attained awakening. But in the meantime, much can be done by individuals to make their relationships more harmonious in a compassionate society.

The Buddha said: ‘Monks, there are six things that foster love and respect, helpfulness and agreement, harmony and unity.’²⁴ What six? When one acts with love towards one’s companions in the spiritual life, both in public and in private; when one speaks with love towards them, both in public and in private; when one thinks with love towards them, both in public and in private; when one share with them, without reservations, whatever one has acquired justly, even if it be no more than the food from one’s alms bowl; when one possesses together with them virtues that are complete, unbroken and freedom-giving, praised by the wise and conducive to concentration; and when one possesses with one’s companions in the holy life, both in public and in private, the noble understanding, leading to freedom and which conduces to the destruction of suffering; then will there be love and respect, helpfulness and agreement, harmony and unity. These are the foundation pillars of a compassionate society where each human strives to live following society.

The Buddha once asked several of his monk disciples how they were able to live together ‘in harmony, mutual appreciation, and agreeability, like milk and water mixed, regarding each other with the eyes of love.’²⁵

One of them, Anuruddha Thera, replied, ‘I always consider what a blessing it is, what a real blessing, that I am living with such companions in the spiritual life. I think, speak, and act with love towards them, both in public and in private. I always consider that I should put aside my wishes and acquiesce to what they want and then I do that. Thus, we are many in body but one in mind.’²⁶

Several things are mentioned here by the Buddha and Anuruddha – love, generosity, having common values, appreciation of others, being sensitive to

²⁶ M. III. 156.

their needs, and not always demanding to get one's way. Other qualities that nourish harmony are forgiveness, kindness, respect, sympathy, and tolerance.

9.3. Joy

Joy (*pīti*) is a feeling of subtle and refined happiness and is similar to it. In Buddhist psychology, joy is seen as the result of virtuous living, a sign of successful meditation, and an indication of growing spiritual intense maturity. Many different types of joy are identified in Buddhism. Sympathetic joy, for example, is the ability to be able to rejoice in the success and happiness of others. When the sage Bāvari merely heard the word 'Buddha' he experienced exaltation (*udagga*), jubilation (*vedajāta*), and elation (*attamāna*).

Buddhālabana *pīti* is the calm joy one can feel while contemplating an image of the Buddha. In the Visuddhimagga, joy is categorized according to its intensity and the effect it can have on the body. Thus, there is minor joy (*khuddikā pīti*), momentary joy (*khaṇikā pīti*), showering joy (*okkantikā pīti*), uplifting joy (*ubbeḡā pīti*), and pervading joy (*pharaṇā pīti*).²⁷

Some people are cautious of joy, thinking that it might lead to attachment, but Buddhaghosa made an interesting comment on this matter: 'It is called joy because it is to be enjoyed' (Vis.143). Joy is an important part of the jhānas and one of the seven limbs that lead to awakening.²⁸

9.4. Peace

Negatively peace (*samagga*, *santi*, or *upasama*) is the absence of conflict while positively it is the presence of harmony, tranquillity, and ease. The Buddha praised and promoted peace within society, between individuals, and within individuals. The Jātaka has a character say: 'This is my message to you who are assembled here; live in concord, avoid arguments...train yourself in peace, for this is praised by the Buddhas. Delight in peace and justice and thereby freedom from bondage will not be destroyed' (Ja. IV. 211). The Buddha commented that even the gods envy the person who lives in peace (Ud. 30). He described himself as a reconciler of those at variance and an encourager of those already united, rejoicing in peace, loving peace, delighting in peace, speaking in favor of peace.²⁹

But the Buddha was not just at peace himself, nor did he merely speak up for peace, he also actively did what he could to promote it. According to tradition, once the Sakyans and their neighbors the Koliyans, were about to have an armed conflict over the water in the river that divided their countries from each other. It was the height of summer and there was barely enough water to irrigate the Koliyan's let alone the Sakyan's. The Buddha positioned himself between the warriors of both sides and inquired: 'What are you fighting about?' 'Water,' came the reply. 'And what is more precious? Water or the blood of your young men?' he asked. 'Blood is far more precious than water,' they

²⁷ Vism. 143.

²⁸ D. II. 79.

²⁹ D. I. 4.

replied. “Then is it not improper to spill blood for the sake of water?” These reasoned and gentle words of admonishment brought everyone to their senses, a compromise was worked out and peace was restored.³⁰

One of the meditations taught by the Buddha was the Recollection on Peace (*upasamānussati*)³¹ during which one contemplates the beauty of peace within oneself and one’s community. The deepest and most lasting peace, however, is only available to those who have attained Nirvana. As the Buddha said: ‘Peaceful is the mind, speech, and actions of one who is utterly quiescent and freed by knowledge.’³²

It is appropriate that the Dalai Lāma, the first Buddhist monk to be awarded the Nobel Prize, and Aung San Suu Kyi, the first Asian woman to be awarded it, were both given it for their efforts to bring about peaceful political change. The Buddhist scriptures say: ‘Having seen contention as a danger and harmony as peace, abide in unity and kindness; this is the teaching of the Buddhas’ (Cp. 3, 15, 13).

From the above, we can contemplate the pillars of a Compassionate Society through Mindfulness Buddhist Education emphasizing Happiness, Harmony, Joy, and Peace which are the essential ingredients for a civilized compassionate Society.

9.5. Teachings of Buddha creation for a compassionate society

The most noticeable feature of the Buddha’s personality was his compassion, and this compassion was not just something he felt for others or that they felt in his presence, it was also the motive for much of what he said and did. He said: “What should be done out of compassion for his disciples by a teacher who cares about their welfare and out of compassion for them, I have done for you.” He visited and comforted the sick “out of compassion”, and he taught the Dhamma “out of compassion.” Once he went into a lonely forest looking for the serial killer Angulimāla, out of compassion both for him and for his potential victims. The Buddha’s compassion seems to have transcended even the bounds of time. He is described sometimes as doing or refraining from doing certain things “out of compassion for future generations.” On many occasions, he said that his very reason for being was “for the good of the many, for the happiness of the many, out of compassion for the world, for the welfare, the good and the happiness of gods and humans.”

After the Buddha’s awakening, he saw the need for some kind of community, bound together by shared values and norms, which would provide the optimal environment for awakening and could disseminate the Dhamma as widely as possible. Thus, what came to be known as the four-fold community (*catu parisā*) evolved, its four parts being monks and nuns (*bhikkhu* and *bhikkhunī*) and lay men and women (*upāsaka* and *upāsikā*)³³. He envisaged the parts of this

³⁰ Dhp-a.254; Ja. V.412 ff.

³¹ Dhp-a.254; Ja. V.412 ff.

³² Dhp 96.

³³ See Anālayo (2018), p. 9 - 17.

community being mutually dependent (*aññamaññaṃ*) on each other – monastics on the laity for their basic needs and the laity on monastics for knowledge of the Dhamma. Furthermore, because the Buddha considered his Dhamma to be distinct from other teachings, it was only right that he would want his disciples to be distinct too - most importantly in their probity but also their dress. The ascetics of other sects tended to wear whatever clothes they could find or were given and, in any style, they liked, but the Buddha wanted his monastics to all to use the same type of robe dyed a similar color so that they could be immediately distinguished from other ascetics. The color was called *kaśāva*, which probably referred to a tawny-yellowish hue³⁴. Although the Buddha never required it be done, lay disciples dressed in white (*gihī odātavasana*) as an alternative to more ostentatious, brightly colored, and embroidered wear perhaps because it was thought to suggest purity and simplicity.

At the beginning of the Buddha's career, people expressed their intention to become disciples, whether monastic or lay, by taking what was called the Three Refuges (*tisaraṇa*) – a refuge being a place offering security from a threatening or dangerous situation. The Buddha was considered such a refuge because his awakening demonstrated that the continual process of birth, death, and rebirth could be transcended; the Dhamma was a refuge because it provided how this could be achieved; and the Saṅgha was a refuge by offering the guidance and encouragement, example and support needed to transcend conditioned existence. The word *saṅgha* means a group or assembly and is generally used for the monastic orders, i.e. monks and nuns, although in the Three Refuge avowal, it does not usually refer to monks or nuns but to anyone who has realized either a stage at which awakening becomes irreversible and inevitable or awakening itself. To this day, those who decide to become Buddhist recite three times a simple formula – I take refuge in the Buddha; I take refuge in the Dhamma; I take refuge in the Saṅgha – by which they affirm their confidence in and commitment to Buddhism.

The Buddha's first move in developing a community of disciples was to establish a monastic Saṅgha. An order of monks unencumbered by familial ties and social obligations would provide the best opportunity to develop the spiritual qualities needed to attain awakening. Furthermore, such monks would be in a good position to disseminate the Dhamma. In the beginning, joining the monastic community required approaching the Buddha and requesting to become a monk, but as time went by the Buddha saw the need for a more formal and structured organization, which the monastic Saṅgha eventually became. Some years after the first monks were ordained, a group of women expressed a desire to become nuns, and a nun's Saṅgha was founded.

³⁴ Vin. I. 306 gives a range of colours that monastics' robes should not be, including red, yellow and orange. Buddhist monks today are often said to wear 'saffron' robe, and indeed the colour of their robes sometimes resembles the bright orange of saffron. But the saffron plant was unknown in fifth century BCE India and even later was never used as a dye because of its expense and poor fixing properties..

9.6. Compassionate society seen within the pāli literature through case studies

The ideal loving Buddhist couple would be Nakulapitā and Nakulamātā, who were devoted disciples of the Buddha and who had been happily married for many years. Once Nakulapitā told the Buddha in the presence of his wife: “Lord, ever since my wife was brought to my home when I was a mere boy and she was a mere girl, I have never been unfaithful to her, not even in thought, let alone indeed.”³⁵ On another occasion, Nakulamātā devotedly nursed her husband through a long illness, encouraging and reassuring him all the while. When the Buddha came to know of this, he said to Nakulapitā: “You have benefited, householder, you have greatly benefited, in having your wife Nakulamātā full of compassion for you, full of love for you, as your mentor and teacher.”³⁶ From the Buddhist perspective, these qualities are the recipe for an enduring and enriching relationship – faithfulness, mutual love and compassion, and a willingness to learn from each other (anukampikā or anaticariya, atthakāmā, ovādikā, and anusasikā respectively).

One of the most famous of these is the Nigrodhamiga Jātaka. One day the lot fell to a doe from the Sāka herd who was pregnant. She went to her stag and said: “I am pregnant. Let my turn be postponed until I have given birth and then I will go to the chopping block.” The stag was unsympathetic. “We cannot make an exception. Your turn has come and you must go to the block.” Desperate to save her unborn fawn she went to the Nigrodha stag and begged him to do something to postpone her death. Moved by compassion he said: “Go home and I will see what I can do.” Accepting that he could not demand another deer take the doe’s place he resolved to do it himself. The next day he went to the chopping block, laid his neck on it, and calmly waited for his grim fate. When the cook came and saw the stag he was surprised. “The king has granted immunity to this stage and yet he lays his head on the block. What can this mean?” He ran off to tell the king, who quickly drove his chariot to the block in the forest.

For the Buddha love and compassion were incomplete if they were not extended to all sentient beings. He even suggested that in certain circumstances kindness to animals might take precedence over human laws. Once a certain monk found an animal caught in a trap and, feeling pity for it, released it. Customary law at that time considered a trapped animal to be the property of the hunter who had set the trap, and this monk was criticized by his fellows for theft. However, the Buddha exonerated him, saying that because he had acted out of compassion, he had not committed any offense.³⁷

Commenting on the Buddha’s words, the Saddhammopāyana says: “Nursing the sick was much praised by the Great Compassionate One and is it a wonder that he would do so? For the Sage sees the welfare of others as his

³⁵ A. II. 61.

³⁶ A. III. 295 - 8.

³⁷ Vin. III. 62.

own and thus that he should act as a benefactor to others is no surprise. This is why attending to the sick has been praised by the Buddha. One practicing great virtue should have a love for others.”

X. CONCLUSION

We see how Buddha in each discourse has been a compassionate teacher who delivered his teachings for 45 years and built a new society which was the need of that hour to come out of dogmas and superstition so that every individual or profession is respected in a good manner. Such respect earned is a part of Education where every individual in the community is mindful through his actions, speech, and mind and this transforms a greater compassionate society.

In eulogizing compassion, the *Jātakamāla* says: “Compassion gives birth to all the other virtues just as cooling rain makes the crops grow. When a person is compassionate, he has no desire to harm his neighbor, his body, speech, and mind are purified, concern for his neighbor’s welfare increases, and states like kindness, patience, happiness, and good reputation grow. Being calm, the compassionate person does not arouse fear in the minds of others. He is trusted like a kinsman; he is not agitated by the passions but quenched by the waters of compassion. The fire of hatred does not blaze in his heart... Remembering this, strive to develop compassion towards others; as if they were yourself or your offspring.”

Compassion is the way *mettā* relates to those in distress. Once again, not everyone requires compassion. Sometimes those around us are celebrating or savouring success. Now it is appropriate for *mettā* to manifest itself by celebrating with them, listening as they recount their good fortune, and being happy in their happiness. Sympathetic joy is *mettā*’s response to those who are happy. However, there is another aspect of sympathetic joy that does not always get a mention. When compassion comes, forgiveness and pardon usually follow. Eventually, we may even be able to have a reconciliation with them. However, we must keep in mind that a person might have been so grievously hurt by another that they want no contact with them. It would just be too painful and would reawaken distressing associations. If equanimity and forgiveness have dissipated all the old hate, that is sufficient. The reality is that the deeper the wounds, the more time they take to heal. The road from hatred to freedom from hatred may be long but its mileposts are all marked “Equanimity”.

Seen through the above case studies in the aspects of a deer how the bodhisattva shows compassion towards his or her subordinates, similarly, the Nakkulapita and her wife during their last stage what all good merits they have earned are remembered to have compassion mindfulness so that the birth should be in higher realms, also we can see how monks and nuns also had compassion for humans and animals. The way Buddha had compassion to transform *Āṅgulimāla*. This shows when we inculcate this quality with mindfulness as a core Buddhist education in life our lives and society will change and prosper diligently.

This shows that *Mettā*, *Karuna*, *Muditā*, and *Upekkhā* all go with one another and in this Compassion has a potential role. If an individual gets an understanding of how compassion is essential for humans and animals this world will become a Compassionate Society.

THE ROLE OF MINDFUL EDUCATION IN DEVELOPING A UNIFIED WORLD: BUDDHIST INTELLECTUAL NETWORKS FROM CHINA TO SOUTH ASIA

Rev. Dr. Madurawala Sobhitha*

Abstract:

This paper focuses on mindful Buddhist education that integrates compassion, wisdom, and ethical principles to address global challenges. It fosters emotional resilience, critical thinking, and interconnectedness, offering solutions to issues like inequality, mental health, and climate change through mindfulness practices and interdisciplinary applications. Historical Buddhist networks connected South Asia, East Asia, and Southeast Asia, promoting cross-cultural exchanges and the dissemination of mindful Buddhist teachings at centers like Nālandā and Mahāvihāra. On the other hand, Pure Land Buddhism highlights Buddhism's adaptability, blending Indian Mahāyāna ideas with Chinese cultural values. Modern educational collaborations between China, India, and Sri Lanka also build on these Buddhist educational networks. Institutions like Peking University, Nālandā University, and the University of Peradeniya advance Theravāda and Mahāyāna Buddhist studies through research and scholarships. Pilgrimages to sites like Bodh Gayā and Mount Wutai, foster spiritual and intellectual ties. As this research paper observed, by integrating traditional Buddhist wisdom with modern approaches, mindful Buddhist networks address sustainability, peacebuilding, and interfaith dialogue. These collaborations underscore Buddhism's transformative potential in promoting harmony, equity, and global citizenship, offering enduring insights into present-day challenges and sustainable development.

Keywords: *Mindful education, unified world, Buddhist wisdom, mindfulness.*

* Senior Lecturer, University of Peradeniya, Sri Lanka.

I. INTRODUCTION TO MINDFUL BUDDHIST EDUCATION

The need for education in cultivating compassion and mindfulness is more than ever in a world that is becoming more interconnected but also more fractured. Through the integration of ethical principles, self-awareness, and holistic learning, mindful Buddhist education provides a transformative method that surpasses traditional education. The importance of mindful Buddhist education in undertaking today's issues and its capacity to link international intellectual networks are examined in this research paper. As instructed in the Theravāda *Tripitaka*, core qualities that went beyond cultural and geographic borders, such as compassion (*karuṇā*), wisdom (*prajñā*), and non-harming (*ahiṃsā*), are emphasized in mindful Buddhist education.¹ It nurtures emotional strength, critical thinking, and a profound sense of interconnectivity and has its roots in centuries-old customs. This method prepares people to handle global issues including social inequity, mental health issues, and climate change by promoting an understanding of our common humanity and the interconnectedness of all living things.

The focus on awareness (*sati*) and meditation techniques are the fundamental components of mindful Buddhist education. These exercises aid in the development of children's capacity to concentrate, control their emotions, and make moral decisions. Including mindfulness in curricula can help build more inclusive, productive, and sympathetic learning environments in stressful and competitive school climates.² Furthermore, interdisciplinary research can be stimulated by the incorporation of Buddhist ideas like dependent origination (*paṭicca samuppāda*), especially in disciplines like ecology, neurology, and the social sciences where knowledge of interrelated systems is essential.³

The ability of mindful Buddhist education to bridge intellectual networks across various disciplines and geographical areas makes it relevant on a worldwide scale. For example, academic partnerships between Buddhist researchers and readers in Asia, Europe, and America can promote mutual learning and cross-cultural communication. These networks can tackle universal issues related to ethics, sustainable development, and the human condition. Additionally, the digital era presents previously unheard-of chances to distribute Buddhist educational materials, facilitating a wider audience and more in-depth interaction. Buddhist concepts can be incorporated into worldwide discussions through online forums, international conferences, and

cooperative research initiatives.⁴

Additionally, mindful Buddhist education supports the Sustainable Development Goals (SDGs) of the UN, especially those related to justice, peace, and high-quality education. It can act as a basis for developing global citizenship by fostering principles of inclusivity and togetherness. According to the United Nations, education is crucial to achieving several other Sustainable Development Goals (SDGs). Individuals can break the cycle of poverty by obtaining a quality education. Education helps to reduce inequities and achieve gender equality. It also enables people worldwide to live healthier and more sustainable lives. Education is also important for building tolerance among people and contributing to a more harmonious society. The UN believes, that to achieve goal 4, education finance must become a national investment priority. Furthermore, policies such as making education free and obligatory, expanding the number of instructors, strengthening fundamental school facilities, and embracing digital change are critical.⁵

On the other hand, programs that include mindful Buddhist teachings in peacebuilding initiatives, for instance, have demonstrated potential in resolving conflicts and foster reconciliation in areas impacted by historical and sociopolitical tensions.⁶ Thus, mindful Buddhist education provides a strong framework for developing moral leadership, improving emotional intelligence, and bridging cultural and intellectual gaps. Its significance in the twenty-first century is highlighted by its capacity to develop international intellectual networks and solve current issues. Adopting the timeless wisdom of mindful Buddhist education will help us navigate an era of rapid change and uncertainty. It will create a way for a more sustainable, inclusive, and compassionate world.

From ancient times to the present, this study examines the development and effects of Buddhist educational networks that link China, India, South East Asia, and Sri Lanka. This study illustrates how these networks support sustainable development, especially in social harmony and community-based ventures, by analyzing historical documents, current institutional relationships, and educational practices. The study emphasizes how the ancient Buddhist values of interaction mindfulness, and moral behavior can provide useful answers for promoting social justice, peace, and harmony in contemporary Asian societies.

II. THE GAUTAM BUDDHA'S APPROACHES TO MINDFUL EDUCATION AND ITS NETWORKING

The concepts of awareness, interconnectedness, and compassion are at the

⁴ Morten Schlütter (2014) "Buddhism in the Digital World", in *The Wiley Blackwell Companion to East and Inner Asian Buddhism*, (ed.) Mario Poceski, New Jersey: Wiley-Blackwell, p. 12.

heart of the Buddha's method of mindful education and networking. In terms of individual growth and community involvement, it places a strong emphasis on cultivating wisdom (*paññā*), moral behavior (*sīla*), and mental discipline (*samādhi*). In the Buddhist tradition, increasing inner awareness, moral principles, and practical wisdom are the main goals of mindful education. In particular, the components of right view, right thought, and right mindfulness are in line with the noble eightfold path and the four noble truths. "And what is the noble eightfold path? It is the right view, right thought, right speech, right action, right livelihood, right effort, right mindfulness, and right immersion."⁷

It is obvious that the noble eightfold path is closely connected with mindful practices. The Buddha's teachings on mindful life led to fulfilling the noble eightfold path and obtaining Nirvāṇa. There are a few essential features we can highlight in mindful education. The first one is self-awareness. Through mindfulness exercises like meditation, education starts with an understanding of oneself, including one's thoughts, feelings, and ambitions. The second one is following some essential Buddhist ethics and values. It is important to stress the importance of ethical principles as the cornerstone of education, such as truthfulness (*sacca*) and non-harm (*ahiṃsā*). It is important to use realistic and flexible teaching strategies to meet each student's requirements and abilities known as "skillful means" (*Upaya*). As demonstrated by the Buddha's teachings to the Kalamas (*Kalama Sutta*), which promote autonomous thought and conclusions based on evidence, critical inquiry is the encouragement of inquiries and research.

Of course, you are uncertain, Kalamas. Of course, you are in doubt. When there are reasons for doubt, uncertainty is born. So in this case, Kalamas, don't go by reports, legends, traditions, scripture, logical conjecture, inference, analogies, agreement through pondering views, probability, or by the thought, "This contemplative is our teacher". When you know for yourselves that, "These qualities are unskillful; these qualities are blameworthy; these qualities are criticized by the wise; these qualities, when adopted & carried out, lead to harm & suffering" - then you should abandon them.⁸

The Buddha also appreciated the integrating knowledge with life skills to live harmoniously and contribute to societal well-being. Incorporating mindfulness activities into the teaching space to improve focus, empathy, and emotional control is one way that mindful education encourages approaches like contemplative pedagogy. An essential component of mindful education is networking. The Buddha acknowledged that true devotees or monks could not learn Buddhism without professional teachers. Thus, in *Dhamma* communities, networking is always emphasized. The Buddha stresses establishing connections based on respect, understanding, and shared values in a Buddhist setting. It is consistent with the development of *kalyāṇa mittatā*

⁷ *Vibhaṅga sutta*, SN 48. 38.

⁸ *Kalama Sutta*, AN 3. 65.

(spiritual friendships) and the idea of interdependence (*paṭiccasamuppāda*). Buddhist intellectual networking has certain fundamental elements.

Interdependence is the first aspect. It teaches us to acknowledge the interdependence of all living beings and encourage teamwork and cooperation for the benefit of everyone. Proper speech and communication are the other essential components. In this element avoiding harsh language, divisive discourse, and gossip in favor of sincere, compassionate, and goal-oriented communication are imperative. Mutual support is the most crucial component of mindful education in Buddhism. It entailed nurturing networks of spiritual companions (*kalyāṇa mittas*) who assist one another in their spiritual and personal development. Compassionate leadership is an additional vital component. It will be a wise and compassionate leader who prioritizes the needs of the community over personal gain. Among these, inclusion is the most sympathetic. The Buddha's welcoming of individuals from various castes, genders, and origins into the *Sangha* is an example of the Buddhist network's embrace of diversity and inclusivity.

In *Kalyāṇamitta sutta* in *Saṃyutta Nikaya*, the Buddha appreciated reliable spiritual friends as the most important element in developing a mindful Dhamma life.

Ānanda! Good friends, companions, and associates are the whole of the spiritual life. A mendicant with good friends, companions, and associates can expect to develop and cultivate the noble eightfold path.

And how does a mendicant with good friends develop and cultivate the noble eightfold path? It's when a mendicant develops the right view, right thought, right speech, right action, right livelihood, right effort, right mindfulness, and right immersion, which rely on seclusion, fading away, cessation, and ripen as letting go. That's how a mendicant with good friends develops and cultivates the noble eightfold path. And here's another way to understand how good friends are the whole of the spiritual life: "For, by relying on me as a good friend, sentient beings who are liable to rebirth, old age, and death, to sorrow, lamentation, pain, sadness, and distress are freed from all these things. This is another way to understand how good friends are the whole of the spiritual life."⁹

The Buddha informs Venerable Ānanda in the *Upaddha Sutta* (SN 45.2): "Admirable friendship, admirable companionship, admirable camaraderie is actually the whole of the holy life."¹⁰ This lesson emphasizes how crucial it is to surround oneself with morally upright and encouraging people. Mutual development and a common dedication to moral and spiritual objectives are fostered by such interactions.

A thorough foundation for establishing and preserving cordial relationships in a variety of social roles, such as those with family, friends,

⁹ *Kalyāṇamitta sutta*, SN 3.18.

¹⁰ *Upaddha Sutta*, SN 45.2.

teachers, and colleagues, is provided by the *Sigālovāda Sutta* (DN 31).¹¹ The Buddha emphasizes values like appreciation, generosity, and respect in his six directions of duty and reciprocity. For instance, teachers should convey knowledge and encourage moral behavior, and students should respect and encourage their teachers. The *Cakkavatti Sutta* (DN 26) serves as another illustration of the function of moral leadership in networking. In order to ensure the welfare of their communities, the Buddha leaders governed with fairness and compassion. This advice is especially pertinent to contemporary leaders who are working to build networks that are sustainable and inclusive.¹²

The Buddha's teachings provide practical advice for modern networking and education. To improve focus, emotional control, and ethical awareness, educational institutions and corporations should incorporate mindfulness exercises from the *Satipaṭṭhāna Sutta*. The *Sigālovāda Sutta*'s ethical reciprocity and the *Upaddha Sutta*'s spiritual friendship principles offer a framework for creating networks that are compassionate and cooperative. Through the alignment of individual growth with the welfare of the group, the teachings of the Buddha encourage people to cooperate in the pursuit of a peaceful and enlightened society.

In both social and professional contexts, mindful networking can be used to build compassionate, cooperative, and inclusive communities that respect moral leadership and a common goal. The spiritual Buddhist network connects spiritual friends and communities through shared experiences, teachings, practices, and philosophy. The world has witnessed many Buddhist traditions and movements that allowed the Buddhist philosophy to spread through Asian regions. From China to India Buddhism was an iconic move in the ancient world. South Asian, South East Asian, and East Asian traditions, cultures, and civilizations sprouted through these Buddhist networks. This research is going to further examine how the ancient Buddhist educational networks through monasteries spread Buddhism and its spiritual texts.

III. ANCIENT BUDDHIST EDUCATION NETWORKS FROM CHINA TO SRI LANKA

In addition to facilitating trade, the old Silk Road created long-lasting educational corridors connecting China, India, and Sri Lanka through Buddhist networks. The foundation for current educational collaborations that tackle today's social sustainability issues was established by these historical ties. In this section, the research examines the ways in which 21st-century societal sustainability is facilitated by Buddhist educational practices and ideas that are disseminated through these networks. The main areas of emphasis include how Buddhist education has changed throughout time, how it has changed in contemporary settings, and how it has been incorporated into social development programs.

¹¹ *Sigalovada Sutta*, DN 31.

¹² *Cakkavatti Sutta*, DN 26.

Buddhist educational networks between China and South Asia are primarily developed through ancient trade and pilgrimage routes. Several significant historical developments can be linked to the formation of Buddhist educational networks. One of the first moves of establishing a Buddhist network between China and South Asia was initiated by early Chinese pilgrims. Early pilgrim monks were essential to the gathering, preservation, and dissemination of Buddhist literature, particularly the teachings of the Buddha. They were expanded geographically and changed to fit different linguistic and cultural contexts. These monks were inspired by the *Dhamma*, or teachings of the Buddha, and their desire to preserve its validity for the next generations. The rich textual traditions of Buddhism that are still in existence today were made possible by their efforts.¹³

Following the Buddha's *Parinibbāna* (passing away), his teachings were passed on and recited orally. To make sure the teachings were correctly retained and passed down, the monastic community (*Sangha*) established councils, such as the first Buddhist council at Rajgir (Rājagaha). However, monks started making pilgrimages as Buddhism spread geographically, from India to Sri Lanka, Central Asia, and finally East Asia. They attempted to gather and preserve sacred texts in addition to engaging in spiritual and mindful practices. The primary goal of Chinese monks seeking classic Buddhist teaching from South Asia was to collect texts from various regions. In order to preserve the teachings and prevent them from being lost or fragmented, some Chinese monks traveled great distances through deserts and mountains to collect Buddhist texts written in many languages and scripts. They found great spiritual teachers in this mindful education journey.¹⁴

The efforts of early Chinese pilgrim monks ensured that Buddhist teachings survived and spread around the world. Their pilgrimages made it easier for Buddhism to be incorporated into various cultural contexts and preserved the authenticity of the texts. As evidence of their solid commitment, the texts they gathered are still essential to studying and practicing Buddhism today. Their journeys and efforts were motivated by the common moral rather than individual benefit. Their work also serves as an excellent example of the Buddhist values of determination, selflessness, and the interconnectedness of all beings.¹⁵

For instance, a famous Chinese monk, Fa-Xian (4th – 5th century CE) traveled to India to gather Buddhist writings, such as the *Vinaya* (monastic precepts). He visited Pāṭaliputra (present-day Patna) in India and Sri Lanka, recording his travels in *A Record of Buddhistic Kingdoms*. As Fa-Xian observed, the Nālandā University and other monastic education establishments in India were very professional in Buddhist mindful teachings. As Nālandā University is one of the most renowned

¹³ Prabodh Chandra Bagchi (2011). *India and China: Interactions Through Buddhism and Diplomacy: a Collection of Essays by Professor Prabodh Chandra Bagchi*, London: Anthem Press, p. 11 - 21.

¹⁴ Mishri Saran (2012). *Chasing the Monk's Shadow*, New Delhi: Penguin Books, p. 112 - 132.

¹⁵ Bagchi, Op.cit., p. 110 - 114.

institutions of Buddhist education, Fa-Xian accounts provide insight into India's flourishing monastic education system. Even though Faxian lived before Nālandā's heyday, which spanned the fifth through the twelfth century, his observations highlight fundamental elements of its curriculum and teaching methods. Nālandā's curriculum placed a strong emphasis on studying Buddhist texts in depth, especially the *Tripitaka* and related commentaries. Buddhist theory was discussed, memorized, and thoroughly examined by monks.¹⁶ Oral transmission as a teaching method was crucial, and it was strengthened by methodical discussion and meditation. Individualized instruction from teachers (*Acharyas*) promoted both academic and spiritual development. Faxian noted that monasteries in India, including Nālandā, maintained high standards of discipline and learning, attracting students and scholars from distant lands.¹⁷

Faxian traveled to Anuradhapura, a well-known Theravāda Buddhist center in Sri Lanka, to visit the Mahāvihāra Monastery. In East and South East Asia, Sri Lanka is renowned for its ability to preserve its scriptures. Faxian noted that the teachings of the Buddha were protected by the careful recording and preservation of the Pali Canon by Sri Lankan monks. With its vast library and knowledgeable monks devoted to studying the scriptures, the Mahāvihāra functioned as a storehouse of Buddhist knowledge. Faxian's voyage demonstrated how India and Sri Lanka share information. He mentioned how a thriving intellectual and spiritual network was established when monks from Sri Lanka traveled to India to gather writings and relics, and vice versa. Sri Lanka, under the influence of Reverend Mahinda, who established Buddhism in the country, became a hub of Buddhist education. Anuradhapura emerged as a prominent educational center, fostering deep exchanges of teachers, texts, and cultural knowledge with India and China. Sri Lanka also played a significant role in preserving Theravāda Buddhist texts, which continue to inform modern Buddhist scholarship.¹⁸

The guru-disciple approach, which combined academic study with practical application, was the foundation of Buddhist education in ancient Asia. Monks frequently served as teachers and spiritual advisors, and education placed a strong emphasis on moral development, character formation, and personal growth. Buddhist teachings placed a strong emphasis on text analysis, memorization strategies, discussion, and critical thinking. Other important elements included mindfulness, meditation, and traditional healing techniques. The growth of social harmony and peace in societies was largely dependent on the incorporation of moral behavior into daily life.¹⁹

¹⁹ Pintu Kumar (2018). *Buddhist Learning in South Asia: Education, Religion, and Culture at the Ancient Sri Nālandā Mahāvihāra*, Maryland: Lexington Books, p. 140 - 141.

When Faxian returned to China, he was helpful in the translation efforts of these spiritual texts. The development of a formal monastic order in China depended heavily on the writings he gathered while traveling. He laid the groundwork for later translators like Kumārajīva and Xuanzang, who built on his work. Chinese monks and local academics worked together to ensure accuracy and cultural relevance during the translation process. The procedure made the teachings understandable to a new audience while maintaining their doctrinal purity. By adding passages that stressed moral behavior, self-control, and meditation, Faxian's translations enhanced the Chinese Buddhist canon. East Asian educational traditions and monastic reforms were impacted by these works.²⁰

Faxian's observations give a comprehensive picture of the interwoven Buddhist society, where pilgrimage and education were closely related. The sophisticated level of Buddhist research and its influence on regional and international networks are demonstrated by his documentation of institutions like as Nālandā and Mahāvihāra. Buddhism flourished throughout East Asia as a result of the translation initiatives he started and the libraries he documented, which guaranteed the preservation and dissemination of Buddhist teachings. In addition to preserving the historical heritage of Buddhist education, his work encouraged monks and academics of later generations to follow in his footsteps. The attitude of mindful pilgrimage is best exemplified by Faxian's voyage, where a dedication to knowledge and devotion to the *Dhamma* forged enduring intellectual and cultural ties throughout Asia.²¹

A significant milestone in strengthening South Asian and Chinese educational links, Xuanzang's seventeen-year journey (629 – 645 CE) promoted previously unheard-of cross-cultural collaborations in Buddhist study.²² Motivated by a desire to acquire genuine Buddhist texts, Xuanzang traveled across the Silk Road to India, the Buddhist homeland, where he visited important monastic establishments and meticulously recorded their teaching methods. His work promoted a better understanding of Indian philosophy and culture in addition to enhancing Buddhist knowledge in China. Xuanzang visited well-known Buddhist educational institutions on his journey, such as Nālandā University, which he characterized as a flourishing intellectual center with more than 10,000 resident monks involved in scholarly research and discussion. He claimed that intellectuals "came as streams and returned as oceans" to Nālandā. He described the methodical teaching strategies employed at Nālandā, stressing the value of reasoned discussion, in-depth research into the Mahāyāna and Hīnayāna doctrines, and real-world applications of Buddhist philosophy. The prosperity of the university, according to Xuanzang, is largely due to academic exchanges

and libraries.²³

More than 700 Buddhist books, including sutras, commentaries, and philosophical treatises, which were previously unavailable in China, were brought back by Xuanzang when he returned to China. He personally oversaw groups of academics that translated these books into Chinese, guaranteeing their doctrinal correctness and accessibility, and he founded translation schools in Chang'an (present-day Xi'an). His translations of the *Mahaprajnaparamita Sutra* and books on Yogacara philosophy, which had a significant impact on East Asian Buddhism, are among his most renowned achievements. The voyage of Xuanzang is a prime example of the effectiveness of cross-cultural and educational cooperation. He established long-lasting connections and advanced Buddhist studies throughout Asia by recording India's monastic customs and passing along its spiritual legacy to China. Scholars and practitioners around the world are still motivated by his legacy.²⁴ Pilgrim monks built connections between remote Buddhist communities in China and South Asia. These networks promoted solidarity among world Buddhists and their mindful education by facilitating the sharing of texts, concepts, and practices.

IV. THE ORIGIN AND TRANSFORMATION OF PURE LAND BUDDHISM IN CHINA

The development of the Pure Land tradition is one of the most important and extensively practiced traditions in Mahāyāna Buddhism. It was founded on the intellectual and spiritual determinations of early Indian Buddhism and strengthened by its dynamic evolution in Chinese culture.²⁵ This is just another example of how Buddhism interconnected and expanded throughout East and South Asia. This tradition became a cornerstone of East Asian Buddhist thinking and practice.²⁶

The Chinese phrase *ching-t'u* can imply both "pure land" and "to purify the land." The term "purifying the Buddha-land," also known as "*ching fo-kuo-t'u*" in Chinese, comes from the early Indian Mahāyāna Buddhist concept of a realized world. The term "to purify the Buddha-land" alludes to the notion that the bodhisattvas of Mahāyāna Buddhism will purify all areas where they would appear as Buddhas in the future. Purification refers to guiding all sentient beings in these areas towards *Nirvāṇa* and achieving Buddhahood. The Mahāyāna bodhisattvas practiced "self-benefit and benefiting others," which involves achieving enlightenment while also assisting others to do the

²⁴ Dorothy C. Wong (2018). *Buddhist Pilgrim-monks as Agents of Cultural and Artistic Transmission: The International Buddhist Art Style in East Asia, Ca. 645-770*, Singapore: NUS Press, p. 43 - 45.

²⁵ Paul Williams (2008). *Mahāyāna Buddhism: The Doctrinal Foundations*, London: Routledge, p. 21 - 22.

²⁶ Charles B. Jones (2019). *Chinese Pure Land Buddhism, Understanding a Tradition of Practice*, Honolulu: University of Hawaii Press, p. 33.

same. It refers to achieving the ideal of the bodhisattva path.²⁷

The intellectual origins of the Pure Land tradition can be traced back to the *early Mahāyāna sutras* written between 100 BCE and 500 CE. The books, such as the *Sukhāvati Sūtras* (particularly the Smaller *Sukhāvati-vyūha Sūtra* and the Larger *Sukhāvati-vyūha Sūtra*), introduced Amitabha Buddha and his Pure Land, Sukhāvati, as places of ultimate *Nirvāṇa*. Amitabha Buddha, portrayed as embodying limitless compassion and wisdom, became important to the Mahāyāna view of Buddhahood. Notably, Pure Land ideals served the spiritual needs of both monastic and lay communities in ancient India. It can contextualize these teachings within the socio-cultural setting of early Indian Buddhism.²⁸

Indian Buddhist philosophical monks such as Nagarjuna (approximately 150 - 250 CE) and Vasubandhu (fourth-fifth century CE) structured these teachings further and connected Pure Land practices to basic Mahāyāna ideas like emptiness (*śūnyatā*) and dependent origination (*Pratītyasamutpāda*).²⁹ Nagarjuna's treatise on the ten stages (*Daśabhūmika-vibhāṣa*) and Vasubandhu's treatise on the Pure Land (*Sukhāvati-vyūha Upadeśa*) provided interpretive frameworks that emphasized the Pure Land path's accessibility to all beings, regardless of spiritual progress.³⁰

In the Indian context, the Pure Land teachings were emphasized as universal and inclusive, meeting the spiritual needs of both monastic and lay practitioners alike. Ritual practices, such as visualizing Sukhāvati and reciting Amitabha Buddha's name, were established to help cultivate faith and achieve rebirth in the Pure Land.³¹ The conceptual foundations of these activities created the way for their cross-cultural transmission and adaptation.

The transmission of Buddhism to China along the Silk Road introduced Indian Mahāyāna teachings, especially the *Pure Land sutras*, to a new cultural and intellectual context. The *Mahāyāna sutras* were transported from the Gandhāra region to China as early as 147 CE when the Indo-Kushan monk Lokakṣema began translating the earliest Buddhist texts into Chinese. Reverend Lokakṣema (147 CE) was keen on translating many Mahāyāna scriptures into Chinese, including the *Pratyutpanna Samādhi Sūtra*. This work emphasized visualization practices for encountering Amitabha Buddha struck

³¹ Kōtatsu, Op.cit., p. 33.

a deep chord with Chinese intellectuals and inspired the early development of Pure Land practice in China.³²

Huiyuan (334 - 416 CE), the founder of the White Lotus Society and the first patriarch of Pure Land Buddhism in China, is an example of how Pure Land teachings were integrated into Chinese Buddhism. Huiyuan emphasized the visualization of Amitabha and the desire for rebirth in Sukhāvati as important practices, linking them to Daoist and Confucian intellectual principles. His efforts contributed to creating Pure Land Buddhism as a community and approachable practice for both monastics and lay people.³³

Chinese intellectuals such as Zhiyi (538 - 597 CE) of the *Tiantai* school and Shandao (613 - 681 CE), a well-known Pure Land teacher, enhanced the tradition. Zhiyi's synthesis of Mahāyāna philosophy and meditation established a foundation for comprehending Pure Land activities within the larger Mahāyāna paradigm. Shandao transformed Pure Land philosophy by emphasizing the chanting of Amitabha's name (*nembutsu*) as the most efficient technique for achieving rebirth in the Pure Land, even for ordinary beings. These achievements established Pure Land Buddhism as an intrinsic aspect of Chinese Buddhism, influencing both monastic and laity activities.³⁴

The Pure Land tradition's success in China can be traced to its adaptation and integration with indigenous Chinese philosophical systems. The emphasis on Amitabha's compassion, as well as the Pure Land path's accessibility, resonated with Chinese values such as community, filial piety, and ethical living. Pure Land practices were gradually merged with *Chan* (Zen) meditation and esoteric rites, resulting in a distinctly Chinese approach to Mahāyāna Buddhism. *Nembutsu* became a widely accepted practice of reciting Amitabha Buddha's name, which is often written as *Namu Amida Butsu* (Homage to Amitabha Buddha). This practice has become one of the most distinguishing features of Pure Land Buddhism.³⁵ This cross-cultural adaptation enabled Pure Land Buddhism to thrive as both a standalone practice and an essential component of Chinese Buddhist schools like *Tiantai* and *Chan*. The tradition's emphasis on faith, recitation, and group worship democratized Buddhist practice, making it more accessible to lay practitioners and cementing its status as a significant spiritual path in East Asia.

The Pure Land tradition is a dynamic fusion of Indian philosophical and literary creativity with Chinese cultural and religious sensibilities. This philosophical tradition is another historical landmark of how China and

South Asia connected through spiritual training and mindful educational networks. In India, it arose as an important illustration of Mahāyāna ideas, emphasizing global salvation through Amitabha's compassion. In China, it has grown into a vibrant and diversified tradition, inspired by Chinese Buddhist scholars' creative engagement with indigenous philosophical frameworks. This paper examines the Indian and Chinese contributions to the Pure Land tradition, highlighting how Buddhism has traditionally changed to fulfill the spiritual requirements of many populations. Understanding these origins and developments provides crucial insights into Pure Land Buddhism's enduring relevance as a global religious tradition and its networking.

V. MODERN BUDDHIST EDUCATIONAL NETWORKING BETWEEN CHINA AND SOUTH ASIA

Based on their common Buddhist ancestry, China, India, and Sri Lanka have a contemporary Buddhist educational relationship that is promoted by research projects, cultural exchanges, and scholarly partnerships. Their historical ties and current initiatives to advance Buddhist studies and education are reflected in this relationship. Today, collaborative research and academic exchange are prominent in China, Sri Lanka, and India relationship. Buddhist philosophy, textual analyses, and the historical dissemination of Buddhism throughout Asia are the main areas of collaborative research. In order to showcase the variety of schools of thought within Buddhism, scholars from Sri Lanka and India regularly work with Chinese institutions on subjects like Mahāyāna Buddhism, Theravāda practices, and the Pure Land Tradition. The United Nations Day of Vesak celebrations and other collaborative academic events encourage discussion on Buddhist teachings and how they relate to contemporary issues like sustainable development and peacebuilding.

China plays a crucial role in study programs and scholarships. Students from India and Sri Lanka can study Buddhism and related subjects at China's esteemed Peking University and Shandong University with scholarships. Chinese Buddhist scriptures and Mahāyāna Buddhism are frequently highlighted in programs. For advanced study in Buddhism and its Chinese interpretations, monks and academics from Sri Lanka regularly travel to Chinese universities.³⁶ Because of its historical significance as the birthplace of Buddhism, India also attracts Buddhist scholars from China and Sri Lanka to establishments like Nālandā University and universities in Bihar. Monks and students can study Theravāda and Mahāyāna traditions and discover India's historic Buddhist legacy through scholarships and training programs. Modern Nālandā University is one of the examples.³⁷

Long regarded as a major global hub for Theravāda Buddhist education, Sri Lanka attracts professors and students from nations including China,

³⁶ Thomas Borchert (2020). "A preliminary survey of Buddhist higher education in Asia: developing typologies and comparing secularities", in *Studies in Chinese Religions Volume 6*, Issue 4, p. 327 - 330.

³⁷ Kumar, Op.cit. p. 289.

Japan, South Korea, Vietnam, Myanmar, and Thailand. To complete, the post-graduate level, Chinese, South East Asian, and Indian students travel to Sri Lankan universities since they offer many Theravāda Buddhist degrees. These universities have well-trained Buddhist monks and lay professors with mindful Buddhist teachings and they work in centers of Theravāda Buddhist study with a modern classroom atmosphere. Theravāda Buddhism is offered and promoted to overseas students by its universities, including the Buddhist and Pali University of Sri Lanka, the University of Peradeniya, and the University of Colombo. With its Department of Pali and Buddhist Studies, the University of Peradeniya is well known for its rigorous academic standards and Theravāda Buddhist studies. The Pali language, Buddhist philosophy, and the evolution of Theravāda Buddhism are only a few of the many topics covered in the curriculum. In their research endeavors, faculty members frequently work with scholars from around the world and concentrate on Buddhist texts and practices. There are many venerable Buddhist monks in Sri Lanka who built a mindful education network throughout Asia. Many young monks from all over the world come to study *Dhamma* and meditation in these monasteries. In universities, numerous highly educated and skilled Buddhist monks actively teach and engage with the international community. Proficient in both Pali and English, they bridge traditional Buddhist teachings with modern scholarship. Renowned venerable monks such as Balangoda Ananda Maitreya Thero, Nauyane Ariyadhamma Mahathera,³⁸ and Rerukane Chandawimala Thero have made remarkable contributions to advancing Theravāda Buddhism and promoting Buddhist scholarship globally. Some venerable Buddhist monks are exceptional teachers of the Forest monastic tradition and Vipassana meditation.

Many lay scholars also play a crucial role in building the educational network between Sri Lanka and the globe. At the University of Peradeniya, one of Sri Lanka's top universities for Buddhist education, Prof. P. D. Premasiri can be introduced as a senior faculty member in the Department of Pali and Buddhist Studies. His work makes Theravāda teachings understandable to a wide range of audiences, including overseas students, by bridging the gap between traditional Buddhist scholarship and contemporary academic investigation.³⁹

As comprehensive programs in Buddhist Studies are available at the University of Colombo, the department focuses on applying Buddhist teachings to contemporary issues including ethics and peacebuilding. Both domestic and foreign students are served by the classes, which give them a thorough understanding of Theravāda traditions. As another prominent professor at the University of Peradeniya and thereafter the University of

³⁸ Nauyane Ariyadhamma Thero (2019). *Footprints on the wonderful paths to Buddhahood*, Melsiripura: Nauyana Forest monastery.

³⁹ G. A. Somaratne et.al. (ed.) (2021). *Buddhist thought and application: Essays in Honour of Professor P. D. Premasiri*, Hong Kong: The Buddha-Dharma Centre of Hong Kong, p. 21 - 28.

Colombo, Prof. Asanga Thilakaratne was influential in creating the Buddhist studies curriculum. His reputation as a trailblazer in fusing ancient Buddhist teachings with contemporary philosophical research was further solidified by his leadership at the University of Colombo's Department of Buddhist Studies. In order to strengthen ties between these countries, Sri Lanka frequently hosts worldwide Buddhist forums and seminars.⁴⁰

Students from Vietnam, Myanmar, Thailand, Japan, and China who want to learn more about Theravāda Buddhism increasingly frequently travel to Sri Lanka. Because of their historical ties to Sri Lanka, Vietnamese and Burmese monasteries frequently send their pupils to study Theravāda scripture studies. Because of their common Theravāda traditions, Thai students often seek advanced degrees to improve their doctrinal knowledge and teaching skills. Theravāda Buddhism is studied by Chinese and Japanese students, many of whom come from Mahāyāna backgrounds, in order to obtain a more comprehensive understanding of Buddhist philosophy and practice. These students are drawn to Sri Lanka because of its rich monastic culture and the chance to interact with living Buddhist traditions in addition to its academic offers.

Chinese, Indian, and Sri Lankan universities and Buddhist institutions continue to collaborate on research projects, faculty exchanges, and curriculum development. Workshops and conferences, like those hosted by the World Buddhist Forum, offer forums for scholarly discussion and the advancement of Buddhist principles in the classroom. Current projects investigate how Buddhist teachings might be applied to modern problems like environmental sustainability, interfaith understanding, and peacebuilding. Scholars from China, India, and Sri Lanka regularly participate in events like the United Nations Day of Vesak, which highlights common Buddhist teachings for world peace.

A crucial component of the Buddhist educational partnership is cultural exchange via study tours and pilgrimages. In India Bodhi Gaya, Sarnath, and Kushinagar are important pilgrimage sites for Chinese, South East Asian, and Sri Lankan Buddhists, providing chances for historical research and spiritual education.⁴¹ In Sri Lanka, scholars and devotees from China, South East Asia, and India visit the Temple of the Tooth Relic in Kandy as well as other Theravāda locations. In China, South East Asian, Indian, and Sri Lankan monks visit holy places like the Shaolin Temple and Mount Wutai, which deepen their knowledge of Chinese Buddhism.

These networking and educational cultural efforts are very important for developing modern-day Buddhist collaborations in Asia. These Buddhist communities train their students with mindful education and teach both Theravāda and Mahāyāna doctrines. As the Buddha expected from his monks and other devotees, Buddhism can remain alive and enriched only through

⁴⁰ Asanga Thilakaratne (2012). *Theravada Buddhism: The View of the Elders (Dimensions of Asian Spirituality)*, Honolulu: University of Hawaii Press, 190.

mindful educational networks and their collaborations. Therefore, even today, the remarkable Buddhist practice of interconnectedness can be observed in every Buddhist country from India to China.

VI. CONCLUSION

Over centuries, the Buddhist educational networks that interconnect China, India, and Sri Lanka have shown incredible adaptability and resilience. They provide insightful information for promoting social justice, peace, and harmony by combining traditional wisdom with contemporary societal issues. These networks are still developing, embracing novel methods and instruments while upholding the fundamental Buddhist ideas of interconnectedness, mindfulness, and compassion. They have enormous potential to help create a world that is socially sustainable and serve as a model for upcoming international educational programs based on moral and considerate behavior.

The ongoing legacy of Buddhism as a unifying factor in Asia is demonstrated by the contemporary Buddhist educational partnership between China, India, and Sri Lanka. These countries have established strong networks of academic and cultural exchanges that promote understanding and intellectual development because of their common ancestry. Institutions like Peking University, Nālandā University, and the University of Peradeniya remain pillars of Buddhist education through faculty exchanges, research initiatives, and scholarships. These collaborations give scholars and students a comprehensive grasp of Buddhist philosophy and practice by bridging the Theravāda and Mahāyāna traditions. Pilgrimage to Bodh Gaya, the Temple of the Tooth Relic, and Mount Wutai are examples of cultural exchanges that strengthen the historical and spiritual linkages between Buddhist communities.

THE ROLE OF BUDDHIST EDUCATION IN ESTABLISHING GLOBAL HARMONY

Prof. C. Upender Rao*

Abstract:

The study focuses on Buddhist education, particularly its role in establishing global peace and promoting compassion. It explores the historical development of Buddhist teaching, from ancient monasteries such as Nālandā to its influence on different cultures, including the translation of *Buddha Vacana* into Tibetan and Chinese. The findings highlight the core ethical values of Buddhism, such as the five precepts and the noble eightfold path, and their importance for social harmony and spiritual development. It also discusses the difficulties in translating *Pāli* terms accurately and provides an overview of *Pāli* translations into various Indian languages, as well as English and other languages. In short, the paper provides a comprehensive overview of Buddhist education, its history, values, and global influence.

Keywords: Buddhism, Buddhist education, global harmony.

I. INTRODUCTION

Currently, the term Buddhist education is widely recognized. Many scholars have examined this topic based on their insights and beliefs. However, we must grasp the realistic meaning and purpose of this term. Many individuals know very little about the contributions of *Buddha-Dhamma* to education. Even in Buddhist countries like India, Sri Lanka, Thailand, and Cambodia, where an unbroken tradition of Buddhist education has endured for many centuries, the current educational systems do not directly evolve from this tradition, nor are they related to it. The Buddhist educational tradition has been largely supplanted in these nations. Fortunately, a few remnants have been preserved within monastic organizational systems for training novices and monks exclusively. Buddhist literature was very rich in ancient India. Many foreigners have embraced this vast Buddhist literature in India. This extensive body of literature was produced due to the flourishing Buddhist education in

* Professor of Sanskrit and Pali, School of Sanskrit and Indic Studies, Jawaharlal Nehru University, New Delhi 110067, India.

ancient India. Buddhism was transmitted into Tibet, and as a consequence, many Sanskrit texts were translated from Sanskrit into Tibetan and Chinese. Epistemological literature composed by Indian Buddhist scholars, focusing on cognition and other philosophical concepts such as mind, logic, and language, was translated into Tibetan and Chinese. These works had a profound impact on Tibetan intellectual history. These translations began in the 7th century, continued into the 8th century, and intensified later. Tibetan scholars also consulted the Sanskrit versions of oral traditions. Tibetans divided Buddhist texts into two broad categories: *Kangyur* and *Tengyur*. *Kangyur* means “translated words.” It consists of works believed to have been spoken by the Buddha himself. This is, in fact, the Mahāyāna Buddhist *sūtra* literature. All texts have Sanskrit originals and were translated from Sanskrit into Tibetan. Some texts were also translated into Tibetan from Chinese, which themselves were translations from Sanskrit. These works were rendered into Chinese when some Chinese masters traveled to India. *Tengyur* means “translated treatises.” This category consists of commentary texts, including *śāstra* works and *Abhidhamma* treatises, both Mahāyāna and non-Mahāyāna. The *Tengyur* contains 3,626 texts in 224 volumes. Among these, essential texts translated by Kumārajīva include the *Diamond sūtra*, *Amitābha sūtra*, *Lotus sūtra*, and *Vimalakīrti nirdeśa sūtra*. His translation style was distinctive, possessing a flowing smoothness that reflected his prioritization of conveying meaning rather than adhering to a strictly literal rendering. Because of this, his versions of Mahāyāna texts often remained more popular.

II. BACKGROUND

In ancient Indian society, individual teachers imparted education on their own responsibility for a long time. In India, even today, we find many temple colleges that owe their inspiration to the monastic colleges of Buddhism and the *Vedic gurukula* system. Some monastic colleges, such as Nālandā, Valabhi, and Vikramaśīla, became international learning centers and spread the fame of Indian education in Central and East Asia. Nālandā was a renowned university. The tradition of translating early Sanskrit texts is ancient. Some Sanskrit scholars have translated texts such as the *Veda* and post-*Vedic* literature into English and other foreign languages. *rāmāyaṇa* translations are very popular in contemporary society, and people have become interested in listening to the story of Rāma in their local languages. The *purāṇa* have been translated into many languages. The *Matsya purāṇa* was translated into Persian by Goswami Anand Daga in 1792 at Varanasi. A manuscript of this translation is available at the Italian Institute of Rome. A copy of the Persian translation of the *bhāgavata purāṇa* is reported to be available at Aligarh Muslim University, Uttar Pradesh. Not only in India, but the *purāṇa* have also travelled beyond Indian territories. They reached Tibet, China, Japan, Indonesia, and Southeast Asia. The *brahmāṇḍa purāṇa* travelled to Bali, an island in Indonesia. Many ancient Javanese adaptations of original Sanskrit works indicate the popularity of Sanskrit and Indian culture in the Indonesian archipelago. Dr. H. N. Vander Tank collected many Sanskrit manuscripts of the *purāṇa*, which are now kept in the Netherlands, after his death. Many translatable works of the *rāmāyaṇa*

into Japanese have also been reported from Java. The *purāṇa* have also reached European countries, especially Germany. Indian ideas have greatly influenced German literature and philosophy since the 9th century. German scholars once observed that Indian philosophical systems could serve as a model for Western thought. The influence of Indian literature on European thought can even be traced to the Middle Ages. Some ancient Indian works passed to Europe through Arabic and Persian translations. For example, the *pañcatantra* was first translated into Pahlavi in the early 6th century and later into Arabic in 750 CE. Various versions derived from the Arabic translation eventually became known in Europe. Thus, the Buddhist education system has left a significant impact on global culture. It could even receive endowments from a king of distant Java. Kings and merchants living in India vied with one another to provide generous endowments to these renowned centers of education, which not only offered free tuition but also provided free food and clothing to lay students and monks. In ancient India, the ordination ceremony for Buddhist monks was called *pabbajjā* in *Pāli* and *pravrajyā* in Sanskrit. Every monk had to be adequately trained in the discipline and doctrine of Buddhism. It was the primary responsibility of a monk to develop the educational activities of Buddhist monasteries. The *pabbajjā* marked the beginning of the novitiate period, which could be undertaken when a person reached the age of eight. It can be compared to the *upanayana* of the *Vedic* tradition. However, parental or guardian permission was necessary for *pabbajjā*. *upasampadā* was conferred at the end of the novitiate period, and the recipient had to be at least twenty years old.

Some scholars state: “Though Buddhism encouraged a life of separation from the world and the suppression of desires, it did not, like *Brahmanism*, advocate extreme asceticism and bodily mortification. Instead, the care of physical health was considered important for spiritual development. We find that exercise was encouraged in Buddhist monasteries. However, we have several pieces of evidence that even in the *Vedic gurukula* system, physical exercise was given importance.”

In a Buddhist monastery, the novice and teacher were united by mutual reverence, confidence, and affection. Similar to Hindu *gurukula*, in Buddhist monasteries, the novice assisted his teacher through service, as it is said: “The student’s education will be enhanced by the service to their teacher.”¹ He had to carry his seat and rugs, supply water and toothpicks, bring his begging bowl and utensils, and accompany the teacher as an attendant when the latter proceeded to the town or village for begging or preaching. The teacher monk taught his students the rules of *Vinaya*, or discipline. He emphasized the vow of chastity and abstinence from the pleasures of daily life, which aided in the intellectual and spiritual progress of his students through appropriate discourses. Famous teachers at Nālandā Vishwaavidyalaya (ancient Nalanda University) received

¹ Kashinath Sharma’s “Subhashita Pustakabhandagara”, specifically in the Samanya Neeti section on p.159. “*Guruśūśrūṣayā vidyā puṣkalena dhanena vā | Vidyayā labhyate vidyā caturthī nopalabhyate ||*.”

an allowance merely three times larger than that given to an ordinary student. This illustrates how a Buddhist teacher led a simple life during that era. However, the lack of proper documentation on Buddhist education has hindered access to valuable information. This situation was noted in the *Encyclopaedia of Religion and Ethics*.² It is impossible to present a history of education. In the absence of historical records, one can examine the indexes of a hundred standard works on Buddhism, Buddhist culture, civilisation, or history, with hardly any reference to education. Where references to education do exist, the information is most likely limited to Indian education in renowned centres of intellectual activity such as Takshashila and Nālandā, as described in the Buddhist Jatakas or the accounts of Buddhist centres of learning in India and Sri Lanka visited and reported by Chinese travellers Fa-Hien, Hiuen-Tsang, and I-Tsing. If we could obtain this information, we could find references to the Buddhist monastic system of education and the temple schools, which were systematically kept aside. Yet, a few attempts have been made to unravel a Buddhist philosophy of education, with limited results. Famous teachers at Nālandā Vishwavidyālaya (ancient Nālandā University) received an allowance merely three times larger than that given to an ordinary student. This illustrates how a Buddhist teacher led a simple life during that era. However, the lack of proper documentation on Buddhist education has hindered access to valuable information. This situation was noted in the *Encyclopaedia of Religion and Ethics*:

Where references to education do exist, the information is most likely limited to Indian education in renowned centers of intellectual activity such as Takṣaśilā and Nālandā, as described in the Buddhist *Jātaka* or the accounts of Buddhist centers of learning in India and Sri Lanka visited and reported by Chinese travellers Faxian, Xuanzang, and Yijing.”

If we could obtain this information, we would find references to the Buddhist monastic system of education and the temple schools, which were systematically set aside. Yet, a few attempts have been made to unravel a Buddhist philosophy of education, with limited results.

III. FOUNDATIONS OF BUDDHIST EDUCATION

The foundation of Buddhist education, as we all know, is Buddhist ethics. In one of the verses of the *Pāli* text *Suttanipāṭa*, the Buddha appears advising: “Like a lion not frightened by sounds, like the wind not caught in a net, like a lotus not touched by water, an ascetic wanderer should roam all alone like a rhinoceros.”³ We often find similarities between *Pāli* and *Sanskrit* literature. Some of the lotus similes occur in *Jarāsutta* of *Suttanipāṭa*, in which the momentariness of life is depicted in a lucid poetic style: “In the same way that

² *Encyclopaedia of Religion and Ethics*. vol. V. p. 177, 1911.

³ Sn 3.37.

a water drop cannot stick to lotus petals, so too the sage remains unattached to false views, false wisdom, and false theories of the world.”⁴ Here, we can find a similarity between *Pāli* and *Sanskrit* literature. Sage Vyāsa says in the *Bhagavadgītā*: “He who acts by offering all actions to *Brahma*, abandoning attachment, remains untouched by sin, like a lotus petal by water.”⁵

Let me conclude this discussion on *Pāli* translation by noting that an exact translation is possible only within the field of mathematics. Two and two make four - this is an exact translation. But in language, even the simplest translation is only an approximation. Therefore, we must use the nearest equivalent word to convey the real meaning of Sanskrit, Tibetan, or *Pāli*. However, the best way to understand Buddhism is to learn the source languages: Sanskrit, *Pāli*, and Tibetan. *Vajirasāra* is a comprehensive *Pāli* work in which the technique of *camatkāra* was developed by providing a scholarly background to the living tradition of Buddhism. The text became engaging due to its literary talent. The fourth stanza presents the material of the *Tipiṭaka* in the following manner: “The one who learned by heart the ten syllables ‘*a saṃ vi su lo a pu sa bu bha*,’ with the mind, obtained happiness.” The letters mentioned here refer to the formula for the recollection of the nine virtues of the Buddha, as described in *Pāli* literature, such as the *Visuddhimagga*. They are as follows: “*iti pi so bhagavā araham sammā-sambuddho vijjā-caraṇa-sampanno sugato lokavidū anuttaro purisa-damma-sārathi satthā deva-manussānaṃ buddho bhagavā ti*.” The abbreviation sequence can be shown as follows: “*a* = *araham*; *saṃ* = *sammā-sambuddho*; *vi* = *vijjā-caraṇa-sampanno*; *su* = *Sugato*; *lo* = *lokavidū*; *a* = *anuttaro*; *pu* = *purisa-damma-sārathi*, *sa* = *satthā deva-manussānaṃ*, *bu* = *buddho*, *bha* = *bhagavā*.” The admiration of this formula was praised by Theravādins, as well as followers of other traditions.

IV. VALUES AND ETHICS IN BUDDHIST EDUCATION

Values and ethics are essential to every society. Values are principles that help individuals determine what is right and wrong and guide their actions in various situations. On the other hand, ethics are beliefs that inform us about what is morally right and wrong. These values and ethics are crucial for all human beings to lead meaningful and harmonious lives. Other beings also follow universal values and ethics, but unlike humans, all other beings naturally adhere to the roles and behaviors assigned to them by nature. Therefore, these values and ethics are more essential to human beings than to any other creatures, as humans in contemporary society often fail to recognize their importance. During the time of the Buddha, these values and ethics were upheld in society. However, in later periods, people began to neglect them. Due to this negligence, peace within human society gradually began to diminish. First, let us discuss who the Buddha was and how he came to be known as “Buddha.” To understand this, we must first explore the meaning of the word Buddha.

⁴ *Sn* verse 9.

⁵ *ŚrīmadBhagavadGītā*, v.10.

4.1. The name of *Bhagavān Buddha*

The name of Bhagavān Buddha was derived from the Sanskrit root *budh*. The *Sāṃkhya* system made *buddhi* (intellect) its great principle (*mahat*). *Mahat* is the first element to evolve out of *prakṛti*. It is made of matter, but it has a psychological, intellectual aspect, known as *buddhi* or intellect. This *mahat* or *buddhi* is a unique faculty of human beings. It helps men in judgment and discrimination. *Mahat* helps to distinguish between the subject and the object. The *Śatapatha Brāhmaṇa* calls a man who has attained perfect knowledge of the self a *pratibuddha*. With this background of understanding, it is not difficult to see that what Bhagavān Buddha preached was undoubtedly unique. The doctrines that emerged from the knowledge of the Buddha were called *dhamma* (Sanskrit: *dharma*), using the very same term employed by Vedic and *Upaniṣadic* literature. Hence, what the Buddha preached was similar to *Upaniṣadic* wisdom. This form of *dhamma* expresses how it is most comprehensive in *Buddha-dhamma* as well. It includes the physical laws of the universe as well as moral and social duties. However, one great distinction between the Vedic tradition and *Buddha-dhamma* is that the latter does not contain *rahasyavāda* (esoterism) and metaphysical doctrines concerning matter and spirit. Nevertheless, some of its root ideas were just modifications of *Sāṃkhya*, *Yoga*, and *Vedānta* systems of Vedic philosophy. There was no distinction in knowledge systems in ancient times as we have today. Whether it was *Upaniṣadic-dharma*, *Buddha-dhamma*, or any other system, they always sought to find truthful solutions to philosophical problems. The Buddha's path leads us toward the knowledge of the truth: that all life is a link in a series of successive existences and inseparably bound up with misery. There are two causes of misery: lust and ignorance. Accordingly, there are also two cures. The first cure is the suppression of lust and desire, especially of all kinds of desires for the continuity of existence. The second cure is the removal of ignorance. Indeed, according to Gautama, ignorance is the first factor in the misery of life. It stands first in the chain of causation. However, the ignorance expounded by the Buddha is different from *Vedāntic* ignorance. In *Vedānta*, *ajñāna* is the cause of all illusions, and it is defined as beginningless, yet positive and removable by knowledge. Though it manifests itself in all ordinary things, which have a beginning in time, it has no beginning, for it is associated with pure consciousness. But in *Buddha-dhamma*, this is not ignorance of the fact that man and the universe are identical with God, but ignorance of the Four Noble Truths – the ignorance that life is misery and that the misery of life is caused by indulging in lusts, and that misery will cease by suppressing them. The Buddha's teachings have influenced many nations in both Europe and Asia. It was a favored idea among the Stoics and found acceptance with Schopenhauer, von Hartmann, and other modern philosophers. Buddhism offers a vast field of knowledge that has not only spread to but also influenced a large part of the world, including India, Sri Lanka, Burma, Cambodia, Thailand, Vietnam, and other countries in Southeast Asia, as well as Tibet, Central Asia, China, Mongolia, Korea, and Japan. Today, it continues to influence all of Europe. The humanistic values embedded in the teachings

of Bhagavān Buddha have shaped the history and culture of these countries. They have given rise to numerous literary, philosophical, and artistic works. The Buddha's forty-five-year mission as a wandering teacher was to show the path of Dhamma. He was a teacher of men and gods (*satthā devamanussānaṃ*) and a guide who steers the chariot of self-control (*purisa-damma-sārathi*). These are two of the nine epithets used today in a formula of homage to the Buddha. Moral discipline (*sīla*), the concentration of mind (*samādhi*), and the wisdom gained through the realization of the true nature of life (*paññā*) constituted the essential steps of the path he taught. He enjoyed a life of study and meditation aimed at training and taming the mind. It is but logical that a religious system like Buddhism, which regards ignorance as the root cause of all misery and considers an undeveloped mind to be the fundamental obstacle to emancipation, would place the highest emphasis on mental development and the educational processes most suited for this purpose. Thus, a distinctive system of education began to evolve during Buddha's lifetime. Four factors relating to his educational effort constituted its foundations: the Buddha as the model teacher, the *saṅgha* as a learning society, the monastic establishments as the institutional base for Buddhist education, and the intellectual liberalism of Buddhism as an incentive to educational development.

4.2. *Bhagavān Buddha as a Teacher*

The Buddha was a great *samaṇa*, yet he was a skillful teacher and believed strongly in the power of the spoken word to convince people to change their way of life, adopt new values, and seek new goals.⁶ At a time when other religious teachers resorted to magical and miraculous deeds to win disciples for themselves, the Buddha upheld only one type of miracle: "the miracle of instruction" (*anusāsani-pāṭihāriya*). His discourses were organized with meticulous care. Clarity and logical presentation marked his longer sermons, which he delivered on his own accord. In these, he addressed small or large groups and sought to guide them step by step to a point of view he sought to establish. The Buddha was the most outstanding teacher in ancient India.⁷ Clear examples of this are the *Dhammacakkappavattana Sutta* and *Satipaṭṭhāna Sutta*. A few characteristics stand out in these discourses. He began with an attention-catching statement, e.g., "There are two extremes which truth-seekers ought not to follow; the one sure and straight path is the middle path." He analyzed a concept by breaking it down into its constituent elements and presenting them with numerical enumeration, serving as a framework for the orderly presentation of ideas and an aid to memory. The Buddha frequently used similes and analogies. An interesting passage in the *Sigālovāda Sutta* enumerates the duties of teachers and pupils.⁸ Teachers should show affection to their pupils, train them in virtue and good manners, carefully instruct them, impart knowledge of the sciences and wisdom of the ancients, speak well of

⁶ Nurullah, S., & Naik, J. P. (1951): p. 96.

⁷ Prof. C. Upendra Rao. (2014): verses 56 - 75.

⁸ D. I. 189.

them to friends and relatives, and guard them from danger. The student, in turn, should serve his teacher, rise in his presence and wait upon him, listen to all he says with respectful attention, perform duties necessary for his comfort, and carefully attend to his instructions. These principles apply to secular education, as the same *sutta* lays down a similar set of duties between religious teachers and their lay disciples. Here, the ethical content of what is taught is emphasized, and interestingly, an obligation is placed upon lay disciples to make themselves accessible to their teachers. In both secular and religious education, the obligations of the disciple regarding learning are significant. The pupil is expected to listen respectfully to everything the teacher says. Similarly, the lay disciple is expected to minister to their teacher with respectful attention in words, deeds, and thoughts. However, the Buddha did not advocate unquestioned acceptance of anything based on the teacher's authority alone. Such an assertion would have contradicted one of his fundamental principles: guaranteeing each person the full and undisputed right to think for themselves. The Buddha's approach to learning is a free and unfettered exercise of one's intellectual capacity to think.

4.3. Buddhist education and its gradual progress

Initially, Buddhist education was purely monastic and intended only for those who entered the order for salvation. However, with time, it was realized that gaining public sympathy and support was necessary for the spread of Buddhism. It was also understood that the best way to propagate the religion was by undertaking the education of the rising generation. Therefore, Buddhism advocated for the general education of the whole community from the beginning of the Christian era. In Buddhist monasteries, education was not confined only to theology, philosophy, and logic; Sanskrit literature, astronomy, medicine, law, polity, and administration were also taught for the benefit of students. This enabled them to obtain government service or pursue valuable and learned professions in society. Mere rote learning of texts was not encouraged; reasoning and analysis played an important role in the method of teaching. Foreign travelers like Xuanzang and Yijing informed us that Indian teachers possessed a keen memory, capable of storing countless texts. Individual attention was paid to students at Nālandā, as each teacher had no more than ten students under his charge. The method that the Buddha proposed for the self-examination of all knowledge was observation and analysis. His philosophy or religion was described as *ehi-passika* ("come and observe" or "come and examine") and *paccattam veditabbo* ("to be realized by each one independently"). Buddhism was given, very early in its history, the epithet *vibhajjavāda*, meaning "the doctrine of analysis." The Buddha's position was also stated as that of a guide pointing the way, while each individual had to realize the truth for himself. Xuanzang's account of Nālandā, where he was a student for over five years, shows that it was a full-fledged university with distinct schools of study, admission and examination procedures, a complex academic administration system, and requisite facilities such as libraries and lecture halls. One thousand five hundred teachers catered to 10,000 students -

both religious and lay, Indian and foreign - who studied 100 different subjects, including philosophy, grammar, astronomy, and medicine. "Learning and discussing, they find the day too short" was Xuanzang's observation. While the educational efficacy of Nālandā is evidenced by the quality of its teachers and students, who left a lasting imprint on Buddhist history through their writings and missionary activities, the vast campus, which has been excavated and conserved, testifies to its grandeur. The information about Valabhī is obtained from Yijing, who states that its status was equal to that of Nālandā. Courses of study lasted for two to three years, and the names of exceptional graduates were inscribed on the gates. The university imparted education in secular subjects as well. The government of Valabhī sought graduates from this university to fill essential positions. Tibetan records testify to the prestige and fame of two more Buddhist universities, namely Vikramaśīla and Odantapurī - both associated with *Dīpaṅkara Śrījñāna*, better known as Atīśa (q.v.), who was invited in the eleventh century to revamp Buddhism in Tibet. He was an alumnus of Odantapurī and the head of Vikramaśīla, both of which had functioned for several centuries and, in his time, were receiving the patronage of the Pāla kings of Bengal. At Vikramaśīla, admission had to be gained by displaying proficiency in logical argumentation in a debate with one of its six *dvāra-paṇḍitas* (literally "gate scholars"). Upon the successful completion of one's studies, one was awarded the degree of *paṇḍita*. Odantapurī is said to have been the model for Tibet's earliest monastic educational establishments. Jagaddala, founded by the Pāla king Rāmapāla in the first quarter of the twelfth century, had a short existence of one and a half centuries but significantly contributed to Buddhist learning. The Buddha did not invent these methods; there was a common source from which all sects arose. Buddhist monasteries had opened their doors to all, irrespective of caste or country. In particular, Buddhist monasteries admitted people of all castes. The Buddhist educational system paved the way for the growth of a broad democratic system of education, which provided equal opportunities to all, including Indians and foreigners, regardless of their caste and creed. These institutions attracted students from distant countries such as Korea, China, Tibet, and Jāvā. Now, some of the essential and lost texts of our ancient literature can be recovered from Tibet or China, and credit must be given to the Buddhist institutions of our country, which enabled Chinese and Tibetan students to obtain their copies free of cost from Indian university libraries. Buddhist education also contributed to the development of traditional logic and philosophy by initiating and encouraging comparative study. In the early period, it was imparted through the mother tongue. However, in the later period, it was taught in Sanskrit, and many books were written in Sanskrit.

4.4. Spiritual power of Buddhist education

The values of *Buddha-dhamma* are not only humanistic but also spiritual. After the Buddha's *Mahāparinibbāna*, when his path developed into a religion named Buddhism, it continued to spread spiritual values. Buddhism became a powerful spiritual force in the world, reflecting the positive nature of human

beings - not only in humans but in animals as well. Pāli literature contains incidents and episodes that illustrate this point. One such incident is the story of Nālāgiri, a royal elephant in Rājagaha. When Nālāgiri was set free and sent to attack the Buddha while he was walking on the streets of Rājagaha with his disciples, it initially charged toward him in anger but soon became calm and composed upon approaching the Buddha. Nālāgiri belonged to King Suppabuddha, who was the father of Devadatta. Devadatta, out of jealousy toward the Buddha, plotted to kill him while he was in Rājagaha (present-day Rājgir in India). To execute his plan, they intoxicated this massive elephant with alcohol, wounded it with spears, and provoked it until it became uncontrollably enraged. Then, they released it through a special gate into the narrow streets, precisely where the Buddha was walking on his alms round. The intoxicated elephant charged furiously down the street, destroying everything in its path. People fled in all directions in terror. However, the Buddha and his faithful attendant, Venerable Ānanda, remained without running away. Ānanda stepped in front of the Buddha, determined to shield him from the elephant's attack. But the Buddha gently moved forward and, with his immense *mettā*, alleviated the elephant's suffering. Nālāgiri immediately calmed down, bowed at the Buddha's feet, and stood with tears streaming down its face. "In Rājagaha, there was a fierce elephant named Nālāgiri, a killer of men. Then, Devadatta, having entered Rājagaha..."⁹ The Buddha did not concern himself with his safety; he only felt the urgency of ending the suffering of the great animal, and that is exactly what he did. With his immense *mettā*, he alleviated the elephant's pain. The poor creature felt his loving-kindness throughout its entire gigantic body, thus being cured of both its pain and intoxication. Nālāgiri then bowed down at the Blessed One's feet, weeping in gratitude. That was the spiritual power of the Buddha. Several approaches developed through Buddhist ethics are undoubtedly beneficial. One of them is *adhimutti* (open-mindedness), a particularly intriguing value. The mind remains open to new messages, allowing one to grasp and comprehend them. Tolerance is another positive attitude, enabling the acceptance of differing perspectives and acknowledging that one's views may not always be the best or the only truth. Intolerance, on the other hand, restricts one's freedom and is often accompanied by an aggressive nature. Today, religious hatred spreads primarily due to intolerance, which also fuels religious wars, forced conversions, and ideological persecution. India has lost countless lives due to deceptive and coercive religious conversions, which rely on deceitful allurements rather than the true gifts of wisdom. The five fundamental rules of moral conduct in *Buddha-dhamma*, often called *sīla*, were taught by the Buddha. They are as follows: kill not any living beings; steal not others' belongings; commit not adultery; lie not; drink no intoxicants. These five Precepts (*pañca sikkhāpadāni*) are as follows: I undertake the precept to refrain from destroying living creatures; I undertake the precept to refrain from taking that which is not given; I undertake the precept to refrain from

⁹ Vin. III. 171ff: "Rājagahe nālāgiri nāmahatthīcaṇḍohoti, manussaghātako. Athakhodeva-dattorājagahaṃpavisitvā"

sexual misconduct; I undertake the precept to refrain from incorrect speech; I undertake the precept to refrain from intoxicating drinks and drugs which lead to carelessness (*pamāda*). This is a fivefold law for all people, including laymen. However, five more precepts were laid down by the Buddha for monks, in addition to the previous five. They are as follows: eat no food except at stated times; use no ornaments or perfumes; use no high or broad beds for sleeping; abstain from dancing, singing, music, and worldly entertainment; own no gold, silver, or any valuable metal, and do not accept gifts of such. All these ten precepts were prescribed for monks, while only the first five were meant for laypeople. However, at times, the first eight were also considered binding on lay followers. In a later period, another precept was added: "Never think that your religion is the best one, and never denounce another's religion." These precepts are similar to *yama*, as taught by the sage *Patañjali* in *Yoga-darśana*. We can see that the *Tevijja-sutta* prohibits all forms of gambling and games, a stance also echoed by *Manusmṛti*.¹⁰ The caste system was later misinterpreted in *Hindu-dhamma*. In the Vedic period, the rigid caste system as seen in later times did not exist. The Buddha emphasized conduct over caste. He declared: "Do not ask about one's birth; instead, ask about their conduct./ Even one from a low family, if he is wise and steadfast, can be noble./ A person disciplined by truth, possessing self-control, and having mastered knowledge (*Vedas*), having lived the holy life (*Brahmacharya*).../ One should invite such a wise person to perform sacred rituals, as he will perform them properly./ Surely, my offering has been well-given, as I have met such a wise person!"¹¹

To establish harmony in society, it is essential to understand and practice these words of the Buddha. A person should be valued based on their deeds and merits, rather than being discriminated against based on accidental birth. The Buddha also spoke of the importance of the purity of the mind. The mind is the forerunner of all mental phenomena and actions. Therefore, the Buddha placed greater emphasis on mental purity than on physical purity. To attain mental purity, one must remove defilements of the mind. Bathing in different rivers does not purify a person. If one has given up mental defilements, one is considered to have bathed spiritually, even without a physical bath. A wrongly directed mind is most harmful to a person, as it leads them to perform wrongful and unwholesome deeds. The Buddha said: "Whatever an enemy may do to an enemy, or a hater to one he hates, a wrongly directed mind can do even worse to itself."¹² On the contrary, a rightly directed mind brings greater welfare than any person or thing in the world. The Buddha's teaching

¹⁰ *Manusmṛti*, IX. 221 - 228.

¹¹ SN 7.9 & MN 93. "*Mā jātiṃ puccha caraṇaṃ ca puccha, kaṭṭhā have jāyatijātavedo; nīcā kulīnopi muni dhitimā ājāniyo hoti hirī nisedho. Saccena danto damasā upeto vedantaḡ vusita brahmacariyo; yaññopanīto tamupavhayetha, kālena so juhati dakkhiṇeyye'ti. Addhāsuyiṭṭhaṃ suhutaṃ mama yidaṃ yaṃ tādisaṃ vedagumaddasāmi; tumhādisānañhi adassanena aññojanobhuñjati habhyasesanti*"

¹² .. *Dhp* 42: "*Diso disaṃ yaṃ taṃ kayirā, verī vā pana verinaṃ Micchāpaṇihitaṃ cittaṃ, pāpiyo naṃ tato kare'ti.*"

of the Four *Brahmavihāras* is highly profound and should be followed by all human beings. The Four *Brahmavihāras* are: *Mettā* (Friendliness or Loving-kindness), *Karuṇā* (Compassion), *Muditā* (Sympathetic Joy), and *Upekkhā* (Equanimity).¹³ The term *Brahmavihāra* has been translated in various ways by scholars, such as: Sublime or Divine State of Mind; Pious Conduct; Perfect State; Good Moods; Sublime Occupation; Excellent States; Divine States; The Highest Condition.” These four represent the highest states of consciousness. The word *Brahma* means “supreme” or “great,” and the outcome of cultivating these qualities is to be reborn in the *Brahmaloka* (the celestial realm) and experience divine happiness. Therefore, they are called *Brahmavihāras*, as they are the supreme means of purifying the mind. A person who earnestly practices the Four Divine States of Mind genuinely desires the welfare of all beings. Through these *Brahmavihāras*, an ascetic eliminates mental impurities such as lust, hatred, jealousy, and envy. While Yoga is a means of self-purification, the *Brahmavihāras* extend beyond the self and benefit others as well. Enmity arises due to conflicts of interest, feelings of superiority, and rivalry. A person who has been defeated seeks revenge when the opportunity arises, thus perpetuating hostility. The Buddha said: “Victory breeds hatred. The defeated live in suffering. But the peaceful one, having abandoned both victory and defeat, lives happily.”¹⁴ To get rid of the feeling of enmity, one should not have the feeling of victory and defeat. To establish pleasure and peace in life one should keep in mind the following Buddha Vacana: “He abused me, he struck me, he defeated me, he robbed me/ Those who hold on to such thoughts, their hatred never ceases// He abused me, he struck me, he defeated me, he robbed me/ Those who do not hold on to such thoughts, their hatred ceases.// Hatred is never appeased by hatred in this world/ It is appeased by non-hatred - this is an eternal law.”¹⁵

Some people keep on thinking, “He abused me, he ill-treated me, he got the better of me, and he stole my belongings.” But the enmity of those harboring such thoughts can never cease. On the contrary, the feeling of enmity in those who never harbor such thoughts can cease over time. Enmity causes anger, and the anger of a person slowly destroys peace. One of the Telugu poets says: “The anger of a person is his enemy, his peace protects him, compassion is his relative, his happiness is his heaven, and his sorrow is his hell.”¹⁶ The Buddha said: Hatred is, indeed, never appeased by hatred in this world. It is appeased only by loving-kindness. This is an ancient law. The feeling of friendliness or

¹³ “Abyāpādenamettāpi abyāpādenamettāgahitā, upekkhātītatramajjhāttatāyacagahitā yasmā kāraṇā, tasmāubhōpetābhagavatānagahitā.”

¹⁴ Dhp 201: “Jayaṃ veraṃ pasavati, dukkhaṃ seti parājito, Upasanto sukhaṃ seti, hitvā jaya-parājayaṃ.”

¹⁵ Dhp 3 – 5.

¹⁶ Sumati Śatakamu, “Printer-friendly pages from Telugu Bhakti Pages,” Telugu Bhakti, <http://www.telugubhakti.com>. “Tana kopame tana śatruvu tana śāntame tanaku rakṣa daya cuṭṭambou, tana santoṣame svargamu tana duhkhamē narakamandru tathyamu sumati”

mettā spreads affection and friendship. Friendship brings pleasure and welfare to society. In practical life, we see that friendliness is often caused by affection (*rāga*), which is not the feeling of pure friendliness. It is to be remembered that true friendliness must be unmotivated, without craving (*taṇhā*). *N'atthi rāgasamaṃ dukkhaṃ* - which means affection (*rāga*) is caused by greed and ignorance, and that brings only suffering, whereas true friendliness (*mettā*) is associated with knowledge. The nature of friendliness is to remove malice, and it is associated with the absence of greed. After seeing the grief of others, the trembling that arises in the hearts of gentle persons is called *karuṇā* (compassion). Compassion removes the grief of others. A compassionate person neither kills beings nor tolerates the suffering of others. The feeling of violence disappears with the presence of compassion. Being subdued by compassion, a true follower of the Buddha thinks in this way: "If I and others find fear and grief equally unpleasant, then what is so special about me that I should save myself and not others?"¹⁷ The sign of kindness (*muditā*) is delight. A person who practices kindness becomes happy when he sees others prosper. He has no feelings of hatred or jealousy toward anybody. Seeing the wealth and merits of others, he neither feels enmity nor jealousy. Kindness removes discontent. There is a lack of true kindness in the joy of unenlightened persons because their joy arises from attachment.

The realization of the Four Noble Truths is essential for humanism as well as for the emancipation of mankind. The Four Noble Truths are: suffering (*dukkha*); cause of suffering (*dukkha-samudaya*); cessation of suffering (*dukkha-nirodha*), and the way leading to the cessation of suffering (*dukkha-nirodhagāminī paṭipadā*). To get rid of suffering, it is essential to follow the fourth Noble Truth - *dukkha-nirodhagāminī paṭipadā*. The fourth Noble Truth is *ariyo aṭṭhaṅgiko maggo* (the Noble Eightfold Path), which consists of: right understanding (*sammā-ditṭhi*): understanding that the four noble truths are noble and true; right thought (*sammā-saṅkappa*): determining and resolving to practice the buddha's teaching; right speech (*sammā-vācā*): avoiding slander, gossip, lying, and all forms of untrue and abusive speech; right action (*sammā-kammanta*): adhering to the principle of nonviolence (*ahiṃsā*), as well as refraining from stealing or sexual misconduct; right livelihood (*sammā-ājīva*): not slaughtering animals or engaging in work that harms others; right effort (*sammā-vāyāma*): avoiding negative thoughts and emotions, such as anger and jealousy; right mindfulness (*sammā-sati*): maintaining awareness of one's mental state, bodily health, and feelings; and right concentration (*sammā-samādhi*): using meditation to reach the highest level of enlightenment. "Thus, this teaching is analyzed according to the two approaches (*nayānaṃ*) in the *Suttanta* method. It has been spoken about in both the worldly (*lokiya*) and transcendental (*lokuttara*) sense, albeit briefly."¹⁸ The Noble Eightfold Path is

¹⁷ *Bodhicaryāvatāra* (The Way of the Bodhisattva) 8.96.

¹⁸ Buddhaghosa, *Sammoha-Vinodanī* (Commentary on the *Vibhaṅga*), in *Aṭṭhakathā Abhidhamma Piṭaka*. "Evam idaṃ dvinnampi nayānaṃ vasena suttantabhājanīyaṃ lokiya lo-

the source of Buddhist moral conduct. If anybody follows it rightly, he will destroy suffering and contribute to the welfare of mankind. Out of the eight factors, three - (1) Right Speech, (2) Right Action, and (3) Right Livelihood - are essential for a layperson. In the absence of these, social harmony cannot be established. A follower of the Buddha will refrain from falsehood, hateful speech, harsh speech, and frivolous speech. One must desist from harsh speech for the establishment of peace around him. By performing the Right Action, one contributes to the welfare of society. Abstaining from taking life, taking what is not given, and engaging in sexual misconduct are included in Right Action. The concept of the Right Livelihood has become especially relevant in today's society. Financial corruption has spread all over the world. Now, the world has become a place of dishonesty. We must follow the Buddha's teaching of *sammā-ājīvo*. One should give up false or dishonest ways of earning one's livelihood or any means that cause injury or harm to others. All professions that do not meet this standard should be abandoned, such as killing animals and selling meat, fish, and eggs. The spirit of honesty and service to mankind should be the prevailing motive. These three aspects of the path are directly related to laypersons and society. If the Noble Eightfold Path is practiced rightly, it enables a person to get rid of suffering as well as attain liberation. This is considered the best among all paths. The Buddha says: "The Noble Eightfold Path is the best among paths, the Four Noble Truths are the best among truths; dispassion is the best among mental states, and the Buddha is the best among bipeds."¹⁹ The Buddha regards this *Dhamma* as the most dependable for the purification of knowledge, which also destroys defilements: "This is the only path; there is no other for the purification of insight. You should follow this path, for it confounds Māra."²⁰

The elaboration of *sīla*, *samādhi*, and *paññā* is the Noble Eightfold Path. In the Noble Eightfold Path: (1) *Sammā-vācā*, *sammā-kammanta*, and *sammā-ājīvo* are included in *sīla* (morality). (2) *Sammā-vāyāma*, *sammā-sati*, and *sammā-samādhi* are included in *samādhi* (concentration). (3) *Sammā-ditṭhi* and *sammā-saṅkappa* are included in *paññā* (wisdom). The Buddha, perhaps for the first time in the history of Indian culture, laid great stress on moral life in two aspects: self-restraint (*saṃvara*) and compassion for all living beings (*karuṇā*). The cultivation of moral values was regarded by the Buddha as an essential part of spiritual perfection. Moral life thus becomes, in Buddhism, a fundamental aspect of religious life. If the Noble Eightfold Path is practiced well, it means *sīla*, *samādhi*, and *paññā* are cultivated, and consequently, the kingdom of peace and happiness will be established in the world. Only through the practice of *aṭṭhaṅgika magga* can one attain the cessation of suffering. The

kuttaram issakam eva kathitaṃ."

¹⁹ Dhṛp 273: "Maggānaṭṭhaṅgiko seṭṭho, saccānaṃ caturo padā; virāgo seṭṭho dhammānaṃ, dvipadānaṃ cakkhumā."

²⁰ Ibid 274: "Esova maggo natthañño, dassanassa visuddhiyā; etaṇhi tumhe paṭipajjatha, mārassetam pamohanam."

Tathāgata only shows the path; we must follow it to be free from worldly suffering: “Be an island unto yourself.”²¹

4.5. The evolution of Buddhist texts through translation

If someone is interested in understanding the issues surrounding *Pāli* text translations into English and other foreign languages, they must first grasp the profundity of the *Pāli* language and its grammatical structure. However, this is only achievable through studying *Pāli*. Unfortunately, many Indians have forgotten *Pāli*, which is an ancient Indian language. Among the oldest languages of *Āryāvarta*, *Pāli* stands out. Additionally, *Pāli* is one of the most beautiful languages of ancient India. It encompasses numerous sermons and sacred texts, along with fascinating non-canonical literature. Regrettably, Indians have ceased learning and even reflecting on this language. Nevertheless, this language is vital for comprehending Buddhist culture and Indian history. Studying it will facilitate an understanding of ancient India’s religious and philosophical issues and events. What exactly do we need for accurate translations? First, we should know the language into which we are translating. We need to possess a good vocabulary and use precise words, which requires thorough readings of the literature from which we are translating. In the case of *Pāli*, we need to engage with this literature, understand grammar, be aware of *prakṛti-pratyaya*, and grasp the structure of the language. Sometimes, the same word may have different meanings depending on various contexts. The word *saindhava* means both salt and horse. If someone asks you to bring the *saindhava*, we need to understand the context. I wonder if we can translate the *Pāli* words and convey their original meaning into foreign languages. Various words in *Pāli* often get translated into English but seem not to be very helpful. Translations of terms from this ancient language, *Pāli*, must aid us in understanding the true sense used by the Buddha. Typically, we translate *dukkha* as suffering, stress, or unsatisfactoriness. However, *dukkha* is best left untranslated, as we cannot find an equivalent in English. It means both “suffering” and “stress,” but it also signifies “unsatisfactoriness,” essentially “getting what one does not want” and “not getting what one does want.”²² It encompasses all those nagging feelings through which one perceives that life is not perfect. Survey of *Pāli* translations in Indian languages: The governments of Andhra Pradesh and Karnataka have given grants for the translation of *Pāli* texts into Telugu and Kannada. The *Pāli-Telugu Tipiṭaka* project is entrusted to the Mahābodhi Society, Bangalore, founded by the late Ācārya Buddhārakkhita in 1956. As part of this project, the following *Pāli* texts are translated, with the *Pāli* text in Telugu script on the left page and the Telugu translation on the right. Completed Translations: *Dhammapada*, *Visuddhimagga* (*Pāli* text not given), *Sutta Nipāta* (*Pāli* and Telugu), *Vinaya Piṭaka* - Part 1 - *Bhikkhu Vibhaṅga*, *Dīgha Nikāya*, *Majjhima Nikāya*, and a few other books. Translations Underway: *Milindapañha*, *Āṅguttara Nikāya*, *Udāna* and

There are some Marāṭhī translations too: *Siddhārtha Jātaka* (सद्धिचर्य जातक) (Vol. 1 to 7) translated into Marāṭhī. *Udāna* (उदान), *Visuddhimagga Sāra* (वसुधधम्मगग सार), *Abhidhammatthasaṅgaha*, *Jātakakathāsaṅgraha* (भाग 1 to 3). *Rāṣṭriya Saṁskṛta Saṁsthāna*, the Deemed University at Delhi (*Samsthāna* has been upgraded to Central Sanskrit University recently), has translated *Pāli* texts into English, Hindi, and Sanskrit. They also run a bi-annual journal in the field of *Pāli* and *Prākṛit* named “*Pāli Prākṛit Anusīlanam*” (A bi-annual journal of *Pāli* and *Prākṛit* language and literature from *Rāṣṭriya Saṁskṛta Saṁsthāna*). The following *Pāli* texts were translated into English, Hindi, and Sanskrit: *Khuddakapāṭhapāli*, *Udānapāli*, and *Itivuttakapāli* – Translated into Sanskrit, Hindi, and English, *Suttanipāṭapāli* - Translated into Sanskrit, Hindi, and English, *Vimānavatthupāli* and *Petavatthupāli* - Translated into Sanskrit and Hindi, *Theragāthāpāli* and *Therīgāthāpāli* - Translated into Sanskrit and Hindi, *Saṁyuttanikāyapāli* - Translated into Sanskrit and Hindi. These are only a few translations done long ago. However, this situation has improved, and many other texts have now been translated. Buddhism was transmitted into Tibet, and as a consequence, many Sanskrit texts were translated from Sanskrit into Tibetan and Chinese. Epistemological literature composed by Indian Buddhist scholars, focusing on cognition and other philosophical concepts such as mind, logic, and language, was translated into Tibetan and Chinese. These translations had a profound impact on Tibetan intellectual history. They began during the 7th century, continued in the 8th century, and intensified later. Tibetan scholars also consulted the Sanskrit versions of oral traditions. Tibetans divided Buddhist texts into two broad categories: *Kangyur* and *Tengyur*. *Kangyur* means “Translated Words.” It consists of the works supposed to have been spoken by the Buddha himself. This is, in fact, the *Mahāyāna* Buddhist *sūtra* literature. All these texts had Sanskrit originals and were translated from Sanskrit into Tibetan. Some texts were also translated into Tibetan from Chinese, which were themselves Sanskrit translations. These works were translated from Sanskrit into Chinese when certain Chinese masters traveled to India. *Tengyur* means “Translated Treatises.” This category contains commentary texts, including one hundred treatises and *Abhidharma* works (both *Mahāyāna* and non-*Mahāyāna*). The *Tengyur* contains 3,626 texts in 224 volumes. Among these, the essential texts translated by Kumārajīva include the *Diamond Sūtra*, *Amitābha Sūtra*, *Lotus Sūtra*, and *Vimalakīrti Nirdeśa Sūtra*. His translation style was distinctive, possessing a flowing smoothness that reflects his prioritization of conveying meaning rather than strict literal rendering. Because of this, his translations of *Mahāyāna* texts often remained more popular. The tradition of translating early Sanskrit texts is ancient. Some early Sanskrit scholars translated texts such as the *Vedas* and post-*Vedic* literature into English

and other foreign languages. *Rāmāyaṇa* translations are very popular in contemporary society, and people have become interested in listening to the story of *Rāma* in their local languages. The *Purāṇas* have been translated into many languages. The *Matsya Purāṇa* was translated into Persian by Goswami Anand Daga in 1792 in Varanasi, a manuscript of which is available at the Italian Institute of Rome. A copy of the Persian translation of the *Bhāgavata Purāṇa* is reported to be available at Aligarh Muslim University, Uttar Pradesh. Not only in India, but the *Purāṇas* have also traveled beyond Indian territories. They spread to Tibet, China, Japan, Indonesia, and Southeast Asia. The *Brahmāṇḍa Purāṇa* reached Bali, an island of Indonesia. Many ancient Javanese adaptations of original Sanskrit works indicate the popularity of Sanskrit and Indian culture in the Indonesian archipelago. Dr. H. N. Vander Tank collected many Sanskrit manuscripts of the *Purāṇas*, which are now preserved in the Netherlands, after his passing. Many translative works of the *Rāmāyaṇa* into Japanese have also been reported from Java. The *Purāṇas* have also traveled to European countries, particularly Germany. Indian ideas have greatly influenced German literature and philosophy since the 19th century. German scholars once observed that Indian philosophical systems could serve as a model for Western thinking. The influence of Indian literature on European thought can be traced back even to the Middle Ages. Some ancient Indian works reached Europe through Arabic and Persian translations. For example, the *Pañcatantra* was first translated into Pahlavi in the early 6th century, then into Arabic in 750 CE. Various versions derived from the Arabic translation later became known in Europe.

V. CONCLUSION

This study has demonstrated that Buddhist education is not merely a relic of ancient tradition but a dynamic, multifaceted system that continues to shape global harmony. From its origins in monastic institutions such as Nālandā and Valabhi to its pervasive influence on contemporary educational practices, Buddhist education has consistently promoted an integrated model of ethical, intellectual, and physical development. At its core, the Buddhist educational system is built upon the cultivation of moral virtues - *mettā* (loving-kindness), *karuṇā* (compassion), *muditā* (sympathetic joy), and *upekkhā* (equanimity) - which serve as the foundation for both personal transformation and social progress.

By fostering critical inquiry and encouraging self-reflection, Buddhist education enables individuals to transcend narrow self-interests and embrace a broader, more inclusive vision of human well-being. The emphasis on the Noble Eightfold Path and the practice of mindfulness (*sati*) not only cultivate inner wisdom but also nurture the qualities essential for peaceful coexistence. This holistic approach underscores the interdependence of body and mind, reinforcing the idea that true peace in society emerges from the well-being of its individuals.

Moreover, Buddhist education has historically transcended rigid social hierarchies, offering a democratic model that welcomes all, regardless of caste,

gender, or social status. The open and inclusive nature of the Buddhist saṅgha, where education was imparted through both oral transmission and rigorous debate, set the stage for a unique intellectual tradition that promoted dialogue and mutual understanding. Such principles remain profoundly relevant today, particularly in a globalized world where cultural exchange and intellectual diversity are paramount.

The legacy of Buddhist education is further evidenced by its enduring contributions to the translation and dissemination of Buddhist texts across Asia and beyond. As scholars and practitioners continue to revisit ancient manuscripts and reinterpret classical teachings, the timeless values of compassion, nonviolence, and wisdom are reasserted as guiding principles for modern society. In this respect, Buddhist education not only informs individual spiritual growth but also offers practical solutions for addressing contemporary challenges, ranging from ethical governance and social justice to environmental sustainability.

Ultimately, the integration of Buddhist educational principles into modern pedagogical frameworks has the potential to foster a more harmonious and sustainable global society. By prioritizing the cultivation of inner peace and ethical conduct, Buddhist education paves the way for a future where personal transformation and collective well-being are mutually reinforcing, creating the foundations for enduring global harmony.

UNITY AND INCLUSION FOR HUMAN DIGNITY: BUDDHIST PERSPECTIVES ON WORLD PEACE AND SUSTAINABLE DEVELOPMENT

Cynthia Chantal Infante Medina

Abstract:

In an era of escalating social inequalities, environmental degradation, and emotional disconnection, the need for holistic educational approaches has become more pressing than ever. This paper explores the integration of Buddhist teachings, particularly mindfulness (*sati*), into educational systems as a means to cultivate compassion, resilience, and ethical consciousness. By incorporating the ethical principles of Buddhism, such as the Five Precepts and the Noble Eightfold Path, education can become a transformative tool that fosters a more compassionate and sustainable society. The paper emphasizes the potential of mindfulness not only in reducing stress but also in enhancing students' socio-emotional skills and ethical decision-making. It argues that education, when aligned with Buddhist values, can bridge the gap between technical knowledge and holistic well-being, preparing individuals to address contemporary global challenges with wisdom and compassion. The paper concludes that incorporating Buddhist principles into education offers a profound opportunity to reshape learning paradigms, fostering unity, inclusion, and dignity for all.

Keywords: *Buddhism, sustainable development, world peace.*

I. JUSTIFICATION

In today's world, societies and the natural environment face an array of challenges, including social inequalities, armed conflicts, environmental degradation, and an increasing emotional disconnection among individuals. Addressing these pressing issues necessitates the exploration of innovative ways of thinking and acting to build a more peaceful, equitable, and sustainable future. In this context, Buddhist teachings - particularly mindfulness, or

“sati” in Pāli - and the ethical principles they embody provide a profound and transformative framework. This essay aims to justify the relevance of integrating these teachings into educational systems, not only as a tool for individual well-being but also as a means to cultivate more compassionate and ethical societies. As seen in verses 129 and 130 of the Dhammapada, in Buddhism, the principle of equality is rooted in the understanding that all beings fear suffering: “All tremble at violence; all fear death. Putting oneself in the place of another, one should not kill nor cause another to kill”¹ “All tremble at violence; life is dear to all. Putting oneself in the place of another, one should not kill nor cause another to kill”². The rapid pace of globalization and technological advancement has brought numerous benefits but has also exacerbated significant imbalances. Emotional disconnection, rising rates of anxiety and depression, and social fragmentation are indicative of a system that prioritizes productivity and consumption over holistic well-being. Additionally, environmental crises such as climate change and biodiversity loss highlight humanity’s estrangement from nature, pushing it towards an irreversible tipping point. These interconnected challenges necessitate holistic solutions that address both the internal and external dimensions of human experience.

Education, as the cornerstone of society, holds immense potential to serve as a catalyst for structural change. However, conventional educational models predominantly emphasize the accumulation of technical knowledge and competition, often overlooking the development of emotional, ethical, and social competencies. This approach has resulted in a gap in preparing individuals to navigate the complexities of the 21st century with resilience, compassion, and creativity. Incorporating mindfulness and Buddhist ethical principles into educational frameworks presents an opportunity to bridge this gap and promote holistic learning.

Mindfulness, understood as the ability to be fully present in the moment, has gained significant recognition in recent years due to its effectiveness in reducing stress and enhancing well-being. However, its potential extends far beyond these individual benefits.

Within the educational context, mindfulness can play a pivotal role in fostering socio-emotional skills such as emotional regulation, empathy, and ethical decision-making.

From a Buddhist perspective, mindfulness is not merely a tool for calming the mind but rather a pathway to the complete eradication of suffering for all beings. The ethical principles of Buddhism offer a robust foundation for fostering more just and sustainable societies. Integrating these principles into educational curricula does not imply the imposition of a religious belief system; rather, it promotes universal values that transcend cultural and religious boundaries.

¹ Dhp 129.

² Dhp 130.

Buddhist ethics emphasize the significance of intentionality behind actions, a principle particularly pertinent in educational contexts where students must learn not only how to solve problems but also how to reflect on the ethical ramifications of their decisions. Encouraging such reflective practices can empower students to make responsible and compassionate choices in their personal and professional lives. As the *Khaggavisāṇa-Sutta* reminds us: “Renouncing violence for all living beings, harming not even one³.”

Sustainability - defined as meeting the needs of the present without compromising the ability of future generations to meet their own - is one of the most pressing challenges of our time. Buddhist teachings provide a unique perspective on sustainability by advocating for simplicity, moderation, and respect for nature. An educational system that incorporates these values could inspire students to engage in sustainable practices, such as reducing waste in their communities, adopting responsible consumption habits, and actively participating in environmental justice initiatives.

In an increasingly interconnected and complex world, rethinking educational approaches to align with the needs of the current era is crucial. This essay argues that Buddhist teachings, particularly mindfulness and ethical principles, offer a powerful framework for addressing contemporary challenges and fostering a more compassionate, ethical, and sustainable future. By integrating these teachings into educational systems, individuals can be nurtured not only to achieve professional success but also to become agents of positive change within their communities and the world at large.

This holistic approach represents an opportunity to transform education into a driving force for structural change that benefits humanity and the planet. It calls for the adoption of an inclusive vision of learning that acknowledges the interdependence of all beings and promotes values that transcend cultural, religious, and economic divisions. In doing so, we can aspire to build a society that does not merely survive but thrives in harmony with the world around it.

II. INTRODUCTION

The benefits of meditation have been widely disseminated globally, with mindfulness being recognized for its potential to reduce stress, anxiety, and depression. However, from a Buddhist perspective, this practice transcends these immediate benefits and aims at the complete eradication of suffering. In the *Mahā-Satipatthāna-Sutta* discourse, the Buddha addresses the monks with the following words: “This is the only path, bhikkhus, for the purification of beings, for the overcoming of sorrow and lamentation, for the disappearance of pain and grief, for attaining the Noble Path, for the realization of Nibbāna, that is, the Four Foundations of Mindfulness.”⁴

While mindfulness can be practiced independently, in the modern world, it is often approached from a purely technical perspective, neglecting its deeper

³ Sn. 284 – 290

⁴ D. II. 231.

integration within Buddhist teachings. This fragmented approach omits essential elements necessary for achieving true inner peace, namely virtue (*sīla*) and right understanding (*sammā-ditthi*). Ethics serve as the foundation for mindfulness practice, allowing for a remorse-free mind that facilitates a more profound and transformative experience.

Ethical conduct plays a crucial role in Buddhist practice, providing a moral framework that fosters both personal and collective well-being. Without anchoring mindfulness within ethical principles, it becomes challenging to achieve long-term personal transformation and meaningful societal change. Virtue and right understanding must therefore precede mindfulness practice, forming a solid foundation for the attainment of *Nibbāna*. From the *Dhammapada*: “To avoid all evil, to cultivate good, and to purify one’s mind, this is the teaching of the Buddhas.”⁵

In today’s globalized world, marked by increasing technological, economic, and social interconnectedness, persistent inequalities and conflicts continue to hinder the pursuit of world peace and sustainable development. Human dignity, a fundamental principle that should guide collective actions, is constantly threatened by social exclusion, armed conflicts, environmental degradation, and disparities in access to education. Addressing these crises requires not only corrective measures but also ethical and transformative approaches that tackle the root causes of suffering.

This essay explores how Buddhist teachings offer valuable perspectives for addressing these global challenges, emphasizing the fundamental role of ethics as a tool for fostering a more compassionate and sustainable future. In Buddhist thought, ethics are not merely a set of external norms but rather an internal discipline aimed at aligning human actions with the principles of compassion, responsibility, and mutual respect. This ethical orientation not only prevents individual and collective suffering but also promotes harmonious and sustainable relationships between individuals and their environment.

Within this framework, mindfulness emerges as a central practice that strengthens the capacity to act ethically in every aspect of life. Beyond its widely recognized personal benefits, such as stress reduction and emotional resilience, mindfulness serves as a bridge to a life governed by ethical principles. In the educational sphere, it has the potential to transform not only students and educators but also entire communities by fostering values such as empathy, compassion, and respect for the interdependence of all beings.

Aligned with the Sustainable Development Goals (SDGs), particularly the goal of ensuring inclusive and equitable quality education (United Nations, 2015). This essay argues that the integration of Buddhist ethics into pedagogical strategies can position education as a catalyst for structural change. By complementing mindfulness practice with ethical principles, global citizenship can be nurtured, prioritizing collective well-being, environmental

⁵ Dhp 183.

sustainability, and peace.

The Buddhist perspective, which emphasizes interdependence and shared responsibility, provides a comprehensive framework for understanding the root causes of global suffering and offers practical tools to address them. Ethics, conceptualized as an act of generosity toward the world, serve to prevent suffering by fostering an awareness of the broader impact of individual and collective actions. Therefore, this essay seeks to highlight the relevance of Buddhist teachings in contemporary education and to advocate for ethics as an essential pillar in the pursuit of a more just, inclusive, and sustainable future.

III. DEVELOPMENT (PROPOSALS)

The current global situation is marked by a series of interconnected challenges affecting both people and the natural environment. These challenges include mental health crises, social inequalities, armed conflicts, and environmental problems that worsen over time. Among the most alarming issues is the global rise in anxiety and depression, reflecting a widespread emotional disconnection that affects individuals of all ages and contexts.

Mental health, a fundamental pillar of human well-being, is being eroded by factors such as work-related stress, academic demands, the impact of social media, and socio-economic uncertainties. Recent studies, such as those conducted by Xiang, Martinez, Chow, Carter, Negri, Velasquez, Spitzer, Zuberbuhler, Zucker, and Kumar (2024), highlight the growing need for mental health services targeted at young people. This phenomenon reveals a crisis of emotional neglect, hindering the building of healthy relationships and the development of solid self-esteem.

Simultaneously, social inequalities persist as insurmountable barriers for millions of people. Poverty, social exclusion, and lack of access to basic services, such as education and healthcare, perpetuate cycles of injustice that affect present and future generations. These inequalities not only generate conflicts and tensions within communities but also limit opportunities for sustainable global development. For instance, gaps in access to quality education restrict the potential of millions of young people, condemning them to precarious living conditions and limiting their ability to contribute to the progress of their communities. The Metta-Sutta emphasizes the importance of cultivating loving-kindness: "May all beings, whether weak or strong, long or short, large, medium, or small, subtle or gross, visible or invisible, near or far, born or yet to be born, without exception, experience joy and happiness"⁶

On the other hand, the environment faces an unprecedented crisis. Climate change, biodiversity loss, and pollution affect all living beings, underscoring the urgent need for action. These issues cannot be separated from social and economic inequalities, as vulnerable communities are often the most affected by natural disasters and environmental degradation. The disconnection between humans and nature is also a reflection of a lack of awareness of the interdependence that defines our lives. In this context,

⁶ Sn. 1 - 2.

education plays a crucial role as a transformative tool. However, traditional educational models are often designed to prioritize the accumulation of technical and academic knowledge, neglecting the holistic development of emotional, ethical, and social skills. This limited approach has created a gap in the formation of individuals capable of facing the complex challenges of the contemporary world with resilience, compassion, and creativity. The impact of this disconnection is evident on multiple levels. On a personal level, the lack of socio-emotional skills hinders self-regulation, empathy, and peaceful conflict resolution. On a social level, the absence of robust ethical principles fosters corruption, violence, and exploitation, perpetuating systems that prioritize individual interests over collective well-being. On an environmental level, emotional and ethical disconnection leads to irresponsible exploitation of natural resources, ignoring the long-term consequences for the planet and future generations. The Buddhist precepts emphasize the importance of ethical conduct by stating: I undertake the precept to refrain from destroying living creatures. I undertake the precept to refrain from taking that which is not given. I undertake the precept to refrain from sexual misconduct. I undertake the precept to refrain from incorrect speech. I undertake the precept to refrain from intoxicating drinks and drugs which lead to carelessness.”⁷

Faced with these challenges, the opportunity arises to reimagine education as a powerful tool for transforming society. Instead of focusing exclusively on technical knowledge, the educational system can become a space where ethical values, emotional skills, and a deep connection with others and nature are cultivated. This would not only benefit individuals but also strengthen social cohesion and promote a more harmonious relationship with the environment. Programs that incorporate mindfulness have been shown to have a positive and significant impact on students’ self-regulation skills in preschool and primary education (Roeser, Galla & Baelen, 2022).

Transformative education is based on a holistic approach that recognizes the interconnectedness of all aspects of life. By incorporating universal ethical principles, such as compassion, respect, and responsibility, educational systems can shape global citizens capable of effectively addressing current challenges. Moreover, by integrating practices like mindfulness, students can develop greater self-awareness and awareness of their surroundings, enabling them to make more informed and ethical decisions.

An example of this transformative approach is the growing adoption of educational programs that combine academic teaching with the development of socio-emotional skills. These initiatives have proven effective in improving academic performance, reducing stress levels, and fostering a more inclusive and collaborative learning environment. Instead of perpetuating individual competition, these programs promote cooperation and mutual understanding,

⁷ “Pāṇātipātā veramaṇī-sikkhāpadaṃ samādiyāmi. Adinnādānā veramaṇī-sikkhāpadaṃ samādiyāmi. kāmesu micchācārā veramaṇī-sikkhāpadaṃ samādiyāmi. Musāvādā veramaṇī-sikkhāpadaṃ samādiyāmi. Surāmerayamajjapamādaṭṭhānā veramaṇī-sikkhāpadaṃ samādiyāmi.

laying the foundation for a more equitable and supportive society. However, for this vision to materialize, several obstacles must be overcome. First, a paradigm shift in how education is conceived is required. This involves recognizing that success is not measured solely by academic achievements but also by individuals' ability to contribute positively to their communities and the world at large. Second, it is essential to have the support of public policies prioritizing inclusive and quality education aligned with the Sustainable Development Goals (SDGs).

The world faces complex challenges requiring innovative and holistic solutions. The mental health crisis, social inequalities, and environmental issues cannot be addressed in isolation; they are deeply interconnected and demand an approach that considers both the internal and external dimensions of human experience. Education, as the foundation of any society, has the potential to be a catalyst for this structural change. By envisioning education as a tool for cultivating emotional skills, ethical values, and a deep connection with nature, we can lay the groundwork for a more compassionate, equitable, and sustainable future.

Meeting the needs of people suffering from depression is a public health priority (World Health Organization, 2020).

In Buddhism, ethical principles, known as *sīla*, form the foundation of a virtuous and meaningful life. These principles focus on cultivating essential qualities such as compassion, nonviolence, honesty, and respect for the interconnectedness of all beings. Unlike a rigid moral code, *sīla* is not confined to external rules; it is an internal discipline that guides our intentions and actions toward collective well-being. Buddhist teachings emphasize that mindfulness is essential for practicing ethics, enabling us to observe our bodily, verbal, and mental actions correctly at any given moment and to avoid transgressions when the opportunity arises.

The foundation of Buddhist ethics lies in the understanding that our actions have consequences not only for ourselves but also for others and the world around us. Interconnection, a central principle of Buddhism, teaches us that every thought, word, and action impacts the fabric of existence. Therefore, acting with compassion and respect toward all beings is not merely an ethical ideal but a practical necessity for living in harmony.

One of the most notable aspects of *sīla* is its focus on the intention behind actions.

Buddhism teaches that actions motivated by compassion and right understanding not only prevent suffering but also promote harmonious relationships and strengthen collective well-being. For example, the first Buddhist precept, "to abstain from killing living beings," goes beyond avoiding physical violence; it also encompasses preventing emotional suffering and respecting life in all its forms. This principle reflects a deep commitment to nonviolence and empathy.

Likewise, honesty and integrity are fundamental values in Buddhist ethics. These qualities not only strengthen interpersonal relationships but

also foster an environment of trust and mutual respect. In a world marked by misinformation and self-serving agendas, practicing honesty is a revolutionary act that can transform social and political dynamics.

Another key principle is respect for interconnectedness. Rather than seeing ourselves as separate entities, Buddhism invites us to recognize our profound interdependence with all beings and the environment. This understanding fosters a sense of responsibility for collective well-being and motivates us to act in ways that benefit everyone, not just ourselves.

Buddhist ethics also play a crucial role in the practice of mindfulness. According to Buddhism, meditation and other contemplative practices cannot be separated from a solid ethical framework. Virtue and ethics are essential for creating a calm and remorse-free mind, which in turn facilitates a deeper and more effective mindfulness practice. In this sense, *silā* not only precedes but also guides mindfulness, forming an integrated system aimed at eradicating suffering in all its forms.

This ethical approach has profound implications for education and human development. By integrating the principles of *silā* into educational curricula, students can be trained not only as competent professionals but also as ethical and compassionate citizens. For example, teaching young people the importance of nonviolence and empathy can help them develop healthier relationships and contribute positively to their communities.

Furthermore, the ethical principles of Buddhism offer a solid foundation for addressing global challenges such as social inequalities and environmental issues. By promoting values like moderation and respect for nature, *silā* invites us to reconsider our priorities and adopt a more mindful and balanced lifestyle. In a world where excessive consumption and resource exploitation are the norm, these ethical principles offer a transformative alternative that promotes harmony and balance. This approach is not only relevant on a personal level but also in collective and global contexts, where individual actions, when combined, have a significant impact on social and environmental dynamics.

For instance, the Buddhist teaching on contentment challenges us to reflect on our consumption patterns and their impact on the planet's resources. This reflection extends to food, as illustrated by this contemplation: "Reflecting properly, I use food not for amusement, intoxication, fattening, or beautification, but solely for the continuation and sustenance of this body, to end the discomfort of hunger and to practice the holy life, considering: 'Thus I shall eliminate old sensations of hunger and not create new sensations of hunger, and I shall be healthy, blameless, and live comfortably.'"⁸

This correct consideration toward food does not advocate deprivation but rather balance, enabling us to meet our needs without compromising the well-being of other beings and future generations. Adopting an ethical approach based on moderation can be an effective response to

⁸M. I. 12 – 3,

overconsumption and the environmental crises we face today, such as climate change and biodiversity loss.

In the social sphere, applying the ethical principles of Buddhism can play an essential role in reducing inequalities and building more inclusive communities. Compassion understood not only as a feeling but as a committed action, urges us to work for social justice, equality, and respect for human dignity. Buddhist ethics challenge us to transcend personal and selfish interests, inviting us to adopt a global perspective that values collective well-being over individual benefit.

A distinctive feature of *sila* is its universal applicability. Although rooted in Buddhist teachings, its principles are relevant to people of any religious or philosophical tradition, as they are based on fundamental human values. This makes it a valuable tool for fostering mutual understanding and cooperation in an increasingly diverse and interconnected world.

From an educational perspective, incorporating the ethical foundations of Buddhism into learning can prepare students to face the challenges of modern times with greater compassion, responsibility, and creativity. For example, an educational program that integrates the teaching of *sila* could include activities such as discussions on ethical dilemmas, community service projects, and workshops on conflict resolution. These activities not only reinforce an understanding of ethical principles but also allow students to apply them in practical and real-world contexts.

Additionally, Buddhist values such as compassion and empathy can be powerful tools for addressing the growing mental health crisis in educational communities. By teaching students to recognize and manage their emotions from an ethical perspective, a healthier and more supportive environment can be promoted in both classrooms and society at large.

Mindfulness practice, guided by an ethical framework like *sila*, can be an effective intervention to reduce stress, anxiety, and emotional disconnection that affect many young people today.

Finally, the transformative impact of Buddhism's ethical foundations extends beyond individuals. On a broader level, they can guide public policies and organizational decisions toward a more equitable and environmentally responsible model. For example, organizations that adopt ethical practices based on principles such as transparency, integrity, and respect for all forms of life not only contribute to a more positive work environment but also generate tangible benefits in terms of social and environmental impact.

The ethical foundations of Buddhism, represented by *sila*, offer a comprehensive framework for addressing the challenges of our time. By prioritizing compassion, nonviolence, and interconnectedness, these principles invite us to reflect on how our actions affect the world and provide tools for living more harmoniously and meaningfully. Incorporating these values into education and daily life can transform individuals, communities, and the world as a whole.

Towards an Education Based on Ethical Values

Buddhism, with its emphasis on compassion and ethics, offers a valuable framework for redesigning educational curricula. Instead of focusing exclusively on the transmission of technical knowledge, ethical education inspired by Buddhist principles seeks to foster essential human qualities such as empathy, responsibility, and critical reflection.

Compassion, understood as the genuine desire to alleviate the suffering of others, can be integrated into educational activities through community service projects, discussions about social issues, and exercises that develop empathy for different perspectives.

In a multicultural and interconnected world, the ability to recognize and value cultural, religious, and intellectual diversity is essential. Incorporating these principles into education fosters mutual understanding and prevents prejudice and discrimination. Education can teach students that their actions have an impact beyond their individual lives, contributing to the well-being of their community and the planet. Practical activities, such as environmental sustainability projects, can help cultivate this understanding.

Ethical Curricula and Sustainability: The design of curricula reflecting ethical principles and sustainable practices is a critical step toward transformative education. Specific proposals include:

(1) **Ethics-Based Subjects:** Integrate topics such as compassion, social justice, and environmental sustainability into existing subjects like social sciences, ethics, or environmental education. For instance, a geography course could analyze the interdependence between human communities and ecosystems, highlighting collective responsibility for environmental preservation.

(2) **Interdisciplinary Projects:** Design activities that bring together different areas of knowledge to address global problems from an ethical and sustainable perspective. A project on climate change, for example, could involve subjects like science, economics, and ethics, promoting comprehensive and responsible solutions.

(3) **Historical Narratives and Examples:** Incorporating stories of figures who embodied universal ethical values, such as Gandhi or Wangari Maathai, inspires students and shows how principles of compassion and sustainability can be applied in real life.

Mindfulness Applied to Ethical Understanding: Beyond its role in emotional regulation, mindfulness can be a powerful tool to foster ethical understanding among students. From a Buddhist perspective, mindfulness is not separate from an ethical framework; instead, it is enriched and guided by values such as compassion and responsibility.

(1) **Meditation Exercises:** Incorporate mindfulness practices that invite students to reflect on ethical issues, such as the nature of their actions and their impact on others and the environment.

(2) **Group Dynamics:** Design activities that promote conscious dialogue

and mutual understanding, such as listening circles where students share experiences and perspectives, cultivating empathy and connection.

(3) **Programs Linking Mindfulness to Social Commitment:** Adapt mindfulness programs to include activities that connect awareness with social engagement, such as workshops on responsible consumption, conflict resolution, and ethical leadership.

Challenges and Opportunities: Despite the evident benefits, implementing ethical and sustainable education faces significant challenges, such as institutional resistance, inadequate teacher training, and the need for financial resources. However, these challenges also present opportunities to innovate and build more inclusive and relevant educational systems.

Strategies to overcome these challenges include:

(1) **Teacher Training:** Provide educators with practical tools to incorporate ethical values and mindfulness into their teaching methods.

(2) **Community Collaboration:** Involve families and communities in the educational process, ensuring that ethical values are reinforced both inside and outside the classroom.

(3) **Progressive Educational Policies:** Promote educational reforms prioritizing the integral development of students by combining academic competencies with ethical and socio-emotional skills.

A Path to the Future: A study on the importance of “informal mindfulness,” understood as the practice of mindfulness during everyday activities like washing dishes or walking, highlights that this practice gradually increases through repetition and accumulated experience. This increase may drive the benefits associated with mindfulness practice (Mettler, Zito, Bastien, Bloom, & Heath, 2024).

Integrating Buddhist principles into education does not mean imposing religion or ideology but rather adopting universal values that transcend cultural and spiritual barriers. By designing curricula that combine mindfulness with ethical principles like compassion and respect for diversity, education can be transformed into a powerful tool for addressing global challenges.

Ultimately, ethical and sustainable education benefits not only students individually but also contributes to collective well-being, promoting more just, peaceful, and resilient societies. This approach is not just an option but an urgent necessity in a world demanding innovative and compassionate solutions to the problems.

Innovative Proposals: Transforming education into a more compassionate, ethical, and environmentally respectful approach requires initiatives that combine theory with practice. Below are concrete proposals designed to bring mindfulness and ethical principles into reality, fostering significant change in students, teachers, and communities.

Ethical Mindfulness Workshops: Ethical mindfulness workshops focus on combining mindfulness practice with reflections on ethical values such as

compassion, respect for diversity, and interdependence. These sessions can include:

(1) **Meditation Practices:** Simple exercises that teach students to be present and develop greater awareness of their thoughts, emotions, and actions.

(2) **Group Reflections:** Dialogue spaces where participants analyze how to apply ethical values in their daily lives and interactions with others.

(3) **Practical Activities:** Dynamics demonstrating the importance of cooperation, mutual respect, and empathy, such as collaborative games or simulations on conflict resolution.

These workshops would not only improve students' emotional well-being but also equip them with practical tools to address contemporary ethical and social challenges.

Teacher Training: Teachers play a fundamental role in the success of any educational initiative. Therefore, programs are proposed to train educators to incorporate compassionate and mindful practices into their teaching methods. Key areas of this training would include:

(1) **Stress Management:** Mindfulness-based techniques to help teachers manage stress, improve their well-being, and model positive behaviors for students.

(2) **Inclusive Practices:** Strategies for creating classroom environments where all students feel valued and respected, regardless of their cultural, social, or academic backgrounds.

(3) **Ethical Integration:** Methods to connect academic curricula with universal ethical principles, helping students develop a deeper understanding of the topics they study.

Additionally, these training programs could include specific modules on teaching students to apply socio-emotional skills and ethical reflections in their daily lives.

Innovative Educational Materials: To complement the previous initiatives, it is essential to develop educational resources that present ethical values and mindfulness creatively and engagingly. Examples of these materials include:

(1) **Interactive Guides:** Books and digital platforms explaining concepts like interdependence and sustainability through illustrations, games, and practical activities.

(2) **Educational Videos:** Short films depicting inspiring stories of individuals and communities that have implemented compassionate practices.

(3) **Collaborative Projects:** Activities where students work together to solve ethical or environmental problems, such as designing solutions to reduce waste at school or promoting respect for diversity in their community.

These resources can be adapted to different ages and cultural contexts, ensuring they are accessible and relevant to a wide range of students.

Community Partnerships: Ethical and sustainable education should not

be confined to classrooms; its impact is amplified when it involves local and global communities. Strategies to foster these partnerships include:

(1) **Collaboration with Local Organizations:** Work with community groups, NGOs, and local leaders to design and implement projects promoting social and environmental justice.

(2) **Community Service Projects:** Initiatives where students apply ethical principles in practical activities, such as reforestation, supporting vulnerable populations, or organizing awareness campaigns.

(3) **Global Exchange Networks:** Create opportunities for students and teachers to collaborate with schools worldwide, sharing ideas and experiences on education, ethics, and sustainability.

These partnerships not only enrich the educational experience but also strengthen participants' sense of global responsibility.

Evaluation and Feedback: To ensure the success of these proposals, it is essential to establish evaluation systems that measure their impact and allow for continuous adjustments. Evaluation tools could include:

(1) **Well-Being Surveys:** Periodic questionnaires to assess the stress levels, satisfaction, and socio-emotional skills of students and teachers.

(2) **Community Change Indicators:** Measures to evaluate the impact of educational projects on the community, such as reduced conflicts or increased civic participation.

(3) **Individual and Group Reflections:** Spaces where participants can share their experiences and suggestions for improving initiatives.

A More Compassionate and Sustainable Future: These innovative proposals aim to transform education into a powerful tool for social change. By integrating mindfulness with ethical principles at all educational levels, individuals can be cultivated who are not only prepared to face the challenges of this century but also deeply committed to the well-being of others and the planet.

Implementing these initiatives has the potential to create a lasting impact not only in schools but also in communities and the broader world. This approach represents a crucial step toward a more equitable, peaceful, and sustainable society, where compassion and respect are the values that guide our actions and decisions.

IV. CONCLUSIONS

In a world characterized by multidimensional crises such as climate change, growing social inequalities, and a global mental health crisis, education emerges as a key space for social transformation. In this essay, we have explored how integrating Buddhist principles such as mindfulness and ethics into education can contribute to building a more compassionate, equitable, and viable future in harmony with the environment. This holistic perspective not only addresses the emotional and ethical shortcomings of the current educational system but also proposes concrete solutions to tackle global challenges at their roots.

Education is much more than the mere transmission of technical or academic knowledge; it is an integral process that must shape individuals as ethical, conscious citizens committed to collective well-being. In this sense, mindfulness, understood from Buddhism as a practice that cultivates full and compassionate awareness, offers a powerful tool to transform both the educational experience and the daily lives of students, teachers, and communities.

Currently, education faces challenges such as the rise of anxiety, depression, and stress among students and teachers. These difficulties not only affect academic performance but also individuals' ability to interact positively with their environment. By incorporating mindfulness into the educational curriculum, space is created for people to recognize their emotions, develop self-regulation, and strengthen essential socio-emotional skills such as empathy and critical thinking.

However, mindfulness should not be seen as an isolated practice but as part of an integral ethical framework. This is where the Buddhist principles of compassion, nonviolence, and respect for interconnectedness become the heart of transformative education. These values not only guide individual actions but also generate a culture of collaboration, inclusion, and shared responsibility.

The incorporation of ethical principles and mindfulness practices in education not only benefits individuals but also directly contributes to achieving the Sustainable Development Goals (SDGs). Designing curricula that combine ethical values with academic content is a key proposal for shaping global citizens capable of addressing the present age challenges. For instance, teaching students about the interdependence of living beings not only fosters respect for diversity but also promotes a caring attitude toward the environment. By connecting these teachings with mindfulness practices, a profound sense of responsibility for collective well-being can be cultivated.

Throughout this essay, we have outlined innovative proposals aimed at integrating mindfulness and ethical principles into education in practical and responsible ways. Ethical mindfulness workshops, teacher training programs, innovative educational materials, and community partnerships are just some of the concrete steps to transform the educational system from its foundations.

These initiatives not only respond to the immediate needs of students and teachers but also have the potential to generate lasting impacts on communities. For example, ethical mindfulness workshops not only help participants manage stress but also invite them to reflect on their values and their role in building a more just and compassionate world.

Similarly, partnerships with local and global communities strengthen the connection between education and real-world challenges, enabling students to apply their learning in meaningful contexts. In this way, education is fostered not only to prepare for the labor market but also to form conscious citizens committed to social change.

The implementation of these proposals has the potential to radically change how we conceive of education and its role in society. By prioritizing mindfulness and ethics, a generation of individuals is cultivated who can face the modern era challenges with resilience, empathy, and a long-term vision.

Moreover, this educational approach benefits not only students and teachers but also contributes to the creation of more equitable and sustainable societies. In a world where social, economic, and cultural divides are increasingly deep, education based on Buddhist principles offers a path toward unity and inclusion. Mindfulness in education, guided by the ethical principles of Buddhism, represents a transformative solution to contemporary global challenges. By combining full awareness with values such as compassion and respect for interconnectedness, an educational system can be built that not only forms competent individuals but also ethical and conscious citizens. Ultimately, this educational vision has the potential to transcend classrooms and transform society as a whole. By cultivating a generation of leaders and citizens committed to peace, justice, and sustainability, the foundations are laid for a future where human dignity, unity, and inclusion are the pillars of our collective development. This approach is not only a response to the challenges of the present but also a beacon of hope for generations to come.

MINDFULNESS IN THE ANCESTRAL WORSHIP RITUAL OF VIETNAMESE

Associate Professor Dr. Pham Thi Kien*

Abstract:

This article analyzes the role of mindfulness in the ritual of worshipping Vietnamese ancestors. Mindfulness, understood as mindfulness and focus on the present, is deeply integrated in worship rituals, expressed through reverence and spiritual connection with ancestors. The study uses document analysis and actual observation to clarify the connection between mindfulness and ancestor worship practices. The results show that mindfulness helps maintain cultural traditions and strengthens family and community relationships. However, in the context of modernization, mindfulness in worship faces many challenges, requiring appropriate adaptation and conservation.

Keywords: *Mindfulness, ritual, Vietnamese.*

I. INTRODUCTION

Ancestor worship is an essential belief in Vietnamese culture, reflecting the filial piety of descendants and showing a strong connection between generations. However, modernization and globalization have led to changes in perceptions and lifestyles, making it more challenging to maintain mindfulness when practicing worship rituals. Many young people today do not deeply understand the meaning and value of mindfulness and ancestor worship, leading to rituals being practiced through loudspeakers or metamorphosing. Therefore, this study was conducted to clarify the concept of mindfulness in the ancestor worship ritual of the Vietnamese people, thereby proposing solutions to preserve and promote core values in contemporary society. In terms of methods, the topic combines document analysis and observation to collect multi-dimensional and reliable data. While the previous works have often approached primarily ethnographic or religious rituals, a standard limitation is the lack of connection with the field of Buddhist psychology and philosophy of the concept of mindfulness. By overcoming this limitation,

* University of Economics Ho Chi Minh City.

the study identified key factors that help maintain mindfulness in ancestor worship, such as the family educational environment, ritual forms suitable for modern lifestyles, and active support from the community. The results show that worship rituals preserve cultural identity and build a rich spiritual life and community cohesion when mindfulness is aroused and instilled.

1.1. Methods

The study uses a literature analysis methodology, including previous studies on mindfulness and ancestor worship and observations of worship rituals in some Vietnamese families and communities. These resources include monographs, scientific articles, research reports, and historical texts related to the topic. The literature analysis aims to provide a theoretical and scientific basis for explaining the relationship between mindfulness and ancestor worship and to place the study in Vietnam's cultural and social context. In addition, relevant cultural and religious documents are referred to to provide context and theoretical foundation for research.

1.2. Results

Mindfulness, or “mindfulness,” in the Buddhist spirit, is often understood as a deep and complete awareness of all behaviors, thoughts, and interactions between people and the world around them.¹ Mindfulness, as understood in Buddhist philosophy, represents a state of profound tranquility that permeates every thought and experience, irrespective of the individual's current state of being, including attaining *nibbāna*.² Scientifically, mindfulness involves the deliberate and non-judgmental awareness of present-moment experiences, encompassing cognitive and emotional processes. This continuous state of awareness fosters mental stability and emotional regulation, creating an inner environment of calmness and clarity. In the context of *nibbāna* - a state of ultimate liberation and cessation of suffering - mindfulness maintains its role by sustaining a serene and focused mind free from attachment and aversion. Integrating mindfulness across various states ensures that tranquility is not transient but a consistent feature of one's mental landscape. Neuroscientific studies support this by demonstrating that regular mindfulness enhances brain regions associated with emotional regulation and executive control, promoting enduring mental tranquility. Consequently, mindfulness is a foundational practice that underlies attaining and maintaining *nibbāna*, ensuring tranquility is deeply embedded in every thought and state of consciousness. This harmonious blend of mindfulness and *nibbāna* illustrates a comprehensive approach to achieving sustained inner peace and cognitive equilibrium.

In the context of Vietnamese culture and beliefs, mindfulness is not only limited to the religious aspect of Buddhism but also deeply intertwined with the

spiritual life of Vietnamese people, especially in the ritual of ancestor worship. Ancestor worship is one of the Vietnamese's oldest and most important spiritual practices. It reflects the sacred connection between descendants and deceased generations. Clearly, it shows the spirit of "drinking water and remembering the source," upholding filial piety towards the roots of the family and the nation.³ In these remembrance rituals, mindfulness is expressed naturally and sustainably, becoming the glue that binds family members and contributing to maintaining and preserving the core values of the national culture. However, in order to better understand the manifestation, role, and meaning of mindfulness in ancestor worship in Vietnam, it is necessary to have a scientific, logical, and comprehensive approach, thereby helping us see the humanistic meaning and importance of educating the younger generation, as well as the limitations that need to be overcome to maintain this tradition in the context of modern society.

First, it is necessary to systematically understand the manifestations of mindfulness in ancestor worship rituals, including specific actions, psychological states, and the connection between mindfulness and other cultural and religious factors. According to Murray, G. (2016)⁴, ancestor worship rituals often involve offering incense, joining hands, bowing, offering offerings, or reading vows, which require high concentration and meticulous attention⁵. As in the incense offering ceremony, the participant must carefully hold the incense stick, turn his mind to his ancestors, close his eyes, or turn his gaze towards the altar with reverence. This "high concentration" is not only a temporary state but also a process of self-observation, not allowing miscellaneous thoughts or worries of everyday life to invade.⁶ At that moment, mindfulness exists, helping the practitioner to identify every movement and breath and, more importantly, to be aware of the noble purpose of the action: to express respect, gratitude, and the desire to "connect" with one's roots. At the same time, to show dignity, ritual participants often need to "keep their minds pure," that is, eliminate negative thoughts, greed, or pressure of work and study so that they can offer incense with a pure heart.⁷ Meanwhile, many people invite a priest or the master of ceremonies who knows the etiquette. Mindfulness is a pivotal mechanism for fostering empathy between humans and the natural world, mainly through ritual worship. Scientifically, mindfulness involves maintaining a heightened awareness of the present moment with non-judgmental attention, which has been shown to enhance

emotional regulation and increase empathetic responses. When integrated into ritual worship, mindfulness practices enable individuals to engage deeply with their surroundings, cultivating a profound connection and reverence for nature. Rituals often incorporate meditation, chanting, and symbolic gestures, facilitating a mindful state that heightens sensory perception and emotional attunement to the environment. This intentional focus strengthens personal well-being and promotes a collective environmental consciousness, encouraging sustainable behaviors and stewardship of natural resources. Furthermore, anthropological studies indicate ritualistic mindfulness practices across various cultures have historically reinforced harmonious relationships with nature, embedding ecological values within community norms. By bridging individual mindfulness with communal worship, these practices create a synergistic effect that enhances personal empathy and collective environmental responsibility. Consequently, mindfulness through ritual worship emerges as a scientifically supported pathway to deepen human-nature relationships, fostering a more empathetic and sustainable interaction with the ecosystem. However, the fundamental factors remain the sincerity and concentration demonstrated by both individuals and their families during the ceremony. Research in psychology indicates that genuine emotional engagement enhances the effectiveness of ritualistic practices in strengthening social bonds and promoting individual well-being. Additionally, sustained focus and mindfulness during ceremonies contribute to more profound psychological benefits, such as reduced stress levels and improved emotional regulation. Therefore, the authenticity and attentiveness of participants are crucial for maximizing the positive outcomes and overall success of ceremonial activities.

On the one hand, high concentration represents an extraordinary level of awareness, and on the other hand, “keeping the mind pure”⁸ is the expression of the aspect of “dwelling in the present”, which is emphasized in Buddhist thought and developed by Mai, C. T. (1997) into the “Mindfulness-Based Stress Reduction” (MBSR) method.⁹ In the worship space, that quiet state helps the owner, children, grandchildren, or anyone who participates in the ritual have the opportunity to stop the flow of thoughts and no longer be attracted by social fluctuations. Many studies by Jamieson, N. L. (2023) have shown that, in the moment of incense smoke, the sound of bells, or deep chanting, people easily dismiss worldly worries and, at the same time, turn their minds to gratitude and remembrance for the deceased.¹⁰ Thus, in the spiritual aspect, mindfulness is not only a state of concentration or purity but also includes “a clear awareness of the meaning of ritual”. Each action, such as lighting incense, pouring wine, or arranging offerings on the altar, has a symbolic meaning of sincerity, filial

¹⁰ Jamieson, N. L. (2023). *Understanding Vietnam*. Univ of California Press, p. 32.

piety, or wishing for the blessings of ancestors. Therefore, if you only follow habits or forms, rituals can quickly become clichés, losing human depth¹¹. On the contrary, when the practitioner understands the hidden meaning behind each gesture, mindfulness is strengthened, helping the ritual become more sacred and potent. This explains why, in some traditional families, adults often explain to their children and grandchildren how to light incense, make vows, and address ancestors to transfer moral lessons, gratitude, and humanity from one generation to another.¹²

Mindfulness is not only manifested at the individual level but also plays a vital role in creating, maintaining, and strengthening close relationships between family members, between families and communities, and further between people and national culture. In terms of the role of strengthening family connections, ancestor worship is an opportunity for everyone in the house to gather. However, many members are often busy with work and study in modern life. The occasions of death, Tet holidays, or the first day and full moon day are rare opportunities for relatives to gather together, share about life, exchange customs, and family traditions, and especially do incense offerings to remember ancestors together. According to Lischer (2021), through the moments of “ritual in silence together, people have time to settle down, put themselves in the flow of family history, and remember their father, evoking memories and bonding with family members.”¹³ Participating in worship ceremonies early on helps young children become aware of their responsibilities and roles in the family and understand their origins and traditions, forming filial piety, gratitude, and respect for superiors. These moral and spiritual values are naturally maintained and strengthened over generations, becoming an “underground circuit” of culture, connecting the past, present, and future.

In addition to strengthening family cohesion, mindfulness in ancestor worship also contributes significantly to maintaining traditional culture. The ancestral worship culture of the Vietnamese people has deep roots, combining indigenous beliefs, Confucianism, Taoism, and Buddhism. For thousands of years, worship rituals have been widely preserved and practiced, from rural to urban, from downstream to upstream. This shows the strong vitality of tradition and, at the same time, the trend of “longevity” in the spiritual life of Vietnamese people. One of the core factors that help ancestor worship rituals survive sustainably is “mindfulness” because it creates a sacred and quiet space where people can vent all worries and “return to the roots” sincerely.

¹³ Lischer, R. (2021). *Just Tell the Truth: A Call to Faith, Hope, and Courage*. Wm. B. Eerdmans Publishing, p. 34.

Whenever they hold a bowl of incense and fold their hands to make a vow, people feel like they are “bathing” in traditional culture, clearly feeling the humanity, filial piety, and responsibility to preserve this precious intangible heritage. Emphasize the importance of worship rituals in educating gratitude for parents, rivers, and countries and fostering the will to rise, do good, and maintain order. Thanks to mindfulness, ancestor worship does not become an ostentatious or superstitious activity but is maintained as a sacred bridge. This “solemn” act contains moral, social, cultural, and historical values.

However, when considering mindfulness in ancestor worship from a scientific and social perspective, we also need to evaluate the advantages and limitations of this practice. In terms of advantages, as mentioned, mindfulness contributes to strengthening concentration and inner tranquility, helping practitioners have the opportunity to escape from stress and anxiety in modern life. This concentration creates conditions for people to “self-reflect” in their minds and better understand their hearts about what they aim for, thereby cultivating the qualities of honesty, sharing, and empathy¹⁴. In addition, mindfulness in ancestor worship also plays an educational role in gratitude, directing people to gratitude and respect for root values. Regularly commemorating and offering incense to ancestors will make each person imbued with the concept of “there is a new powder to clean the lake,” aware that today’s success has the great merits of the previous generation. In addition, through community rituals (death ceremonies, Tet holidays, etc.), mindfulness helps arouse solidarity and attachment. Everyone contributes to the ceremony, cleans, decorates the altar, offers incense, and shares spiritual values, forming a “sense of community” embedding national identity. At the macro level, mindfulness becomes the “glue” to maintain the national cultural identity because when people understand and appreciate the roots, they will be motivated to preserve and spread good traditions to the next generation, helping Vietnamese culture to survive sustainably against the intrusion of foreign cultures.¹⁵

On the other hand, the limitations in maintaining mindfulness when worshipping ancestors in Vietnam today are also undeniable. First, it is a problem of “distraction when practicing”, especially in the context of industrialized society, modernization, work pressure, education, digital entertainment, and social networks... making many people no longer have enough concentration and patience to perform the ceremony seriously. In many cases, the ritual becomes profitable for “buying and selling expensively,” or people light incense in a hurry, whisper a double or three-sentence vow without any

¹⁴ Kabat-Zinn, J. (2003). Mindfulness-based interventions in context: Past, present, and future. *Clinical Psychology: Science and Practice*, 10 (2), p. 144 – 156. <https://doi.org/10.1093/clipsy/bpg016>

¹⁵ Dao Duy Anh (2002). Outline of Vietnamese cultural history, Cultural Information Publishing House, Hanoi, p. 283.

deposition, and calm down.¹⁶ Besides, the “limited understanding” of the true meaning of rituals is also a significant challenge. For example, many people only know how to light incense to “invite grandparents to eat Tet” but do not understand why they have to join hands, why they have to offer rice trays, why they have to make vows or dresses, or the origin and meaning of offerings such as votive gold, fruits, betel nuts, wine, etc. This ignorance makes rituals easily fall into formality, even taken advantage of by some people who “sell services” to worship. In the long run, if mindfulness is eroded, ancestor worship risks becoming one-sided, far from fundamental human and moral values.¹⁷

On the other hand, we must also recognize that the introduction and interference of international cultures in the period of globalization has created pressure to transform many traditional cultural features, including ancestor worship. Due to frequent exposure to Western lifestyles, a segment of young people may view ancestor worship as backward, superstitious, or no longer feel that it is a sacred activity that requires mindfulness. For those who migrate abroad (study abroad, work, settle), maintaining the ancestral altar also faces many difficulties regarding living conditions, space, time, etc. Since then, mindfulness has gradually declined, worship rituals have been shortened, and only superficial rituals have occurred. However, many young people still strive to “preserve” and maintain this ritual, seeing this as a way to connect with their homeland, helping them have a spiritual fulcrum in an unfamiliar environment. Some also create worship methods on digital platforms, such as creating online incense offering applications, online worship ceremonies, sharing knowledge about worship rituals on social networks, etc. Although this form is controversial for its “sacredness,” it also shows the adaptive trend of traditional culture in the modern world.¹⁸

Thus, for mindfulness in ancestor worship to be maintained and developed sustainably, it is necessary to have many synchronous solutions from the individual, family, community, and national levels. First, at the individual and family level, each member must know the deep meaning of worship activities, actively study, learn, and pass on what he knows to the next generation. Setting aside a certain amount of time during the day or on the occasion of death to offer incense, recite prayers, or retreat in front of the altar can become a positive educational “mindfulness habit.” Children and grandchildren also need access to documents and books or listen to folk tales and legends to realize that behind each incense stick are many historical stories, hardships, and ancestors’ courage. At the community level, local governments and cultural associations can organize talks, seminars, or exhibitions introducing the ritual of worship,

inviting researchers, monks, or folk artisans to give a deeper explanation of the philosophical meaning. Beliefs. This will arouse the interest of young people and, at the same time, limit misunderstandings or false worship practices. At the national level, mindfulness in ancestor worship should be recognized as an important part of intangible cultural heritage, thereby having policies to preserve and encourage research and teaching in an educational environment. Some schools can integrate the content of mindfulness and moral values in civics, history, or literature lessons, helping students form an appreciation and understanding of etiquette. Besides, modern technology and communication can also become an effective channel for disseminating knowledge. Ritual instructional videos, short lectures on the value of mindfulness posted on social media, and academic analysis articles on university websites can all contribute to spreading and strengthening mindfulness in the community.¹⁹

It is also impossible to ignore the psychological and health aspects when practicing mindfulness in ancestor worship. Many studies in psychology and neuroscience show that when people are in a state of concentration and calm, the brain secretes beneficial neurotransmitters, which help reduce stress and increase the ability to self-regulate emotions. This stable and positive mentality can contribute to building a more harmonious relationship in the family, limiting conflict.²⁰ Therefore, if you skillfully combine Buddhist mindfulness with ancestor worship, each family member will have more “spiritual medicine,” relieving stress and improving psychological health. Moreover, when witnessing the reverence and solemnity of grandparents and parents during worship, children also learn to control behavior, train calmness, and cultivate personality. For adults, on every occasion of death, Tet comes, gathering around the altar, smelling incense, sipping tea and bowls of wine, and listening to stories about grandparents, parents, or clans; it is also an opportunity to contemplate, self-reflect, and reorient the road ahead. Thus, mindfulness brings profound human value and, at the same time, nurtures a “healthy spirituality,” directing people toward truthfulness – goodness – and beauty.

Of course, any cultural practice needs to face the risk of being “commercialized” or “exploited” for other purposes. Ancestor worship is no exception. Due to not correctly understanding the nature of mindfulness and the meaning of worship, some places focus on full trays, burning votive gold, building monumental tombs, and praising wealth instead of concentrating on sincere filial piety and deep gratitude. This leads to the abuse of smoky incense, environmental impact, waste of wealth, or the creation of competition: “One house offers more than the other.” In addition, there is also the phenomenon

¹⁹ Le, D. D., & Giang, L. T. (2024). The Effects of Caring for Grandchildren on Health and Well-Being of Grandparents: Evidence From Vietnam. *Asian Social Work and Policy Review*, 18 (3), e12328, p. 57.

²⁰ Brown, K. W., & Ryan, R. M. (2003). The benefits of being present: Mindfulness and its role in psychological well-being. *Journal of Personality and Social Psychology*, 84(4), p. 822 – 848. <https://doi.org/10.1037/0022-3514.84.4.822>

of shamans “roaming,” turning rituals into buying and selling services, making many people mistakenly believe that as long as they offer a lot and burn much votive gold, they will be “blessed.” This is the phenomenon of “superstition,” which can overshadow the reasonable value of ancestor worship. Instead of letting mindfulness shine through, some families are “led” by vague and financially costly vows. Therefore, to limit this situation, communicating and educating about the true meaning of rituals, encouraging simple and appropriate practices, and upholding the spirit of “more courtesy than offerings.” Cultural management agencies, Buddhist associations, or Confucian associations need to make detailed recommendations and guidelines to help people identify and avoid falling into the “quagmire” of superstition. In this context, mindfulness is seen as a “torch” that illuminates the way, reminding each individual of the core purpose of ancestor worship: to be grateful, to remember, and to remind oneself to behave by moral morality.

Taken together, it can be seen that mindfulness is the soul of the ancestor worship ritual, helping this action to become solemn, profound, and full of meaning. Thanks to the state of concentration and calmness, Vietnamese people maintain a connection between the past – present – and future; an invisible but sustainable link is encapsulated within the family and spread to the community and the nation. Mindfulness in ancestor worship not only helps each individual have the opportunity to purify the soul and find a quiet and peaceful corner but also contributes to nurturing morality, educating gratitude, and enriching cultural identity. At the same time, it also arouses a sense of maintaining a long-standing spiritual heritage, which is the foundation for shaping personality, strengthening family affection, and building a good society. However, mindfulness only shines when each individual, family, and community knows its value, not allowing hustles, rivalries, or ignorance to distort the worship practice. We need to recognize that, in modern life, mindfulness is not “outdated” or “marginalized”; on the contrary, it is a spiritual “remedy” to help people face stress. Through the worship ritual, we are reminded of the origin and the finitude of human life, thereby cherishing the present and thinking about the future. These values are fully compatible with the sustainable development trend of the contemporary world: respecting the past, preserving heritage, and moving towards living in harmony and being responsible for the natural environment and society. In addition to family bonding, we need to have stronger and broader educational and communication activities. Mass media, social networks, and cultural NGOs can cooperate in organizing seminars, creating art publications and documentaries, or building online information channels, spreading the message of “mindfulness in ancestor worship” to all levels of people. Once the essence, value, and meaning are understood, each individual will actively practice the ritual voluntarily, sincerely, and more deeply.

In addition, improving the quality of academic research on mindfulness in the context of ancestor worship is necessary. This would provide a solid scientific basis for solutions to preserve and promote traditions. Much research focuses on

mindfulness in Buddhism or psychotherapy²¹, but less on “mindfulness in folk beliefs”²². Deepening this topic can open new perspectives on the intersection of the Vietnamese people’s Buddhism, Confucianism, and ancestral worship beliefs and how spiritual, moral, and cultural values are intertwined. Through the results of interdisciplinary research (sociology, anthropology, religious studies, psychology), we will have a more “comprehensive” and “multi-dimensional” view, avoiding simplifying or radicalizing the problem. From there, universities and research institutes can make policy recommendations, such as developing a set of teaching materials on mindfulness in belief, guiding rituals by modern life, and organizing training courses for religious workers or community leaders so that they can spread this positive message.²³

Finally, for mindfulness in ancestor worship to take root in contemporary society, it is important that each person needs to “live mindfully” even when leaving the altar, that is, maintain a spirit of gratitude, mutual respect, observance of piety to parents, etc. behave in a meaningful way. Ritual worship is only a means, a door to the spiritual world, and mindfulness is the quality that helps people maintain awareness and live by their conscience.²⁴ If applied correctly, mindfulness will improve the quality of ritual practice and contribute positively to building a compassionate, orderly, and loving society. It also has the “deep meaning” of offering incense sticks to the altar, reminding us to treat each other with sincerity so that every day that passes, we live and act worthy of the noble traditions left by our ancestors.²⁵ Thus, looking at a comprehensive direction, mindfulness in ancestor worship has been and will continue to be a core factor in helping maintain Vietnam’s cultural identity, strengthen spiritual ties between generations, and promote educational and humanistic values in the community.²⁶ In the flow of modernization, if we know how to preserve and adapt intelligently, we can completely transfer this quintessence to future generations, helping them understand that “lighting incense is not only an action, but a way of life,” thereby continuing to maintain the spirit of national filial piety. Once “imbued” with the meaning of mindfulness, people will see that the ancestor worship ritual is not a mandatory procedure but a natural expression of the heart, a “spiritual ritual” that supports the soul and directs

people to better values.²⁷ Moreover, even though time has passed and society has changed, the beauty of “drinking water and remembering the source” is still enduring and endures, contributing to shaping its own identity and affirming the value of Vietnamese culture in the international arena, as affirmed in many research works that mindfulness, with roots from Buddhist philosophy and handed down through the practice of ancestor worship, it is the red thread that connects the spirituality, personality, and culture of an entire nation.

II. DISCUSSION

Mindfulness in Vietnamese worship rituals reaches its peak when it harmoniously combines tranquility, a sense of roots, and filial piety.²⁸ Regarding cognition, mindfulness helps people deeply understand impermanence, arouse gratitude for ancestors, and appreciate traditional values. In terms of psychology, performing the ceremony with a calm mind reduces stress, nourishes the soul, and connects generations of families. Regarding culture, mindfulness in worship is an invisible link that preserves national identity and maintains historical sources. Morality is also nurtured when people know their role and responsibility to their ancestors and the community. This has existed for a long time in Vietnam because it is suitable for national sentiments and simultaneously inherits the spirit of “drink water and remember the source.”²⁹ The unique feature of Vietnamese Buddhism is reflected in the concept of “dependent,” helping mindfulness to permeate the culture of worship, creating harmonious and sustainable nuances.

Mindfulness in worship rituals is a core element that helps people connect with their roots while maintaining cultural and moral values passed down from generation to generation. Mindfulness helps individuals focus on the present moment and preserves national identity through the ritual of ancestor worship. Therefore, mindfulness practice has both spiritual significance and a far-reaching impact on social cohesion and human moral education.

However, the modern context, with the hustle and bustle of life and the intrusion of many foreign factors, poses many challenges to maintaining mindfulness in worship. Many young people underestimate or do not understand the meaning of rituals, leading to superficial and formal practices.³⁰ Faced with this situation, many researchers need synchronous and creative solutions to inherit the traditional quintessence and adapt to the needs and

³⁰ Worwood, V. A. (2012). *The fragrant mind: aromatherapy for personality, mind, mood, and emotion*. New World Library, p. 43.

lifestyles of today's generation.³¹

To overcome this, solutions include strengthening education and communication about the value of mindfulness, diversifying and improving forms of worship, organizing practice spaces to connect families and communities, developing interdisciplinary research and supporting policies, and upholding the role of families and spiritual leaders.³² These measures maintain and promote ancestor worship beliefs in modern Vietnamese society and contribute to building a sustainable moral and cultural foundation, connecting generations and towards a harmonious community.

III. CONCLUSION

Mindfulness is a core element in the Vietnamese ancestor worship ritual, contributing to maintaining and promoting the nation's cultural, moral, and spiritual values. However, mindfulness faces many challenges in the modern context, requiring attention and efforts from families, communities, and society to preserve and promote this value. Education about the meaning and importance of mindfulness in ancestor worship and adapting traditional rituals to the modern context are necessary solutions to maintain and transmit the nation's precious cultural values to future generations.

INTERNATIONAL COUNCIL FOR DAY OF VESAK AND VIETNAM BUDDHIST SANGHA MINDFULNESS EDUCATION-A SOLUTION TO HELP STUDENTS FACE ENVIRONMENTAL AND SOCIAL CRISES

Dr. Nguyen Thi Bich Van*

Abstract:

Modern education, within the context of globalization and rapid social change, encounters numerous new pressures. Beyond providing students with knowledge and skills to meet labor market demands, education must also foster humanistic values to shape a future generation that is conscious, responsible, and compassionate. In response to urgent issues such as environmental crises, social inequality, and moral decline, compassion and a commitment to sustainable development have emerged as core values requiring greater emphasis. This paper examines the role of Buddhist mindfulness in imparting these two values. Mindfulness, by cultivating awareness and deep understanding, enables students to regulate emotions, alleviate stress, and develop compassion for themselves, others, and nature. Engaging in mindfulness practice not only facilitates a deeper connection with oneself but also nurtures empathy and a sense of responsibility in one's actions. While compassion fosters harmonious relationships, the recognition of sustainable development underscores the necessity of preserving the environment and natural resources, ensuring equilibrium between humanity and ecosystems. The study advocates for the integration of mindfulness into modern education through subjects such as ethics, life skills, extracurricular activities, community initiatives, and a supportive learning environment. These efforts aim to nurture a generation of students who are not only intellectually proficient but also empathetic, understanding, and socially and environmentally responsible. This serves as the foundation for cultivating a sustainable and humane future in the new era.

Keywords: *Modern education, Buddhist mindfulness, compassion, sustainability, development, social responsibility.*

I. INTRODUCTION

Education has long been regarded as the most powerful tool for shaping the future of humanity, playing a central role in building a civilized, progressive, and sustainable society. However, in the modern world, which is deeply influenced by rapid technological advancements and the immense pressures of contemporary society, education appears to be drifting away from its core objectives. Instead of fostering holistic human development – both intellectually and morally – the current education system places excessive emphasis on achievements, grades, and competitiveness. As a result, students are subjected to an overwhelming academic workload, leaving them with little time and space to connect with their families, nature, and essential humanistic values. This not only diminishes their quality of life but also erodes the fundamental values necessary for individuals to lead fulfilling lives with awareness, responsibility, and a deep sense of connection to their community and environment.¹

Moreover, the world is currently facing major environmental and social crises. Phenomena such as the rise in school violence, the apathy of a portion of young people toward social issues, and the moral decline within communities clearly highlight the gaps in today's education system. (Phú & Phu, 2024)². Elements such as compassion, sustainability awareness, and a sense of responsibility seem to be insufficiently emphasized in educational programs, leading to a lack of holistic character development among younger generations. In this context, Buddhist mindfulness has been proposed by many researchers as an effective educational approach. With its focus on awareness, deep understanding, and empathy, mindfulness is not only a philosophy of life but also an essential skill that helps learners develop self-awareness, regulate emotions, reduce stress, and improve mental well-being. Furthermore, mindfulness has the potential to cultivate compassion, foster a sense of responsibility toward society and the environment, and strengthen the connection between humans and nature.³

Numerous studies have shown that practicing mindfulness can help students improve their concentration, reduce academic pressure, and encourage them to be more aware of the connection between individuals and the community. This not only helps them develop essential life skills but also contributes to fostering a generation that is responsible for society and the planet.⁴

Compassion and awareness of sustainable development – fundamental values for creating a better world – can be deeply integrated through mindfulness education, shaping generations that are not only intellectually intelligent but also spiritually enriched and socially conscious.

This paper focuses on analyzing the role of mindfulness in modern education while proposing specific methods to integrate mindfulness into the curriculum. These solutions aim not only to enhance academic competence but also to emphasize spiritual development, compassion, and social responsibility, preparing younger generations to face global challenges in a sustainable and humane manner.

II. RESEARCH METHODOLOGY

To research the role of mindfulness education in helping students cope with environmental and social crises, this paper adopts a mixed-methods approach, including the following specific steps:

Document analysis: This study synthesizes theoretical and practical literature related to mindfulness, mindfulness education, and the relationship between mindfulness education and the development of compassion and awareness of sustainability. The materials are collected from: Published scientific studies in international and domestic journals, specialized books, reports, and guidelines on mindfulness education from major educational organizations, and documents related to the impact of environmental and social crises on students.

Synthesized evaluation: Combining quantitative and qualitative data to conclude the impact of mindfulness education on helping students face crises. The effectiveness and scalability of mindfulness education models in school settings. This multidimensional research approach ensures a comprehensive and insightful perspective, evaluating practical outcomes while providing strategic direction for the future application of mindfulness education.

III. RESULTS

3.1. Compassion in modern education

Definition and Importance of Compassion: Compassion, from a Buddhist perspective, is the ability to understand the suffering of others and the desire to alleviate that suffering. In the context of education, compassion is not only an ethical value but also an essential life skill. Studies have shown that students and teachers with high levels of compassion tend to have better relationships, fewer conflicts, and higher satisfaction in their learning and work.⁵

The life of Buddha is the fullest and most profound embodiment of wisdom and compassion, the two core values that make up His transcendent character. From any perspective, we can feel the light of compassion and the vast wisdom

giáo dục, phổ biến quan điểm đó trong xã hội. *Gia đình hòa hợp và xã hội bền vững*, p. 195.

⁵ Hạnh, T. L. Đ. “The role of buddhism in moral education in vietnam. Advice and guidance”, p. 75.

radiating from His life and teachings. Wisdom is the vast sky through which the mind of compassion flows, and although it is difficult to fully grasp the enormity of Buddha's wisdom, His compassion is something that anyone can easily recognize and feel (Davids J & Indrani Kalupahana).⁶ To think of Buddha is to think of the great compassion He manifested throughout His life. Scholar G.C. Pande once remarked that the greatness of Buddha lies not only in His teachings but also in His timeless influence, as no other figure has left as deep an imprint in the history of Indian culture as He has. According to him, wisdom (Bodhi) and compassion (*karunā*) are the perfect embodiment of Buddha's character – a great and transcendent personality. In agreement, philosopher S. Radhakrishnan describes Buddha as a symbol of boundless tolerance. He wrote: "Buddha did not view life solely as a series of sins but also as suffering that must be resolved through understanding and awakening. He faced adversity with a clear mind and strong faith, combining gentleness and love with a firmness that was sometimes tough but always resolute".⁷

Not only in philosophical terms, but historian Will Durant also praised Buddha as a symbol of absolute compassion. He commented: "Buddha is the one who 'repays hatred with virtue.' When misunderstood or insulted, He remains silent. If someone harms Him, He shields them with love. Even when that person continues to do evil, He still uses good deeds to resolve the situation." Buddha's compassion is not just mere affection but also a sacred practice (*ariyacariyā*) – a path of enlightenment, shaped and nurtured through many lifetimes of Bodhisattva practice. This is not temporary or personal compassion but the result of a long process of cultivation, transcending all selfish limits, thinking only of the benefit and happiness of countless beings. The *Saṅgīti Sūtra* records Buddha's confirmation that He cultivated compassion over many lifetimes, and it was this merit that allowed Him to be reborn as a universal monarch before attaining supreme enlightenment and becoming the Fully Enlightened One.⁸

The Buddhist scriptures, such as the *Lakkhaṇasuttanta*, also state that the 32 marks of excellence of the Buddha are the result of practicing compassion and noble virtues toward beings in many past lifetimes. Therefore, when He came into this world, the Buddha not only carried infinite wisdom but also expressed boundless compassion through every action and teaching. Even as a young prince, Siddhattha demonstrated compassion for all suffering in life. Legend tells that during the land-plowing ceremony of the *Sākya* royal family, the young prince was not pleased by the sight of small creatures writhing in pain under the plow's blade. Instead of joining in the festive ceremony, Siddhattha quietly sought refuge under a persimmon tree, sat in deep meditation, and quickly attained the serene state of the first *jhāna* (as recorded in the *Saccaka*

⁶ Davids J & Indrani Kalupahana (1987), *The Way of Siddhartha – A Life of the Buddha*. University Press of America, p. 21.

⁷ S. Radhakrishnan (1950), *The Dhammapada*. Oxford University Press; London, p. 12 - 13.

⁸ *Kinh Capala Sutta*.

Sūtra, Majjhima Nikāya). Furthermore, other texts record that the prince had no interest in the hunting pleasures that were typical of royals at the time. Once, when out walking in the forest with Devadatta and Naradatta, Siddhattha became disappointed and protested when they killed animals. Upon seeing a white crane shot down by Naradatta, the young prince rushed to its aid, removed the arrow, and cared for it with boundless love. These actions clearly revealed the compassion and noble character of the future Buddha.⁹ From childhood to enlightenment, the life of the Buddha is the most compelling proof of the power of compassion, not only as a personal virtue but also as a guiding principle for liberation and enlightenment. His life continues to be an endless source of inspiration for all beings on the path to truth, love, and liberation from suffering.

Current Situation: The modern education system, despite many advancements in technology and teaching methods, often lacks specialized programs to nurture compassion. Instead, the pressure from grades, achievements, and increasing competition has become an inseparable part of the educational environment. The consequences of this include the rise of mental health issues, including stress, anxiety, and even school violence. These pressures not only negatively impact student's personal development but also reduce their ability to collaborate, a crucial skill for sustainable development in the future.¹⁰ The modern education system often lacks programs that nurture compassion. Instead, the pressure from grades and competition often leads to isolation, stress, and even school violence. This not only affects student's mental health but also reduces their ability to collaborate and develop sustainably in the future.

Buddhist mindfulness and compassion: What exactly is mindfulness, and why has it become such a common term nowadays, especially for children? Simply put, mindfulness means focusing entirely on what you are doing right now without getting lost in other thoughts or worries. It's like focusing on one task, such as eating your favorite ice cream, and truly savoring each bite without thinking about the homework you need to submit tomorrow or the new game you want to play. It's all about being present in the moment.

Why is mindfulness important for children, especially in today's fast-paced digital world? Children today are surrounded by screens, notifications, and constant stimuli that make it easy for their minds to wander. From video games to social media, there's always something competing for their attention. This can lead to distractions, difficulty focusing on schoolwork, and even increased stress levels. By practicing mindfulness, children learn to bring their attention back to the present moment, which can help them manage these distractions significantly.

Mindfulness is an effective tool for cultivating compassion. Through practices like loving-kindness meditation (*mettā* meditation), students can

⁹ Davids J & Indrani Kalupahana (1982), *The Way of Siddhartha – A Life of the Buddha*, University Press of America, p. 21.

¹⁰ Phú & Phu (2024), p. 20.

develop empathy while also improving self-awareness and emotional regulation. In the context of modern education, mindfulness is understood as the ability to focus on the present moment without being distracted by unnecessary worries or thoughts. It is not only a philosophy but also an essential life skill, especially for children in today's world, where technology and media continuously compete for their attention. Research shows that practicing mindfulness can help children reduce stress levels, improve focus, and better regulate emotions. By directing attention to the present, children learn to manage distractions, thereby enhancing their ability to learn and develop character. Moreover, mindfulness is a powerful tool for nurturing compassion. Through practices like *mettā* meditation, students not only develop kindness but also enhance self-awareness and emotional regulation. These values play a crucial role in creating a positive and sustainable school environment.¹¹

3.2. Sustainable development in education

The Meaning of Sustainable Development in Education: Sustainable development in education is an important aspect, not only focusing on environmental protection but also encompassing social and economic aspects. The goal of education for sustainable development is to create a balance between these factors, aiming for a comprehensive and sustainable future for the next generations. According to Da Silva (2024), sustainable development in education requires a comprehensive curriculum that helps students gain a deeper understanding of individual and collective responsibility in protecting the planet.

In the context of growing global issues such as climate change, social inequality, and resource depletion, education becomes a vital tool in addressing these challenges.¹² Education is not only a means of conveying knowledge but also a foundation for forming awareness, skills, and responsible behaviors. According to Hyland (2013), education also plays a role in nurturing ethical values and building social capital, contributing to the promotion of sustainable solutions for society. One of the key goals of sustainable development in education is to foster sustainable awareness through practical activities. Small actions such as saving energy, reducing waste, and recycling not only help protect the environment but also contribute to building a sustainable lifestyle. However, as Mueller (2009) emphasized, education for sustainable development needs to go further, encouraging students to engage in solving major issues such as environmental crises, promoting a circular economy, and building a fair society. According to Hài (2024), raising sustainable awareness should start early, as children and adolescents are the most receptive and capable of changing behaviors. When equipped with appropriate knowledge and skills, they can make better decisions, contributing to the sustainable development

¹¹ Hyland, T. (2013). *Moral education, mindfulness, and social engagement: Fostering social capital through therapeutic Buddhist practice*. Sage Open, 3(4), p. 2158244013509253.

¹² Frank, P., Fischer, D., & Wamsler, C. (2020). "Mindfulness, education, and the sustainable development goals". *Quality Education*, p. 545 - 555.

of society. Sims et al. (2020) also affirm that sustainable education not only helps students face environmental crises but also helps them build resilience against issues such as climate anxiety.

Furthermore, sustainable development in education is not only for students but also requires the participation of teachers, parents, and the community. According to Miller-Porter (2024)¹³, educational programs require close coordination between schools and stakeholders to create a comprehensive and cohesive learning environment. This not only helps students learn but also promotes the application of sustainable values in daily life. Thus, sustainable development education also contributes to enhancing critical thinking, creativity, and adaptability. These skills are not only essential for solving current problems but also help prepare the younger generation for future challenges. As Paswan (2024)¹⁴ pointed out, the combination of education and ethical values can promote peace and sustainable development on a global scale. Sustainable development education is not only a tool to raise awareness but also an important foundation for building a future where people, society, and nature can coexist and develop harmoniously.

The Role of Mindfulness in Sustainable Education

Mindfulness plays a particularly important role in sustainable education because it helps students develop the ability to be aware of the impacts their actions can have on the environment and society. In the current context, where issues such as climate change, environmental degradation, and social inequality are becoming increasingly serious, educating environmental awareness is more essential than ever. Mindfulness, to nurture awareness, encourages students to pay attention to their every action and recognize the connection between individual actions and their effects on the community and the planet.

Practicing techniques like “environmental mindfulness meditation” not only helps students connect more deeply with nature but also helps them develop a sustainable and respectful relationship with the world around them. When students take the time to observe and feel the environment mindfully, they gradually become more aware of environmental issues more clearly and deeply. Mindfulness helps them notice seemingly small things that have lasting impacts, such as excessive use of natural resources, food waste, or the habit of littering. These actions can be changed through awareness and mindfulness. Research has shown that applying mindfulness in education can help enhance awareness and reduce anxiety, especially for students facing increasing environmental challenges. Mindfulness not only helps students understand environmental issues but also helps them maintain a positive and responsible attitude toward taking action to address those issues. Practicing mindfulness in the context of sustainable education encourages students to act responsibly

¹³ Miller-Porter, A. (2024). *Mindfulness in Sustainability Education*. Doctoral dissertation, University of Wisconsin-Stevens Point, p. 11.

¹⁴ Paswan, T. C. Phát triển bền vững và hòa bình thế giới: định hướng Phật giáo. *Lãnh đạo bằng chánh niệm vì hòa bình bền vững*, p. 253.

not only for themselves but also for the community and the planet.¹⁵

(1) Mindfulness, through nurturing awareness and attention, can become a powerful tool in promoting sustainable education. It not only helps students learn about environmental protection but also practice protective actions from a young age. When equipped with knowledge and awareness through mindfulness education, the younger generation will become responsible citizens, capable of proactively and effectively facing future environmental challenges.¹⁶ These skills are not only important in addressing current environmental issues but also serve as the foundation for building a sustainable future for the next generation.

3.3. Integration of Buddhist mindfulness into modern education

In the context of modern education, the application of mindfulness is not only a method for stress reduction but also a strategy to enhance the quality of learning and promote holistic human development. Mindfulness practices should be tailored to specific groups, from preschool children to teachers and lecturers, to achieve optimal results.

Preschool children: Shaping awareness from an early age breathing and body awareness activities: Preschool children need simple and engaging methods to develop mindfulness. Guiding them to practice exercises like “deep breath in, blow the balloon out” not only helps them become aware of their breath but also supports their ability to focus and regulate emotions. **Mindful storytelling:** Short stories about love, gratitude, and patience help children understand emotions while also developing the habit of listening and focusing on the present moment. **Practicing gratitude through play:** Activities like “Gratitude Circle” allow children to share what makes them happy, fostering gratitude and social connection.

Primary School Students: Developing focus and creativity mindful art exercises: Encouraging students to draw or color in a quiet state, focusing on every detail and color, helps develop creativity and concentration. **Mindfulness box:** A box containing objects like sand, seashells, or small balls, when used, encourages children to focus on sensory perception, reduce stress, and improve concentration. **Focus games:** Games such as “Listening to Sounds” teach students how to listen and recognize, enhancing their focus during learning activities.

Secondary and High School students: Writing a diary in mindfulness: Writing a diary in mindfulness is an effective method for students to recognize their emotions and thoughts without judgment, thus developing self-awareness. **Short mindfulness meditation:** Short meditation sessions, 5-10

¹⁵ Sims, L., Rocque, R., & Desmarais, M. É. (2020). Enabling students to face the environmental crisis and climate change with resilience: inclusive environmental and sustainability education approaches and strategies for coping with eco-anxiety. *International Journal of Higher Education and Sustainability*, 3 (2), p. 112 - 131.

¹⁶ Da Silva, L., & Wise, S, (2006), “Parent perspectives on childcare quality among a culturally diverse sample”, *Australian Journal of Early Childhood*, 31(3), p. 6 - 14.

minutes long, at the beginning or end of class, help students reduce stress, improve concentration, and boost mental health. Compassionate group activities: Group discussions on compassion and empathy help students understand and apply these values in daily life, thus building a positive school community.

University students: Mindful Skills Course: Organizing short courses on meditation, emotion management, and positive thinking helps students balance life and study more effectively. Meditation practice in libraries or quiet spaces: Creating mindfulness spaces on campus for students to practice meditation, recharge, and improve focus. Social projects: Encouraging students to participate in community projects to practice compassion and social responsibility through hands-on activities, fostering sustainable relationships with the community.

Teachers and lecturers: Role Models for the Learning Community Teachers play a central role in integrating mindfulness into the classroom. Training teachers in mindfulness not only helps them manage work-related stress but also enables them to become role models for students to follow. Teachers need to develop mindfulness skills to create a friendly, peaceful learning environment where students can grow intellectually, emotionally, and spiritually. Furthermore, teachers should focus on building positive relationships with students, helping them feel supported and loved. When teachers practice mindfulness, they can inspire students, helping them develop the necessary skills to face challenges in both their studies and life. Mindfulness will be a powerful tool to help teachers maintain calmness and clarity in any situation, thus creating a healthy and effective learning environment.¹⁷ Through the development and application of these methods, teachers not only enhance the quality of education but also contribute to the creation of a sustainable learning community, where students not only gain knowledge but also learn how to live harmoniously and responsibly towards society and the environment.

(1) Mindfulness training programs: Offer in-depth courses that help teachers develop stress management skills, build positive relationships with students, and maintain emotional balance. (2) Daily meditation practice: Allocate brief moments before or after work hours for teachers to practice meditation, helping them maintain peace of mind and clarity in their teaching. (3) Support for colleagues: Establish mindfulness practice groups within schools, where teachers can share experiences and support each other in maintaining mindfulness practices. The integration of mindfulness into education not only enhances the quality of learning but also contributes to building a humane, harmonious, and sustainable society.

¹⁷ Ritchhart, R., & Perkins, D. N. (2000). "Life in the mindful classroom: Nurturing the disposition of mindfulness". *Journal of Social Issues*, 56(1), p. 27 - 47.

IV. CONCLUSION

Buddhist mindfulness offers a comprehensive and profound method for teaching compassion and sustainable development awareness in modern education. When integrated into the educational system, mindfulness is not just a technique to help students improve concentration and reduce stress, but also an essential tool for developing humanistic values, building character, and nurturing students' spirits. Mindfulness practice helps students learn not only to listen to themselves but also to listen to the world around them with care and understanding.

By promoting awareness and empathy, mindfulness helps students recognize the impact of their actions and decisions on society and the environment. This is a critical step in fostering environmental protection awareness and building a sustainable society. Mindfulness encourages students to view issues from a holistic and deep perspective, enabling them to act responsibly and sustainably, not just for personal gain, but also for the benefit of the community and future generations. The integration of mindfulness into education also contributes to improving student's mental health. Research has shown that mindfulness can help reduce anxiety, stress, and insecurity while enhancing inner peace. This not only helps students overcome academic challenges but also prepares them to face difficulties in life. When students can confront life's issues with a resilient mindset, they become stronger, and more resilient, and develop effective problem-solving skills.

Mindfulness in education is a path towards a humanistic education, where every student learns how to live responsibly and with empathy. When compassion and awareness of sustainable development are nurtured in student's hearts from an early age, we are helping to build a peaceful, harmonious, and compassionate world. A generation of students raised with these values will have the ability to bring about positive changes, not only in their communities but also globally. Therefore, integrating mindfulness into education is not just an option but an essential requirement for building a sustainable and humane future.

MINDFULNESS IN EDUCATION FOR A COMPASSIONATE AND SUSTAINABLE FUTURE: SCHOLARLY PAPERS FOR THE UNITED NATIONS DAY OF VESAK 2025 IN VIETNAM

UPāli M. Sedere*

Abstract:

Although the 17 Sustainable Development Goals (SDGs) were introduced in 2015, they were preceded by a series of major world conferences since 1972, including the Stockholm Conference, the Rio Conference, and the 1992 Earth Summit. The Earth Summit II, held at the United Nations headquarters in New York in 1997, further paved the way for the establishment of the SDGs. Additionally, UNESCO-led initiatives such as Education for All (1990) and the Millennium Development Goals (2000) played significant roles in integrating global development efforts into the SDG framework. Compassionate sustainable development refers to meeting the needs of the present generation without compromising the ability of future generations to meet their own needs. Until the COVID-19 pandemic in 2020 and 2021, there was notable progress toward achieving the SDGs. However, the global economic downturn and severe crises in many countries have reversed much of the progress made by 2019. According to UN estimates, by 2024 - just six years before the 2030 deadline—SDG progress is projected to be at only 17% of the expected levels. The success of compassionate sustainable development ultimately depends on human behavior. While social, economic, and institutional factors influence

* Upali M. Sedere, PhD (Iowa), PhD (MCU), M. A. (Iowa), B. Ed. Hons, (Ceylon). Global Ed Falcon Awardee in the Year 2024 as “Inspiring Educator” at the World Conference of Education at Delhi, India; Fulbright Scholar, Served the UN/FAO, the World Bank, and several International. sustainability, human behavior remains the key determinant in achieving long-term development goals. Environmental mindfulness is fundamental to advancing the SDGs, making education a crucial tool for fostering transformation across all age groups. Cultivating mindfulness at every level of society is essential to shaping behaviors that support sustainable development. The integration of mindfulness and education is, therefore, a foundational requirement for compassionate development that sustains the planet's resources. Education and mindfulness have a profound, catalytic impact on individual well-being and the future of our planet.

Keywords: *Compassionate sustainable development, mindfulness in education, mindfulness and behavior, role of education, integration of education and mindfulness.*

I. INTRODUCTION

Although high standards in education and human development have been achieved today, particularly since the Education for All (EFA) movement in 1990, which promoted universal primary education in every country, the world now faces unsustainable outcomes starkly reflected in global warming, climate change, natural disasters, and human distress. The formal education received by past and present generations, though highly academic, has proven deficient in critical areas. A lack of emphasis on preserving and protecting the environment is one such oversight that education has never directly addressed. Vast industrial emissions, waste disposal, deforestation, and over-extraction of natural resources since the Industrial Revolution - further intensified by globalization and open economies—pose severe threats to human existence. The global community, particularly United Nations-led development agencies, has now mobilized to find solutions to these challenges. Human-centered development has significantly contributed to the current crisis, affecting future generations. The depletion of resources, intensification of natural disasters, climate change, and global warming—exacerbated by ozone layer damage—have made it impossible to return to environmental normalcy. The only viable solution is to halt further deterioration and adopt sustainable measures that promote compassionate development, ensuring that future generations can meet their survival needs. The mission of sustainable development is to meet the needs of the present generation without compromising the ability of future generations to meet their own. Education is identified as the most powerful intervention in achieving these goals. However, unless adults and children become acutely aware of the severe threats facing humanity, conventional education alone will not yield the expected outcomes.

II. UNDERSTANDING SUSTAINABLE DEVELOPMENT GOALS

Although the Sustainable Development Goals (SDGs) were established in 2015, they were a result of four major world conferences since 1972¹. The

¹ Environment and sustainable development, Stockholm 1972, <https://www.un.org/en/conferences/environment/stockholm1972>

first United Nations (UN) Conference in Stockholm in 1972 was followed by the UN Conference on Environment and Development (UNCED) in 1992 - known as the Rio Conference or Earth Summit Environment and Sustainable Development, Rio Earth Summit 1992,² then the UN General Assembly Special Session on Sustainable Development in New York in 1997³ better known as Earth Summit II; and finally, the World Summit on Sustainable Development (WSSD) in 2002⁴ Besides these, the UNESCO-led Education for All initiative in 1990⁵ and the Millennium Development Goals (MDGs) in 2000⁶ also contributed to integrating all development efforts to SDGs. On September 25, 2015, the UN officially declared the Sustainable Development Goals (SDGs), setting a target for achievement by 2030 for the global community. The 17 SDGs—no poverty, zero hunger, good health and well-being, quality education, gender equality, clean water, and sanitation, affordable and clean energy, decent work, and economic growth—aim to eradicate poverty and protect the planet from climate change, which threatens human existence. The global community adopted these 17 goals, developed country-specific strategic plans, and mobilized resources. Most countries made reasonable progress toward achieving the SDGs until the COVID-19 pandemic disrupted global efforts in 2020. According to the SDG Monitoring Report by the UN, the lingering impacts of the COVID-19 pandemic, escalating conflicts, geopolitical tensions, and worsening climate crises have severely hindered progress. With just six years remaining, current efforts fall far short of what is needed to meet the SDG targets. Only 17% of indicators show progress sufficient for achievement by 2030, and a mere 12% of the 17 Sustainable Development Goals (SDGs) are currently on track.⁷

The United Nations and countries worldwide increasingly recognize the importance of education for sustainable development.⁸ Irina Bokova, Director-General of UNESCO (2009 - 2017), stated “A fundamental change is needed in the way we think about education’s role in global development because it has a catalytic impact on the well-being of individuals and the future

² Environment and sustainable development, Rio Earth Summit 1992, <https://www.un.org/en/conferences/environment/rio1992>

⁸ UNESCO (2018) A. Leicht, J. Heiss and W. J. Byun (eds.): *Issues and trends in Education for Sustainable Development*, January 31 2025, <https://unesdoc.unesco.org/ark:/48223/pf0000261445>

of our planet. Now, more than ever, education has a responsibility to be in gear with 21st-century challenges and aspirations and foster the right types of values and skills that will lead to sustainable and inclusive growth and peaceful coexistence”.⁹ It is evident that among the seventeen Sustainable Development Goals (SDGs), education serves as a crosscutting intervention essential for transforming human behavior to achieve these goals by 2030. UNESCO has emphasized that education, which is crucial for achieving all SDGs, has its own dedicated Goal 4, which aims to “ensure inclusive and equitable quality education and promote lifelong learning opportunities for all.” The Education 2030 Framework for Action guides the implementation of this ambitious goal and commitment.¹⁰

III. IMPACT OF COVID-19 PANDEMIC ON SDG

Although governments have developed plans to achieve the SDGs, the progress made until the global COVID-19 pandemic in 2020 and 2021, along with multiple other crises, has reversed positive trends toward achieving these goals. COVID-19 has altered the political, environmental, and economic aspects of human existence, affecting psychological well-being and sustainability, which in turn impacts people’s living standards and quality of life. The COVID-19 era led to social problems and international crises in the early 2020s. As of April 13, 2024, 7,010,681 people have died from the coronavirus outbreak. The International Monetary Fund (IMF) estimated in late 2023 that the pandemic caused a loss of US\$28 trillion in economic output from 2020 onward. Fifty-four countries faced a serious debt crisis, with 14 countries at risk of both public and private debt crises, 22 at risk of a private sector debt crisis, and 21 at risk of a public sector debt crisis. Despite global efforts to mitigate poverty through the SDGs, poverty levels have increased significantly. Sri Lanka successfully reduced poverty to just 4% by 2019, but this figure rose to 12% due to the debt crisis in 2024. A decline in income has led to a sharp rise in global poverty. Due to the pandemic, about 97 million more people now live on less than \$1.90 a day, raising the global poverty rate from 7.8% to 9.1%. As of today, 8.5% of the global population – almost 700 million people – live on less than \$2.15 per day, the extreme poverty threshold for low-income countries.¹¹ Moreover, school-based education was severely disrupted, and in several countries, including Bangladesh, Myanmar, and the Philippines, schools remained closed for well over a year. UNICEF and UNESCO have highlighted this setback as a consequence of the COVID-19 pandemic’s impact on schooling and learning (UNICEF, 2022).¹²

IV. HUMAN BEHAVIOR AND SUSTAINABLE DEVELOPMENT

Human history is full of wars and civil conflicts. Struggles for power stem from human greed and the desire to dominate others. Throughout history, discrimination among humans has been a common phenomenon. Skin color, tribe, race, ethnicity, language, religion, gender, caste, culture, and sexual orientation are some of the common criteria used by individuals, communities, and nations to discriminate against one another. Despite significant advancements in human societies, including achievements in education, discrimination against fellow humans persists. In public forums, powerful nations advocate for equity, equality, and fair treatment. This is also reflected in national and international declarations. However, these facades have suppressed direct discrimination, while indirect discrimination and marginalization have become the diplomatic tools of powerful groups, including international agencies at the highest levels of society. These same individuals, leaders, and organizations subtly harm others while favoring certain communities, races, and nations at the expense of others. Such behavior breeds tension and humiliation, leading to unrest, anger, hatred, and resentment among individuals, as well as conflicts, distrust, terrorism, and wars among communities and nations. These are destructive behaviors that hinder the achievement of the SDGs.

The entire globe is increasingly in distress as a result of escalating natural disasters, global warming, and the depletion of resources, which pose alarming threats to human existence. Unless every individual is aware of sustainable development, future generations will not enjoy the quality of life that the present generation does. No nation can achieve the SDGs if its people do not actively support strategic interventions toward these goals. Sustainable development depends on individual behavior, and no government can implement effective programs unless people recognize the gravity of these issues. Every individual must recognize the importance of themselves and their households in actively contributing to sustainable development. No government or international organization can achieve the dream of sustainable development unless people are committed to the SDGs. This is no exaggeration. Individuals and households serve as the foundation for building stronger, more resilient, and sustainable communities. Therefore, it is crucial to understand how individuals and families can be involved and motivated to work toward the SDGs. This calls for shaping individual behavior to be more conscious and mindful of the SDGs.

Disparities widen daily within households, among local communities, at political levels, and in national and international arenas. Equity and equality are enshrined in the constitutions of all governments. Yet poverty, starvation, lack of access to healthcare and education, denial of human rights, and resource deprivation threaten human security and dignity. Such injustices and misfortunes breed anger and create tension, leading to unrest, conflict, violence, crime, and destruction. These factors hinder the achievement of the SDGs.

V. FUTURE GENERATIONS AND COMPASSIONATE SUSTAINABLE DEVELOPMENT

Brundtland Report (1987),¹³ published by the World Commission on Environment and Development, stated that “sustainable development is the development that meets the needs of the present generation without compromising the ability of future generations to meet their own needs.” This commission was established in response to mounting concerns over ozone depletion, global warming, and other environmental challenges hindering efforts to improve the global standard of living. However, this interpretation primarily focused on environmental issues, as sustainable development was often understood in terms of environmental degradation and resource depletion.

The UNDP (2015) defined sustainable development in terms of economic and social development, as well as environmental protection. All these sectors are interdependent. The 17 SDGs directly relate to these three sectors. Thus, sustainable development is built upon the following dimensions: (1) The Social Dimension, where individuals commit to using available resources responsibly, ensuring that future generations can also benefit. (2) The Economic Dimension, where individuals and societies ensure the continuation of economic welfare for future generations. (3) The Institutional Dimension, where institutions make decisions with a long-term perspective to serve future generations.

Sustainable Development Goal 4 (SDG 4) focuses on education, which is a cross-cutting intervention essential for achieving all 17 Sustainable Development Goals (SDGs). Education is a key intervention that enables societies to address various challenges, as none of the SDGs can be achieved without educating people about these issues. In general, sustainable development refers to policies, projects, and investments that generate present benefits without compromising environmental, social, and personal well-being in the future. Such policies are often referred to as “green policies” because they aim to minimize the environmental impact of development and prevent resource depletion. Sustainable development is an approach to growth and human development that aims to meet the needs of the present without compromising the future. In other words, sustainable development aims to ensure the continuity of both human and animal life by conserving natural resources, preserving environmental gifts, and safeguarding human achievements for future generations.

It is important to understand the value of compassion, which is the ability to feel sympathy for others. In the context of sustainability, compassion means that people today consider future generations with empathy and take action to conserve the planet and its resources to ensure their survival. A mindful person, rather than a mindless one, can effectively address sustainability challenges. A

¹³ Brundtland Gro Harlem (1987), *Report of the World Commission on Environment and Development: Our Common Future*, United Nations; <https://sustainabledevelopment.un.org/content/documents/5987our-common-future.pdf>

mindless person lacks direction in their thoughts, fails to perceive reality, and is often unable to cultivate compassionate behavior.

VI. HUMAN BEHAVIOR AND THE HUMAN MIND

The human mind determines an individual's actions and governs human behavior. In Buddhist theory, this is expressed as “cittena niyati loko–cittena parikkassati, cittassa ekadammassa- sabbeva vasamanvagū” “The world is directed by the mind; by the mind, it is swept away. All follow the authority of one thing: the mind.” (*Samyutta Nikāya, Citta Sutta*)¹⁴ The mind continuously generates feelings (*cetanā*), which lead to moods, ideas, and behaviors – an unstoppable process, even for those in meditation. The Buddhist model of the mind suggests that consciousness is a continuous stream (*bhavaṅga-sota*), with the mind (*manasa*) being central to self-exploration and transformation. A shift in thinking and a strong sense of social values are necessary to cultivate pro-sustainable behavior. When an individual experiences discrimination, marginalization, or denial, antisocial tendencies may naturally emerge, leading to distraction and distress. Under such circumstances, one cannot expect positive thoughts or peaceful behavior. Disruptions to peace hinder sustainable development, as disparities and discrimination create space in the human mind for resentment and retaliation against injustice. Conversely, when individuals or communities are treated fairly and recognized, their behaviors become more positive, contributing to emotional well-being. The Theravāda school introduces the concept of the mind as a fundamental factor of existence, referred to as the “life-stream” (*bhavaṅga-sota and bhavaṅga citta*). This life-stream consists of a sequence of mental moments shaping one's state of being and perception. According to Buddhist theory, consciousness arises through seven basic cognitive functions (*sabba citta sādāraṇa* – Universal Mental Factors): *Phassa* (contact), *Vedanā* (feeling), *Saññā* (perception), *Cetanā* (volition), *Ekaggatā* (one-pointedness or agreement), *Jvitindriya* (life faculty), and *Manasikāra* (attention). There are 52 mental factors¹⁵ in Buddhist psychology, categorized as Universal Mental Factors (7), Particulars (6), Immoral (14), Beautiful (19), Abstinences (3), Illimitable (2), and Wisdom (1).

To achieve sustainable development goals, all individuals within a community or nation must commit to adopting proactive behaviors that ensure sustainability. Sustainable development can only be driven by the ‘righteous’ and ‘proactive’ actions of individuals. No government can achieve SDGs without the commitment of its people to the necessary practices. Therefore, educating both the young and the old for transformation is essential, as education shapes behavior. However, despite the widespread availability of formal education, commitment to SDG goals remains lacking, even among students. The current education system is primarily focused on passing examinations rather than

¹⁴ *The Connected Discourses of the Buddha: A Translation of the Samyutta Nikāya*. Bhikkhu Bodhi (trans.) (2000). Boston: Wisdom Publications. ISBN 0-86171-331-1.

¹⁵ Mental factors (Buddhism); [https://en.m.wikipedia.org/wiki/Mental_factors_\(Buddhism\)](https://en.m.wikipedia.org/wiki/Mental_factors_(Buddhism)), February 4th 2025.

transforming society for sustainable development. As a result, today's formal education falls significantly short of preparing individuals and communities to contribute meaningfully to SDG achievement.

Buddhists understand that healing the self and healing society are interconnected, making both inner and outer work essential and interrelated.¹⁶ Buddhist teachings emphasize the interdependence of all living beings, including humans and the natural world, underscoring that the well-being of the environment is crucial to the well-being of all life forms. Early Buddhist environmental ethics encouraged followers to protect clean water, safeguard sacred trees, and make food choices that minimize harm.¹⁷ Similarly, the *Vanaropa Sutta* (SN. I) praises those who plant groves, stating that their merits grow both day and night. In Buddhism, nature is not seen as an adversary but as a partner in achieving peace. Throughout his life, the Buddha frequently engaged with nature, often teaching in forests and woodland parks, making the natural world an intrinsic part of his teachings (Fronsdal)¹⁸ According to Buddhist philosophy, everything—including work and family relationships—reflects an individual's inner life. Perception is shaped by the self and fluctuates according to one's inner state. Therefore, if individuals change themselves, their circumstances will inevitably change as well (Sokaglobal.org). Nichiren,¹⁹ a Japanese Buddhist monk, reinforced this idea by stating: "If the minds of living beings are impure, their land is also impure, but if their minds are pure, so is their land. There are not two lands, pure or impure in themselves. The difference lies solely in the good or evil of our minds." This perspective highlights the critical role of mindfulness in achieving a sustainable planet.

VII. MINDFULNESS AND BEHAVIOR

The concept of mindfulness originates from the Pāli term "*sati*", which literally translates to memory, recognition, and consciousness. The path to overcoming suffering is called the Eightfold Path (*ariyaṭṭaṅgikamagga*), and its seventh element is "*sammā sati*" or right mindfulness (Bodhi, 2013). In the last 20 years, mindfulness has received renewed global attention. The importance of emotional intelligence (EQ) for successful living gained prominence in the 1990s with Daniel Goleman's book *Working with Emotional Intelligence* (1998).²⁰ Traditional philosophy often viewed the mind as a mysterious internal realm that governed outward physical behavior. Some philosophers even considered the mind to be a spiritual entity.

¹⁹ Nichiren (1222 – 1282), the priest who established the form of Buddhism embraced by members of the Soka Gakkai, is a unique figure in Japanese social and religious history.

²⁰ Daniel Goleman (1999): *Working with Emotional Intelligence*; Bantam Books, New York.

In the Buddhist philosophical vocabulary, there are at least three terms for what is ordinarily designated as “mind”: *manas* (mental power or mental faculty), *viññāna* (discernment or consciousness faculty), and *citta* (mind or thought). Breaking every experience down to its irreducible constituents holds the key to understanding both the dynamics of the mental and the resulting activities associated with the karmic process.²¹ The mind and its ever-flowing thoughts, or *citta*, lead to “behaviors”. Behavior has two forms: covert and overt. What matters most is behavior itself, as it directly interacts with people, society, the environment, and resources.

The mind, or *manas*, has a continuous flow of *citta* (thoughts). These thoughts cannot be stopped by any means, not even through meditation. This is the reality of the mind and its thought process. Mindfulness is a practice that helps individuals understand that the thoughts arising in the mind must be righteously managed by the consciousness faculty or *viññāna*. This requires *sammā sati*, meaning righteous awareness or right mindfulness. Righteousness refers to doing what is right obeying moral principles or ethical laws. *Sammā Sati* is “correct” or “right” mindfulness. In Buddhist theory, “to bear in mind” further implies “bearing in mind the Dhammas.” According to the *Satipaṭṭhāna Sutta*, *sati* means maintaining awareness of reality, where sense perceptions are understood as illusions, allowing one to perceive the true nature of phenomena (Wikipedia).²²

In the context of sustainable development, the Buddhist perspective emphasizes understanding the reality of development challenges with a futuristic outlook. A mindful person’s behavior leads to righteous or right actions, known as *sammā kammanta*. In contrast, a mindless person is unlikely to exhibit realistic or righteous behavior. When behavior is righteous, an individual naturally aligns with the right view, speech, conduct, livelihood, and effort—key elements of the Noble Eightfold Path (*ariyaṭṭaṅgikamagga*) in Buddhism. The author’s advocacy here is for secular living rather than the attainment of *nibbāna*, the supreme goal in Buddhist ideology. Right mindfulness (*sammā sati*) plays a crucial role in guiding a person toward a right livelihood that fosters positive conduct for sustainable development. Mindfulness inherently cultivates righteous behavior, making individuals less likely to violate the principles of compassionate and sustainable development.

VIII. MINDFULNESS IN EDUCATION

Education is the gateway to fostering such a behavioral foundation for change. This mission must be embraced by all forms of education—informal, non-formal, and formal—to cultivate mindfulness and compassion among people of all ages, ensuring their commitment to sustainable development goals.

²¹ Stanford Encyclopedia of Philosophy – Indian Buddhism #4, 2009, 2012.

²² The *Abhidhammattha-sangaha*; <https://en.m.wikipedia.org/wiki/Abhidhammattha-sangaha> (cited 4th February 2025).

Repeated meta-analyses of mindfulness and education-related research studies clearly illustrate that mindfulness training can bring positive behavioral outcomes for teachers and students. By adhering to the basic principles of transformative learning in education for sustainable development and socio-emotional competencies, both adults and children can be transformed. Being conscious of one's behavior and committing to environmental preservation, particularly of fast-depleting resources, is one of the most promising efforts toward sustainability. However, fostering these values is challenging unless school communities collaborate with parents. Parenting is a key intervention in shaping a child's behavior, as parents play a crucial role in inculcating values during early childhood. Schools must provide parent education that emphasizes the importance of adopting environmentally friendly and ethically responsible behavior at home. Today, schools are well-integrated with parents and the broader schooling community, making them a vital platform for promoting sustainable behaviors. While mindfulness practices may have a relatively weak direct effect, they can still positively influence key socio-emotional competencies such as emotional regulation, empathy, social connectedness, and resilience, albeit with varying degrees of impact. Guidance is also needed on how to effectively implement mindfulness practices to enhance education for sustainable development (ESD).²³

Beyond all these aspects, education serves as the gateway to the three key components of compassionate development outlined by the UNDP (2015) for achieving the Sustainable Development Goals (SDGs). These components include (1) the Social Dimension, (2) the Economic Dimension, and (3) the Institutional Dimension, all of which emphasize the responsible use of available resources without compromising the needs and well-being of future generations. This can only be achieved if individuals and communities remain mindful of their actions, actively working to preserve, conserve, and protect the environment while preventing waste and the overexploitation of natural resources. Mindfulness training, therefore, is a fundamental approach to enhancing human consciousness and mental capacity, ultimately fostering 'righteous behavior' that aligns with the principles of sustainable development.

The current understanding of human behavior and environmental degradation provides a broader and more detailed perspective on how human actions impact the environment and all living beings. Disasters, tragedies, and the exploitation of natural resources have become increasingly evident in society. Humans not only drive environmental changes but are also affected by them and remain the only agents capable of addressing these challenges. Today, societies dominate the Earth's major biophysical cycles and bear responsibility for critical environmental crises, including climate change and biodiversity loss.

²³ Ana M. Gómez-Olmedo, Icon, Carmen Valor, Icon & Isabel Carrero (June 2020): *Mindfulness in Education for Sustainable Development: Nurturing Socioemotional Competencies through a Systematic Review and Meta-Analysis*. <https://www.tandfonline.com/doi/abs/10.1080/13504622.2020.1777264>

Addressing these challenges is impossible without altering human behavior—both individually and collectively. Raising awareness about the root causes of human actions is essential in fostering attitudes that align with sustainable thinking.”²⁴ In education, this perspective supports the use of mindfulness as an intervention to combat environmental ignorance, aggressive tendencies, and maladaptive behaviors that threaten human existence.

Mindfulness and education together help mitigate deviant behaviors in industries, thereby improving institutional systems that prevent harmful emissions, environmental pollution, and the over-utilization of depleting natural resources. The second rationale is that applying mindfulness as both a practice and a resource strengthens factors that contribute to conscious behavior among individuals and communities toward sustainable development goals. Such training not only transforms individuals but also fosters new leadership to address these pressing issues. In education, this is reflected in programs and studies exploring how mindfulness contributes to resilience against stress, benefiting both teachers and students. Mindfulness is argued to help learners and educators cope with the demands and challenges of educational settings (Meiklejohn et al. 2012).²⁵ Furthermore, research on mindfulness-based teacher training initiatives suggests that personal mindfulness training enhances teachers’ well-being, self-efficacy, classroom management skills, and their ability to build supportive relationships with students. Since education systems are closely connected with parents and communities, teachers can be mobilized to address these issues through effective programs with community support (Meiklejohn et al. 2012). Additionally, mindfulness is argued to enhance the quality of educational interventions (Beauchemin et al. 2008).²⁶

More recently, a fourth potential aspect of mindfulness has drawn the attention of educators—its role in cultivating broader ethical virtues, a topic of ongoing debate in mindfulness research.²⁷ Ethical virtues are moral characteristics that individuals develop through learning and practice, aimed at

fostering a meaningful and well-lived life. Rather than simply adhering to rules or guidelines, the cultivation of ethical virtues—such as honesty, courage, and compassion—focuses on developing positive character traits. In this context, the Dhamma and mindfulness training serve as pathways for nurturing virtues in individuals and instilling moral values that contribute to achieving sustainable development goals. In conclusion, I wish to state that:

The Dhamma is not merely an idea but a mode of conduct and a way of life. Education, as a behavioral science, brings lasting behavioral changes, shaping actions and empowering learners to make informed decisions and take responsible actions. True behavior transformation is a lasting change and the pathway to cultivating mindfulness in every action. Mindfulness, or the conscious awareness of behavior, transforms ecological principles into habits of mind, body, and heart –forming the foundation of righteous living that paves the way for compassionate and sustainable development.

IX. CONCLUSION

Sustainable development, at its core, necessitates a delicate equilibrium between social, economic, and environmental imperatives, ensuring that present needs are met without compromising the ability of future generations to fulfill their own. The realization of the *Sustainable Development Goals* (SDGs) is contingent upon the collective efforts of individuals, communities, and institutions in making informed, ethically responsible choices. Within this framework, education plays an indispensable role - not merely as a means of disseminating knowledge but as a transformative process that nurtures ethical awareness, mindfulness (*sati*), and a deep sense of interconnectedness with all sentient beings. Buddhist teachings provide profound insights into the cultivation of mindfulness and its ethical implications in addressing global sustainability challenges. Mindfulness, as a practice of heightened self-awareness and introspective clarity, serves as a foundation for conscious decision-making and compassionate action. By fostering an acute awareness of the interdependence (*pratītyasamutpāda*) between human actions and environmental consequences, Buddhist principles encourage a shift from exploitative tendencies toward responsible stewardship of natural and social resources. When integrated into educational paradigms, mindfulness not only enhances cognitive and emotional well-being but also instills a moral compass that aligns personal aspirations with the collective good.

From a Buddhist standpoint, sustainability is not merely a pragmatic goal but an ethical imperative rooted in the principles of non-harming (*ahiṃsā*), generosity (*dāna*), and right livelihood (*samyag-ājīva*). The ethical dimension of sustainability demands a reevaluation of consumerist habits, an acknowledgment of the karmic consequences of human actions, and an intentional movement toward a more harmonious coexistence with the natural world. Education that incorporates these dimensions can empower individuals to recognize their intrinsic responsibility in shaping a more equitable, compassionate, and sustainable society.

Ultimately, the integration of mindfulness into educational systems represents a paradigm shift toward a more conscious, ethically attuned society. By cultivating mindfulness, individuals develop the capacity for discernment, restraint, and altruism—virtues that are indispensable in addressing the pressing ecological and social challenges of the modern era. True sustainability, therefore, is not solely an external pursuit but an inward transformation that arises through self-awareness and ethical responsibility. It is through these mindful and compassionate actions, supported by collective engagement, that humanity can forge a path toward genuine sustainability, ensuring a just and thriving future for all.

UN VESAK DAY: INTERNATIONAL INTERFAITH MINDFULNESS DAY

Ven. S. M. Sujano*

Abstract:

Vesak Day commemorates three pivotal events in the Buddha's life: his birth, enlightenment, and passing into *Maha Parinibbana*. As Buddhism spread across regions, Vesak celebrations also evolved, blending local traditions while maintaining their core significance.

More than a religious observance, Vesak emphasizes ethical living, compassion, and mindfulness meditation as pathways to peace and liberation. Beyond its Buddhist origins, mindfulness meditation has gained global recognition, secular and inter-religious aspects, as a practice that enhances physical and mental well-being across cultures and traditions.

This article proposes recognizing the UN Vesak celebration as "International Interfaith Mindfulness Day". Such a designation would highlight Vesak's universal themes and provide a global platform for fostering mindfulness, interfaith dialogue, and collective reflection. Establishing Vesak Day as International Interfaith Mindfulness Day would inspire a worldwide commitment to peace, happiness, and harmony, exemplifying the Buddha's timeless teachings and their enduring relevance in today's interconnected world.

Keywords: *Vesak, mindfulness, interfaith, meditation.*

I. INTRODUCTION

Vesak Day is an annual observance for Buddhists globally and is regarded as one of the most sacred dates. The day is also considered one of the auspicious days in the Buddhist calendar that marks the special day of celebration every year due to its connection with the life of the Buddha. It is to commemorate the three pivotal events in the life of the Buddha: his birth, his enlightenment

* Varapunya Meditation Centre Aberdeen, Scotland.

and *Maha Parinibbana*, his passing away.¹ These days, each highlighting the Buddha's profound understanding of suffering and the path to liberation, are central to the spiritual observance of Vesak. As Buddhism spread across the world, particularly during the reign of King Ashoka of India the celebration of Vesak evolved, integrating local traditions while maintaining its core significance.²

The Vesak is a day that reminds people to walk on the path to peace by practicing sharing and caring, living an ethical life, and understanding the natural phenomena of impermanence, suffering, and non-self. Furthermore, it serves as a promotion of a life of kindness and compassion, mindful living, and attaining liberation.

The Vesak celebration emphasizes practices beyond mere worship and praise of the Buddha. Primarily, it focuses on participating in religious activities, such as giving offerings, observing moral practices, listening to *dhamma* talks, and engaging in mindfulness meditation. Mindfulness meditation is an essential part of the practice to gain the right understanding and liberation but not exclusive to Buddhism. Accordingly, the Vesak celebration could promote mindfulness not only in a secular context³ but also as a universal platform for interfaith awareness and practice, which has not been identified so far. Mindfulness meditation is one of the effective pathways to peace and liberation for everyone, regardless of their background, religion, ethnicity, or nationality, which is also supported by the UNDV declaration 2013.⁴ Therefore, it would not be an exaggeration to recognize "The Vesak Day" as an "International Interfaith Mindfulness Day."

II. THE SIGNIFICANCE OF VESAK

The day of Vesak or *Visakha Puja* (Thai) is the day of worshipping or merit-making event for Buddhists all over the world. The most venerable Phra Brahmagunabhorn explains the term "*Visakha Puja* is an abbreviation derived from the Pali term *Visakhapunnami* Puja. It is sometimes written as Vesak, which is founded on the Sanskrit term *Vaisakhapournami puja*."⁵ On this sacred day, Buddhists believed that coincidentally the birth of the Buddha-to-be (Pali: *Bodhisatta*, skt: *Bodhisatva*), his attaining enlightenment and entering *Mahaparinibbana* or passing away all these three events took place on the full moon day of Vesak Lunar month.

The legends suggest that on the full moon day of Vesak, the sixth lunar

³ UNDV declaration 2013, item number 8.

⁴ UNDV declaration 2013, item number 5; '...Spreading the Buddha's wisdom on the interconnectedness of all humans'.

⁵ Phramaha Hansa Dhammaso, (2011), *Vesak Day and Global Civilization*, Thailand: Mahachulalongkornrajavidyalaya press, p. 6.

month,⁶ the *Bodhisatta* was born into the royal family of *Kapilavatthu* (Skt. *Kapilavastu*) at the beautiful grove named Lumbini, presently located in modern Nepal. He was named Prince *Siddhartha* (Skt. *Siddhartha*) and lived a princely luxurious life. At the age of 29, he left the palace in search of the truth and became a royal ascetic wandering around practising contemporary austerities in search of freedom. After six years of practice at the age of 35 at dawn on the full moon day of Vesak, 588 BC, 45 years before the Buddhist Era, he finally attained enlightenment under the Bodhi Tree at *Uruvena* village in the current *Bihar* State of India, known as *Bodhgaya*. Ever since, he has been known as the “Buddha”, the compassionate one, an enlightened one, a fully liberated one. For forty-five years after his enlightenment, the Buddha, out of compassion, tirelessly spread his findings for the good and happiness of all beings. Finally, at the age of eighty on the full moon day of Vesak, the Buddha traveled to the Sala Grove in *Kusinagara* modern India, and passed away.⁷

Therefore, Vesak Day is an auspicious day for Buddhists to celebrate the life of the Buddha out of gratitude and appreciation for his compassion in showing us the path to liberation. It is also known as “*Buddha Purnima*”, “*Buddha Jayanti*”⁸ or “*Swanyapunhi*”⁹ to commemorate the three important events in the life of the Buddha.

III. HISTORY OF VESAK CELEBRATION

It is understood that Vesak was not an organized celebration during the time of the Buddha. Nevertheless, a historian and Buddhist scholar, the late Venerable Sudarshan *Mahasthavira* of Nepal, advocated that the Vesak celebration very likely originated with the birth of Prince *Siddhartha* and his return to *Kapilavatthu*. He argued that the joyful occasion of Queen *Mahamaya*’s return to *Kapilavatthu* after the *Bodhisattva*’s birth in Lumbini Grove was a moment of great happiness for the people of the *Kapilavatthu*. They celebrated by gathering in the streets, singing, dancing, and decorating the city with flowers. This tradition, known as ‘*Swanyapunhi*’ in the Newari language, which means a celebration with flowers, is said to be the origin of the Vesak celebration. On the day of his attainment, he further argues that numerous celestial beings were present and celebrated by sprinkling flowers over the Buddha’s achievement. Similarly, on his passing away day, both celestial beings and humans worshipped him with great honor and respect

⁶ Scholarly The most widely accepted scholarly estimate places the year at 623 BC, which is technically 80 years before the beginning of the Buddhist Era. The current Buddhist Era is 2568 in Thailand, Myanmar, Cambodia, and Laos, while other Buddhist traditions recognize it as 2567 BE.

with flowers.¹⁰ This assumption may be plausible; however, one can argue that it is probably based on his faith and confidence in the Buddha. Historically it would be troublesome to accept it as the official Vesak celebration.

The first concrete historical records appeared to be from the time of King Ashoka. As Buddhism spread beyond the Indian continent with the support of King Ashoka, accounts indicate he organized Vesak Celebrations to pay great respect and honor to the Buddha. According to the Chinese pilgrim Fa Hian who visited India around the 5th century records further confirm the Vesak celebration of a grand procession of the Buddha at *Pataliputta* that continued from the time of the Ashoka. According to the description, they made a four-wheeled chariot, and on it, they erected a structure of five stories by tying bamboo together... on the four sides are niches with a Buddha seated in each, and a Bodhisattva standing in attendance on him. Such celebrations continued even after the King Ashoka.¹¹ Unfortunately, the tradition was discontinued due to the political and religious landscape changing over time.

Another important piece of evidence appeared to be chronicles from Sri Lanka. *Mahavamsa*, one of the chronicles provides tangible records of the celebration of Vesak. According to these records, it is suggested that in the 5th - 6th century CE, the term Vesak was mentioned where it says that the King *Dutthagamani* (101 - 77 BC) of Sri Lanka organized twenty-four great Vesak Celebrations.¹² The chronicles also further record that the successors of King *Dutthagamani* also continued the tradition. It is also believed that this tradition was introduced to Sri Lanka with the expansion of Buddhism during the time of King Ashoka, where it received state patronage and flourished in Sri Lanka.¹³ Successively, the tradition was believed to be introduced to Thailand during the Sukhothai period. According to the *Nangnopphamat*, a book on the Loi Krathong Festival, a joyful and colour celebration took place in the city of Sukhothai. The Royal Family would observe *sila*, and precepts and perform many meritorious deeds.¹⁴

IV. SYMBOLISM AND SPIRIT OF VESAK

In the modern era, the Vesak celebration serves not only as a commemoration of the Buddha's life but also as a reminder of his teachings on mindfulness, compassion, and enlightenment. It calls individuals to commit to ethical conduct, the path of peace, and understanding, thus aligning their lives with the *Dharma*.

¹⁰ Sujankirti, (2007), *The Buddha and Baisakha Purnima*, Kath: N. M. Shreekirti Vihara, p. 16.

¹¹ Vincent Smith, (1901), *Rulers of India, Oxford: At the Clarendon Press*, p. 118., Sujankirti, (2007), *The Buddha and Baisakha Purnima*, p. 17.

¹² IBC, (2009), *Vesak Day: The Buddha's Birth, Enlightenment and Passing away*, Thailand: IBC, p. 1.

¹³ Vincent Smith, (1901), *Rulers of India, Oxford: At the Clarendon Press*, p. 118.

¹⁴ IBC, (2009), *Vesak Day: The Buddha's Birth, Enlightenment and Passing away*, p. 5.

Nowadays, Vesak is celebrated across the Buddhist world with rituals such as devotional activities; expression of respect and devotion by organizing processions of the Buddha image, lantern lighting, offering flowers, and decorating monasteries and streets. Lay Buddhists visit monasteries to offer food and other requisites to monastic and observe precepts as well as listen to the sermons to advance understanding as well as perform acts of charity and kindness to embody the Buddha's teachings on compassion and selflessness. Lastly, reflection through sermons and group meditations enhances spiritual growth and mindfulness. Nonetheless, while the core principles of Vesak remain consistent, different cultures bring unique elements to the observance such as:

- In Sri Lanka, lantern lighting, oil lamps, and vibrant decorations adorn homes and monasteries.
- In China, Vietnam, and Korea, the bathing of Buddha statues symbolizes purification.
- In Thailand, state holidays encouraged people to attend merit-making in different forms and participate in candlelit processions known as Wian Tian at temples.
- In Nepal, a procession of a decorated chariot with a Buddha image is taken around the city with traditional music bands and candlelit processions.¹⁵

These diverse customs emphasize Vesak's ability to unite people from various cultures while honoring the Buddha's timeless teachings.

V. RECOGNITION AS A UNIFIED BUDDHIST FESTIVAL

In 1950, during the inaugural World Fellowship of Buddhists conference in Colombo, Sri Lanka Vesak Day was officially acknowledged as a day to commemorate the Buddha's birth, enlightenment, and passing.¹⁶ Similarly, almost half a century later, the United Nations resolution to celebrate Vesak marks a historic acknowledgment of the global significance of the Buddha's life and teachings. It was adopted by the United Nations General Assembly (UNGA) in 1999, recognizing Vesak as an international observance.¹⁷

The United Nations resolution was initiated by predominantly Buddhist countries, particularly led by Sri Lanka, with support from other 33 nations with significant Buddhist populations, such as Thailand, Myanmar, Cambodia, Laos, Vietnam, and Bhutan. The proposal emphasized the Buddha's universal teachings of peace, compassion, and non-violence, which resonate with the UN's values. Subsequently, the proposal was approved. The resolution received widespread support and was agreed unanimously reflecting the international respect for the Buddha's teachings.

¹⁵ Sujankirti, (2007), *The Buddha and Baisakha Purnima*, p. 19 - 23.

¹⁶ Sujankirti, (2007), p. 6.

¹⁷ MCU (2010), *The Vesak Day, History, Significance and Celebrations*, Thailand: Mahachulalongkornrajavidyalaya press, p. 14.

The UN General Assembly adopted the resolution on December 13, 1999 (A/RES/54/175), with provisions that can be summarised; firstly, the UNGA officially declared Vesak Day as an international observance, acknowledging the day's importance to the global Buddhist community. Secondly, the resolution invited UN member states, UN agencies, and international organizations to acknowledge the contribution of Buddhism and, where appropriate, celebrate Vesak Day. Lastly, the United Nations Headquarters and regional offices were encouraged to mark Vesak Day with commemorative activities.¹⁸

Every year since the resolution was approved Vesak Day, has been internationally celebrated as a global observance. The first-ever Vesak celebration took place in 2000 at the UN Headquarters in New York and other UN offices worldwide. The first Global celebration took place in Sri Lanka with state sponsorship, the second year at the UN headquarters in New York, and the third year with the support from Myanmar government was organized in UN Headquarters. In 2004-7 under the leadership of Mahachulalongkornrajavidyalaya University (MCU) supported by the Thai government the Vesak Celebration was organized on a completely different scale by inviting Buddhist scholars from around the world to participate and so began future productive projects including cultural performances, speeches by Buddhist leaders, Mindfulness Meditation sessions and discussion on peacebuilding. The celebration highlighted the importance of Buddhist study, practice, propagation, and protection. In 2008 for the first time, the Vietnamese Buddhist Sangha hosted the United Nations Day of Vesak in Hanoi with 87 countries participating. The main theme of the conference was Buddhist contributions to building a just, democratic, and civilized society.¹⁹ Subsequently, Vietnam sponsored the organisation of the celebration in 2014 in Ninh Binh with 95 Countries, and in 2019 in Ha Nam with 112 countries taking part.²⁰ Once again Vietnam is organising this United Nations Day of Vesak Celebration 2025 at the Vietnam Buddhist University, Ho Chi Minh City.

VI. UNIVERSALIZED MINDFULNESS PRACTICE

At the Bangkok Declaration of the 10th Anniversary celebration of the UN Day of Vesak in 2013, representatives from 34 countries presented nine key points. The second last of these points says: to promote the ethical use of mindfulness in a universally applicable manner, in such fields as healthcare, education, management, and community development.²¹

²¹ UNDV, (2013), *Bangkok Declaration of the 10th anniversary celebration of the UNDV*, accessed December 1, 2024, available at: www.undv.org/vesak2013/en/index.php.

Traditionally, there are two types of meditation practices: *Samatha*, serenity meditation, and *Vipassana*, insight meditation. The practice of serenity meditation aims at the development of calmness and finding inner peace whereas insight meditation is to gain direct knowledge regarding natural phenomena.²² These practices aim to cultivate mindfulness, *sati* to develop discernment, and *panya*.

The *Satipatthana Sutta*,²³ the Discourse on the Four Foundations of Mindfulness is a foundational text in Buddhism that outlines how to practice mindfulness and describes its profound benefits. This practice is central to the cultivation of serenity, *samatha*, and the development of insight, *vipassana* leading to the realization of liberation (*nibbana*). The *Satipatthana Sutta* identifies four areas of mindfulness practice:²⁴

1. Mindfulness of the Body (*kayanupassana*): Observing breathing, postures, and bodily sensations to understand the impermanence of physical form.
2. Mindfulness of Feelings (*vedananupassana*): Noticing pleasant, unpleasant, or neutral feelings to reduce attachment and aversion.
3. Mindfulness of Mind (*cittanupassana*): Observing the state of the mind (e.g., calm, agitated, joyful) to recognize its transient nature.
4. Mindfulness of Mental Objects (*dhammanupassana*): Contemplating mental phenomena such as thoughts, emotions, and the principles of the Buddha's teachings (e.g., the Four Noble Truths).

Mindfulness meditation is a practice that involves cultivating awareness and presence in the current moment without judgment. Mindfulness is a fundamental element of Buddhist meditation practices. It has various ways of mindfulness in all Buddhist traditions as well as in modern usage.²⁵ Generally, this practice involves focusing attention on the present moment, observing the body, feelings, thoughts, emotions, and external stimuli with clarity and equanimity. Mindfulness meditation typically includes Awareness of the body by paying attention to the rhythm of breathing and further bodily activities including observing physical sensations in the body. It also involves contemplation of different sensations and feelings, watching thoughts and emotional patterns, and understanding conditioned realities without attachment or aversion.

The benefits of mindfulness meditation are both spiritual and practical. In

²² H. Gunaratna, (2013), *The Path of Serenity and Insight*. USA: Bhavana Society, p. 3.

²³ *The Middle Length Discourses of the Buddha*, Bhikkhu Bodhi (trans.), (2005), USA: Wisdom Publications, pp. 145s.

²⁴ Bhikkhu Bodhi (2005), Ibit. P. 145; Thich Nhat Hanh (2019), *The Miracles of Mindfulness*. London: CPI Mackays, p. 111.

²⁵ Analayo (2017), *Early Buddhist Meditation Studies*, USA: Barre Centre for Buddhist Studies, pp. 19s.

terms of spiritual benefits, the Buddha clearly outlined these in the discourse;²⁶

“Monks, this is the direct path for the purification of beings, for the surmounting of sorrow and lamentation, for the disappearance of dukkha and discontent, for acquiring the true method, for the realization of *Nibbāna*.”

Besides these benefits, modern research studies suggest further benefits can be expected from the mindfulness practice. It helps calm a restless mind and fosters concentration developing mental clarity and focus. The practice of observing thoughts and emotions non-judgementally helps to reduce stress and anxiety. It teaches individuals to be in the present moment and trains them to respond to rather than react to the situation. Regular mindfulness practice increases emotional awareness, allowing practitioners to identify and address emotions effectively, fostering inner peace and stability. The practice also encourages introspection and self-discovery. This heightened awareness of one's thoughts, feelings, and actions aligns with Buddhist teachings on understanding the nature of self.

In the modern context, mindfulness has been universalized and is emphasized as a psychological tool rather than a strictly spiritual or religious practice. This secular approach emphasizes emotional regulation, stress management, and mental well-being, often promoted in contexts such as healthcare, education, and workplaces without any explicit reference to Buddhist philosophy, which is one of the objectives of the 10th UNDV declaration.

Mindfulness is universalized and popularized through programs such as Mindfulness-Based Stress Reduction (MBSR) by Jon Kabat Zinn²⁷ which follows Mindfulness-Based Cognitive Therapy (MBCT), or Mindfulness-Based Intervention (MBIs) programs,²⁸ These programs are backed by scientific research that highlights its benefits in reducing anxiety, improving focus, and fostering emotional well-being. Such practices have gained global accessibility and also adapted to suit diverse audiences, transcending cultural and religious boundaries.

Nowadays, mindfulness practices such as mindful breathing, mindful walking, mindful eating, and body scanning are widely taught in non-religious settings. Since the focus lies in practicality, mindfulness meditation prioritizes practical outcomes over philosophical exploration, making it an attractive tool for the challenges of modern life. Nevertheless, some argue that this adaptation risks diluting the depth of traditional mindfulness by divorcing it from its ethical and spiritual roots in Buddhism. Furthermore, it is also criticized as

²⁶ Bhikkhu Bodhi (trans.), (2005), *The Middle Length Discourses of the Buddha*, USA: Wisdom Publications, p. 145; Analayo (2006), *Satipatthana*. USA Windhorse Publication, p. 17.

²⁸ Ruth Baer et al., *Frequency of Self-reported Unpleasant Events and Harm in a Mindfulness-Based Program in Two General population Samples*, *Mindfulness* Vol. 12, p. 763 - 774, March 2021.

over-commercialized and too simplified which may lead to harmful results in the longer term. Nonetheless, it is widely acknowledged as having its origin in the Buddhist psychology of meditation practice.

VII. MINDFULNESS MEDITATION AND VESAK DAY

The Vesak Day is a commemoration of mindfulness practice in the Buddha's journey from birth, enlightenment and *Mahaparinibbana*, passing away. Each event highlights mindfulness practice as essential. First, the Buddha's birth symbolizes the beginning of self-awareness and the quest for the truth to be free from all bondage and conflict. Mindfulness meditation was the key practice for that freedom. On his birth, the Bodhisattva proclaimed;

'mindful and fully aware the *Bodhisatta* passed away from the Heaven of the Contented and descended into his mother's womb'... as soon as the *Bodhisatta* was born,... uttered... this is the last birth; now there is no more renewal of being in future lives.'²⁹

The practice of Mindfulness played a fundamental role in the Buddha's journey to enlightenment. It was through mindful observation of his thoughts, feelings, and sensations that he gained insight into the nature of suffering and the path to liberation. His awakening enabled insight into the Four Noble Truths, suffering, the cause of suffering, the end of suffering and the path to end the suffering.³⁰

His passing away exemplifies the profound awareness cultivated through the teachings and liberation. In *Mahaparinibbana Sutta*, the Buddha's last days, Venerable Anuruddha uttered on the Buddha's passing:

'The sage who's free from lust has passed away to peace. With mind unshaken he endured all pains: by *Nibbāna* the illumined's mind is freed.'³¹

One of the main principles of the Vesak celebration, therefore, is to reflect and follow the footsteps of the Buddha and his enlightenment. He achieved liberation through mindfulness practice under the Bodhi tree and taught for forty-five years encouraging everyone to work mindfully towards that freedom. His last statement was "Don't be negligent, live mindfully".

Mindfulness meditation, as a result, undoubtedly, is deeply connected to Vesak Day. It offers an opportunity not only limited to Buddhists but for anyone who seeks peace and harmony to renew their commitment to mindfulness practices through various activities.

The Vesak celebration is further marked by acts of kindness and charity, which reflect mindful awareness of the suffering and needs of others. Activities such as feeding the poor, releasing captive animals, or engaging in community service are performed with a spirit of merit-making but are generally carried

²⁹ Bhikkhu Nanamoli (2015), *The Life of the Buddha According to the Pali Canon*, Kandy: BPS, pp. 3/5.

³¹ Maurice Walshe (1996), *The Long Discourses of the Buddha*, USA: Wisdom Publications, p. 271.

out with a spirit of mindfulness and compassion.

VIII. VESAK DAY PROMOTES GLOBAL MINDFULNESS

Nowadays, Vesak Day celebrations have been transferred from the Buddhist background to the global stage and have received UN recognition.³² Similarly, Mindfulness meditation has global recognition, and its landscape has changed from a Buddhist and spiritual base to a secular and scientific environment.³³

As mindfulness promotes physical and mental well-being that has global recognition and as it becomes more universal attracting people from various backgrounds, the Vesak Celebration too brings millions of people together to cultivate mindfulness and conduct mindful actions, fostering a shared experience of presence and unity. Undoubtedly, the Vesak Celebration can inspire not only Buddhists but people of all faith beliefs to reflect on their lives with awareness, kindness, and compassion.³⁴ In addition, it also serves as an annual opportunity to deepen one's mindfulness practice - based on their faith and integrate mindfulness into daily life for the benefit of physical and mental well-being.

The connection between Vesak celebrations and mindfulness meditation extends beyond Buddhist communities, providing a universal framework for fostering mindfulness, compassion, and ethical living. It would not be an exaggeration to suggest that mindfulness practice is no longer confined solely to Buddhism; it has become integrated into secular discourse and interfaith contexts, encouraging mindfulness practices across various religions, cultures, and traditions. Buddhism undoubtedly serves as a rich repository for both the theoretical and practical aspects of mindfulness. However, as mindfulness has become more universalized in recent history, diverse faiths, and religious groups have also embraced mindfulness practices rooted in their faiths.³⁵

IX. INTERFAITH PRACTICE OF MINDFULNESS

As mindfulness practice becomes more universal, it provides a foundation for inter-religious engagement by offering a neutral, secular approach that can be seamlessly integrated into specific religious contexts. This neutrality enables mindfulness to act as a bridge between faith groups, fostering dialogue and mutual understanding. Over time, mindfulness meditation has evolved into a shared platform that supports physical and mental well-being across diverse backgrounds.

In this context, mindfulness meditation serves as a non-threatening common ground in interfaith settings, promoting respect and the exchange of

³² MCU, *Messages on UN Day of Vesak Celebration 2023*, accessed on January 26, 2025, available at, www.undv.org.

³⁵ Jim Garrison and Jim Burklo, *A Short Interfaith Guide to Meditation Practices*, accessed on January 25, 2025, available at: www.orsl.usc.edu.

experiences among individuals from various religious traditions. This interfaith approach to mindfulness plays a significant role in building mutual respect and understanding, helping to bridge divides between religions. A notable example is Scotland's annual Interfaith Mindfulness Day, which is organized to celebrate Vesak Day. This is a collaborative initiative event organized by the *Varapunya* Meditation Centre and the Aberdeen Interfaith Group, which exemplifies this spirit of unity and shared practice.³⁶

X. INTERFAITH MINDFULNESS: COLLABORATION AND PRACTICE

Interfaith refers to the interaction, cooperation, and dialogue between individuals or groups from diverse religious traditions and spiritual beliefs.³⁷ Such initiatives foster understanding, respect, and collaboration among communities of differing faiths. One such organization advancing this mission is the Aberdeen Interfaith Group (AIFG), a member of the umbrella organization Interfaith Scotland. The AIFG was established in 1993, coinciding with the centenary celebrations of the World Parliament of Religions, a historic event that marked a significant moment in global interfaith dialogue.³⁸ Since its inception, the AIFG has provided a platform for individuals and groups to engage in meaningful conversations, fostering mutual respect and cooperation. The AIFG celebrated its 30th Anniversary in 2023 in the Aberdeen Town Hall.³⁹

The *Varapunya* Meditation Centre (VMC) in Aberdeen Scotland is a Buddhist monastery which was established in late 2012 under the spiritual guidance of Ajahn Sujana along with pious devotees. The Centre offers Buddhist studies and meditation sessions at the Centre, in various places in the city and online. Since the establishment the VMC has been a member of the AIFG and working in collaboration ever since.⁴⁰

As a member of the AIFG since 2012, Ajahn Sujana, the resident monk at VMC, has the honor of representing the center and contributing to its initiatives. His journey has been profoundly shaped by this work, especially in his role at the meditation center in Aberdeen, Scotland. The support and inclusivity of the AIFG have provided me with an invaluable platform to connect, learn, and collaborate with individuals from various faith traditions. Together, they have worked toward shared objectives such as fostering mutual understanding, combating prejudice, and promoting peace. Through initiatives like interfaith walks and cultural exchange programs, AIFG has created

⁴⁰ Ven. S. M. Sujano (2017), *Kalyana Mettacitta: Stories of a Bhikkhu on the Block*, Scotland: *Varapunya* Meditation Centre, p. 4.

meaningful opportunities for dialogue and unity, highlighting the power of collective efforts in bridging cultural and religious divides.

XI. INTERFAITH MINDFULNESS DAY: A MODEL PROJECT

The Vesak Day is traditionally observed with rituals and worship, Ajahn Sujana envisioned celebrating it in a way that would resonate with Scotland's multicultural and interfaith context, an inclusive approach, inviting members of other faiths to participate. Motivated by those intentions, in collaboration with AIFG and VMC the 'Interfaith Mindfulness Day' project was launched in 2018 at the *Varapunya* Meditation Centre in Aberdeen, Scotland.⁴¹ Since then, it has gained special status among Interfaith events in Scotland. The event serves as a platform for people of diverse faiths – including branches of Christianity, Islam, Hinduism, Buddhism, Brahma Kumaris, Bahai, Sikhism, Quakerism, and Humanists – to explore mindfulness practices in the context of their spiritual traditions. This is a day program featuring activities within the Buddhist environment such as a mindful walk in nature, sharing food in a spirit of community, and reflections tied to themes of mental health, aligning with Scotland's Mental Health Week. During the COVID-19 pandemic, these celebrations successfully transitioned to an online format, demonstrating the resilience and adaptability of interfaith initiatives. The event has grown in popularity, highlighting how mindfulness – a universal practice transcending religious boundaries – can bring people together.

The initiative builds on the idea that mindfulness is a bridge connecting various spiritual and cultural practices. For instance, a similar event, *Be Still and Know* is an Interfaith Day of Mindfulness,⁴² (Lance Smith, 2024) was held in rural Massachusetts in 2014. Inspired by traditions ranging from Buddhism to Native American spirituality, it featured sitting and walking meditation, silent contemplation and shared reflections. These practices exemplify the power of mindfulness to create spaces for shared understanding and collective peace.

XII. INTERFAITH MINDFULNESS DAY: MOVING FORWARD

Interfaith mindfulness events offer a unique opportunity to address global challenges such as mental health, social cohesion, and environmental awareness. They create a framework where individuals from different backgrounds can come together, not to debate differences, but to celebrate shared values like mindful living, compassion, presence, and inner peace. The collaboration between Aberdeen Interfaith Group and the *Varapunya* Meditation Centre exemplifies how local initiatives can inspire broader efforts to promote harmony in diversity.⁴³

⁴¹ Patricia Findlay, *Interfaith Mindfulness Day*, Interfaith Scotland, Newsletter Autumn 2019: issue 32, p. 17

⁴² Lance Smith, *Be Still and Know: An Interfaith Day of Mindfulness*, accessed on November 30, 2024, available at: <https://bestillandknowinterfaith.blogspot.com>.

⁴³ Ajahn Sujana, *Aberdeen Interfaith Group*, Interfaith Scotland Newsletter Autumn 2022: Issue 36, pp.16 - 17.

Interfaith mindfulness initiatives foster respect for diversity and promote common goals, encouraging a broader perspective on a more inclusive, peaceful world. These gatherings have successfully demonstrated how mindfulness can unite different faiths and traditions, focusing on shared values such as mindful living, compassion, and an awareness of the natural world. They also have been facilitating interfaith reflections and dialogues, cultivating a sense of community among diverse belief systems.

The Vesak commemorates the Buddha's life and teachings, emphasizing the profound impact of mindfulness meditation in fostering inner peace and transformative growth.⁴⁴ It serves as a reminder for individuals from all backgrounds to integrate mindfulness into their daily lives, uniting diverse communities in honoring the Buddha's legacy through mindfulness, compassion, wisdom, and self-awareness.

By promoting the Vesak celebration on an international and interfaith mindfulness meditation platform, Vesak transcends cultural and religious boundaries, inspiring people to embrace its essence. This celebration strengthens the connection to the Buddha's path, guiding practitioners toward happiness in this life and future lives, and ultimately, toward enlightenment. Therefore, celebrating Vesak Day as "International Interfaith Mindfulness Day" beautifully honors the Buddha's teachings by inspiring global citizens to live with awareness, compassion, and wisdom. This celebration certainly highlights the transformative power of mindfulness on both personal and collective levels.

XIII. CONCLUSION

In conclusion, Vesak Day has evolved from a traditional Buddhist observance into a global celebration recognized by the United Nations, symbolizing the universal significance of mindfulness meditation. Similarly, mindfulness, rooted in Buddhist teachings, has transcended from its origins to become a widely embraced secular and scientific practice, fostering physical and mental well-being across religions, cultures, and traditions. Both Vesak and mindfulness uphold the values of awareness, compassion, and unity, offering a common foundation for diverse communities.

The connection between Vesak and Mindfulness Meditation transcends religious boundaries, creating a framework for ethical living and fostering collective harmony. Vesak offers an annual opportunity for individuals from all backgrounds to deepen their mindfulness practices, reflect with kindness and compassion, and reconnect with the Buddha's transformative teachings. Initiatives such as Interfaith Mindfulness Day in Scotland exemplify how mindfulness can act as a bridge between traditions, creating inclusive spaces for healing, dialogue, and shared understanding.

44 UNDV, UNDV, (2013), *Bangkok Declaration of the tenth anniversary celebrations of the United Nations Day of Vesak*, accessed December 1, 2024, available at: www.undv.org/vesak2013/en/index.php.

To further amplify this vision, the Vesak Day celebration could be formally recognized as International Interfaith Mindfulness Day. This proposal aligns seamlessly with Vesak's universal themes and its potential to unite people of all traditions. By serving as a global platform for interfaith engagement, mindfulness practice, and collective reflection, the Vesak as International Interfaith Mindfulness Day would inspire a worldwide commitment to unity, happiness, and harmony – critical elements for cultivating a compassionate and peaceful world.

FOSTERING UNITY AND INCLUSIVENESS FOR HUMAN DIGNITY: BUDDHIST PERSPECTIVES ON GLOBAL HARMONY AND SUSTAINABLE PROGRESS

Prof. Dr. Trương Quang Vinh*

Abstract:

This article examines the theme “Unity and Inclusivity for Human Dignity: Buddhist Insights for World Peace and Sustainable Development” in light of the United Nations Day of Vesak (UNDV) 2025. We hope to highlight the significance of Buddhist teachings in solving modern world difficulties by analyzing the five sub-themes: “Cultivating inner peace, forgiveness and mindful healing, Buddhist compassion in action, mindfulness in education, and fostering unity”. According to the article, Buddhist teachings provide fundamental insights that can help individuals and societies achieve sustainable growth, social cohesiveness, and long-term peace.

Keywords: *Buddhism, world peace, sustainable development.*

I. INTRODUCTION

The globe is currently facing unprecedented difficulties, such as conflicts, inequality, environmental degradation, and a crisis of human dignity. In this setting, Buddhist teachings offer useful insights toward cultivating unity, inclusivity, and compassion. The UNDV 2025 provides an opportunity to investigate these lessons and their implementation in fostering global peace and sustainable development. The purpose of this article is to look at the relationship between Buddhist teachings and contemporary concerns, with a focus on inner peace, forgiveness, compassion, education, and collaboration. The scientific literature frequently defines mindfulness as intentionally and acceptingly focusing on the present moment (Kabat-Zinn, 2013). The key

* Director of the Office of International Relations, Business Relations, and Student Services at Long An University of Economics and Industry, Vietnam.

components of mindfulness are awareness, attention, and a positive attitude toward the experience of the present moment (acceptance). According to theoretical explanations of mindfulness training, repeated practice enhances self-regulatory abilities, including attention and emotion control, which have advantages such as improved mental health and reduced emotional reactivity.¹ Connection practices have been demonstrated to increase kindness and decrease implicit biases. These practices include generating feelings of warmth and goodwill for others (loving-kindness practice), wishing to alleviate others' suffering (compassion practice), and reflecting on the caring motivation behind an action (e.g., the decision to teach).² More importantly, this article will solely discuss "Mindfulness in Education for a Compassionate and Sustainable Future Education" because it has a significant impact on influencing future generations.

II. INTEGRATING MINDFULNESS IN EDUCATION

The term "mindfulness" is an English translation of the word "*sati*," which has several meanings in Buddhist texts and teachings, including "remembering," "recognizing," "waking up," "paying attention," "calling to mind," and "being alert."³ It describes a state of conscious awareness and the repeated application of this awareness to every daily experience in the framework of contemplative activities.⁴ The phrase also refers to the development of a healthy, skillful, and astute understanding of the four facets of life – the body, emotions, intellect, and mental components. The traditional teachings of Buddhism state that mindfulness improves wisdom, insight, loving-kindness, compassion, and mental balance. Additionally, it is believed that the meditation techniques will lessen ignorance, aversion, and greed – three things that Buddhist psychology holds to be the main causes of human suffering.⁵ During the 1960s and 1970s, Westerners traveled to Asia to study Buddhist practices, while Eastern Buddhist leaders traveled to the West to share many of these viewpoints. Buddhist centers that were later established, particularly in the United States and England, incorporated a number of Eastern traditions and provided public training and programs (Young, 2016).⁶

The development of an ideal state of psychological welfare and consciousness, as well as the cultivation of profound insight into mental processes, identity, and reality, were the stated goals of these approaches as they were envisioned at the time (Walsh, 1983).⁷ It was believed that meditation was a family of techniques that improved consciousness, trained attention, and gave people more deliberate control over their mental processes. According to the language

⁴ Bodhi (2011), p. 19; Ditrich (2017), p. 31.

⁵ Ditrich (2017), p. 7.

⁶ Young (2016), p. 41.

⁷ Walsh (1983), p. 10.

of the time, the techniques could be useful for a range of “intermediate aims,” including psychophysiological and psychotherapy ones (Walsh, 1983).⁸ The groundwork for the original spiritual practices’ secularization was thus laid.

The term “mindfulness” was almost non-existent in the educational sphere fifteen years ago. Only a tiny number of educators and scholars imagined the role mindfulness practice could play in promoting the well-being of teachers and pupils. Fast forward to 2015, and we’ve seen an extraordinary boom in interest in incorporating mindfulness into school, which is being sponsored by a variety of groups. Benefits of Mindfulness in Education - students who engage in mindfulness exercises report increased focus and attention span, which can result in improved academic achievement. Both teachers and students can gain a great deal by incorporating mindfulness into the classroom.

Around the last few decades, a growing interest in the principles and uses of mindfulness in education has led to a wide variety of projects, programs, and methods of delivery all around the world. In kindergartens, schools, teacher in-service training programs, and higher education, mindfulness in education has been extensively explored, applied, and integrated, and the subject of research studies. The goal of introducing mindfulness into education was to improve academic achievement, resilience, social and emotional skills, mental health, well-being, and prosocial behavior. Peer-reviewed research on mindfulness in education is rapidly increasing, and international organizations like the World Bank, the World Economic Forum, the Organization for Economic Cooperation and Development (OECD), and the United Nations Educational, Scientific, and Cultural Organization (UNESCO) are discussing the subject.

Since mindfulness was initially used in medicine at the end of the 1970s to help patients with chronic health difficulties manage their pain, stress, and sickness, interest in the practice and its advantages has grown. After being included in Buddhist practices, mindfulness was secularized and presented in groups with the goal of lowering stress and enhancing health (Kabat-Zinn, 2003⁹; Segal, Williams, & Teasdale, 2013¹⁰). Subsequent generations of therapeutic and non-therapeutic models were influenced by the model’s ubiquity, clinical success, and research, which increased interest in mindfulness-based viewpoints.

These days, mindfulness meditation is a hot topic in neuroscience, clinical and health psychology, cognitive therapy, education, business, and leadership. Studies have indicated the efficacy of mindfulness in enhancing clinical symptoms and overall health. Still, there is little research on mindfulness in educational contexts, even if there is evidence that mindfulness meditation can improve cognitive ability. It’s clear that anxiety levels are rising and that pupils at all levels are having more difficulty controlling their attention spans. For example, social anxiety affects over 12% of people in North America, and more

⁸ Walsh, 1983, p. 18.

⁹ Kabat-Zinn (2003), p. 8.

¹⁰ Segal, Williams, & Teasdale, (2013), p. 16.

significantly, 80% of those people experienced social anxiety before turning 18. Without a doubt, deficiencies in educational opportunities and institutions that equip students to handle the growing complexity of the modern world have a role in the rise in anxiety disorders among young adults.

Teachers have a critical role in providing learning experiences that influence and shape the character and well-being of children and youth (NSW Government, 2015). Teachers, who are regarded as the most important component of education, help pupils learn, grow, and thrive (Rivkin, Hanushek, and Kain, 2005¹¹). However, teaching is a demanding and complex career that typically involves stress, emotional challenges, job dissatisfaction, and burnout. Beltman and Poulton (2019)¹²; Lomas, Medina, Ivtzan, Rupperecht, and Eiroa-Orosa (2017)¹³; Zarate, Maggin, and Passmore (2019). This can result in poor mental health and lower well-being outcomes for teachers. Alongside school-based initiatives around the world and the increasing preference for teacher facilitation over being led by trained mindfulness practitioners, many mindfulness-based programs for teachers have been created and researched (e.g., Beshai, McAlpine, Weare, & Kuyken, 2016; Crain, Schonert-Reichl, & Roeser, 2017; Harris, Jennings, Katz, Abenavoli, & Greenberg, 2016; Jennings et al., 2019; Schussler et al., 2018). Consequently, there has been a notable surge in peer-reviewed papers about mindfulness-based teacher programs (Ergas & Hadar, 2019). Two categories of mindfulness-based programs are generally well-liked by educators. The first consists of programs designed to support educators' emotional regulation, self-compassion, and overall well-being. The second relates to classes designed to instruct teachers in specific mindfulness practices in the classroom. Some programs integrate the two into a single, long-term, gradual learning process, such as Presence, Awareness, and Self-Compassion in Schools (PAS) in Austria¹ or the Purple School Project in Israel. While recognizing teachers' stress, emotional challenges, and burnout, both categories seek to improve their coping strategies, resilience, and overall well-being. Some programs focus on in-service teachers, such as Harris et al. (2016), while others target pre-service teachers, such as Hirshberg, Flook, Enright, & Davidson (2020)¹⁴. Enhancing teachers' mental health and well-being (Harris et al., 2016) and enabling them to use newly learned skills to improve their classroom presence and management (Hirshberg et al., 2020; Jennings & Greenberg, 2009) are usually the programs' two main objectives.

According to meta-analytic studies, MBIs are significantly linked to lower levels of stress and other negative emotions in both non-clinical (Galante et al., 2021) and clinical populations (Goldberg et al., 2018; Goldberg et al., 2021; Hedman-Lagerlöf et al., 2018; Wielgosz et al., 2019). This is in line with the theory that mindfulness improves mental health by improving our capacity

¹¹ Rivkin, Hanushek, and Kain, (2005), p. 2.

¹² Beltman and Poulton (2019), p. 6.

¹³ Lomas, Medina, Ivtzan, Rupperecht, and Eiroa-Orosa (2017), p. 23.

¹⁴ Hirshberg, Flook, Enright, & Davidson (2020), p. 7.

to control our emotions (Alsubaie et al., 2017; Hölzel et al., 2011; Chambers, Gullone, & Allen, 2009; Gratz & Tull, 2010¹⁵; Erisman and Roemer, 2010; Wielgosz et al., 2019) and preventing the amplification of negative affect.

The practice of mindfulness is specifically linked to healthy emotion regulation by modifying the degree of emotional response (intensity or duration), receptiveness, and vulnerability to negative emotions, according to a convergence of correlational, experimental, and treatment studies (Chiesa et al., 2013; Fogarty et al., 2015).

According to prominent theoretical models of mindfulness, the mediators of outcomes (such as the reduction of stress) are associated with improvements in emotion regulation (Lutz et al., 2008; Ostafin et al., 2015) as well as attentional changes (Malinowski, 2013; Bishop et al., 2004; Tang et al., 2015). Empirical research supports this idea by demonstrating that attentional shifts toward emotional stimuli (e.g., Roca & Vázquez, 2020¹⁶) and a greater use of specific ER strategies, such as acceptance or positive reappraisal (Garland et al., 2017; Lindsay et al., 2018¹⁷), are linked to decreases in distress and increases in well-being following MBIs.

III. SPECIFIC BENEFITS OF INTEGRATING MINDFULNESS IN EDUCATION

3.1. Control of emotions

People feel a range of emotions, both positive and negative, in circumstances pertaining to academic learning and success. Effective management of negative emotions is believed to improve academic learning and success since these emotions are known to have a negative impact on learning and achievement. People can increase their emotional awareness without passing judgment by practicing mindfulness meditation. Instead of reacting rashly, they are able to respond to emotions more skillfully thanks to this knowledge. According to studies, practicing mindfulness might lessen unpleasant emotional reactions and improve emotional stability. Students who practice mindfulness are better able to recognize their feelings and create appropriate coping mechanisms, which lowers the likelihood of disruptive conduct.

3.2. Reduction of stress

A organized program called mindfulness-based stress reduction (MBSR) uses yoga and mindfulness meditation to assist people manage their stress. Mindfulness meditation helps reduce the body's stress reaction and enhance mental and physical health by concentrating on the here and now and accepting thoughts and feelings without passing judgment. Mindfulness techniques, such as meditation and deep-breathing exercises, can help students manage their stress levels, leading to a calmer and more focused learning environment. Jon Kabat-Zinn created MBSR at the University of

¹⁵ Gratz & Tull, (2010), p. 10.

¹⁶ Roca & Vázquez, (2020), p. 24.

¹⁷ Garland et al., 2017; Lindsay et al., (2018), p. 4.

Massachusetts Medical Center in the late 1970s. It combines body awareness, yoga, mindfulness meditation, and the study of thought, feeling, behavior, and action patterns. In order to lessen suffering or pain and to promote wellbeing, mindfulness can be defined as the nonjudgmental acceptance and exploration of the present experience, including bodily sensations, internal mental states, thoughts, emotions, impulses, and memories.

3.3. Encouragement of well-being

Numerous advantages have been associated with regular mindfulness meditation practice, such as reduced anxiety, depression and enhanced cognitive performance. By encouraging people to think more healthily and feel happier, it can also raise their general quality of life. Moreover, Regular mindfulness meditation practice has been linked to a variety of benefits, including decreased anxiety and sadness, as well as improved cognitive performance. Encouraging people to think more healthily and be happier can improve their overall quality of life.

3.4. Better social skills

Students who practice mindfulness are better able to relate to their teachers and peers because it fosters empathy and understanding. There are several ways that incorporating mindfulness into the classroom improves social skills.

Self-awareness: Students who practice mindfulness learn to observe their thoughts and emotions objectively. They are better able to comprehend their acts and how they affect other people thanks to their increased self-awareness, which promotes more thoughtful relationships.

Empathy & Compassion: Urging pupils to think about and comprehend the emotions of their peers, regular mindfulness practice cultivates empathy. Conflicts may decrease, and more sympathetic behavior may result from this.

Active Listening: By encouraging present-moment awareness, mindfulness can enhance listening abilities. In conversations, students who engage in mindfulness practices are more likely to listen intently and answer intelligently.

Emotional Control: Students who practice mindfulness are better able to identify and control their emotions. They may react to social events with composure and calmness instead of impulsively thanks to their emotional intelligence.

Resilience and Coping: One of the best ways to develop resilience and deal with difficulties is to practice mindfulness. It keeps you centered, lowers tension, and gives you more clarity while reacting to circumstances. Students who practice mindfulness are better able to manage stress and obstacles. Even during challenging circumstances, they can sustain healthy social connections and relationships by improving their stress management.

Positive Communication: Building relationships, promoting understanding, and establishing a supportive atmosphere are the main

goals of positive communication. Kindness and optimistic thoughts are fostered by mindfulness. This kind of thinking can result in more positive and encouraging peer interactions.

3.5. Improved mental health

By lowering the signs of anxiety and despair, mindfulness can improve mental health in general.

3.6. Methods for including mindfulness in the classroom

3.6.1. Mindful breathing exercises: Mindful breathing exercises are a powerful tool for relaxation and focus. To help students center themselves and get ready for learning, begin the day with a few minutes of mindful breathing. Mindful breathing is focusing on the experience of your breath, both inhale and exhale, to promote present moment awareness and minimize stress.

3.6.2. Encourage pupils to listen to one another with awareness in order to improve comprehension and communication. Establish Clear Expectations: Start by outlining the value of active listening and how it contributes to comprehending and appreciating the opinions of others.

Model Active Listening: Show that you can listen intently by keeping eye contact, nodding, and giving a considered response to what is being said. It is a great way to enhance both their comprehension and communication skills.

3.6.3. Mindful Movement: To assist students in decompressing and refocusing, provide brief mindful movement exercises like yoga or stretching.

3.6.4. Mindful Moments: Throughout the day, provide opportunities for quick mindfulness exercises, such as pausing for a minute before beginning a new task.

3.6.5. Curriculum on Mindfulness: Include courses specifically on mindfulness practices and their advantages to incorporate mindfulness into the curriculum.

3.7. Resources for teachers

3.7.1. Mindful Schools: Provides teachers with materials and training to help them incorporate mindfulness into their lessons.

3.7.2. The Center for Mindfulness in Education supports, trains, and does research on mindfulness initiatives in educational institutions.

3.7.3. A thorough guide to comprehending and applying mindfulness in educational contexts is the Handbook of Mindfulness in Education.

3.8. Relational mindfulness in education

Relational mindfulness can help educators better manage, teach, and deal with the emotional problems of classroom and school contexts. To successfully address the management, teaching, and emotional problems of classroom and school contexts, educators must possess a high level of social and emotional competence (Jennings et al. 2011). According to research (Burrows 2008, 2010, 2011b; Day 2004; Jennings & Greenberg 2009¹⁸), there is a need for

¹⁸ Jennings & Greenberg (2009), p. 8.

interventions that assist educators in responding calmly to disturbing and provocative student conduct without unnecessarily escalating these behaviors. According to Jennings & Greenberg (2009), mindfulness can help teachers become more conscious of the emotional atmosphere in their classrooms. According to Thomas (2010)¹⁹, practicing mindfulness can also assist teachers in being more composed when dealing with the daily stressors of teaching. Since many of the participants in a recent study (Burrows 2011b) focused on a relationship with a colleague that was causing them significant concern and was contributing to feelings of frustration, anger, stress, emotional imbalance, anxiety, and professional ineffectiveness, the study concluded that it is also urgently necessary to address the difficult relationships that can develop between adults in school communities. According to Fulton (2005)²⁰, when mindfulness is implicitly incorporated into one's professional work, it can help professionals develop relational competence manner of being. As Weare (2010, 4) has proposed, mindfulness could be "the missing piece in social and emotional learning." The state of mindfulness, according to Bishop (2002, 92)²¹, is one in which one is acutely aware of and focused on the reality of the present moment, accepting and acknowledging it, without being enmeshed in thoughts about the circumstance or emotional responses to it. Given that connection is regarded as the foundation of psychological well-being and as a necessary component of relationship growth, healing, and development, relational mindfulness can be defined as a growing awareness of the current relational experience with acceptance. (Surrey 2005, 92)

Educators and leaders who want to better handle the emotional, instructional, and management problems of classrooms and school environments can benefit from relational mindfulness. It implies that regular relationally oriented mindfulness practice, led by an experienced mindfulness teacher or counselor, that examines contemporary issues in the presence of colleagues is likely to be beneficial for educators who wish to cultivate the ability to maintain composure in highly charged emotional environments. The literature on relational counseling and psychotherapy places more emphasis on counseling training and experience than it does on mindfulness training and experience. In reality, relational mindfulness is a combination of the two, with a focus on increasing awareness of the current relationship experience (Surrey 2005, 92).

To find out if relational mindfulness can be effective in supporting educators in making long-term changes to their practices, more research is required.

IV. CURRICULUM DEVELOPMENT

Incorporating Buddhist teachings on compassion, ethics, and sustainability into mindfulness exercises in the classroom can significantly improve the learning environment for both teachers and students. Here are a few strategies

¹⁹ Thomas (2010), p. 34.

²⁰ Fulton (2005), p. 74.

²¹ Bishop (2002), p. 92.

to highlight these values:

4.1. Compassion

4.1.1. Kindness and loving include loving-kindness (*metta*) meditation exercises in which trainees send well wishes and thoughts to both themselves and other people. This encourages compassion and empathy for other people.

4.1.2. Compassionate activities: Motivate kids to take part in community service projects or other deeds of kindness, like lending a hand to classmates. Talk about the effects of these behaviors and consider their emotional impact.

4.1.3. Emphasize understanding and compassion in your relationships with pupils by teaching them to listen and communicate attentively.

4.2. Sustainability

4.2.1. Teach children about the importance of conscious consumerism and how their decisions affect the environment. Talk about how to make sustainable decisions and cut down on waste.

4.2.2. Nature Connection: Include outdoor mindfulness exercises that promote an awareness of the natural world and a sense of connectedness to it. A sense of obligation to safeguard it may result from this.

4.2.3. Implement and serve as an example of sustainable practices at the school, such as energy conservation, recycling initiatives, and green projects.

4.3. Morals

4.3.1. Incorporate conversations about moral decision-making into the curriculum to promote mindful decision-making. Encourage pupils to stop and consider the effects of their actions by practicing mindfulness.

4.3.2. Role-playing Scenarios: Examine moral conundrums through role-playing and talk about how mindfulness might support morally upright behavior in these circumstances.

4.3.3. Values in Practice: As students consider how mindfulness might support them in living in accordance with their basic values, they should be encouraged to identify these values.

4.4. Conformity to the teachings of Buddhism

4.4.1. The Four Noble Truths: Talk about the Four Noble Truths and how mindfulness and compassion can help us comprehend and lessen suffering.

4.4.2. Presenting the Eightfold Path, which emphasizes elements like Right Action, Right Livelihood, and Right Mindfulness, as a manual for moral and conscientious life.

4.4.3. Interdependence: To emphasize the interdependence of all life and the significance of sustainability and compassion, teach the notion of interdependence (*pratītyasamutpāda*).

Through the integration of these values, educators can establish a learning environment that cultivates individuals who are compassionate, ethical, and environmentally sensitive in addition to promoting academic success.

V. LONG-TERM IMPACT

The concept, presumptions, and goals of mindfulness and positive psychology are similar in a number of ways, which creates an ideal environment for in-depth discussion and mutual learning. Though mostly focusing on adults, there are emerging conversations on the possible integration of these two fields. There have already been some recent attempts to investigate how mindfulness and positive psychology might be incorporated into education for school-aged children. However, there isn't much evidence-based research looking at how the two work together. Ivtzan and Lomas (2016)²² found that mindfulness improves both hedonic and eudemonic wellbeing in adults. Niemiec (2013) discusses the potential merger of character strength with mindfulness, based on positive psychology. Mindfulness-based programs for adults have been linked to increased self-esteem, life satisfaction, psychological flexibility, happiness, positive affect, and optimism (Shapiro, de Sousa, & Jazaieri, 2016).²³

Mindfulness and positive education suggest that 21st-century education should prioritize social-emotional skills, psychological health, wellbeing, and resilience. The two methods offer different methodologies to accomplish the intended goals. Integrating both perspectives, supported by science and practice, can improve understanding and application of both, perhaps enhancing their effectiveness.

Previous initiatives integrating mindfulness into positive education have various degrees and types of implementation. One initiative in Bhutan included a 1:10 ratio of mindfulness-based sessions to life-skills themes in the curriculum, with each exercise lasting only a few minutes (Adler, 2016²⁴). In a study of the Happy Classroom Program in Spain, Lombas et al. (2019) found a 1:1 ratio of mindfulness-based and character-building elements. During the 18-week trial, mindfulness-based sessions were held twice a week for less than 4 minutes on average. In terms of mindfulness education and the "dose-response" principle, both programs are considered low-dose and low-intensity protocols.

A generation that is fervently dedicated to social responsibility, sustainability, and peace might be raised by incorporating mindfulness into the classroom.

5.1. Empathy and compassion

Empathy and compassion are fostered by mindfulness education and are necessary qualities for cooperative and peaceful societies.

5.2. Ethical decision-making

Reflective thinking is promoted by mindful behaviors, which results in moral judgments that take into account the wider effects on the environment and society.

²² Lomas (2016), p. 44.

²³ Shapiro, de Sousa, & Jazaieri, 2016, p. 39.

²⁴ Adler, (2016), p. 33.

5.3. Reduced stress and anxiety

Students who practice mindfulness to manage stress and anxiety are better able to address issues and confrontations with composure and equilibrium.

5.4. Enhanced Focus and Academic performance

By increasing focus and attention, mindfulness helps students become more attentive and knowledgeable citizens, which can improve their academic performance and overall learning experience.

5.5. Implementation strategies

- **Curriculum Integration:** Include mindfulness practices including breathing techniques, meditation, and mindful movement in everyday routine. Including yoga or stretching exercises in physical education or during break times. These activities can help students stay physically active and mentally centered. Encourage students to practice mindful reading by paying full attention to the text and reflecting on their feelings and thoughts. Similarly, mindful writing activities can help students express themselves more clearly and thoughtfully. Engage in drama, music, and art projects to encourage mindfulness. Students should be encouraged to participate completely in their creative processes. Organize workshops or special sessions focused on teaching mindfulness techniques. These can be led by teachers, school counselors, or guest speakers with expertise in mindfulness. Provide students with access to mindfulness apps, books, or online resources. To promote mindfulness, take part in art, music, and theater activities. Encouraging students to fully engage in their creative processes is important. Plan specific seminars or courses aimed at teaching mindfulness practices. These tools can help them practice mindfulness outside of school as well. Make sure educators are trained in mindfulness techniques so they can mentor students and include mindfulness into their lesson plans. A more encouraging and caring learning environment can be produced by incorporating mindfulness into the curriculum. Additionally, it can assist kids in gaining critical abilities for stress management and emotional intelligence development. By introducing mindfulness into curriculum, users may create a more supportive and nurturing learning environment for both students and instructors.

- **Developing a mindfulness culture**

Mindfulness Corners: Set aside a spot in the classroom for students to practice mindfulness when they need a break or feel overwhelmed.

Mindfulness Announcements: Include a quick mindfulness exercise in your morning announcements or assembly.

Classroom Practices: Encourage instructors to incorporate short mindfulness breaks into lessons and transitions.

- **Teacher training:** To effectively lead mindfulness activities and set an example of mindful behavior, educators should receive training.

- **Whole-school approach:** Integrate mindfulness into the school culture by implementing procedures, policies, and events that support

sustainability and well-being.

- **Community engagement:** Engage the community and families in mindfulness programs to increase the influence outside of the classroom.

Education transformation is neither easy nor simple. We require cooperation, ingenuity, critical thinking, endurance, and patience in order to accomplish significant progress. The change of education is neither straightforward nor easy. To make meaningful change, we need collaboration, creativity, critical thinking, perseverance, and patience. We must encourage comprehensive and long-lasting improvements and support the reforms in curriculum, teacher preparation, instruction, school climate, and culture. We must support the reforms in curriculum, teacher preparation, teaching, school atmosphere and culture, and mobilize comprehensive and long-lasting changes. Now is the moment to build on this momentum, start interdisciplinary discussions, and create a cohesive framework that can influence children's lives and academic performance everywhere.

Mindful education not only improves individual well-being, but it also fosters a generation that values and works for peace, sustainability, and social justice. Also, it allows students to be present and engaged in their studies. They can learn how to control their emotions and relieve tension and anxiety (emotional regulation); Consistent mindfulness practice can benefit both mental and physical health (Improved Well-Being); Fostering a calm and concentrated mindset improves pupils' ability to acquire and remember information (Better Academic Performance). This all-encompassing approach to education can pave the path for a more compassionate and ethical society.

VI. CONCLUSION

The broad idea of mindfulness serves as a framework for psychology and education research. The concept of mindfulness has a wide range of applications, as evidenced by a selective review of research findings on problem-based learning, learning material variability, the effects of making learning materials difficult, and three distinct interventions to increase interest (personalization, example choice, and relevance intervention). The wisdom of Buddhism offers a strong basis for dealing with today's most important issues. A world that respects human dignity and advances sustainable development can be achieved by promoting mindful education, acting with compassion, accepting forgiveness, developing inner peace, and encouraging unity. We have the chance to reaffirm our dedication to these ideals and work together to build a more inclusive and peaceful world at UNDV 2025. Promoting mindful education, acting with compassion, accepting forgiveness, cultivating inner peace, and supporting unity can help to create a world that values human dignity and promotes sustainable development. At UNDV 2025, we will have the opportunity to reaffirm our commitment to these objectives and collaborate on creating a more inclusive and peaceful world.

The increasing understanding that we must support the whole learner and make sure kids have the resources they need to develop and flourish excites educators, legislators, instructors, and students around the globe. In this

regard, schools offer the most efficient and successful means of reaching youth and teachers, as well as developing their welfare and life skills. These goals and aims are in line with the distinctive pedagogies, ideas, and practices that mindfulness in education offers. The evolution and spread of mindfulness in educational contexts, the role of mindfulness-based pedagogies in education for wellbeing, global educational model and initiative prototypes, the various results and insights gained from mindfulness-based methods for both students and teachers, and potential points of convergence between mindfulness in education and positive education as a basis for integrative dialogue and collaboration were the main topics of this chapter.

There is a wide range of approaches, forms, and purposes within the topic of mindfulness in education. The amount of empirical research on the efficacy of these programs has grown dramatically, albeit it hasn't always kept pace with the expansion of classrooms and school-based activities. Even if the field needs additional development, the total results – which have been gathered from numerous nations – are noteworthy and encouraging. Given everything that has been done, investigated, and found via empirical and scientific research, mindfulness in the classroom can be a crucial component of a new educational paradigm.

New problems arise when new programs and pedagogies are introduced. Therefore, it would be ideal for future mindfulness deployment in educational settings, including the methodical creation and introduction of new models, to be supported concurrently by an empirical evaluation process.

Education transformation is neither easy nor simple. We require cooperation, ingenuity, critical thinking, endurance, and patience in order to accomplish significant progress. We must support the reforms in curriculum, teacher preparation, teaching, school atmosphere and culture, and mobilize comprehensive and long-lasting changes. Now is the moment to build on this momentum, start interdisciplinary discussions, and create a cohesive framework that can influence children's lives and academic performance everywhere.

EXISTENTIAL CRISIS, MINDFULNESS AND THE MIDDLE PATH TO SOCIAL ACTION

Dr. Asoka Bandarage*

Abstract:

Materialist development and the adulation of individualism and competition have undermined the inherent values of human evolution, namely altruism and cooperation. They have given rise to political and economic extremism and ecological and social destruction. It is vital that we evolve beyond the resultant isolation, powerlessness and resignation of this destructive worldview. While recognizing the value of mindfulness training, this paper explores how we can move beyond the current individualist and limited focus of mindfulness training. How can we move towards a broader ethical and social framework and a balanced path of environmental sustainability and human well-being? How can the Buddha's teaching of the Middle Path and the Noble Eight-Fold Path guide us in this regard?

Keywords: *Existential crisis, mindfulness, middle path, social action.*

I. INTRODUCTION

Deepening eco-social collapse and political-economic extremism exemplify the existential crisis facing humanity today. An explosion of complex emergencies including climate change, armed conflict, destruction of economic, political and cultural institutions, poverty and displacement have become the reality of our time.¹ Physical and emotional suffering, uncertainty, anxiety, despair and confusion increase across the world.

Widening economic inequality represents maldistribution of resources and opportunities. This is the main social issue of our time. Data from Oxfam for 2023 reveals that the richest 1% of the global population controlled nearly

twice as much wealth as the remaining 99% of the world population.² The richest five billionaires in the world more than doubled their wealth since 2020 while five billion people became poorer during the same period.³ A handful of global asset management companies, led by BlackRock (with 11.5 trillion in assets in 2024),⁴ represent financialization, the domination of finance capital in every global economic sector, from agribusiness to pharmaceuticals, media, entertainment and defense.⁵

Global media focus on identity politics, dualistic thinking and othering – ‘us vs them’ – contributes to separatism, ethnoreligious strife and jingoism. As a result, public attention is diverted from the existential threats facing humanity. The intensification of conflicts across national, cultural and even sexual boundaries prevents the development of a shared human and ecological consciousness.⁶ Countries in the Global South, such as China and India are thoroughly embracing the myopic model of the Global North of financial deregulation and technological and market development, putting short-term profits over long-term environmental, cultural and social sustainability.⁷

Generally unacknowledged in the media is that economic growth is closely paired with an increase in militarism, making the arms industry a leading sector of the global economy. The Stockholm Peace Research Institute, for example, has estimated that global military expenditure was \$2.443 trillion in 2023, the largest annual increase since 2009. The largest spenders have all drastically increased their military spending: the United States by 37%, China by 12% and Russia by 4.5%.⁸ At the same time, the number and types of nuclear weapons in development have also increased as rival nation-states deepen their nuclear arsenals.⁹

II. DOMINATION AND THE TECHNO-MARKET PARADIGM

Underlying global crises is a paradigm of domination built on the concept of dualism and attachment to the concept of a separate self and self-advancement and power over others. It approaches life- both human and non-human- as mere resources to be conquered and controlled for purposes of production and consumption. The relentless pursuit of economic growth has led to great material advancement. Yet, it undermines the natural integration of planetary life, which seeks to reintegrate the environment and society through advances in modern science, technology, and the market.¹⁰ Developments in bioscience and technology are replacing natural forms of plant, animal and human life with technologically transformed hybrid or virtual commodities. The folly of pursuing transhumanism is a serious threat to humanity’s identity as a species in nature.¹¹

Figure 1: Domination and the Techno-Market Paradigm

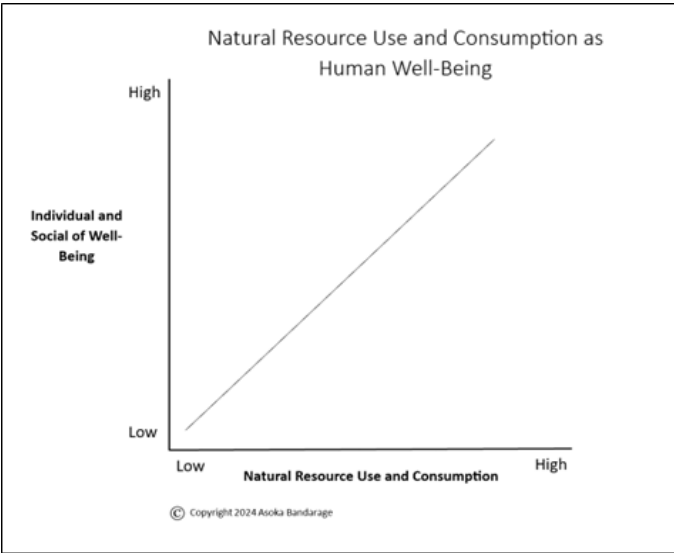

The techno-market imperative is built on developing human craving and ignorance and the notion that individual and social well-being inevitably increases with quantitative growth and increased material consumption. Social, ecological and ethical values are not factored into economic decisions. Instead, it encourages excessive individualism, competition and separation between people intensifying geopolitical rivalries. Modern advertising built on psychological manipulation upholds the assumed insatiability of human wants.¹²

III. MINDFULNESS

Largely in response to the efforts of environmental and social change movements worldwide, the language and concepts of environmental sustainability, basic human needs, human development and so on, have been adopted/ co-opted by dominant world institutions, namely United Nations bodies and transnational corporations. Similarly, the language and techniques of mindfulness drawn from Buddha’s teaching is being incorporated within the techno-market culture as a response to widespread mental disorders and unhappiness, especially in the Western World.

Mindfulness (*sati* in Pali) involves cultivating present-moment awareness and equanimity through attention to breathing and bodily sensations. Mindfulness practice is based on Buddhist principles and is a powerful tool for nurturing the inner peace and guidance much needed in these turbulent times.¹³ The practice of mindfulness fosters sensitivity to the realities of impermanence, suffering and the interconnectedness of life, nurturing compassion towards both the self and others, thereby overcoming dualism. This has immediate relevance to the themes of the 2025 UN Vesak Conference: ‘Unity and Inclusivity for Human Dignity and Buddhist Insights for World Peace and Sustainable Development’.

In recent decades, many different types of mindfulness meditation have become popular in the West, generally led by influencers from corporate, media and Hollywood elites. Tech giants, such as Google and Apple, and multinational consultancies and banks promote employee meditation to relieve stress and

¹³ *Mahasatipatthana Sutta: The Great Discourse on the Establishing of Awareness.* (S.N. Goenka edition). Vipassana Research Institute, Mumbai, 1996, pp. vii–xiv.

increase competitive advantage and productivity.¹⁴ Indeed, “in Silicon Valley meditation is no fad, it could make your career.”¹⁵ With no shortage of irony, even the US military has embraced mindfulness meditation to boost its soldiers’ performance and grit.¹⁶

These approaches to mindfulness that focus on profit-motive and the quest for power only fuel the dangerous national and international policies that destroy life and undermine the fundamental principles of interconnectedness and compassion. In contrast, mindfulness from a Buddhist perspective intimately parallels an ethical worldview based on morality and non-violent action.¹⁷

Generally, values of moderation and interdependence were acculturated in traditional Asian Buddhist communities.¹⁸ The currently dominant corporate approach to mindfulness is externally driven and materialistic and provides no depth, tools or guidance to understand the socio-economic forces underlying the interrelated global crises. Nor does it help generate real solutions based on ethical criteria and actions needed to develop sustainability and international social justice. In this sense it is not mindfulness at all and is perhaps better referred to as “McMindfulness”;¹⁹ a profoundly limited and individualist mindfulness that dilutes and distracts from activism seeking real social change and liberation from the dominant institutions and culture that threaten all life.

IV. TOWARDS RIGHT MINDFULNESS

The 2025 UN Vesak Conference poses the question: How can Mindfulness in Education become a guide for a Compassionate and Sustainable Future? Indeed, how can we harness the awareness, equanimity, and compassion nurtured by mindfulness meditation to overcome isolation, powerlessness, and apathy, and confront the ongoing political and economic extremism that will inevitably lead to complete ecological and social destruction?

Mindfulness practice focusses on heightened awareness of the present and viewing reality, both internal and external, objectively. Buddhist teaching helps us understand the true roots of suffering – the three poisons of greed (*raga*), hatred (*dvesha*) and ignorance (*moha*) – and their manifestations in

¹⁴ Bandarage, Asoka. *Mindfulness and Social Action in Covid 19 Crisis*. Accessed on [April 30, 2020], available at: <https://asiatimes.com/2020/04/mindfulness-social-action-in-covid-19-crisis/>.

the contemporary existential crisis. In this regard, it is well to remember the first two verses of the Dhammapada where the Buddha taught the primacy of the mind and Right Mindfulness:

*“Manopubbangama dhamma
manosettha manomaya
manasa ce padutthena²
bhasati va karoti va
tato nam dukkhamanveti
cakkamva vahato padam.²⁰*

All mental phenomena have mind as their forerunner; they have mind as their chief; they are mind-made. If one speaks or acts with an evil mind, ‘*dukkha*’ follows him just as the wheel follows the hoofprint of the ox that draws the cart.”²¹

*Manopubbangama dhamma
manosettha manomaya
manasa ce pasannena
bhasati va karoti va
tato nam sukha¹ manveti
chayava anapayini.²²*

“All mental phenomena have mind as their forerunner; they have mind as their chief; they are mind-made. If one speaks or acts with a pure mind, happiness (*sukha*) follows him like a shadow that never leaves him.”²³

As Buddhists, we understand the well-being of the self cannot be separated from the wellbeing of the other. It is explicated in the biological and social principle of interdependence – *anatta* – and the illusion of a separate self. It requires transcending a limited and individualist approach to mindfulness to focus on *samma sati*, a comprehensive understanding of mindfulness based on the Buddha’s the Noble Eight-Fold Path.²⁴

We need to explore how *samma sati* (Right Mindfulness) and *samma samadhi* (Right Concentration) are inherently linked with the other factors of the Path, namely ethical conduct (*sila*) and wisdom (*panna*). In other words, Right Mindfulness requires commitment to ethical precepts such as, non-violence, truth and honesty and to the wisdom of virtuous or Right intention

and Right view.²⁵

In the Introduction to the *Mahasatipatthana Sutta*, The Great Discourse on the Establishing of Awareness, the Buddha stated:

“This is the only way, monks, for the purification of beings, for the overcoming of sorrow and lamentation for the extinguishing of suffering and grief, for walking on the path of truth, for the realization of *nibbana*; that is to say, the fourfold establishing of awareness”²⁶.

The *Mahasatipatthana Sutta*, explains that the fourfold establishing of awareness – of the body, bodily sensations, the mind and mental contents – must lead to Right Mindfulness, namely the eradication of craving and aversion and the realization of *nibbana*.

“...Here, monks, a monk dwells ardent with awareness and constant thorough understanding of impermanence, observing body in body, having removed craving and aversion towards the world [of mind and matter]; he dwells ardent with awareness and constant thorough understanding of impermanence, observing sensations in sensations, having removed craving and aversion towards the world [of mind and matter]; he dwells ardent with awareness and constant thorough understanding of impermanence, observing mind in mind, having removed craving and aversion towards the world [of mind and matter]; he dwells ardent with awareness and constant thorough understanding of impermanence, observing mental contents in mental contents, having removed craving and aversion towards the world [of mind and matter].”²⁷

V. THE MIDDLE PATH

The middle way/ path (*Majjhima Patipada*), identified by the Buddha around 5 BC, has profound potential to help us face both individual and social dilemmas. The Buddha developed the concept of the Middle Path based on his own experiences. Initially, as the heir to a royal throne, he indulged in extreme sensual pleasures. Later, in his quest, for spiritual understanding, he practiced self-mortification. Through these experiences and his meditation practice, he discovered that neither overindulgence nor self-denial resulted in true inner harmony. As a result, he promoted the Middle Way as the pathway to human liberation.²⁸

“The applicability of the Middle Way to societal peace and harmony is inherent in the Buddha’s well-known teaching of the Four Noble Truths: reality of suffering, arising of suffering, cessation of suffering and the Path to ending suffering. Buddha pointed out the reality of impermanence, the changing nature of all material and mental phenomena and the suffering that comes from attachment to such changing phenomena.

²⁵ Hart (1987): 57 – 69.

²⁶ From the *Mahasatipatthana Sutta*, (*Dīgha Nikāya* 22).

²⁷ From the *Mahasatipatthana Sutta*, (*Dīgha Nikāya* 22).

²⁸ Rahula (1979): 45 – 50.

Identifying greed, hatred and ignorance (including limited vision) as the roots of suffering, he advocated the cultivation of non-attachment or mental equilibrium/ equanimity as the path to freedom.”²⁹

The Law of Dependent Origination (*Paticca Samuppada*) propounded by the Buddha explains the conditioned arising of all phenomena and the law of cause and effect. Liberation is said to come from following the Middle Path and nurturing the set of non-harmful and non-violent actions of the Noble Eight-Fold Path (*Arya Ashtanga Magga*).³⁰ This consists of:

- Right View/ Understanding (*samma ditthi*)
- Right Thought/ Intention (*samma sankappa*)
- Right Speech (*samma vaca*)
- Right Action (*samma kammantha*)
- Right Livelihood (*samma ajiva*)
- Right Effort (*samma vayama*)
- Right Mindfulness (*samma sati*)
- Right Concentration (*samma samadhi*).³¹

Contrary to common belief in the West, the Buddha did not advocate passivity but instead offered clear guidance for living based on mindfulness, wisdom and morality, including Right Action and Right Livelihood.

The middle road is not about passivity, indecisiveness or being ‘wishy washy’. It is a path of balance, openness, patience and perseverance. As scholar-monk Bhikku Bodhi puts it, the Middle Path “is not a compromise between the extremes but a way that rises above them, avoiding the pitfalls into which they lead.”³²

It is a path that avoids all extremes, be they political ideologies like fascism, neoliberal capitalism, and communism; acts of violence such as terrorism; or cultural, religious or ethnoreligious extremism based on ego-centric and materialistic identity.³³

The Middle Path is founded on the human qualities of generosity, compassion, and wisdom, rather than on greed, hatred, and ignorance. It represents a path of peace rather than violence. Although it may not be essential to use sectarian terms like ‘Buddhist,’ the universal significance of the Middle Path for freedom and well-being should not be overlooked. While the Buddha’s teachings of the *Dhamma*, or the Laws of Nature, are typically applied to individual transformation, their relevance to social and global

transformation must also be acknowledged.³⁴

VI. SOCIAL AND ENVIRONMENTAL SUSTAINABILITY

In order to address the contemporary global crisis, we must fundamentally rethink the global economic system. The current model, based on domination and unchecked growth, needs to be challenged. Economists E. F. Schumacher and Herman E. Daly offer valuable alternatives with their concepts of 'Buddhist Economics' and 'Ecological Economics,' respectively. Additionally, the idea of 'Compassionate Economics' has emerged, highlighting the need for a more humane and sustainable economic approach.³⁵

Schumacher explained, "the Buddhist Middle Way is by no means antagonistic to physical well-being. It is not wealth that stands in the way of liberation but the attachment to wealth; not the enjoyment of pleasurable things but the craving for them."³⁶

The Buddha's teaching on craving (*tanha*) clarifies the distinction between human needs and wants. It emphasizes that the mind is of utmost importance and that we possess the ability to transform both our individual and collective consciousness.³⁷ Similarly, the Sufficiency Economy Philosophy from Thailand advocating moderation and wisdom envisions balanced and sustainable development that can protect society from uncertainties associated with globalization and market turbulence.³⁸

This perspective is much needed to consciously transform the global economic system. It advocates for a shift towards the rational distribution of natural resources, the adoption of suitable technologies, mindful consumption habits, purposeful job creation and fairer wealth distribution across society. This can only be achieved by integrating ethical, social, and ecological criteria into economic decision-making from the start, rather than only considering these factors after social and environmental degradation has taken place, typically from an angle of PR and marketing.³⁹

A transition from unchecked growth to sustainable development requires a holistic transformation, including changes in ownership structures, production technologies, distribution methods, and communication systems. The Middle Path advocates for a nuanced perspective, not entirely dismissing quantitative growth but seeking balanced alternatives. These include the adoption of appropriate technologies, with a focus on renewable energy sources, and the creation of meaningful work opportunities. Such a shift aims to ensure both

³⁴ Bandarage (2013): 78.

³⁹ Bandarage (2013): 78.

economic stability and social well-being for all members of society, finding a harmony between human needs and environmental constraints.

The Middle Path does not advocate a return to the economic stagnation that characterized tribal societies or a complete abandonment of economic and technological innovation and growth. However, there is much to learn from some of our ancestors, such as those from traditional Buddhist societies, on how to balance short-term material gain and the long-term survival and flourishing of both human beings and the ecosystem that created and sustains us.

Community-centered economics is essential for preserving the intricate web of ecological systems, cultural diversity, ethnic identities, and social structures. As futurist Hazel Henderson described the need for bioregionalism and decentralization is incompatible with unchecked economic growth and globalization, monopoly capitalism and runaway technological growth.⁴⁰

Bioregionalism advocates for local control over natural resources and self-sufficiency. As a counter to neoliberal capitalism's destructive path, increasing numbers are eschewing agribusiness and transnational corporate dominance. Instead, they're adopting ecological, community-based practices, fostering direct connections with land and fellow inhabitants. This shift signifies a grassroots movement towards sustainable, locally-rooted socioeconomic systems.⁴¹

Returning to the land may not be an option for most people. However, the unsustainable concentration of wealth among a minority at the expense of societal well-being and environmental integrity necessitates immediate policy interventions. Financial institutions and asset managers must be compelled to redirect their substantial capital towards sustainable development and job creation rather than destructive ventures. The rapacious pursuit of financial gain through speculative practices requires constraint through the cultivation of compassionate and judicious economic paradigms.

Given increasing global economic inequality, the divergence between under-consumption of the poor and over-consumption of the rich population is sharpening. The eradication of hunger and poverty necessitates a recalibration of global consumption patterns: reducing excess among the affluent while elevating standards for the impoverished. The 'Middle Path Equilibrium Curve' (Figure 3) illustrates that optimal material and spiritual well-being lies neither in extreme deprivation nor in excessive wealth, but in a balanced middle ground.

In contrast to the linear consumption and well-being projection of the dominant paradigm (Figure 2), the Middle Path points out that after a certain point, increasing material consumption and resource use decrease happiness

⁴⁰ Henderson (2006): 123.

⁴¹ Quinn, Caroline. *Why Tomorrow Documentary is a Must-Watch for Environmental Advocates*. Accessed on [June 28, 2024], available at: <https://www.tomorrow-documentary.com/why-tomorrow-documentary-is-a-must-watch/>.

and well-being. Rather, optimum individual and social wellbeing results from balanced and shared consumption of resources and goods. In other words, we must prioritize interconnectedness between the self and the other, instead of a paradigm of domination.

Figure 3: Middle Path Equilibrium Curve

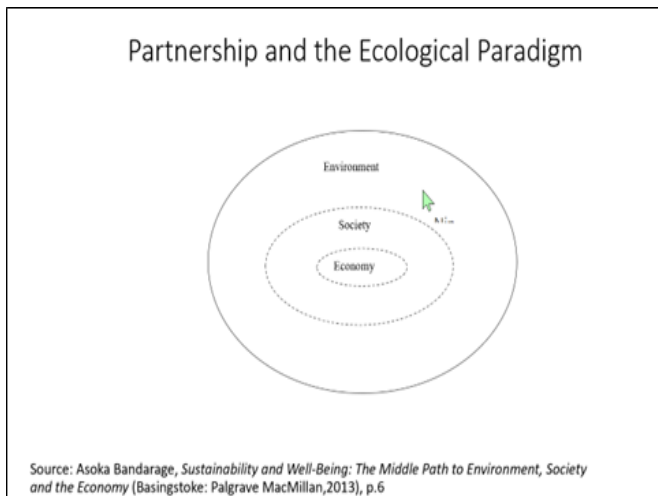

VII. PARTNERSHIP AND THE ECOLOGICAL PARADIGM

Partnership thinking illuminates the organic unity of life and the interconnectedness of all phenomena. This perspective reveals humanity not as an isolated entity, but as an integral component of a nested ecological hierarchy: embedded within animal systems, which are in turn part of broader plant ecosystems, the Earth’s biosphere, and ultimately, the evolving cosmic tapestry of (multiple) universes.⁴² “Interbeing,” a concept introduced by Vietnamese Buddhist scholar-monk Thich Nhat Hanh, transcends hierarchical dualisms. It posits an inherent interconnectedness of all phenomena, asserting that the self’s survival is inextricably linked to the others. This paradigm shift emphasizes mutual dependence over isolated existence.⁴³ The Middle Path and Partnership/ Ecological paradigm are characterized by profound reverence for life’s unity and an acute awareness of the interdependence among diverse elements of the whole. This worldview emphasizes the imperative for cooperation and equilibrium within complex systems.

Figure 4: Partnership and the Ecological Paradigm

⁴² Bandarage (1997): 317.

⁴³ Hanh (2020): 1 - 116.

Partnership consciousness, an inherent aspect of human societies, necessitates evolution into a global paradigm in our interconnected world. This expanded consciousness integrates diverse traditions – Buddhist philosophy, indigenous wisdom – with monistic elements of Western science, including quantum theory and evolutionary biology. Notably, physicists like Bohr, Bohm, and Einstein echo Buddhist thought in identifying consciousness as energy, the fundamental constituent of universal existence.⁴⁴

VIII. MINDFULNESS AND INNER TRANSFORMATION

As the Buddha taught, mind and consciousness preceed all actions. Therefore Right Mindfulness (*samma sati*) is essential to human wellbeing.⁴⁵ The global transformation we require extends beyond intellectual discourse; it necessitates a fundamental shift in human consciousness from ignorance, greed, and hatred to wisdom, generosity, and compassion. Only by embracing these values can we transcend the current system of exploitation and domination and foster sustainable alternatives. This change depends on cultivating wisdom and a strong commitment to compassionate and generous principles among an increasing number of individuals.⁴⁶ It is useful to consider the Buddha's call for the removal of sixteen defilements of the mind as the foundation for mental purification:

“What monks, are the defilements that defile the mind? Covetousness and unrighteous greed is a defilement that defiles the mind. Ill will... anger... hostility... denigration... insolence... envy... miserliness... deceit... fraud... obstinacy... rivalry... conceit... arrogance...

⁴⁴ Cited in Bandarage (2013): 74.

⁴⁵ Pure Dhamma. “*Manōpubbangamā Dhammā, Manōsetthā Manōmayā.*” Accessed on [January 20, 2025], available at: <https://puredhamma.net/dhammapada/manopubbangama-dhamma/>.

⁴⁶ Bandarage, Asoka. “The Buddha's Middle Path: Lessons for Sustainability and Global Well-Being.” *Development*, vol. 56, no. 2 (2013): 232 – 40.

vanity... heedlessness is a defilement that defiles the mind. Knowing that covetousness and unrighteous greed is a defilement that defiles the mind, a monk abandons it. Knowing that ill will... heedlessness is a defilement that defiles the mind, a monk abandons it.”⁴⁷

As discussed earlier, the pursuit of insatiable growth - unbridled materialism, technology and power - at the global societal level is rooted in egoistical craving – *tanha* - and defilements of the human mind. While haste and the pursuit of goals are celebrated virtues in the dominant mechanistic paradigm, the eco-centric paradigm and the Middle Path emphasize the importance of the processes and means employed to achieve those ends. This approach is grounded in morality, wisdom, and right mindfulness, highlighting that how we reach our objectives is as critical as the objectives themselves.⁴⁸ We must cultivate global visions and strategies that resonate with the highest moral and ethical values of humanity, rather than our deepest fears and insecurities. It is essential to establish a political action agenda rooted in universal spiritual teachings that transcend narrow sectarianism and economic competition, guiding us toward a more inclusive and cooperative future.⁴⁹ The Buddha’s teaching of *Maithri* Loving Kindness and *Samma Sati*, Right Mindfulness are most pertinent to developing the partnership ethic that is urgently needed to address the existential crisis facing humanity:

“And how is it monks, that by protecting oneself one protects others? By the pursuit, development, and cultivation [of the four establishments of mindfulness). It is in such a way that by protecting oneself one protects others.”⁵⁰

IX. MINDFULNESS AND SOCIAL ACTION

If an increasing number of educated and relatively privileged mindfulness meditators merely turn inward in response to the existential crises we face, they risk becoming part of the problem rather than part of the solution. By sitting on a cushion and closing their eyes to escape fear and horror, they neglect to expand their awareness to the ethical, social justice, and ecological implications of these challenges. Engaging with the world around us is essential to fostering meaningful change.⁵¹

The silence of meditation and mindfulness practice is not necessarily at odds with the collective action of social movements; rather, they can complement each other in creative and diverse ways. We must explore how the inner transformation of awareness, compassion, and resilience fostered by

⁵¹ Bandarage, Asoka. “Mindfulness and Social Action in Covid 19 Crisis.” *Asia Times*, April 6, 2020. Accessed on [April 30, 2020], available at: <https://asiatimes.com/2020/04/mindfulness-social-action-in-covid-19-crisis/>.

mindfulness meditation – and other practices such as communion with nature, prayer, and chanting – can be applied to facilitate outer political and economic transitions. This integration is essential for addressing the unprecedented challenges facing humanity.⁵² Ultimately, the change required now is a shift of the human heart from greed, hatred and delusion to generosity, compassion and wisdom. As the Buddha's Loving Kindness Discourse, the *Karaniyametta Sutta* beautifully states:

"May all beings be happy and secure; may their minds be contented... Just as a mother would protect her only child even at the risk of her own life, even so let one cultivate a boundless heart towards all beings... Let one's thoughts of boundless love pervade the whole world -above, below and across -without any obstruction, without any hatred, without any enmity..."⁵³

Socially engaged Buddhism is not an entirely a new construct.⁵⁴ The Buddha's teaching imparts instructions for social engagement and mindful living.⁵⁵

"The culturally conditioned, media-driven belief that we cannot do much to change the world is mistaken. The origin and historical evolution of the dominant trajectory of global military and economic expansion is attributable to a small elite. Understandably, most people are currently preoccupied with individual survival, but it is possible for some of us, including mindfulness meditators, to awaken ourselves to the larger social and ecological realities and exercise our agency, rights and responsibilities as parents, teachers, citizens and humans."⁵⁶

To uphold environmental sustainability and human well-being over unrestricted corporate profit signifies Mindfulness in Education for a Compassionate and Sustainable Future upheld by UNDV 2025.

SUBJECTIVITY, PHENOMENOLOGY, AND THE NOTION OF ANATTA

Dr. Jeff Wilson*

Abstract:

This paper explores the issues of unity and inclusivity on a deeper level, examining the meaning of these terms in personal psychology and the subjectivity of the individual. In order to achieve social and international, inclusivity we need to understand the oppositions and fragmentations of the present-day personal psyche. Scholars increasingly use the phenomenological philosophy of Edmund Husserl to explain the Buddhist approach to these problems. Rather than attempting a positivistic analysis of the 'external' world like many of his contemporaries, he focused on the cognitive processes that allow us to participate in intersubjective relations with other humans. Like Buddhist epistemology he emphasized consciousness itself rather than a third-person, objective view of the world. The notion of *suññata*, nothingness or voidness, is investigated here from the perspective of the western phenomenologists who disconnect from this third-person approach through 'a certain refraining from judgement' (Husserl). Like the authors of the Perfection of Wisdom sutras, they know that wisdom is not found in the intellectual sphere and that sometimes the words get in the way.

Keywords: *Anatta, phenomenology, mindfulness meditation, subjectivity.*

I. INTRODUCTION

From a certain (Western) perspective, the construction, maintenance and tightening of strong ego boundaries is the fundamental concern of present-day educational theories and practices. Such theories appear to be based on a belief that autonomy, rationality and individuality are facilitated in children through the disciplined construction and policing of the parameters that surround and define subjectivity. Perspectives that question this attitude to acculturating and training the next generation of citizens can be found in the writings of French writers such as Michel Foucault, Jacques Derrida and Julia Kristeva

* Research consultant in Buddhist Studies.

whose cultural theories present an opposing methodology that *loosens* the parameters around subjectivity and that can be developed to coexist with this dominant third-person analytic style in order to simultaneously release the faculties of imagination, creativity and insight. Educational methodologies which embrace such alternative or complementary approaches prepare young people for the art of living, not just for working.

II. CONTRASTING CONCEPTIONS OF THE SELF: EAST AND WEST

When the focus is shifted to a non-Western tradition such as Buddhism, certain resonances begin to appear between these complementary methodologies and the philosophy of Buddhism. It becomes possible to construct a suitable discourse/ terminology in which to discuss subjectivity from both the internal and external viewpoints. Buddhist philosophy centres around the notion of *anatta* (no-self) while occidental epistemology is centred around the self, the ego, and around the rights and responsibilities of the autonomous individual. In the West, a child's development is carefully monitored, its actions and responses accurately tuned to produce a functional ego.

What then, is the Western mind to do with the notion of *anatta* ('no-self'), the negation of a seemingly universal conviction that a continuous and substantial self, or 'own-being' (Skt. *svabhava*) exists. The Freudian ego is still very much the Cartesian ego of '*cogito ergo sum*' ('I think therefore I am'); the 'I' defined as the rationally thinking being. In the Western approach to selfhood, the thinking self stands apart from nature, observing an outside world while the Eastern approach is to see ourselves as part of nature and nature as existing within us. This latter approach views subjectivity from a very different perspective, where an over-emphasis on autonomy does not lead to a separation from a more holistic identification, a sense of belonging to, of being a part of nature. An ability to see from both the objective and subjective perspectives would lead to the logic of the Mahayānists in which a self both exists and does not exist.¹

Therefore, although it is a not altogether trouble-free analysis, it would be possible to say that the Buddhist concept of no-self questions the substantiality of a sense of self that is the product of over-intellectualised self-views. If there is an authentic self then it resides in experience - in the momentary awareness that we have of the flowing existential stream of phenomenal interactivity. The objective of meditation practice, then, is a lowering of parameters in regard to the autonomy of selfhood, and in the transcendence of a mental gateway separating self from other, self from the world. The sense of self that undergoes this transition from self-oriented consciousness to liberated consciousness is still a self but it is not a self that is bound by habitual attachments and is thus experienced in meditation practice as a relatively insubstantial part of the greater psyche. To understand the more esoteric texts of Buddhism requires a use of language that is disentangled from the Cartesian ego.

¹ See, for example T. E. Wood, 1994, *Nagarjunian Dispensations: A Philosophic Journey Through an Indian Looking Glass*. University of Hawaii Press, Honolulu, p. 15.

III. MEDITATION, COGNITION, AND TRANSFORMATIVE AWARENESS

The problem requires the introduction of relatively non-differentiating perspectives to balance the analytic tendencies of disciplinary approaches.² It is a matter of reinstating the value of semiotic flow, the kind of linguistic flow found in poetic and colloquial language, against the hegemony of symbolic stasis, the language contained within the boundaries of prescriptive grammars and institutional rationalities. Science cannot shield us from our own subjectivity; the methodologies that go into the 'construction' of the subject need to be thoroughly understood in order to conceive of better, less interventionist methodologies in the future. They would be educational methodologies designed to provide a balanced approach to living by developing a synthesis of the analytic, 'task-positive' or task oriented, style and the intuitive (default mode) style of learning and cognition. This re-definition of cognitive styles into the 'task-oriented' and 'default mode' styles has become prominent since the turn of the new millennium through fMRI studies in secular meditation techniques which recognise two independent neural networks in the brain. One follows the cortical regions (the task-oriented mode) while the other lies beneath it (the default mode) and includes the *insular* region which is identified with self-referencing cognitive processes.³ Meditation is now believed to work particularly well with this default mode in promoting cognitive change by bringing about 'sustained attention to interoceptive sensations of respiration or bodily sensation.'⁴ This internalised attention interrupts the habitual self-referencing patterns that create egocentric perceptual behaviours. The effect of interoceptive attention in other words is to free the subject, emotionally and perceptually, from over-attachment to external events and preoccupations. Instead of the automatic conceptual patterns that sometimes impose on behaviour, a more flexible and adaptive mode of cognitive organisation emerges, one that can be characterised as a semiotic flow, as the neuroplasticity of human creativity and which can complement the dominant mode of task oriented thinking and behaviour.

The problem of the boundaries drawn around subjectivity first presents itself then as a contradiction between rational thought and holistic or poetical cognition. But bridges can be built between the disciplined thought of logico-empirical investigation and the internal quest for 'psychic' meaning and value, even if only in the Jungian sense. It may be remembered that C. G. Jung saw the profound, underlying form of consciousness, the *alaya vijñana*, as a collective unconscious containing archetypal figures resembling spirits and *devas*. His work demonstrated that psychology sometimes needs to use the language of

⁴ Ibid.

religion and mysticism to properly describe the workings of the human Psyche. The *external* view produced by logico-empirical approaches to knowledge seems to radically exclude the *internal* experience of hermeneutic subjectivity and to see it as ‘mere’ subjectivity as opposed to the detached and impartial perspective of the empirical gaze. But the task oriented and default-mode areas of the mental sphere can work together as we learn to both think and to not think; to objectively analyse our immediate environment or to simply be aware of the ebbs and flows of the present moment.

The term ‘cognition’ has been employed here in preference to alternatives such as ‘consciousness’, which seems dependent on an opposition to ‘unconsciousness’; or to ‘mind’ which similarly depends on an opposition to ‘body’. However, cognition should not be confused with the notion of ‘cognitivism’ which tends to be used as a signifier for the type of mentation that operates through a process of symbolic manipulation, deduction and inference. These latter aspects of cognition are related here to the ‘analytic’ modality and always contrasted with the equally valuable cognitive modality of the ‘global’, the intuitive, pre-symbolic and undifferentiated modes of knowing and understanding.

‘Cognition’ then refers to the whole spectrum of consciousness, including the subliminal and hardly-noticed sensorimotor interactions that are regarded here as forming the fundamental cognitive basis for the so-called higher cognitive functions. Cognition, then, basically means ‘knowing’, as the Greek root of the word demands: it means ‘knowing’ in both the sense of knowledge acquired through logico-empirical investigation and in the sense of knowledge acquired through direct experience, through intimate acquaintance with the content of our environment.

The terms ‘global’ (or non-analytic) and ‘analytic’ refer here to cognitive states or cognitive styles characterised respectively by low differentiation and high differentiation. A non-analytic style, by this definition, will describe the person’s preferred mode of perceptually-guided activity as a means of dealing with the world in a holistic or ‘whole-istic’ manner, as a continuum of contextually-related (but not highly articulated) phenomena. The analytic style, meanwhile, is characterised by a tendency to articulate the world into a highly complex multiplicity. As most people utilize a mixture of the two main styles, even though one style may predominate over the other, it can be hypothesized that everyone is capable of operating within one or both styles. In the field of Buddhist contemplative practices, the global style has been correlated with certain *Mahayāna* practices - tranquility meditation and emptiness - while the analytic has been compared with the mindfulness techniques characteristic of the Theravada schools.

The two basic forms of meditation style are sometimes found working together; they are never contradictory opposites but rather the characteristics of two different cognitive states: a) the ‘global’ state: characterised by emptiness, the world experienced as an undifferentiated continuum; and (b) the ‘analytic state’: characterised by the tendency to differentiate and

categorise phenomena. The analytic cognitive style can be seen to operate in Buddhist practice in its deconstruction of *samsaric* habits of thought, that is, in its tradition of 'mindfulness' (*sati*), where practitioners adopt an objective and detached approach to their own thoughts and actions. Since the mid-nineteenth century modernisation of the Buddhist Sangha in south-east Asia, this analytic, 'open-monitoring' meditation method has become dominant. Its modern theme of moment-by-moment self-analysis attracted the attention of western psychologists, and successful secular versions have been developed and used by psychologists in areas such as Cognitive Behavioural Therapy (CBT).

IV. PHENOMENOLOGY, DECONSTRUCTION, AND THE VOID

The texts produced by the 'global' and non-analytic cognitive state are not organised according to a strictly sequential schema. They are rather, to use a Deleuzian term, 'rhizomatic', that is, they do not grow upwards from a central root system as trees do, but by spreading out laterally as rhizomes do and by obeying a law of circular causality:

any point on a rhizome can be connected to any other point... semiotic chains of all sorts are connected to quite diverse modes of encoding, chains of biological, political, economic and other kinds...

A semiotic chain is like a tuber agglomerating quite different kinds of acts - linguistic, but also perceptual, mimetic, gestural, cognitive ones: there is no language in itself, nor any universality of language, but a concourse of dialects, patois, slangs, special languages ... It develops by stems and underground flows, advances along river valleys or railway lines ...⁵

The wide distribution of the Perfection-of-Wisdom texts, around the beginning of the common era (CE) marked the beginning of the Mahayana tradition. A semiotic chain was developed in these texts between the notions of wisdom, the great mother and emptiness. The fundamental theme of empathy is explored through the semiotic connection between wisdom and the mother; one cares for the mother as the mother cared for one. She is the mother of *even* the Buddhas, so she is the source of wisdom. Her world is empty of substantial 'things'; it is pure experience. There is no universal language:

where there is emptiness there is neither form nor feeling, nor perception, nor impulse ... nor object of mind ...⁶

But then the text reminds us that there are two cognitive styles that are complementary rather than oppositional:

form is emptiness, and the very emptiness is form, emptiness does not

⁵ Gilles Deleuze, Paul Foss and Paul Patton, in *Ideology and Consciousness*, No 8, Spring, pp. 49 - 71, pp. 52 - 53.

⁶ Edward Conze, 2002, 'The Heart of Perfect Wisdom, Short Form' in Perfect Wisdom, Buddhist Publishing Group, Totnes, UK, p.171.

differ from form, nor does form differ from emptiness...⁷

Each issue or theme is treated as an object of meditation that draws to it a centrifugal force of inspiration and insight and which acts as a temporary centre that relates back, like the tributaries of a river rather than through the roots of a Chomskian 'linguistic tree',⁸ to the central question.

These present-day cultural theorists – Deleuze, Foucault and Kristeva – find their phenomenological foundations, not just in Nietzsche, but even more profoundly in the writings of Edmund Husserl. The theoretical similarities found between their 'continental' semiotic philosophy and that found in the Buddhist texts become clear when seen from Husserl's perspective. Like that of the Buddhists, his system focuses on the cognitive processes that allow us to participate in the intersubjective relations of our world rather than on a positivistic analysis of that world. For Husserl, this analysis of the world, this 'natural standpoint', must be disconnected in order to 'go to the things themselves', to turn away from the outside world and concentrate on consciousness itself.

This notion of a cognitive disconnection is found throughout the Buddhist doctrines in the notion of *suññata* (voidness, emptiness or nothingness). The ultimate aim, in the mental practices formed around this doctrine, is the 'sign-less concentration of mind' (*animitta cetosamādhī*). In the *Cūḷasuvāṇṇasutta*, this state is arrived at through a series of such mental disconnections. One disconnects from perception of the 'assembly of men and women', from perception of earth, through to the 'base of neither-perception-nor-non-perception' and nothingness as sign-less concentration. Therefore, the notion of voidness is seen, in the Pāli canon, as an absence of signs, symbols and signifiers, a state of bare awareness (*sati*).

Husserl's idea that we all carry a 'natural thesis', a thesis about the natural world that is 'present to hand', is related to the Lacanian view of a 'symbolic order'; a linguistic ordering of our perceptions of the world. The goal of both phenomenologists and Buddhists is a reduction in the influence of this cognitive nucleus of pre-conditioned relations and ideological conventions. The real theme here is the reception of Buddhist philosophy in the West. To talk about Buddhist philosophy is not to suggest that Buddhism is a philosophy rather than a religion; that's an old debate. It is often now recognised that Buddhism is *more* than a religion, that it is a religion but also a philosophy, a system of psychology and a system of phenomenology as in Edmund Husserl's search for a form of pure, unadulterated consciousness.

Meditation would be a helpful tool for western phenomenologists because their aim is to disconnect the image we all carry of the 'way the world is'. The way to be aware of things in a direct, unconditioned act of perception is to put this rationalistic thesis about the world "in brackets". To put such a

⁷ Edward Conze, 2002, 'The Heart of Perfect Wisdom, Short Form' op cit.

⁸ Ibid, p. 53.

thesis or ideological standpoint into brackets is to separate it from immediate consciousness, not to suppress it, but to hold it in a disconnected state so that it can be clearly seen as a particular perspective, thus leaving the process of *sati* or bare attention in its unconditioned state. Husserl calls this act of perception an *epoché*, “a certain refraining from judgment” (Husserl, 2012: 58). What is disconnected is a ‘Natural Thesis’ about a ‘fact world’ that is always already ‘out there’. His method for attempting to attain pure consciousness is to subject this thesis, this internal commentary on the world, to a ‘certain suspension’ (2012: 57).

This method bears a certain resemblance to the practices revolving around the notion of *suññatā*, the concept of nothingness or emptiness. Most Buddhist disciplines and schools employ the practice of *ānāpānasati*, a certain method of focusing on the respiratory system and centering awareness in the internal (*ajjhata*) sphere of cognition rather than in the external (*bahiddhā*) sphere of the objectively perceived outside world. The aim is to arrive at a state or perceptual mode in which the conceptual and symbolic representations of the world are minimized or suspended. When experience is transposed into the symbolic sphere, when it is put into order and categorised by the constraints of language, it is transformed and consequently has its existence in a separate dimension where the world is interpreted as if one were reading it as a text. It is as if an inner voice, a voice of conditioned thoughts, is constantly explaining and describing the world of experience.

Suññatā is translated as voidness, emptiness or nothingness. The techniques associated with the notion are designed to instil silence in the consciousness of the practitioner, to ‘still the mind’. In the *Culasuññatāsutta*, monks are advised to disconnect from perception of the elephants, horses, men and women of the village and focus on the Sangha. The focus then shifts from the Sangha to the forest, the earth, the base of infinite space and so on until reaching a state of “the sign-less concentration of mind” (*animitta cetosamādhi*). Thus the Voidist method, coming directly from the notion of *Suññatā*, involves a series of disconnections from the symbolic order, the propositional ‘linguaging’ of the world. It is a disconnection of the inner voice of conditioned thoughts and responses that is constantly explaining, describing and ordering the world of experience.

The ‘symbolic order’ is a term constructed by Jacques Lacan, a theorist who mixed together a new reading of psychoanalysis with the linguistics of Ferdinand de Saussure and the phenomenology of Husserl. It is a way of grouping together Husserl’s ‘Natural Thesis’ with all of the different perspectives that might be targeted by his method of suspension. As the language acquisition of a child progresses, it learns the social rules and how to play the social game with all its deeply embedded conventions of speech and action. An adult gradually emerges, equipped with the necessary knowledge skills and armed with the prescribed grammatical tools with which to interact with other subjects. An ‘order of things’ has been established and the person is oriented within a social, psychological and ideological environment. In

Buddhist philosophy this order of things can be expressed as *sutamayā paññā*, the form of knowledge based on language and learning. A higher form of knowledge, or wisdom, is expressed by the term *bhāvanāmayā paññā*, wisdom based on mental development and meditation and which produces insight rather than propositional representation.

There are many intersections between the two methods, especially in regard to the notion of *anatta*, or non-self. The notion of a substantial 'self' has been radically questioned by those who have followed Husserl, those so-called postmodernist theorists like Lacan, Michel Foucault and Julia Kristeva, who are thoroughly rooted in Husserlian thought and who see the ego or self as a 'subject in process', a subjectivity that is constantly changing and that has no true substantiality or permanence. This subject in process exists in a constant interactive relationship with its significant objects: its foundations lie in Desire, and if the desire is too great for a particular object, that object has an exorbitant effect on the subject (Kristeva, 1982). In the same way, the five aggregates are the five aggregates of clinging (*panchupādanakhandā*). We become attached to forms, feelings, sensations, and so on while the attachments, the objects, and the subjective experiences, together, create consciousness. The idea of a substantial self is implicit in this consciousness. There is, therefore an acknowledgement of desire, attachment, and clinging as the major driving forces behind subjectivity, in both systems. Both phenomenology and Buddhism see this thirsting as fundamental in the construction of the individual.

So far, Husserl's interest in Buddhism has hardly been mentioned. He had already formed his theories and methodologies before coming into contact with the Buddha's teachings. A colleague of his had produced a German translation of a substantial part of the Pali canon. When he read it, it had quite a dramatic effect on him. He realized that what he was reading was not just an academic philosophy or a set of religious prescriptions but a methodology for living, an art of living; a *lebenswelt*. He must have seen the significance of the term *bhāvana*, which is often used simply as a word for meditation but that, on a deeper level, refers to 'mental development'. This is not just a development that leads to greater mental abilities in the areas of logic, conceptualisation and propositional grammar but a development leading to intuition, insight, and the eventual transcendence of propositional thinking, to 'cessation' (the cessation of volitional formations). He would have seen that the Buddhist idea of wisdom was similar to his own, signifying a higher degree of knowledge than that produced by the objectifying conceptualisations of logico-empirical language.

Such wisdom is attained through contemplative practices and all the methodologies that must be learned in order to appreciate the calmness of mind that produces insight and a purified intuition. The practices of mindfulness, for example, are methodologies involving the focusing of attention on the experience of the present moment in order to free consciousness from its customary objects and complex thoughts. In a similar way, Husserl's method involves a 'bracketing' of the conceptual systems that are hindrances to the

phenomenological ability to see existence in its pristine state, as emerging out of itself rather than in a formulaic manner, in a formulated mapping of the world. His method of 'transcendental reduction', the bracketing out of our received perceptions/explanations of the natural world, is a pathway to transcendental pure consciousness just as the Buddhist path leads, by way of the cessation of conditioned thought patterns, to the cognitive freedom of enlightenment and the vibrant emptiness of *suññatā*.

Although the poststructuralist notion of 'deconstruction' refers to a critical methodology associated with Jacques Derrida, its epistemological foundations lie in the philosophy of Nietzsche, and deconstruction resonates in certain ways with the Buddhist practice of mindfulness meditation or 'bare attention' (*sati*). Nietzsche views the construction of meaning and value as taking place within a highly symbolic system preconfigured by the operation of certain foundational value oppositions. Such oppositions are always already in play when culture and science come to define tradition and reason and when a logic of contradictions informs the epistemology of both. Foucault acknowledged the fundamental influence that Nietzsche had on his philosophical development in his essay, *Nietzsche, Genealogy, History*.⁹ In this work, it is clear that Foucault based his post-structuralist epistemology on Nietzsche's attempt to dislodge the privileged 'origin'; the extrapolation of present needs and desires onto an imagined and sacrilegious past. It is this 'sacred' origin that anchors the values and meanings of the present to a distant 'essential' truth. This essential meaning is traced back to its 'roots' in classical Greek and Latin texts and and the pious myths of Judeo/ Christian lore, forming a 'white mythology', Derrida's expression for the notion that a profound mythology underlies and informs Western rationality, the Nietzschean *Grundglaube* (fundamental belief), the belief in a primordial differentiation between good and evil, a misplaced faith in the synthetic terms or things which emerge from such radical opposition.

The primitive meaning, the original, and always sensory and material, figure... is not exactly a metaphor... It is a kind of transparent figure, equivalent to a literal meaning (*sens propre*)... It becomes a metaphor when philosophical discourse puts it into circulation.¹⁰

The original figure soon becomes a mere token because when it is taken up in discourse, it enters into a symbolic domain that is governed and informed by the principle of the opposition: it becomes the subject of desire or aversion according to the cultural context and period within which it emerges or re-emerges.

Deconstruction is an analysis of the 'minute particulars' of any worldview that has become 'accepted as the correct one', an analysis out of which emerges a

⁹ Michel Foucault, 1971, 'Nietzsche, Genealogy, History', in (ed) Paul Rabinow (1986), *The Foucault Reader*, Penguin, London, pp. 76 - 100.

¹⁰ Derrida, Jacques. 1982, 'White Mythology: Metaphor in the Text of Philosophy' in *Margins of Philosophy*, Harvester Wheatsheaf, Hemel Hempstead, pp. 207 - 271, p. 211.

‘rather different picture’ than the one previously held.¹¹ The splitting of the sign into signifier and signified, into ‘phonic’ and ‘graphic’, and into utterance and concept reveals the whole of a signifying process to be a ‘structure of difference.’¹² The quest for the ‘ideal’ brings forth a symbolic domain where attention is taken up entirely by a fascination for value-carrying signs: everyday attention to the interactions and experiences of the present moment is dominated by a habitual bestowing of meaning and value onto every event and percept.

To measure reality is to place too much faith in the power of the analytic modality, to privilege structure over play; and in terms of the human sciences, to privilege psychometric evaluations over personal interactivity. This leads to a fundamental belief in the *opposition of values*¹³ and in the existence of a Platonic world beyond the senses, a logical, absolute and ideal reality beyond the imperfection of interpretive human cognition. The third-person stance that anchors the empirical viewpoint becomes part of a process that obscures the sensory image that inspired the original naming. This is why the practice of bare attention follows a middle path (*madhyamika*), an approach that unselfconsciously ‘deconstructs’ the metaphysical oppositions which arise in the mind in the process of observing the object.

Any text can be ‘deconstructed’ if its structure can be revealed, if the network of oppositional values which set the parameters for discourse within the particular field can be demonstrated. Like Wittgenstein’s language games, the targets of deconstruction are often shown to be shallow referential systems whose meanings and values emerge from cultural structures rather than from a super-sensible truth attached to archaic origins. Beneath the apparently rational knowledge of a society lie the silent, socially constructed cognitive processes that inform that rationality. Truth is always compromised by the fact that a value system is already in place (in any culture), that it dictates the parameters within which the search for truth can operate, and that value systems can discontinuously change within cultures.

Within cognitive experience, despite philosophical logic, theology and careful scientific experimentation, transactions take place between the emotions and profound cultural identifications and dependencies;

Metaphysics - the white mythology which reassembles and reflects the culture of the West: the white man takes his own mythology, Indo-European mythology, his own logos, that is, the mythos of his idiom, for the universalised form of that he must still wish to call Reason.¹⁴

¹¹ G. C. Spivak, 1976, “Translator’s Preface” to Jacques Derrida (1976) *On Grammatology*, John Hopkins University Press, Baltimore, p. xiii.

¹² Ibid, p. xvii.

¹³ Nietzsche, Friedrich. 1998, *Beyond Good and Evil: Prelude to a Philosophy of the Future*, [trans] Marion Faber, p.7. ‘Der Grundglaube der Metaphysiker ist der Glaube an die Gegensätze der Werthe’.

¹⁴ Jacques Derrida, 1982, ‘White Mythology: Metaphor in the Text of Philosophy’, op cit, p. 213.

Derrida describes the dominant third-person, task-oriented mode of cognition as a mythology that has gained supremacy to such an extent that it is now known as 'Reason'. He sees clearly that western science, although it has produced so much, has no right to set itself up as scientific philosophy. By denying the subjective it cannot successfully describe reality or satisfy its quest for certainty. There is often a mistaken sense of certainty at the centre, and the semiotic traditions holding it in place change frequently as a result of tension generated by changing social demands and by a general sense of personal discontent (*dukkha*). It is a falsely-reassuring certitude made necessary by the anxiety resulting from an experience of being 'caught by' the game, of being somehow 'at stake' in the game.¹⁵

This is the same anxiety caused by what Buddhists call '*tanha*' (thirst, craving, attachment), a vague awareness that there is some deeply desired specific outcome at stake. In the twelve 'links' (*Nidāna*) of the Buddhist chain of circular causality, *tanha* precedes *upadana*; that is, thirst leads to attachment. A 'certain mode of being implicated in the game',¹⁶ together with an investment of self, desire, and the need to belong, conspire in bringing about the circumstances for a deep attachment to particular outcomes, to a fear of losing the game. Such an urgent need to win and such a profound anxiety at the thought of losing - or of 'being lost' - create the conditions for the emergence of an epistemology of certainty, an absolute and formal knowledge able to answer all questions and resolve all disputes. A vocabulary worthy of representing such a truth requires formal definitions created from semantic histories leading back to distant origins, to an archaic palimpsest, a parchment that has been erased and then reinscribed.

This mythology, which clings to 'bare' experience and which deludes us into believing that our objective gaze produces empirical truths, is a kind of conceptual screen that creates a distance between understanding, desire, and the world. The early Buddhists realised through their mindfulness practices that it was possible to differentiate between the object itself (in its 'suchness') and the value-laden perspectives that habitually emerge in recursive situations. They found that by suspending, as it were, these culturally created perspectives, they could gain a less distorted view of the world. Their practices were designed to deconstruct all habitual attachments to objects thus liberating the attention from unconscious desire. But desire itself was not an object of judgement or suppression; it was noted and recognised by a detached mindful attention which chose 'immediate coping' as the foundation of its ethical practices instead of a codified and prefigured morality.

The patriarchs of this Enlightenment - Descartes, Locke, Kant and others - treated reason as if it were a panacea for all social ills. Rational beings would be cogs in an infinitely rational machine, the 'social body'; and a correspondingly rational mental hygiene would be established that would protect this perfectly

¹⁵ Ibid, p. 252.

¹⁶ Ibid, p. 213.

ordered and reasonable utopia from any corruption by irrational thought and behaviour. The dream has been repeatedly criticised and deconstructed, but is still embedded in the disciplinary orientation of Western institutions; and in the get-tough-on-crime speeches of ambitious politicians. The rational society requires rationalised behaviour from its citizens (the elements of its totality) and it demands disciplined, highly differentiated acts of perception. This involves the establishment of a habitual, third-person, objective viewpoint on the world. It is not that the third person view, the objective gaze, is purely the creation of science, but that science has given it enormous precedence over other perceptual attitudes.

V. CONCLUSION

In Foucault's philosophy and in the fusion of psychoanalytic theory and semiotics of Julia Kristeva, the positing of a 'semiotic' domain of pre-symbolic cognition that prefigures and anticipates the forming of the symbolic realm of formal language seems to suggest a foundation for the establishment of a language in which to discuss Asian epistemologies. Edward Crangle's idea that certain meditation techniques favour a non-analytic, undifferentiated cognitive style while others favour a more analytic, more differentiated style resonate strongly with the Kristevan notion that a pre-symbolic cognitive flow precedes the establishment of symbolic, conceptualised understanding. Her pre-cognitive flow, where awareness is more visual than verbal, resonates with the non-analytic cognitive style, while her 'conceptualised understanding' represents the analytic style. Nagarjuna would be happy with this configuration as an example of the workings of the 'middle path' in which no absolute opposition between objective and subjective can exist. Patterns emerge around the construction of subjectivity along the lines of two distinct, contrasting, and non-interventionist cognitive methodologies or modalities. The opposition between the third-person, objective gaze of the scientist and the immediate and intuitive perspective of the meditator is dissolved in the realisation that ultimate truth is ineffable.

THE NEED FOR BUDDHIST VALUES IN WESTERN SOCIETY WITH SPECIAL EMPHASIS ON CENTRAL EUROPE AND EDUCATION

Prof. PhDr. Milada Polišínská*

Abstract:

The paper is introduced by a brief overview of the origins and development of knowledge on Buddhism and its practice in Central Europe and especially in Czechia and including the values dominating Central European and Czech society nowadays. Then, the paper concentrates on its key focus, which is education and the young generation in general from the perspective of today's crisis, uncertainty about how to solve it, and the apparent and alarming inability to solve the current situation. The conclusion of the paper suggests that it would be necessary to draw much more systematically from Buddhism because Buddhism contains values and shows a path that is missing in today's Western/ Central European society and which is the only path leading out of the dead end in which apparently Western/ Central European society find itself today.

Keywords: *Buddhism; Education; Four Noble Truths; Noble Eightfold Path; Central Europe; Czechia; Poland; Hungary; Communism; Lotus Center in Prague; Dharma Gate Buddhist College; End of Western civilization; Venerable Dhammadipa.*

I. BEGINNINGS OF BUDDHISM IN CENTRAL EUROPE

The first encounters of Central Europeans with Buddhism date back to the Middle Ages.¹ The frequency of contacts increased in the 17th century and the Enlightenment period. However, it was knowledge mediated through travelers, priests, and other Europeans who visited Asia and had been exposed

to the Buddhist environment, or it was knowledge and experience acquired from colonial powers in Western Europe, France, and Great Britain.²

Knowledge and practice of Buddhism began to open its way to Central Europe in the 1920s. In the academic sphere, Departments of Indology or Oriental Studies were inaugurated at Central European universities, where outstanding scholars taught and who were not only academics but also important disseminators of Buddhist knowledge in academia and among a wider public. It was for example Vincenc Lesný in Prague,³ and Otakar Pertold, the first professor of religious studies in Prague, who, according to the testimony of many of his contemporaries, was a Buddhist and managed to survive the domination of the totalitarian regimes of Nazism and Communism.⁴

In the 1920s and 1930s, Buddhism spread in Czechia more than this brief insight can offer. Personal trips to South and Southeast Asia for spiritual purposes increased, and a pleiade of European spiritual thinkers came to Prague, although not exclusively Buddhists, but often esotericists or mystics, yet significantly influenced by Buddhism, such as Paul Brunton or the theosofist Rudolf Steiner. A significant figure in Czech mysticism who cannot be left out of the list was Karel Weinfurter, from whom many Czech practitioners of Eastern philosophy and yoga drew their inspiration.⁵ František Drtíkol, who is today known mainly as an art deco photographer, is considered the founder of Czech Buddhism. He translated a number of Buddhist texts into Czech.⁶ We could mention many more names in this context.

II. TOTALITARIAN REGIMES AND SPIRITUALITY

The development of Buddhism and spiritual movements in general in Central Europe was tragically interrupted for decades by the Nazi occupation of some countries and satellitization of others from 1939 to 1945, and soon after the end of the Second World War by a series of communist coups triggered and supported from Moscow. The incorporation of the Central European states into the Soviet sphere of influence lasted from 1948 to 1989. This had a disastrous effect on the development of spiritual life, including Buddhism, in this region.

Religious education in schools was banned, families who openly professed faith were persecuted and their children were used as a tool to force their parents to abandon their faith, priests were persecuted as enemies of the new

³ Vincenc Lesný (1882-1953), from 1924 Professor of Indology at Charles University in Prague, 1937-1939 Dean of Philosophical Faculty (in 1939 the Czech universities were closed by the Nazi occupational regime). From 1945 Lesný was Director of Oriental Institute in Prague. He established Indické sdružení [Indian Association], was co-founder of the journal *New Orient* and in 1952 became one of first members of Czechoslovak Academy of Sciences.

socialist society, monastic orders were dissolved and banned, and churches were pushed to the very margins of society. However, the situation was not the same in all Central European countries. The worst was in today's Czech Republic, then Czechoslovakia. In Poland ⁷ and in Hungary, ⁸ the approach of communist authorities towards the church was at some periods slightly milder. I would very much like to explain the reasons for this development in more detail, but that would take us too far from our topic, which focuses on Buddhism.

III. PRACTICING BUDDHISM UNDER COMMUNIST REGIME IN CENTRAL EUROPE

Even under communism, there were small groups in Czechia that were dedicated to Buddhist meditation. Without institutional affiliation, no groups were allowed to exist, as they would be labeled as unauthorized organizations conspiring against the regime. Therefore, the Buddhist meditation groups were usually connected with the practice of yoga, but yoga did not have an easy situation either. The communist security knew well, or assumed, that the yoga environment was spiritually oriented, and therefore the few yoga groups that existed were hiding under the guise of physiotherapy and rehabilitation in hospitals and medical centers.⁹ The surveillance by the communist secret police, sanctions at work and pressure on the family, for example, by a threat of not allowing children to continue their studies at the high school or university, etc.- the regime had many methods, and a strong determination of Buddhists was necessary to resist them. However, these more than modest conditions and many hardships gave rise to a number of exceptionally experienced, profound and wise personalities. The Buddhist foundation developed exceptionally among them and bore its fruits, from which the rest of us eagerly drew in the 1990s and early 21st century.¹⁰

Anyone who remembers these yogic-Buddhist, or rather Buddhist with a small portion of yoga activities, cannot forget them. The meetings took place in remote places and in rather primitive conditions of abandoned or unmaintained rural cottages, with only a small groups of people in attendance. Maintaining a vegetarian diet required considerable ingenuity due to the lack of vegetarian ingredients and even the limited supply of vegetables and fruits. Buddhist texts were smuggled across the border and secretly translated and distributed, and there were only a few people who made it to Indian ashrams during a brief liberal period of the so-called Prague Spring of 1968.¹¹ But many

⁷ Snyder (2003): p. 275p.

⁸ After the suppression of the Hungarian uprising against the communist dictatorship by the Soviet army in 1956, a somewhat milder communist regime was established, which was nicknamed Goulash Communism.

¹¹ Again, Milada Bartoňová has to be named, and also Jiří Čumpelík and Mírko Frýba, who later became a Buddhist monk.

eyewitnesses say that it was these conditions of modesty and renunciation that opened to the practitioners a Buddhist path.

A special case is Poland, which is a country with a very strong Catholic tradition. A position of Catholic church increased especially after the Pole Karol Wojtyła became the Pope John Paul II. The Catholic faith helped Poland to face difficult historical periods in the 20th century, Nazism and communism,¹² and its dominant position made the space for Buddhism relatively smaller. Despite its prevailingly Catholic orientation, also Eastern spirituality, particularly Buddhism, developed in Poland benefiting from relatively more favorable conditions in the country, at least at some periods of 20th Century. In the 1970s, the development in Poland undoubtedly meant a strong flow of spiritual development, both Christian and Buddhist. For example, the travels behind the Iron Curtain were in many cases easier for Poles than for Czechs. In the 1970s, Polish university students were able to go on trips to India, Sri Lanka, and the Far East, as the author can testify based on own observations, and these experiences certainly impacted young people significantly. However, in the 1980s, the tightening of communist restrictions in Poland due to the development of the powerful opposition movement Solidarity put an end to this relative freedom.

IV. BUDDHISM AFTER COMMUNISM – 1990S AND BEGINNING OF 21ST C. IN CZECHIA

After the fall of communism and the restoration of democracy in Central Europe in late 1989, conditions changed quickly in this field as well. Catholic priests had to come from Poland to Czechoslovakia,¹³ which was a real desert in terms of spirituality and had a reputation as the most atheistic European country, which also had its deeper historical roots,¹⁴ to fill the vacancies in the church administration, in parishes, etc. Also teachers of Eastern religions – Buddhists – came from Poland. The similarity of Czech and Polish languages made the communication easier.

Buddhist monks and teachers from abroad, prevailingly from Asia, began to come to Czechia, for instance Bhante Wimala and Lama Ole Nydahl, and gave public lectures where the attendance was very high. Buddhist literature was published by domestic authors and in translations. A number of centers were established, such as the Lotus Center in Prague,¹⁵ which provides even today a home for Buddhists of several schools. Czechs began to travel abroad,

¹² Snyder, op. cit.

¹³ In Czechia, approx. one tenth of Catholic priests are Polish. Mészáros, Pavel. *Rodinný život mi chybí. Ale žádná žena by se mnou nevydržela, říká kněz Czendlik* [I miss the family life. ¹⁴ This is caused by the interpretation of medieval Hussite movement, and by identification of Habsburg monarchy with catholicism, or rather by identification of anti-Habsburg position with Czech protestant religion and tradition.

¹⁵ <https://www.centrumlotus.cz/en/>

mainly to India, Thailand, Sri Lanka and other Buddhist countries, in search for a deeper exposure to Buddhism. Buddhism as part of religious studies returned again to Czech universities and the Academy of Sciences.

I don't want to idealize too much this period of hectic developments, when, in addition to what has been said, a wave of New Age movement appeared and a search for a spiritual path mixed from time to time with superficiality and amateurism. Nevertheless, this period of flowering lasted throughout the 1990s and the first decade of the 21st century; it was a remarkable time of connection of the old generation of practitioners with the new enthusiasts.

V. CHANGES AS THE 21ST CENTURY PROGRESSES

It seems that the Buddhist scene in the Czech Republic today has changed compared to the first decade of the 21st century, and I am afraid that not for better. Buddhist teachers no longer come here, and if they do, they do not give lectures to a wider public as before, and usually only resort to their narrowest circle. At least the author of this article, who has been closely and actively following these events, has not noticed any substantial activity. Those spiritual teachers who were previously active in Czechia have mostly transferred their activities to other countries, as far as can be ascertained from the Internet.¹⁶

In respect of other Central European countries, in Hungary, another Central European country, the situation is different and seems to be more favorable to Buddhist values. Although from the political view, Hungarian President Viktor Orbán, who has been the leading figure in Hungarian politics for many years, is being criticized for his departure from the European political mainstream of liberal democracy and for some his accommodating steps towards Vladimir Putin, *Dharma Gate Buddhist College*¹⁷ has been operating in Budapest, the Hungarian capital, for many years, providing Buddhist education and a variety of spiritual activities and meetings. A *Buddhist stupa* has also been built in Hungary, one of the biggest or the very biggest stupa in Europe.¹⁸

Other Central European country that we are examining in this brief survey is Slovakia, formerly part of Czechoslovakia, where the spiritual life is clearly at a much weaker level.

Buddhism in a Time of Material Abundance and Prosperity

So far, I have briefly described and positively characterized the 1990s and the first decade - the decade and a half - of the 21st century as a time of promising development of spiritual life in Czechia, and of a society open to seek and positively accept Buddhist teaching and Buddhist teachers who often came to this country.

¹⁶ For example, Venerable Bhante Y. Wimala.

¹⁷ *Dharma Gate Buddhist College Budapest*, last accessed on [February 12, 2025], available at: <https://dghbc.hu>

¹⁸ Molnar, Jozsef. *Zalaszentőr Stupa: One of the Biggest Stupas in Europe*, accessed on [February 12, 2025], available at: <https://themindcircle.com/zalaszentor-stupa/>

Of the domestic figures, few local Buddhists who went through a challenging path in search for knowledge during the communist era, without having a chance of contact with the Buddhist environment in South and Southeast Asia and the Far East, with minimal or no contact with Buddhist teachers, had later a significant influence and now enjoyed a highest respect. Very influential were Eduard Tomáš and his wife Míla, valued for their high spirituality, and also Milada Bartoňová. A different path, probably thanks to the fortunate circumstances of the Prague Spring, was chosen by Thomas Peter Guttman, who, after graduating from Charles University in Prague went abroad, continued his studies and became a Buddhist monk and teacher under the name Dhammadipa. He is now back in Czechia serving to the great benefit of the local Buddhist community.¹⁹ Yet, contrary to expectations and assumptions, in the environment of abundance and prosperity that now prevails in my homeland,²⁰ both spirituality and physical moderation have sharply decreased, even though nothing prevents their development. The extraordinary generation of spiritual teachers has already reached an advanced age - they are mostly in their seventies, often in their eighties and older, and today we meet them exceptionally because human age takes its toll.

What was already evident around the mid-2010s has deepened and surfaced even more after the COVID-19 pandemic. In Prague and throughout the country, there are beautifully furnished yoga studios where beautiful and excellently trained instructors teach yoga. Many of them have also completed trainings in famous, often very expensive centers abroad, sometimes they also visited India, but everything is oriented primarily to a practice of various types of yoga - Ashtanga, Iyengar, Power Yoga, Gravid Yoga, Senior Yoga, Facial Yoga and other. However, there are just a few Buddhist centers²¹ in the country, all of them founded during the flourishing period described above. They continue to run their programs, and their management is a wonderful example of devotion, perseverance, and a true Buddhist approach. But they are less visible than they used to be and new ones do not open, or very exceptionally.

Not enough that we have in Prague several Buddha bars where people go to have alcoholic drinks, smoke not just cigarettes but also, something else, etc., and big golden Buddha statues are used to decorate these places. The same is the case of most of massage salons. Recently, it has even happened that Buddhist symbols and quasi-Buddhist behavior have been demonstrated in a very caricatured manner. The most bizarre situation occurred last year when one of the richest Czechs, tried for a very large-scale financial fraud amounting to billions Czech Crowns in value during the privatization²² of one of the largest

¹⁹ <https://www.dhammadipa.cz/cs/biography/>

²⁰ Although Czechs mostly complain, the truth is that the standard of living is high and the country belongs to the safest. The surveys and statistics confirm that.

²¹ A new center worth mentioning is the Shanta Vana Foundation and Meditation Center, founded in Bohemia by the venerable Dhammadipa. <https://www.dhammadipa.cz/cs/>

²² Privatization was the process of returning property nationalized by the communist

coal mining areas in the country, declared himself a Buddhist, wore a white silk top head and orange jeans and T-shirt and constantly disturbed the legal procedure by requesting time for Buddhist meditation and exercise, used quasi Buddhist gestures, ridiculed the lawyers and made the audience laughing.²³

It would certainly not be right to claim that a regime of oppression and lack of basic needs is needed for the development of authentic spirituality. However, the Middle Way (*Majjhimāpaṭipadā*) is very important, and Buddhism shows the true direction that we are currently missing.

There's a bad mood throughout the land

Now, I would like to address the topic from another perspective. In the period of enthusiasm and naive feeling that all problems are gone with the Iron Curtain being gone, the vocabulary used in official documents, in press, and also in diplomacy, in TV and media, correspondingly reflected expectations of positive developments.²⁴ Of course, there were many problems and I do not want to go deeper into this issue, and not everything was so nice – let's mention at least the 9/11. However, the prevailing narrative was positive, including narrative of European Union: common and shared European values, tolerance, cooperation, understanding, mutual support, non-aggression and such. If we say, common European values, it looks as very far from Buddhism, as the basis of European civilization is Christianity. But many of postulates – compassion, mindfulness, non-aggressivity, peace of mind, understanding, support, and other fundamental qualities, are common for both, Buddhism and Christianity.²⁵ It was very promising time.

Unfortunately, today, the situation is very different. At first, the early bird of the coming changes was rather humorous, when the Czech President Václav Havel, who had a subtle sense of the state of society and the atmosphere of the time, uttered a memorable sentence that was later widely quoted and went down in history: "There's a bad mood throughout the land."²⁶ I hope that the subtle and sad humor of this statement was not lost in translation. However, that was the very beginning, at least in Czechia.

Nowadays, no one mentions common European values, either in European Union, neither in Czechia. The main topic that has dominated the professional and public space for several years is catastrophic visions, going as far as

regime to its original owners. Despite the intention of correcting wrongs, the process was also affected by financial and property fraud, often on a large scale.

²³ <https://www.novinky.cz/clanek/krimi-jak-rikame-my-buddhisti-kolacek-ve-smokin-gu-s-motylkem-presvedcoval-soud-o-sve-nevine-40425995>

²⁴ The 1990s are today associated with the atmosphere of enthusiasm, relief, good expectations and trust in the future.

²⁵ In Czechia, for example, the following literature is available on this issue, primarily from domestic authors, with several titles in translation. Thích, Nhất Hạnh (1996), Scheufler (1992), Wolf (2014).

²⁶ For the first time Václav Havel used this phrase in his speech in Prague Rudolfinum Hall in 1997. Kaiser (2014): 222 – 228.

apocalyptic and post-apocalyptic ideas. This is something that did not exist at the end of the 20th and beginning of the 21st century. Centers and institutes for apocalyptic and post-apocalyptic studies are being established at universities, one of the most important of which is at the leading German university in Heidelberg.²⁷ European centers are specialized almost exclusively on Christian eschatology only, despite the fact that cosmologies and cosmographies of all world religions deal with the theme of end of the world, to put it short. However, all world religions, eschatologies and cosmologies deal with the end of the world, the Day of Judgment, as well as considerations of what happens to the human body after death - Christianity, Hinduism and others. Islam and Christianity are relatively close in this. According to Hinduism, very briefly, the world does not last forever, but is periodically destroyed and re-created and the time is cyclical in Hinduism. It gradually passes through four yugas (ages). Between every two ages there are 400 years of twilight of the previous one and then 400 years of dawn of the following age. Lord Shiva destroys the present world but next world is emerging on its place.²⁸

In respect of Buddhism, there are different Buddhist cosmologies. Certain traditional Buddhist ideas about the world are incompatible with modern science, and have been abandoned by number of modern Buddhists. The 14th Dalai Lama says that “my own view is that Buddhism must abandon many aspects of the Abhidharma cosmology.” He sees the mistakes of this traditional cosmology as not affecting the core of Buddhism (the teaching of the *Four Noble Truths* and liberation) since it is “secondary to the account of the nature and origins of sentient beings.”²⁹

The topic of the end of the world is not just a Central European topic, as shown for example by international Symposium “Precarious Water Futures and the End(s) of World(s) – an Integrative Dialogue Across Disciplines and Societies,” organized by India-German Centre of Advanced Studies in New Delhi.³⁰

If we dwell more on the topic of the end of Western civilization, on the one hand, this is not an easy theme, and it could at least strengthen an interest in this particular civilization and civilizations in general, which is generally quite low today for a number of reasons. However, I would like to point out that in the Western European civilization sphere, from the collapse of the Roman Empire to the present day, preachers and leaders have appeared always from time to time and continue to appear, predicting the approaching end of the world, Judgement Day, end of the civilization and other related fatalities.³¹

²⁷ Käte Hamburger Centre for Apocalyptic and Post-Apocalyptic Studies. University Heidelberg, Germany.

²⁸ Miltner (2001).

²⁹ Ibidem.

³⁰ ICASMP – M. S. Merian-R.Tagore International Center of Advanced Studies/ Metamorphoses of the Political. <https://micasmp.hypotheses.org>

³¹ These were chiliastic movements that appeared particularly in critical and turning

These preachers, of course, depending on the communication technology at the time, through sermons in medieval times, or via social networks today, had sometimes a large response, sometimes even hysterical, of large audiences, and some were able to trigger broad movements that sought to build a new society. I do not want to go into the teachings of Christian chiliastic sects and other movements here, but it should be emphasized that today's journalism about the end of civilization is nothing unusual in history, it has happened many times before, whatever the main reason was. It must also be acknowledged that today's wave of apocalyptic topics is not just a journalistic pursuit of attractivity, but has a real basis. It reflects deep-rooted existential anxiety, fear of the future, of the unknown, of the end, and of death.³²

In Czechia, there are at this time rather frequent public lectures on the end of European civilization and/ or end of Western civilization. These lectures are given by serious scientists, such as the leading world class Czech Egyptologist Miroslav Bárta,³³ whose specialization leads to understanding and knowledge of the development and end of the civilization of ancient Egypt, and other scholars. Their academic expertise and also responsibility allows them to speak on this topic in a qualified manner and then that is fine.

VI. EDUCATION

Approaching the conclusion of my paper, I would like to focus on education. Traditionally, in all or most publications about Czech education, we encounter a proud presentation of excellent education, which goes back to the 18th century, to the reign of Empress Maria Theresa, who implemented a very progressive educational reform for her time.³⁴ It suddenly catapulted Czechia to the position of the most educated or one of the most educated countries in Europe with almost zero illiteracy.

But where are we today? I will now skip education during the Cold War and the dominance of communist ideology in Czechoslovakia, when the structure, system and content of education completely corresponded to the Soviet model

points, especially in connection with the emergence and development of reformist Christian movements.

³² Recent pandemic of Covid-19 was without any doubt one of the sources of these feelings and there are many evidences that people still feel the time of Covid as an interruption or break of their life. The current war in Ukraine even increased the anxiety and stress. Hays, Hayden, Polišenská (2023).

³³ Miroslav Bárta (born 1969) is a Czech professor of Egyptology, an archeologist and politician. From 2011 he has been a leader of research in the archeological site of Abusir in Egypt and 2013 - 2019 a Director of Czech Institute of Egyptology. In 2024 he was elected a Senator. In addition to Egyptology, he has also been studying collapses, rises and falls of civilizations in an interdisciplinary research perspective and authored several books on this topic.

³⁴ Empress Maria Theresa in 1774 introduced an universal education for both boys and girls, consisting of compulsory six-year school attendance and a system of schools with teaching of reading, writing and arithmetic, religion, agriculture and, for girls, housework. A system of higher education was build on this foundation.

and marxist-leninist ideology. Let's look at the main features of educational reform after the fall of communism. Curricula have been revised at all levels of the education system, in many cases accompanied by a deep discourse on the objective interpretation of a number of issues. Borders have been opened for pedagogical and student mobility at both secondary and university levels. A new accreditation system was established and private schools of all levels, including universities, began to emerge.³⁵

A very painful issue that has been on the table for more than 30 years is the financial undervaluation of teachers. Under the communist regime, the teaching profession was very poorly paid, because the communist ideology³⁶ considered the intelligentsia to be a segment of the population that always tends to lean towards the bourgeoisie and therefore to treason. This was also related to the fact that the teaching profession was very feminized.

Although there were in the last decades repeated promises of correction and indeed, salaries were repeatedly increased, especially for primary school teachers, the teaching profession in the Czech Republic still remains financially undervalued. This is also associated with a number of other negative phenomena, especially in primary and secondary schools, including little respect for this profession, a tendency towards formalism, reluctance to engage more deeply and sincerely, and above all, a lack of those who would like to devote themselves to the teaching profession.³⁷

The situation of university teachers, particularly post-docs, assistant professors and lecturers in their 30s and 40s in general, is no less difficult. Low salaries lead to the fact that most of them, especially young ones, teach courses at several universities, which makes it impossible for them to devote themselves to scientific work, research and publishing activities. The struggle for the accumulation of „points“ prevails, blind reviews of articles or projects are extremely rarely written with an effort to honestly evaluate and recommend improvement, but are mostly a malicious effort to harm and prevent the proposed work from being published. This unfortunate state of affairs is widely criticized, but it looks as it is not in the power of our current academia to change it.³⁸ The main mission of a teacher or scholar is disappearing.

³⁵ Just to mention few aspects: the academic mobility financially supported by the European Union called Erasmus provided a great source of knowledge and experience, the system of grants allowed for ambitious international research cooperation, many post doctoral students earned experience in post doct academic stays at universities and research institutions abroad. The access to foreign literature which previously was very difficult or non-existent was also a great source of knowledge and today, the university graduates easily communicate in English.

³⁶ The economy of the communist states was primarily heavy industry oriented and was regulated by COMECON, Council for Mutual Economic Assistance. The economies were regulated by central planning and gradually were not able to satisfy the need of domestic market and stayed behind the developed Western economies.

³⁷ Based on personal experience of the author and her family.

³⁸ Based on personal experience of the author and conversation with the peers.

Alarming articles by experts appear daily on the psychological state of young people, especially primary school pupils and secondary school students.³⁹ The psychologists openly admit that do not know how to cope with this situation. Among these children, suicide attempts and completed suicides, depression, self-harm, on the other hand, aggression, bullying, etc. are increasing.

The high school admissions system⁴⁰ is currently heavily criticized for causing significant stress for children and high financial costs for their parents.⁴¹ It would certainly not be good if young people were not prepared to set their goals and strive for them. However, I feel very clearly that this system is not entirely healthy, that the amount of information that surrounds us is so immense that it cannot be processed without a solid foundation, and that the values of Buddhism, at least the basic ones, are what is very much needed to give our world and life in it direction and guidance.

VII. THE BUDDHIST PATH FROM THE DEAD END

In Czech history, there are periods of great spiritual growth and development, and they are truly admirable. However, it is a great mistake for those who experienced or experience them to believe that such events are the beginning of a permanent state, that the new, changed situation will stay with us forever.⁴² And it is here that we find a great Buddhist lesson, which most Czechs lack. It is the awareness that everything is constantly changing and evolving. From this ignorance, a number of negative feelings, frustrations and erroneous assessments of reality stem.

After the fall of communism and the famous Velvet Revolution in Czechoslovakia, the impression arose – and it was spread and shared by the media, academics and experts alike – that the division of the world was over forever, that from now on everything would develop only peacefully, that all evil had been eliminated and so on. Although the author of this article admits that she herself, as many other people, remembers with nostalgia the enthusiasm and positive atmosphere of those times, she is well aware of the transient and changing nature of the essence and external appearance of everything.

Today, even the vocabulary of that time, in which words such as love, cooperation, common values, trust, truth and others were often repeated,

³⁹ Just few titles of recent articles to illustrate the situation: We missed the train in child mental health care; The surge in aggression among young people is mainly the impact of the pandemic, which hit the teenage generation hardest; Police in Prague arrested another student due to a threat of shooting at school, and more. The articles are from <https://www.novinky.cz/> of February 2025.

⁴⁰ There is a unified test administered and evaluated by Cermat (Center for determining educational outcomes).

⁴¹ Children can attend preparatory courses for entrance exams and also take mock exams in advance. These options come with quite high fees, which many families cannot afford.

⁴² This state of mind was, despite many difficulties, very typical for the period after the collapse of Iron Curtain and end of the Cold war. It is a source of nostalgia of many who remember those times.

is sarcastically mocked as naive, detached from reality, etc. The main representatives of the opposition to communism, who were literally loved by the entire nation and abroad, are now mockingly called Truth-Lovers⁴³ (but in Czech it sounds much more mocking), based on Václav Havel's famous slogan "Truth and love must prevail over lies and hatred." Only a few of them have remained as public figures - however, their political views have also changed, significantly towards the politics of realism.

I stated at the beginning of this paper that I am not a scholar researching Buddhism, but a lifelong enthusiastic follower, admirer, and student of Buddhism, trying to find and work on Buddhist theory of social sciences, in contrast to current main stream of theories of social sciences prevailing and dominating in the West. It is precisely in these days that I am increasingly aware of the importance and universality of Buddhist teachings.

The *Four Noble Truths* (*cattāri ariyasaccāni*) teach the basic foundation of Buddhism on *dukkha* (suffering caused by the awareness of transient existence of everything); *samudaya* closely related *dukkha* which means attachment to the transient, unstable world origin and existence. *Nirodha* teaches that the attachment to this transient substance of everything can be ended by letting go of this attachment. *Marga* is a path toward the liberation from *dukkha*.⁴⁴

Closely connected and of a profound importance evidenced in the past and highly needed at present is the *Noble Eightfold Path* (*ariya aṭṭhaṅgika magga*).⁴⁵ All its components are nowadays not observed, they are ignored or even violated. But Buddhism offers here a fundamental and universally valid, positive instructions or principles and the compliance with them is lacking in Czechia.

If we start from the second point, then Right Resolve (*samyaka-saṃkalpa/ sammā-saṅkappa*) is clearly not applied in today's society, just like Right Speech (*samyag-vāc/ sammā-vācā*) – let's mention at least a few phenomena here: many-hour speeches in parliament, fake news and disinformation campaigns, constant chatter on mobile phones, I would also include the tabloid press and other. Right Conduct or Action (*samyak-karmānta/ sammā-kammanta*) is not among the respected values today, wars and violence surround us and I would include here also the highly unsatisfactory situation of family and partnership life, changing of partners, which is „thanks“ to tabloid press and social magazines presented as something fashionable and attractive. Right Livelihood (*samyag-ājīva/ sammā-ājīva*: no trading in weapons, living beings, meat, liquor, or poisons – this does not need any additional comments. Right Effort (*samyag-vyāyāma/ sammā-vāyāma*) and Right Mindfulness (*sati/ Satipatthana; Sampajañña*) are related to the state of mind, the strength of its focus and to its

⁴³ One of the most popular mottos of Václav Havel was that „Truth and Love Must Prevail Over Lies and Hatred.“ The „True-Lovers“ is derived from this motto.

⁴⁴ The author of this paper used Miltner (2001). However, the literature to the foundations of Buddhism is enormously rich.

⁴⁵ Ibidem.

awareness. And lastly, the eight quality, Right Meditation (*samyak-samādhi/sammā-samādhi*, teaches particularly on *dhyana* meditation. It is related to the state of mind and the strength of its focus and to its awareness. And going back to the first quality - Right View introduces to understanding of Karma and Four Noble Truths, in essence, that our actions have consequences, death is not the end, and our actions and beliefs have consequences after death, which is very basic understanding.

After discussing briefly the *Four Noble Truths* and *Noble Eightfold Path*, I would like to add two fundamental and critical comments that I would like to make here. I am returning again to the end of the civilization topic.

The first point is the so called popularization of the topic and increase of public awareness. The articles, various reflections, documentaries on Youtube and presentations on social networks are often written and/ or created by journalists, publicists, youtubers and influencers with more or less superficial or minimal knowledge of the matter, often with the goal just to increase the number of the readers or viewers. The topic of the end of civilization is being appropriated by journalists, popularizers, etc., as an attractive commodity that sells well. And they ruthlessly flood the market with cheap, supposedly expert descriptions of the ruin and destruction into which our comfortable consumer society is rushing.⁴⁶ A society that is not spiritually grounded is unable to resist these irresponsible pressures. Let's add to this a fully justified environmental stress, hesitations of politicians how to proceed and what decision to take, topics of violence, both real and fictional, which are pouring on us from all sides. The media, TV, press, and the Internet is full of murders, fires and traffic accidents and crimes of all sorts. Another topic is cancer, which also dominates the media. Information on who got sick, who died, details, etc. The documentary value of such information is low and it has a very negative impact on young adults, also on old generations and basically on everyone.⁴⁷

The other point that I would like to emphasize is the impact of this situation on the younger generation - it is no coincidence that bullying is spreading in schools, self-harm is increasing, children's suicide attempts and completed

⁴⁶ There are countless short videos on this topic on YouTube alone. Some of them are talks and readings of Aldous Huxley's books *The End of Civilization* and *Brave New World*, which is OK, but also, for example, such videos as "The Northern Lights over the Czechia-the End of Civilization," there is a "Civilization Hyde Park" channel with various speakers, there are recordings of the music group *The End of Civilization* produced by a person named The Hell with topics such as children addicted to heroin and the like are presented, also topics such as the end of civilization and survival in the wilderness, and many others appear on youtube.

⁴⁷ For example, in February 2024 alone, the main Czech daily *Mladá fronta Dnes* published articles about cancer every day or at most every other day, either interviews with leading oncologists or well-known public figures – politicians, actors or singers. Stories of ordinary families affected by this disease were also reported, and in the fall of 2024, the main TV channel aired a film series about a young, nice and talented medical student who falls ill with a brain tumor, „Sense of Tumor.“

suicides are increasing, and recently there have been threats, often serious, of murder in schools, even at lower school levels, not to speak of mass shooting at the University in Prague.⁴⁸ Very often the children who take such violent steps come from broken families and often witness domestic violence.

Journalists and publicists claim that people require such information and that they try to respect the wishes of readers, and readers claim that they cannot even look at this type of news. The result however is that the picture of our society and environment the media offer is very stressful.

We could go on and on, but I have to at least mention the cinema that is coming to Central Europe. Movies are mostly Hollywood productions of horror, violence and war themes, and the same appears on television being full of crime films every day.⁴⁹ Social networks that create a de facto alternative reality for many young people are full of violence as well.

There is a lack of restraint in our society. The number of extremely obese people is increasing, at the same time eating disorders, especially among young girls is alarming. The number of young people who doubt their sexual orientation and are often traumatized is increasing. With all the respect and understanding to this topic it could be said, however, that there are also not really medically substantiated cases, but rather a manifestation of lack of anchoring in today's world.⁵⁰

To sum up this dismal list, let's say that, unlike the relatively recent times of a few decades ago, there is a toxic, disturbing atmosphere around us, which brings widespread and multi-layered social and individual stress, uncertainty and anxiety.

I am deeply convinced that this is the universality of Buddhist values that is missing and that could open a healthy way out of this toxic dead end.

⁴⁸ On 21 December 2023, a student of history opened a fire in the building of Philosophical Faculty of Charles University in Prague, killed 14 of students and injured 25 students. After this, he committed a suicide. Before doing this, he killed his father and shot in a park a man with a small baby.

⁴⁹ Just as a random example of a common situation: On one of this year's March Saturdays, all channels of TV in Czechia broadcast a total of 29 films with catastrophic, highly violent and evil topic, one of them was even called *End of the World* and several had such words as *Evil*, *Murder* in the title.

⁵⁰ The Czech Republic is a liberal country in the area of LGBT rights, with the introduction of a partnership in 2024 replacing the registered partnership from 2006. Discrimination on the basis of sexual orientation is prohibited. Czechia supports the right of homosexuals to marry by approximately 65% and is generally somewhat more tolerant than other Central European countries. Report of the Center for Research of Public Opinion, Sociological Institute of Academy of Sciences, April/May 2024, <https://cvvm.soc.cas.cz/images/articles/files/5833/ov2407092.pdf>

EVALUATING THE EFFECTIVENESS OF MINDFULNESS IN ACADEMIC CURRICULA: A STUDY ON UNIVERSITY STUDENTS' WELL-BEING AND PERFORMANCE

Dr. Kalsang Wangmo^{*}

Abstract:

Mindfulness has gained significant attention as a tool for enhancing mental well-being, emotional resilience, and cognitive performance. This study examines the effectiveness of integrating *sati* into university curricula through a structured *sati* training program. A survey was conducted among 200 undergraduate students from diverse academic disciplines, assessing key behavioral changes such as stress reduction, focus, emotional regulation, and communication skills. The study utilized a Likert-scale-based questionnaire to measure students' perceptions before and after participation in *sati* sessions spanning one academic year. Findings indicate a substantial positive impact, with over 90% of participants reporting improved focus, reduced stress, and enhanced emotional stability. The results suggest that while curriculum-mandated *sati* courses are more effective in fostering engagement, voluntary participation also yields significant benefits. Moreover, students who practiced *sati* more frequently exhibited stronger improvements in cognitive and emotional well-being. The study underscores the necessity of embedding *sati* in higher education to promote holistic student development. Future research should explore personalized *sati* interventions to maximize inclusivity and effectiveness.

Keywords: *Buddhism, effectiveness of sati, academic curricula.*

^{*} Assistant Professor (Sr) Department of Far East Languages, (Co-ordinator: Centre for Happiness & Holistic Well-Being) Central University Jharkhand, Ranchi, Jharkhand, India.

I. BACKGROUND AND INTRODUCTION

Mindfulness, with its roots in ancient meditation practices, has emerged as a powerful tool for improving mental and physical health. The scientific community continues to explore its many applications, ranging from stress reduction to cognitive enhancement, and its potential to improve the quality of life for individuals across various domains. As research continues to unfold, *sati* may become an increasingly integral part of modern health and wellness practices. *Sati* is a mental practice rooted in ancient meditation traditions, particularly in Buddhism, though it has gained widespread popularity in the West as a secular practice. It refers to the ability to be fully present in the moment, with awareness and without judgment. This involves paying attention to one's thoughts, feelings, bodily sensations, and the surrounding environment in a focused and non-reactive way.¹

II. HISTORICAL AND CONCEPTUAL BACKGROUND

The term “mindfulness” translates from the *Pāli* word *sati*, which is a central concept in Buddhist teachings. *sati* is traditionally a part of the Buddhist eightfold path, which is a guide to ethical conduct and mental training. It emphasizes developing awareness in all aspects of life, promoting self-awareness, emotional regulation, and compassion. In contemporary times, *sati* has been adapted into various therapeutic and personal development practices. One of the most influential figures in bringing *sati* to the Western world is Jon Kabat-Zinn, who developed the mindfulness-based stress reduction (MBSR) program in the 1970s. This program was designed to help individuals manage chronic pain, stress, and various health conditions through *Sati* meditation.² *Sati* is often practiced through structured meditation, but it can also be cultivated in everyday activities. It generally includes the following key elements: (1) Awareness: Being conscious of the present moment, observing experiences as they unfold. (2) Acceptance: Approaching thoughts, emotions, and sensations without judgment, allowing them to come and go. (3) Non-reactivity: Responding to experiences in a calm and balanced way rather than reacting impulsively.³ The practice of *sati* promotes mental clarity, emotional balance, and physical relaxation, making it a tool for improving overall well-being. While at its core, all *sati* practices aim to cultivate present-moment awareness, there are different styles and applications. Although the list of such practices could be extensive, to put the current scope in context, some examples are compiled in Table 1.⁴

Table 1 - Non-exhaustive list of mindfulness practices

Techniques	Short description
Breathing-Based Practices	<i>Mindful Breathing</i> – Focusing on the inhale and exhale, noticing sensations of the breath <i>Box Breathing</i> – Inhaling, holding, exhaling, and pausing for equal counts (e.g., 4-4-4-4) <i>Counting Breaths</i> – Counting each breath cycle (e.g., up to 10, then starting over).
Body Awareness Practices	<i>Body Scan Meditation</i> – Slowly scanning the body for sensations, tension, or relaxation. <i>Progressive Muscle Relaxation</i> – Tensing and releasing muscle groups to reduce stress. <i>Mindful Walking</i> – Paying attention to each step, movement, and contact with the ground.
Mindful Observation	<i>Five Senses Exercise</i> – Observing things you can see, hear, touch, taste, and smell. <i>Nature Observation</i> – Paying attention to sounds, sights, and feelings in nature. <i>Trataka (Gazing Meditation)</i> – Focusing on an object (like a candle flame) to develop awareness.
Thought and Emotion Practices	<i>Labeling Thoughts</i> – Recognizing and naming thoughts (e.g., “worry,” “planning,” “judging”). <i>RAIN Method</i> – Recognizing, Allowing, Investigating, and Nurturing emotions with compassion. <i>Loving-Kindness Meditation (Metta)</i> – Sending positive wishes to yourself and others.
Mindful Eating & Everyday Activities	<i>Mindful Eating</i> – Eating slowly, savoring each bite, and noticing textures, flavors, and smells. <i>Mindful Listening</i> – Fully engaging in conversations without judgment or distraction. <i>Mindful Cleaning</i> – Washing dishes, sweeping, or organizing with full attention.

Techniques	Short description
Mindful Journaling & Reflection	<i>Gratitude Journaling</i> – Writing down things you’re grateful for daily. <i>Mindful Reflection</i> – Contemplating experiences or feelings without judgment. <i>Morning or Evening Check-In</i> – Noting how you feel mentally, emotionally, and physically.
Movement-Based Mindfulness	<i>Yoga</i> – Combining breath with movement to stay present. <i>Tai Chi & Qigong</i> – Slow, mindful movements that synchronize breath and body. <i>Stretching with Awareness</i> – Noticing sensations during gentle stretching exercises.

Existing research on mindfulness: Mindfulness has been the subject of an increasing number of research studies in psychology, neuroscience, medicine, and education. Its benefits, as explored in research, span a variety of domains, including mental health, cognitive function, physical well-being, and emotional resilience.⁵ (1) Mental Health: Research has shown that mindfulness can reduce symptoms of anxiety, depression, and stress. Programs like Mindfulness-Based Cognitive Therapy (MBCT) combine mindfulness practices with cognitive behavioral therapy (CBT) to prevent relapse in people with depression. Studies have demonstrated that mindfulness training can help reduce rumination (overthinking), improve mood, and promote emotional regulation.⁶ (2) Neuroscience: Brain imaging studies have identified structural and functional changes in the brain associated with mindfulness practice. Regular mindfulness meditation has been linked to increased grey matter in brain regions involved in memory, learning, emotional regulation, and self-awareness, such as the hippocampus and prefrontal cortex.⁷ Research also suggests mindfulness may help decrease activity in the default mode network (DMN), a brain network associated with mind-wandering and self-referential thinking, which is often linked to stress and anxiety.⁸ (3) Education: Mindfulness programs in schools have shown promise in improving students’ attention, emotional regulation, and academic performance. Educators have

⁵ Kabat-Zinn, J. (1990). *Full Catastrophe Living: Using the Wisdom of Your Body and Mind to Face Stress, Pain, and Illness*. Delta.

⁶ Zeidan, Fadel, et al. “Mindfulness Meditation Improves Cognition: Evidence of Brief Mental Training.” *Consciousness and Cognition*, vol. 19, no. 2, 2010, 597 - 605.

⁷ Davidson, Richard J., and Jon Kabat-Zinn. “Contemplative Practices and the Neuroscience of Meditation.” *Psychiatric Clinics of North America*, vol. 27, no. 2, 2004, 195 - 207.

⁸ Creswell, J. David. “Mindfulness Interventions.” *Annual Review of Psychology*, vol. 68, 2017, 491 - 516.

reported that mindfulness helps students reduce stress, improve focus, and develop better coping strategies for dealing with challenges.⁹ (4) Physical Health: There is growing evidence that mindfulness practice can have positive effects on physical health. Studies have shown it can reduce blood pressure, lower cortisol levels (the stress hormone), improve immune function, and even reduce chronic pain. Mindfulness is often incorporated into treatment plans for individuals dealing with chronic pain, cardiovascular conditions, and other physical health issues.¹⁰ (5) Workplace: Mindfulness has been increasingly applied in the workplace to enhance productivity, reduce burnout, and improve overall employee well-being. Studies suggest that mindfulness programs in corporate settings can foster improved focus, creativity, and resilience to stress. Future research is also exploring how mindfulness can be integrated with other psychological and therapeutic techniques, as well as its application in specific populations (e.g., children, older adults, and individuals with severe mental health conditions). There is a growing interest in studying the effects of mindfulness on neuroplasticity (the brain's ability to reorganize itself), emotion regulation, and resilience. In India, mindfulness is increasingly being adopted in both academic institutions and corporate industries due to its recognized benefits in enhancing focus, reducing stress, and improving overall well-being. The integration of mindfulness practices in these sectors reflects a growing recognition of the importance of mental health, emotional resilience, and productivity in both educational and professional settings. The application of mindfulness in both Indian academic institutions and corporate industries is still evolving but has already shown significant potential in addressing the challenges posed by academic pressure, workplace stress, and mental health concerns. In educational institutions, mindfulness helps students and teachers develop emotional resilience, reduce anxiety, and improve focus. In the corporate sector, mindfulness contributes to employee well-being, enhances productivity, and fosters mindful leadership. As awareness of its benefits continues to grow, mindfulness practices are likely to become more deeply integrated into India's academic and professional landscapes, promoting a culture of mental health and emotional well-being (More details can be found in Appendix A & B).

III. NEED FOR MINDFULNESS TEACHING IN THE UNIVERSITY CURRICULUM

Mindfulness teaching in the university curriculum addresses the growing need for emotional well-being, mental health support, and academic success. It helps students build important life skills, fosters a supportive campus culture, and prepares them to thrive in both their personal and professional

⁹ Roeser, Robert W., and Jacquelynne S. Eccles. "Mindfulness and the Development of Emotion Regulation and Academic Success in Middle School Children." *Contemporary School Psychology*, vol. 19, no. 2, 2015, 152 - 165.

¹⁰ Goleman, Daniel, and Richard J. Davidson. *Altered Traits: Science Reveals How Meditation Changes Your Mind, Brain, and Body*. Avery, 2017, p. 38.

lives. Universities that embrace mindfulness are contributing to the overall development of their students, helping them manage the challenges of university life while also preparing them for the future. Integrating mindfulness teaching into university curricula has gained traction in recent years due to its numerous benefits for both students and the academic environment as a whole. Here are the key objectives and needs for mindfulness teaching in the university curriculum:

- (1) **Enhancing Mental Health and Well-being** - University students often face high levels of stress due to academic pressure, social adjustments, and personal challenges. Mindfulness practices help students develop resilience, emotional regulation, and a greater sense of well-being. Students should be provided with tools to manage stress, anxiety, and other mental health challenges that are common in the university setting.
- (2) **Improving Focus and Concentration** - With the rise of technology, social media, and multitasking, students often struggle with staying focused on academic work. Mindfulness encourages present-moment awareness, which can improve concentration and academic performance. Improving students' ability to focus on tasks, improving their attention span, and reducing distractions thus becomes a challenge.
- (3) **Enhancing Emotional Intelligence and Social Skills** - Emotional intelligence is critical for navigating relationships, both personal and professional. Mindfulness helps students better understand their emotions and the emotions of others, fostering improved communication and conflict resolution. Cultivating greater empathy, self-awareness, and interpersonal skills should thus be the goal.
- (4) **Supporting Academic Performance** - Mindfulness practices have been shown to support cognitive functions that are essential for academic success, such as critical thinking and creative problem-solving, by fostering a calm and clear mind.
- (5) **Promoting Inclusivity and Diversity** - Mindfulness can encourage open-mindedness, reduce bias, and help students approach differences with curiosity rather than judgment, contributing to a more inclusive campus environment.
- (6) **Enhancing Resilience and Coping Skills** - University life is filled with ups and downs. Mindfulness encourages students to acknowledge and accept difficult emotions without being overwhelmed by them, improving their ability to cope with stressors and setbacks.
- (7) **Developing Personal Growth and Self-Reflection** - University is a time of self-discovery and growth. Mindfulness provides students with the space to reflect on their experiences, values, and goals, encouraging greater self-understanding and personal development.
- (8) **Creating a Positive Campus Culture** - Integrating mindfulness into university life can contribute to a more positive and compassionate campus culture, where students, faculty, and staff are more mindful of their interactions and create a supportive environment for everyone.
- (9) **Enhancing Well-rounded Education** - Universities are not only places for academic learning but also personal development. By integrating mindfulness into the curriculum, institutions can help students develop life skills that extend beyond textbooks and exams, preparing them for the demands of modern life.

Mindfulness Class 2023-2024, Central University of Jharkhand, Ranchi, India (Photo Copyright: Author, 2025)

IV. SCOPE OF CURRENT RESEARCH ON THE APPLICATION OF MINDFULNESS

4.1. Courses floated for registered students

The Centre for Happiness and Holistic Well-being has launched a survey to assess the effectiveness of mindfulness among university students, aiming to cultivate a thriving community empowered by mental clarity, emotional well-being, and holistic happiness. The Centre's mission is to provide University students with the tools, wisdom, and practices rooted in ancient Indian traditions, focusing on mental health, self-awareness, and overall well-being. By nurturing the mind, body, and soul, the Centre aims to cultivate resilience, inner peace, and joy, equipping students to navigate academic pressures. This is achieved through integrating ancient Indian practices, fostering a balanced and purposeful life journey. The survey's design is based on key objectives and factors that contribute to the student's overall well-being. The goals of this study, target population, practice session details, and survey methodology are provided in this chapter. Actual questions, together with a statistical summary of the outcome are provided in Appendix A.

4.2. Study objectives

The survey measures key behavioral changes, such as stress reduction, focus, emotional regulation, and other factors that reflect mindfulness's impact on students. Communication Skills: This involves the ability to express thoughts clearly and establish effective communication with others. It encompasses listening, understanding, and responding thoughtfully. Problem Solving: This skill helps students find solutions, evaluate alternatives, and make informed decisions when faced with challenges. Time Management: The ability to manage time effectively and prioritize tasks is essential for maintaining an organized and balanced life. Emotional Intelligence: Understanding and

managing one's own emotions and healthily responding to others' emotions contributes to stronger, more fulfilling relationships. Positive Thinking: Cultivating a positive outlook, even in difficult situations, can help make life more manageable and fulfilling.

4.3. Timeframe

The timeframe for the assessment is one year, constrained by the size of the population surveyed. The survey relies on self-reported outcomes to assess behavioral changes, as mindfulness effectiveness is evaluated through personal reflections and experiences. This approach aims to gauge the influence of mindfulness on students' mental and emotional growth, contributing to their overall well-being and life satisfaction.

4.4. Target population

The survey includes students from the same academic year, consisting of 200 undergraduate students studying different streams of subject; Life Science, Environmental Science major, Mathematics major, Physics Major, Chemistry major, Hindi Major, Foreign Languages (Korean & Chinese) major, English major, Economics major, Political Science major, Anthropology major, Mass communication major, ensuring a balanced representation from different departments of the University.

4.5. Mindfulness practice session details

Practice sessions started in December 2023 to November 2024. Sessions were conducted 3 hours per week. The following 5 methods were used during practice sessions. Focus on the Breath. Purpose: One of the core practices of mindfulness involves focusing on your breath. This is because breathing is something that's always happening in the present moment and can anchor you in the "here and now." Practice: Sit comfortably in a quiet space and close your eyes. Take a few deep breaths to relax. Then, breathe normally and focus on the sensation of the air entering and exiting your nostrils, chest, or belly. If your mind starts to wander, gently bring it back to the breath. Effectiveness: This helps to train the mind to stay present, and over time, it can improve concentration and reduce stress. Body Scan. Purpose: A body scan helps you become aware of physical sensations and areas of tension in your body. Practice: While lying down or sitting, focus your attention on each part of your body starting from your toes and moving up toward your head. Simply notice any sensations in each area without judgment. If you feel tension, just acknowledge it, but try not to change it. Effectiveness: This practice enhances body awareness and helps you notice physical stressors that may go unnoticed in daily life. Mindful Observation. Purpose: This practice involves paying attention to things in your environment, and fully engaging your senses without distraction or interpretation. Practice: Pick an object in your environment (a flower, a cup, etc.) and observe it closely for a few minutes. Notice every detail: its color, shape, texture, smell, and even sound if relevant. Try to avoid labeling it or thinking about its purpose. Effectiveness: This practice encourages being present and reduces automatic thinking, leading to greater mental clarity and calmness. Mindful Listening. Purpose: This practice involves focusing

on sounds without letting your mind wander into judgment or distractions. Practice: Close your eyes and pay attention to all the sounds around you. Do not try to label them or judge them. Simply notice them as they come and go. You can also practice this when listening to someone speak - fully attend to what they're saying without thinking of your response while they're talking. Effectiveness: Helps improve focus and listening skills while promoting emotional presence in interactions. Thought Awareness and Control: Purpose: Mindfulness is not about controlling thoughts, but about being aware of them and letting them pass without getting caught up in them. Practice: Sit quietly and observe your thoughts. Do not try to push them away or forcefully control them, just notice them as they arise. Label them if you like (e.g., "thinking," "judging," "remembering") but do not engage with them. When you catch your mind drifting, gently return your focus to your breath. Effectiveness: Over time, this can help you become less reactive to your thoughts and reduce their control over your emotions.

(6) Survey Methodology: For this study, it is assumed that all students have a similar level of mindfulness practice. All the students have taken Basics of Mindfulness: Buddhist Art of Living as their Skill Enhancement paper in their undergraduate 2nd & 3rd Semester. Any prior exposure to mindfulness or biases influenced by peers or faculty members are considered negligible and are not expected to impact the survey results. To minimize noise from the understanding of terms used in questions, only Closed-ended questions are used to measure changes in stress, focus, and well-being. Answers from practitioners are requested on a simple Likert scale (1-3 & 1-5). To distinguish between expectations and actual impact, the survey is split into 2 corresponding parts. To avoid any biases, fear of likely poor academic grades, or any other potential influence on answers, the survey has been kept anonymous and confidential. To keep it simple, only statistical results have been populated using Google Forms. Results presented here are based on the dominant trends seen in overall statistics, without gender, age or demographic distinction.

V. KEY FINDINGS

From the survey results, it is evident that mindfulness training has had a meaningful impact on students. The primary areas of improvement - stress reduction, increased focus, and better emotional regulation - suggest that mindfulness is a valuable tool for student well-being. A strong trend observed in survey results is - a large difference between expectations and realizations. A good number of students were influenced by the curriculum to register for mindfulness courses. At the end of the course, an overwhelming number of students viewed the introduction of mindfulness in the academic curriculum positively. (See Table 2). A significantly large number of respondents show high expectations from effectiveness and potential benefits of mindfulness sessions. Interest in registration for mindfulness course is partly influenced by convenience, although 70% students do not consider the convenience to be main driver for registration. 66% of students are influenced by curriculum mandates to register for mindfulness or similar courses. This shows that a fully

voluntary introduction of mindfulness courses may not be as effective. In the general population, it is also reasonable to assume some skepticism towards novel techniques. Several respondents who were positively surprised by benefits, and who believed in positive benefits by the end of the course, are overwhelming, hovering north of 90% in most parameters. In general, coping with academic and social stress rates slightly higher than understanding the personal mind and emotions. Although, the significance of the difference may be debatable. 100% of respondents have a positive view of the benefits of mindfulness courses in improving mental health, focus, and social skills. In the same vein, 98% of respondents think that curriculum in universities is an effective tool for realizing these benefits.

Table 2 - Expectations at the start of the mindfulness course and realizations at the end

	Questions	Agree (%)	Disagree (%)	Do not know (%)
1	I decided to take this course because it is required for my program or degree.	65.5	29.4	5.0
2	I am not particularly interested in mindfulness, but the course seemed convenient.	22.7	69.7	7.6
3	I am taking this course to improve my mental peace and emotional balance.	97.5	0.8	1.7
4	I believe that learning mindfulness will help improve my relationships with others.	89.1	3.4	7.6
5	I am taking this course to help me cope with personal challenges or difficulties in my life.	90.8	5.9	3.4
6	I feel that mindfulness will help me improve my overall emotional resilience.	90.8	3.4	5.9
7	I believe the skills I gain in this course will help me in my future career or professional life.	82.4	3.4	14.3
8	I think that mindfulness will improve my ability to focus, which will help with my studies or work.	95.8	0.8	3.4

9	Mindfulness practice can improve emotional regulation and mental well-being.	99.2	0.0	0.8
10	Mindfulness practice can help reduce rumination (repetitive negative thinking).	91.6	3.4	5.0
11	Mindfulness can improve the quality of relationships by increasing empathy and listening skills.	88.2	2.5	9.2
12	The course has deepened my understanding of how the mind works and how thoughts influence emotions.	89.9	3.4	6.7
13	Mindfulness has the potential to enhance overall quality of life by promoting well-being and balance.	91.6	4.2	4.2
14	Mindfulness plays an important role in promoting inner peace, which is essential for creating peace in society.	94.1	1.7	4.2
15	Mindfulness programs can be an effective way to address the root causes of violence, such as stress, trauma, and misunderstanding.	90.8	2.5	6.7
16	Mindfulness courses are essential for helping students manage academic stress and maintain well-being.	96.6	1.7	1.7
17	Mindfulness courses in University would promote greater empathy and understanding among students, fostering a more inclusive campus environment.	91.6	3.4	5.0
18	Mindfulness courses can help students develop a stronger sense of social justice by encouraging them to listen deeply and understand others' perspectives.	87.4	1.7	10.9
19	Mindfulness courses are practical and beneficial for university students, as they can improve mental health, focus, and social capabilities of students.	100.0	0.0	0.0

20	Universities should provide mindfulness training as part of student orientation programs to help students adjust to academic and social challenges.	98.3	1.7	0.0
21	Mindfulness courses are a valuable tool for students to develop a well-rounded, thoughtful approach to life, improving their ability to engage meaningfully with society.	93.3	1.7	5.0

Furthermore, detailed responses are collected on individual behavior changes (See Table 3). Here, a good correlation is found between the effectiveness of mindfulness and the extent of its benefits. Students who practiced mindfulness daily or multiple times a week reported the highest benefits in stress reduction, focus, and emotional well-being. A large majority of students (above 60%) experienced reduced stress after regular mindfulness practice. Over 70% of respondents noted an improvement in their ability to concentrate during classes and while studying. A substantial number of students reported feeling more in control of their emotions after engaging in mindfulness exercises. Those who practiced occasionally (once a week or less) experienced moderate improvements but did not find the training as transformative. Around 20-30% of students observed some improvement in stress reduction but felt that the impact was moderate. The small group of students who rarely engaged in mindfulness reported minimal to no benefits.

Table 3 - Detailed responses on focus & mental well-being

Questions		Scale 5 being most positive (%)				
		1	2	3	4	5
1	How often do you practice mindfulness (e.g., meditation, breathing exercises)?	0	10.3	16.1	36.8	36.8
2	To what extent has mindfulness practice improved your overall academic performance?	1.1	6.9	6.9	41.4	43.7
3	How much has mindfulness improved your focus during academic tasks (e.g., studying, lectures)?	0	10.3	24.1	28.7	36.8
4	How much has mindfulness enhanced your ability to manage academic workload and deadlines?	1.1	16.1	18.4	28.7	35.6

5	To what extent do you feel mindfulness helps you manage academic stress or pressure?	0	5.7	18.4	32.2	43.7
6	Do you find it easier to stay present and engaged during class or study sessions after practicing mindfulness?	1.1	5.7	24.1	33.3	35.6
7	How often do you use mindfulness techniques to manage distractions or wandering thoughts during studying?	1.1	10.3	21.8	26.4	40.2
8	To what extent has mindfulness enhanced your problem-solving or critical thinking skills in academic tasks?	1.1	13.8	17.2	27.6	40.2
9	To what extent has mindfulness practice reduced your feelings of anxiety (e.g., nervousness, fear, unease)?	3.4	12.6	13.8	31.0	39.1
10	How often does mindfulness practice help you manage symptoms of depression (e.g., sadness, hopelessness, lack of energy)?	0	10.3	17.2	26.4	46.0
11	How much do you feel mindfulness practice helps you cope with personal or emotional stress in general?	2.3	4.6	12.6	32.2	48.3
12	How has mindfulness practice helped you maintain emotional stability during stressful academic or personal situations?	0	4.6	13.8	40.2	41.4
13	Has mindfulness practice improved your ability to manage interpersonal conflicts (e.g., with classmates, teachers)?	1.1	4.6	14.9	36.8	42.5
14	Do you feel mindfulness practice helps you listen more attentively and respond more thoughtfully during conversations?	0	5.7	24.1	25.3	44.8

15	To what extent has mindfulness practice enhanced your overall social skills (e.g., communication, collaboration, problem-solving)?	1.1	4.6	12.6	33.3	48.3
16	How much has mindfulness practice improved your ability to make decisions under pressure or uncertainty?	0	5.7	11.5	33.3	49.4
17	Has mindfulness practice improved your ability to adapt to changing situations or challenges in life?	2.3	10.3	13.8	34.5	39.1
18	How often does mindfulness help you manage your time effectively and reduce procrastination?	0	4.6	8.0	41.4	46.0
19	To what extent has mindfulness contributed to your ability to prioritize tasks and manage your responsibilities effectively?	1.1	3.4	11.5	40.2	43.7
20	How has mindfulness practice impacted your academic motivation and goal-setting?	2.3	11.5	13.8	35.6	36.8
21	To what extent has mindfulness practice improved your communication skills (e.g., listening, speaking, empathy)?	0	5.7	8.0	40.2	46.0
22	Has mindfulness practice helped you to be more patient with others?	0	4.6	9.2	28.7	57.5
23	Do you find that practicing mindfulness improves your ability to handle conflicts or disagreements in social settings?	3.4	5.7	10.3	39.1	41.4
24	How much has mindfulness practice improved your decision-making ability under pressure?	3.4	4.6	16.1	34.5	41.4
25	To what extent has mindfulness practice contributed to your time management skills (e.g., prioritizing tasks, avoiding procrastination)?	1.1	3.4	12.6	36.8	46.0

26	Do you feel mindfulness has helped you become more adaptable to changes in your life or routine?	0	13.8	17.2	34.5	34.5
27	Has mindfulness practice improved your ability to retain and recall information?	0	3.4	17.2	37.9	41.4
28	How much do you feel mindfulness improves your academic motivation (e.g., interest in subjects, drive to succeed)?	3.4	9.2	19.5	29.9	37.9
29	How much has mindfulness practice helped in reducing your feelings of anxiety or nervousness?	1.1	5.7	8.0	42.5	42.5
30	Do you feel that mindfulness practice has contributed to reducing symptoms of depression (e.g., sadness, hopelessness)?	4.6	9.2	11.5	35.6	39.1
31	To what extent has mindfulness helped you regulate your emotions during stressful or frustrating situations?	0	3.4	17.2	37.9	41.4
32	How would you rate the improvement in your ability to stay organized and manage academic tasks due to mindfulness practice?	1.1	4.6	6.9	39.1	48.3
33	Do you find it easier to concentrate on studies after practicing mindfulness	0	5.7	13.8	26.4	54.0
34	How much do you feel mindfulness improves your academic motivation (e.g., interest in subjects, drive to succeed)?	1.1	4.6	10.3	39.1	44.8
35	To what degree has mindfulness helped you manage academic-related stress (e.g., exams, assignments, deadlines)?	0	8.0	17.2	34.5	40.2

On the downside, this survey lacks measures to sufficiently establish

reasons behind the ineffectiveness of mindfulness sessions for a small number of students. Reasons could range from inconsistent practice, the need for personalized techniques, or something inherently missing in mindfulness practice, such that the effectiveness cannot be generalized to 100%. It would be interesting to highlight the real causes of perceived ineffectiveness in any further studies.

VI. CONCLUSION AND RECOMMENDATIONS

Study results demonstrate that mindfulness training has been largely effective in helping students manage stress, improve focus, and regulate emotions. The data highlights that those who engaged in mindfulness more consistently experienced greater benefits. Additionally, most students strongly believe that mindfulness courses are beneficial in the academic curriculum and that universities would do well to facilitate this. A small percentage of students, however, remained uncertain about its impact, this suggests the need for more personalized guidance and consistent practice. By encouraging regular practice, diversifying techniques, and integrating mindfulness into daily life, its effectiveness can be further enhanced, providing long-term benefits for students' mental and emotional health. For further improvements in the effectiveness of mindfulness practice sessions. It is thus recommended to focus on the following aspects during the planning phase. (1) Encouraging & Emphasising the importance of regular mindfulness practice. This can help students experience more pronounced benefits. (2) Offering different, more personalized mindfulness techniques (e.g., meditation, mindful breathing, mindful walking). This can cater to diverse preferences and increase engagement. (3) Encouraging students to integrate and apply mindfulness in everyday activities, such as mindful eating or mindful listening. This can make the practice more sustainable. (4) More frequent follow-ups, periodic check-ins, additional sessions & support for selected focus groups, could reinforce the practice and address any challenges students face.

APPENDIX A - MINDFULNESS IN INDIAN ACADEMIC INSTITUTIONS

In recent years, several Indian academic institutions have begun incorporating mindfulness into their curricula to help students manage stress, enhance concentration, and improve emotional well-being. The challenges of academic pressure, intense competition, and mental health concerns among students have prompted institutions to explore mindfulness as a way to foster mental resilience and improve learning outcomes.¹¹ (1) Schools and Colleges: Many educational institutions are now introducing mindfulness-based programs, often tailored to the needs of students. For example, the Mindfulness in Schools Program (MiSP) has been implemented in various Indian schools to teach students practical mindfulness techniques, which include breathing exercises, body awareness, and mindful listening. These programs are designed to enhance students' attention, emotional regulation, and coping mechanisms in the face of stress and academic pressure. (2) University Programs: Some universities have partnered with mindfulness organizations to introduce mindfulness courses or workshops as part of their wellness programs. Notable examples include mindfulness-based stress reduction (MBSR) courses or workshops offered in universities like Jawaharlal Nehru University (JNU) and Tata Institute of Social Sciences (TISS). These courses help students enhance focus, reduce anxiety, and develop self-compassion, which in turn positively impacts academic performance. (3) Mental Health Support for Students - India has seen a rise in mental health concerns among students, especially due to the pressure to perform academically and the high competition for admission to prestigious institutions. Mindfulness is being recognized as an effective tool to address student mental health. (4) Mindfulness-Based Cognitive Therapy (MBCT) has been adopted by some counseling centers in universities as a form of psychological intervention for students struggling with anxiety, depression, and stress. Programs like MBCT integrate mindfulness practices with cognitive therapy to help students develop more adaptive ways of thinking and coping with difficult emotions. (5) Mindful Leadership Development: Some educational institutions are incorporating mindfulness into leadership training programs for students. These programs aim to build self-awareness, empathy, and emotional intelligence in future leaders, promoting a mindful approach to decision-making and conflict resolution. (6) Mindfulness in Teachers'

¹¹ Jawaharlal Nehru University. JNU, <https://www.jnu.ac.in/main/>, MBSR Training. MBSR Training, <https://mbsrtraining.com/>, Mindfulness in Schools Project. Mindfulness in Schools, <https://mindfulnessinschools.org/> & Tata Institute of Social Sciences. TISS, <https://tiss.ac.in/>.

Training - Indian educators are also being trained in mindfulness to support their well-being and that of their students. Various teacher training programs and workshops are being organized by organizations like The Art of Living and Mindful Schools to help teachers manage their stress, improve classroom management, and foster a more positive and focused learning environment. Teachers who practice mindfulness themselves are often better equipped to teach students how to deal with their emotions and navigate academic stress.

Sample of Survey in Graph
(Bi-lingual Survey- 117 respondents in English & 83 in Hindi)

APPENDIXB-MINDFULNESSININDIANCORPORATEINDUSTRIES

Corporate India has seen an increasing integration of mindfulness into workplace wellness programs. With high levels of stress, long working hours, and burnout prevalent in industries such as IT, finance, and healthcare, mindfulness is being recognized as an essential tool for enhancing mental

health, improving productivity, and fostering a positive work culture.¹² (1) Corporate Mindfulness Programs: Large organizations such as Infosys, Tata Consultancy Services (TCS), and Accenture India have introduced mindfulness-based programs, including guided meditation sessions, yoga, and breathing exercises, to reduce employee stress. These programs are aimed at improving employee focus, reducing burnout, and enhancing emotional resilience. (2) Workshops and Retreats: Companies often host mindfulness workshops, seminars, and retreats where employees learn techniques like mindful breathing, meditation, and mindfulness-based stress reduction (MBSR). These programs help employees manage their mental health, which in turn boosts their productivity and creativity at work. (3) Mindfulness is also being integrated into leadership development in Indian corporate settings. Many Indian companies are recognizing the need for leaders who possess emotional intelligence, are empathetic, and can manage their stress while making sound, balanced decisions. Mindfulness-Based Leadership Programs: Corporations like Wipro and HCL Technologies have developed leadership programs that incorporate mindfulness practices. These programs are designed to help leaders improve self-awareness, focus, and clarity in decision-making. Leaders trained in mindfulness are better equipped to handle workplace challenges, manage teams with empathy, and create a more collaborative and supportive work environment. (4) Executive Coaching: Mindfulness is also being used in executive coaching programs, where senior leaders and managers learn to incorporate mindfulness practices to improve their performance, reduce stress, and maintain work-life balance. Indian employees often experience stress from long working hours and high-performance expectations. Companies are recognising the importance of supporting employees' mental health to improve both well-being and organizational performance. Several Indian companies now encourage employees to use mindfulness apps such as Headspace, Calm, and MyLife to help manage stress and anxiety. These apps offer guided meditations, mindfulness exercises, and breathing techniques that employees can use during work breaks to reduce stress and increase focus. With the rise of remote work and flexible working hours in the post-pandemic era, companies are also adopting mindfulness initiatives in the form of virtual meditation sessions and stress-relief workshops. These initiatives help employees maintain a sense of calm and balance in their professional and personal lives.

BUDDHIST EDUCATION FOR A COMPASSIONATE AND SUSTAINABLE FUTURE ACCORDING TO THE PHILOSOPHY OF TRAN THANH TONG

Luu Hong Hoa*

Abstract:

Buddhist education, as envisioned by Tran Thanh Tong, retains its timeless value and relevance in today's world. Cultivating compassion, wisdom, and mindfulness through Buddhist education not only enables individuals to attain inner peace but also contributes to the development of a compassionate and sustainable society. In the future, integrating Buddhist teachings with advancements in science and society presents a promising path to addressing the challenges facing humanity. By embracing the spirit of Buddhism, we can become responsible global citizens, contributing to environmental protection and the creation of a peaceful world.

Keywords: *Buddhism, Tran Thanh Tong, compassion, sustainability.*

I. INTRODUCTION

In the face of global challenges such as climate change, social inequality, and armed conflicts, the search for a path toward sustainable and compassionate development has become more urgent than ever. In this journey, the spiritual and intellectual values of past sages, particularly the philosophy of King Tran Thanh Tong, offer invaluable insights.

The Tran Dynasty (1225 – 1400) is regarded by historians as one of the most glorious and illustrious periods in Vietnamese history. It was an era of national unity, cultural revival, and significant national development. The Tran rulers, wise and enlightened emperors, including Tran Thai Tong, Tran Thanh Tong, and Tran Nhan Tong, along with talented generals such as Tran Hung Dao,

* Head of Office in Vietnam Buddhist Research Center of Vietnam Institute of Buddhist Studies.

Tran Quang Khai, and Tran Nhat Duat, successfully mobilized the collective strength of the people to defeat the Mongol invasions. This demonstrated the power of a dynasty that valued talent, won the hearts of the people, and fostered comprehensive national progress, not only elevating the country's standing to an equal footing with China but also earning the respect of neighboring nations. As scholar Tran Dang Thuc observed: "Warrior, artist, and sage - three identities merged into one - were naturally and distinctly embodied in three successive generations of Tran dynasty emperors, maintaining continuity and consistency across the reigns of grandfather, father, and son: Thai Tong, Thanh Tong, and Nhan Tong."¹

II. BIOGRAPHY OF TRAN THANH TONG

Tran Thanh Tong (1240 – 1290) was the eldest son of Tran Thai Tong, the first ruler of the Tran Dynasty, renowned for his patriotism and deep care for the people. His mother, Princess Thuan Thien of the Ly Dynasty, came from a lineage that highly revered Buddhism and upheld "benevolent governance" as a national policy.

The *Dai Viet Su Ky Toan Thu* (Complete Annals of Dai Viet) records his biography as follows:

*"His given name was Hoang, the eldest legitimate son of Thai Tong and Empress Dowager Hien Tu Thuan Thien of the Ly clan. It is said that before his birth, Emperor Thai Tong had a dream in which the Supreme Deity bestowed upon him a treasured sword, after which the Empress became pregnant. He was born on the 25th day of the 9th lunar month in the year Canh Ty, the 9th year of the Thien Ung Chinh Binh era (1240), at the hour of Ngo (midday). Following his birth, he was designated Crown Prince. Upon the passing of Thai Tong, he ascended the throne and reigned for 21 years before abdicating. He then lived in retirement for 13 years, reaching the age of 51. He passed away in Nhan Tho Palace and was laid to rest in Du Lang."*²

With his Zen-inspired approach to governance, King Tran Thanh Tong implemented numerous policies aimed at fostering a prosperous and harmonious society. His reforms encompassed administrative, educational, and economic advancements, as well as the patronage of Buddhism and the recruitment of talented individuals. He emphasized wisdom and virtue as the foundation for selecting officials, ensuring a capable and ethical state apparatus.

Additionally, he practiced compassionate governance by staying close to the people and nurturing a sense of unity. His benevolent leadership is reflected in his words recorded in history: *"In the spring, during the first lunar month, the emperor addressed the royal family: 'The realm belongs to our ancestors. The one who inherits their legacy should share prosperity with the kin. Though externally, all under heaven revere a single sovereign, internally, we are bound by blood, sharing burdens*

² Ngo, S. L. (1998). *Complete Annals of Dai Viet* (Vol. 2, Translated by the Institute of History). Social Sciences Publishing House. p. 30.

and joys alike. Let these words be passed down to future generations as a lasting reminder, ensuring eternal blessings for the royal lineage and the nation.”³

During his 21-year reign as emperor, 13 years as Supreme Emperor, and even during his time as Crown Prince, Tran Thanh Tong experienced the full spectrum of hardships and challenges. He actively participated in military campaigns and was the only Vietnamese emperor to take part in all three Mongol invasions (1258, 1285, 1288). His strategic foresight and dedication to nurturing his successors laid the foundation for the Tran Dynasty’s remarkable achievements.

His efforts in cultivating talent, particularly in preparing his son, Tran Nhan Tong, to inherit and expand upon his legacy, led to the flourishing of the Truc Lam Zen School. Under his guidance, the Tran Dynasty reached its golden age, becoming the first feudal dynasty in Vietnamese history to achieve absolute unity – from the highest levels of government to the common people, from soldiers to civilians, from the elderly to the young, and from men to women. This collective spirit, known as the *Hao khi Dong A* (Eastern A Spirit), became a defining force of the era. For the first time, all of Dai Viet’s people stood together for a common cause, demonstrating an unyielding resolve against one of the most formidable military powers in the world at the time. Despite the overwhelming threat, Dai Viet upheld its spirit of self-reliance and resilience, fueled by boundless patriotism. Heads may fall, blood may be shed - but never would they accept the loss of their nation’s independence.

In addition to being an emperor and a military leader, Tran Thanh Tong was also a Zen master who imparted his spiritual knowledge and meditative experiences through his writings. It is believed that he authored several works, including *Di Hâu Lục* (Records Left for Future Generations), *Cơ Cầu Lục* (Records on Dynastic Succession), *Thiền Tông Liễu Ngộ Ca* (Song of Zen Enlightenment), *Phóng Ngưu* (Releasing the Ox), and *Chi Giá Minh* (Treatise on Reverence). Unfortunately, all these works have been lost over time.

- **Di Hâu Lục** (*Records Left for Future Generations*): This book was believed to contain his messages for posterity, likely encompassing his philosophical, political, and ethical reflections.
- **Cơ Cầu Lục** (*Records on Dynastic Succession*): This work might have discussed the organization of the state and governance strategies.
- **Thiền Tông Liễu Ngộ Ca** (*Song of Zen Enlightenment*): A collection of poetry expressing his deep spiritual realizations about Zen, life, and humanity.
- **Phóng Ngưu** (*Releasing the Ox*): A symbolic work likely reflecting themes of liberation from worldly attachments.
- **Chi Giá Minh** (*Treatise on Reverence*): A piece that may have emphasized humility and simplicity as essential virtues.

³ Ngo, S. L. (1998). *Complete Annals of Dai Viet* (Vol. 5, Translated by the Institute of History). Social Sciences Publishing House. p. 180.

Though these writings have not survived, Tran Thanh Tong's legacy as both a ruler and a Zen master continues to inspire generations, reflecting a harmonious blend of political wisdom and Buddhist enlightenment.

Currently, only 16 works remain, including 15 poems and a prose passage discussing the bond between brothers in the royal family. These include *Chân tâm chi dụng* (真心之用) (*The Function of True Mind*) and *Cung viên xuân nhật ức cựu* (宮園春日憶舊) (*Spring Day in the Palace Garden, Reminiscing the Past*), *Đáp Tuệ Trung Thượng Sĩ* (答慧忠上士) – *Reply to Tue Trung Thuong Si*, *Đề Huyền Thiên Động* (題玄天洞) – *Inscription for Huyen Thien Cave*, *Độc “Đại Tuệ Ngữ Lục” Hữu Cảm Kỳ 1* (讀大慧語錄有感其一) – *Reflections on Reading “Sayings of Great Wisdom” (Part 1)*, *Độc “Đại Tuệ Ngữ Lục” Hữu Cảm Kỳ 2* (讀大慧語錄有感其二) – *Reflections on Reading “Sayings of Great Wisdom” (Part 2)*, *Độc “Phật Sự Đại Minh Lục” Hữu Cảm* (讀佛事大明錄有) – *Reflections on Reading “Great Illumination of Buddhist Affairs”*, *Hạ Cảnh* (夏景) – *Summer Scenery*, *Hạnh An Bang Phủ* (幸安邦府) – *Visit to An Bang Prefecture*, *Hạnh Thiên Trường Hành Cung*⁴ (行天長行宮) – *Visit to Thien Truong Palace*, *Hoạ Tuệ Trung Thượng Sĩ* (和慧忠上士) – *Poetic Response to Tue Trung Thuong S*, *Sinh Tử* (生死) – *Life and Death*, *Tặng Trần Quang Khải* (贈陳光啟) – *Gift to Tran Quang Khai*, *Văn Chấn Trọng Vi* (輓陳仲微) – *Elegy for Tran Trong Vi*, *Tự Thuật Kỳ 1-5* (自述其一至五) – *Self-Reflections (Parts 1-5)*

On May 22, 1290, King Thanh Tong passed away at the age of 51. In remembrance of him, people in various regions, such as Nam Dinh, Thai Binh, and Ninh Binh, established temples in his honor, where incense is offered throughout the year as a tribute to his legacy.

III. THE BUDDHIST PHILOSOPHY OF TRAN THANH TONG

Through his poetry, Tran Thanh Tong revealed profound insights into the mindset and way of life of the Tran Dynasty. His writings offer glimpses into how people of his era lived, contemplated, practiced, and acted in pursuit of enlightenment.

One of his most notable poems, *Chân Tâm Chi Dụng* (*The Function of True Mind*), encapsulates his Zen philosophy:

⁴ According to the books *Hoang Viet Thi Tuyen* and *Nam Ong Mong Luc*, this poem is attributed to Tran Nhan Tong.

<i>The function of the true mind,</i>	<i>Light as a feather in thought,</i>
<i>Is wise and silent.</i>	<i>Heavy as stone.</i>
<i>Neither coming nor going,</i>	<i>Crystal clear, pure,</i>
<i>Neither decreasing nor increasing.</i>	<i>Stripped of all attachments.</i>
<i>Whether vast or minute,</i>	<i>Beyond all measurement,</i>
<i>Whether favorable or adverse-let it be.</i>	<i>Without trace or origin.</i>
<i>In motion, it is like clouds, like cranes;</i>	<i>Now, for your sake,</i>
<i>In stillness, it is like walls, like cliffs.</i>	<i>I reveal it.⁵</i>

IV. THE FUNCTION OF THE TRUE MIND

Zen Master Thanh Tong emphasized that practicing self-cultivation and inner transformation should be a lifelong endeavor. He taught that achieving an awakened mind - pure awareness and tranquility - was essential for realizing the profound function of *chân tâm* (the true mind). Those who truly understand their minds and harness their full potential should not act out of selfishness but instead share their insights and achievements with others. A mind that embraces generosity and interconnectedness naturally leads to success in all endeavors. At the heart of his teachings lies the Buddhist understanding of impermanence and interdependence. Everything in existence is neither truly coming nor going, neither created nor destroyed; rather, all things continuously manifest in different forms. No entity has an independent, inherent self; everything exists due to the coming together of various conditions. Human beings, too, are formed by countless interdependent elements - our ancestors, parents, and the fundamental natural forces of the universe: *địa, thủy, hỏa, phong* (earth, water, fire, wind). Reflecting deeply on oneself reveals these connections: *Whose hands do mine resemble? Whose feet do I take after? From whom have I inherited my resilience and strength?* In this way, self-awareness becomes a gateway to recognizing our inseparable bond with all life.

The phrase “Vào nhỏ hay vào to, Mặc kệ thuận hay nghịch” (Entering the small or the large, regardless of favorable or adverse conditions) highlights the importance of transcending dualistic thinking - whether in size, comparison, or circumstances. Attachment to notions of *big* and *small* traps us in judgment, just as clinging to *favorable* or *unfavorable conditions* keeps us bound by emotions of joy and suffering. A truly awakened mind remains undisturbed, maintaining inner peace regardless of external situations. One of the defining characteristics of enlightened Vietnamese Zen masters is their ability to adapt skillfully to their circumstances. They act according to their role and environment while always staying aligned with compassion and the benefit of the Dharma and all beings. They live with freedom, selflessness, and non-attachment, never allowing external conditions to control or bind them. The

⁵ Institute of Literature (1988), *Poetry and Prose of the Ly - Tran Dynasties* (Vol. II, p. 415). Social Sciences Publishing House

key is acceptance and integration with all things, selecting what aligns with one's nature to refine and perfect oneself. The poem continues, "*Động thì như mây, như hạc*" (In movement, be like clouds and cranes) suggests that when the body is active - whether walking, standing, or reclining - one should move with ease and fluidity, or "*Tĩnh thì như tường, như vách*" (In stillness, be like walls and cliffs) implies unwavering stability, whether sitting or lying in a state of rest, or "*Nhẹ như sợi lông, nặng như tảng đá*" (Light as a feather, heavy as a boulder) reflects both physical weight and the inner state of movement or stillness. Ultimately, when ideas of *gain and loss, right and wrong, victory and defeat* dissolve, the true mind (*chân tâm*) is revealed.

The *true mind* (*chân tâm*) is the most profound mystery within each individual. It is not the physical body, nor does it have a tangible form, yet it is not separate from the physical self. It has no shape, no appearance, no color, no scent, no size, no limits, no inside, no outside. It pervades all things, beyond grasp, and can only be realized through clarity and inner stillness. Its manifestation (*Dụng*) is seen in individuals of great wisdom - those who embody freedom, selflessness, universality, fearlessness, and humility. These individuals possess profound intelligence, unshakable resolve, and unwavering confidence in their abilities. They rely on no external forces but rather trust in their inner strength. With wisdom and virtue, they dedicate themselves to the welfare of society, playing a vital role in stabilizing and protecting the nation, fostering prosperity, and ensuring the well-being of the people. No one exemplifies this ideal more than figures like Tran Thai Tong, Tran Thanh Tong, and Tran Nhan Tong - leaders who not only ruled wisely but also lived by the enlightened principles of the true mind, guiding their people toward harmony, resilience, and spiritual awakening.

*"The scorching heat causes sweat to drench my body,
Yet it has never soaked the loincloth my mother gave me at birth."*⁶

V. REPLY TO TUE TRUNG THUONG SI

This body may ache and suffer from illness, but it has no connection to the true mind. The physical body and the true mind are entirely different. "Scorching heat" is merely a sensation - when we observe it clearly, we recognize that this heat is felt in the body. It may arise from fever due to illness or from external weather conditions, but it does not reside in the mind. Many people mistakenly say, "I am hot," when in fact, it is the body that is experiencing heat. "The loincloth my mother gave me" is a common metaphor in Zen teachings, symbolizing what Zen Buddhism calls "the original face" (*bản lai diện mục*) - the primordial mind, the unchanging essence of all phenomena in the universe, untouched by external conditions such as illness or heat.

When one truly understands this, they are no longer influenced by external circumstances and instead develop confidence in their inner being.

⁶ Institute of Literature. (1988). *Poetry and Prose of the Ly - Tran Dynasties* (Vol. II, p. 417). Social Sciences Publishing House

In Reflections on Reading Sayings of Great Wisdom, it is written:

“Sweat drenched from meditative practice,
One day, I shall see my mother’s true visage.”⁷

The essence of Buddhism in general, and Zen Buddhism in particular, lies in awakening individuals to perceive this “mother’s visage”. This concept is the key to resolving ontological questions and represents the highest state of liberation in Buddhist philosophy. The *true mind* is also symbolized as the “nurturing face” (*nuông sinh diện*) in Tran Thai Tong’s teachings, as the “true original face” (*chân diện mục*) in Tue Trung Thuong Si’s thought, and as the “innocent child” (*đồng tử*). It is the “genuine person without status” (*vô vị chân nhân*), the “face of the spring sovereign” (*đồng hoàng diện*) in Tran Nhan Tong’s philosophy, the “primordial person” (*bản lai nhân*) in Tran Minh Tong’s teachings, and the “wondrous essence” (*diệu thể*) in Dao Hue’s thought. Furthermore, it is the “free and independent person” (*tự tại nhân*) in Hien Quang’s teachings, the “leisurely monk” (*nhân tăng*), and the “one unified mind” (*nhất chúng tâm*) in Huyen Quang’s philosophy.

The Buddha meditated in the Snowy Mountains for six years, saw the morning star, and attained enlightenment - this is seeing the “*true face of the mother*.” The Second Patriarch (Nhị tổ) stood in the snow and cut off his arm to realize awakening. The Sixth Patriarch (Lục tổ) attained enlightenment upon hearing a single verse from the *Diamond Sutra* (*Kim Cang*). Linh Nguyên awakened when he saw peach blossoms blooming. Huong Nghiem was enlightened upon hearing the sound of a stone striking bamboo. Lâm Tế realized the truth when he was struck by Hoang Ba. Dong Son awakened when he saw his reflection in the water. “The true face of the mother” or “the original face” (*bản lai diện mục*) has no name - just as a newborn has no name until one is given. The body is like a house, and there must be a master of the house. That master is the “*original face*.” The sensations of heat and cold, feelings of lack, and desires - all of these are mere illusions. They do not belong to the true master of the house. These illusions shift with each breath, and one must focus on the breath. Like passing clouds, wandering thoughts and distractions come and go. When the clouds clear, the sky is this clear sky is *the original face*, the unchanging essence. It is the “treasure already within your house - stop searching elsewhere.”

What have we done to sweep away delusions? What have we done to recognize the “mother’s visage”? What have we done to attain serenity and liberation? Why waste time searching in confusion, restlessly chasing after illusions? If one seeks to find their true face by looking outward, running east and west in pursuit, it is nothing but a futile endeavor.

“Moving freely without clinging to existence or nonexistence,
Amidst the tangled web of myriad things, knowing nothing.

⁷ Institute of Literature. (1988). *Poetry and Prose of the Ly - Tran Dynasties* (Vol. II, p. 405). Social Sciences Publishing House.

Eating, sleeping as it comes,
Beyond that, nothing else is worth doing.”⁸

Self-Reflection, Part 3

Regarding the concept of existence and nonexistence, Emperor Tran Thanh Tong urged people not to become entangled in dualistic thinking. He emphasized that life simply requires one to live authentically - to eat, sleep, and function according to one's role and responsibilities, both for oneself and for the nation. This philosophy echoes in Tran Nhan Tong's *Cư Trần Lạc Đạo* (*Living in the World, Enjoying the Way*): “When hungry, just eat; when tired, simply sleep.”

Tran Thanh Tong was deeply influenced by the philosophy and style of Tran Thai Tong and Tue Trung Thuong Si. He held the view that there is no fundamental distinction between the Buddha and sentient beings - Buddha exists within all beings, and all beings possess the nature of Buddha. Tran Thanh Tong expressed this through his belief that “All phenomena are empty; there is no distinction between Buddha, saints, and sentient beings.” This perspective aligns with Tran Thai Tong's assertion: “My body is the Buddha's body; there are not two forms.” Tue Trung Thuong Si reinforced this notion, stating: “When deluded, one does not realize that one is Buddha.” Meanwhile, Tran Nhan Tong proclaimed in his famous teaching, “Buddha is in your own home”: “In my heart, nothing is lacking, nothing is in excess./ Buddha is emptiness, and so are people./ The autumn scenery stretches beyond the distant sky,/ Clouds veil the green mountains, indifferent to worldly affairs.”⁹
(Self-Reflection, Part 5)

At birth, we arrive in this world naked, without clothing. Only later do our parents clothe us to shield our bodies. When it becomes too hot, we remove our garments for comfort. Tran Thanh Tong perceived life and death in the same manner - as simply donning or removing clothes, a natural necessity without intrinsic importance. Just as clothing covers the body but does not alter the mind, birth and death are merely manifestations - the physical body perishes, but one who comprehends this truth transcends the cycle of life and death:

“Living is like putting on a robe,
Dying is like taking off one's trousers.
From ancient times until now,
There has been no other path.
Once the ‘eight characters’ are understood,
There is nothing left to report to you.”¹⁰

(Birth and Death)

⁸ Institute of Literature. (1988). *Poetry and Prose of the Ly - Tran Dynasties* (Vol. II, p. 407). Social Sciences Publishing House.

⁹ Institute of Literature. (1988). *Poetry and Prose of the Ly - Tran Dynasties* (Vol. II, p. 408). Social Sciences Publishing House.

¹⁰ Institute of Literature. (1988). *Poetry and Prose of the Ly - Tran Dynasties* (Vol. II, p. 416). Social Sciences Publishing House.

Extending this analogy further, throughout our lives, we put on many “robes”- a university degree, a position of power, a title or status. Recognizing these as mere outer coverings, we can train our minds to remain unshaken by gain or loss, superiority or inferiority. Tran Thanh Tong continues: *“From ancient times until now, there has been no other path”*. Every human being, without exception, follows the same cycle of birth, aging, illness, and death. Has anyone ever shed their skin and lived eternally? If we all walk the same road, what is there to fear? The natural law of *birth, existence, transformation, and extinction* and the human cycle of *birth, aging, sickness, and death* reflect the impermanence of all things. Eight notions nurture fear: birth and death, coming and going, similarity and difference, being and non-being. These eight notions prevent us from finding true peace and happiness in the present moment.

According to the Buddhist principle of Dependent Origination (Duyen Sinh), all things in this world, including the human body, exist due to causes and conditions. When these causes and conditions come together, things arise; when they disperse, things cease to exist. Ultimately, Zen poetry reveals the impermanence and instability of the human body, which is composed of the Four Great Elements (tứ đại). Its purpose is to guide readers toward recognizing their innate Buddha-nature, as taught by the Buddha: *“Nhất thiết chúng sinh giai hữu Phật tính”* (All sentient beings possess Buddha-nature). This Buddha-nature is the eternal and indestructible true mind within all beings. Such a perspective fosters positive qualities that inspire individuals to dedicate themselves to serving their country in the present. Once one realizes this true self, they attain mastery over themselves, their circumstances, and even nature itself.

The attainment of enlightenment is not merely achieved through the study of scriptures, classic texts, or the contemplation of the “five profound meanings” (ngũ huyền). It is not simply about diligently immersing oneself in history, refining one’s literary and martial skills, or leisurely reading books in times of peace. Rather, the life of Tran Thanh Tong, spanning over 40 years, was a profound journey of direct experience, shaped by real-life struggles and dedication. He walked the “fourfold paths of life”, devoting himself entirely to his people and his country: *“Taking the will of the people as his own will, taking the hearts of the people as his own heart.”* In times of war, he mounted his horse and led his troops into battle. For him, Zen was not separate from life - it was life itself. It was applied in action, lived with full dedication and selflessness in service to the nation. This engaged approach to Zen represents the most profound realization of enlightenment and was a defining principle of the Tran dynasty Zen Buddhism. Similarly, Tue Trung Thuong Si embodied this spirit: *“Walking is Zen, sitting is Zen.”* Whether eating vegetarian or consuming meat, he lived in harmony with nature, embracing a way of life that flowed seamlessly with circumstances (*tùy duyên tùy tục*), demonstrating the true essence of Zen in daily existence.

Forty long years, a single heart remains pure,
Escaping beyond thousands of prison gates.
In motion, like the wind echoing through a hollow cave,

In stillness, like the moonlight reflected in a cold pond.
 Having grasped the profound meaning of the Five Mysteries,
 I roam freely upon the vast crossroads of life.
 If one asks me what birth and death truly are,
 They are but clouds drifting in the sky and water contained in a vessel.¹¹

VI. REFLECTIONS ON READING “GREAT ILLUMINATION OF BUDDHIST AFFAIRS”

To focus the mind on a single object is to perceive that object as it truly is. More broadly, it is to see the true nature of all phenomena – to penetrate the essence of reality, even the most subtle psychological states. Zen in Buddhism leads to the cultivation of meditative concentration (*định lực*) and wisdom (*trí tuệ*), ultimately attaining enlightenment and liberation from the suffering of birth and death in the cycle of reincarnation (*samsara*). To achieve this, one must train the mind to be steadfast and unwavering – solid like a mountain (“*nhất phiến thành*”), unshakable like a diamond, impervious to external disturbances. When the mind moves, it should be “like the echoing wind in a hollow cave”; when still, it should resemble “the moonlight reflected in a tranquil pond”. A mind that is pure and empty, like a half-filled cup of water, easily embraces all things, perceiving them with clarity and truth. Our true nature transcends birth and death - it is like *clouds in the sky, like water in a vessel*. Water evaporates and becomes clouds; clouds gather and transform into rain; rain falls upon the earth, rivers, and oceans, continuing its natural cycle. In the same way, life flows in an unbroken, ever-changing process, yet its essence remains unaltered. The cloud never truly vanishes; it simply transforms - appearing in a teacup, across vast grasslands, in the gentle laughter of a child, or a mother’s loving hands. When all conditions align, a phenomenon manifests; when certain conditions are absent, it remains unexpressed. Understanding this law frees one from attachment to notions of life and death, eliminating the fear of mortality. Clouds may be large or small, thick or thin, taking on various forms; water in a vessel conforms to its shape, whether round or elongated, wide or narrow. Likewise, we may be a drifting cloud in the sky or the vast ocean itself - our essence shaped by the expansiveness or constraints of our minds. The ultimate truth is: Neither birth nor death, neither coming nor going, neither sameness nor difference, neither existence nor non-existence. To grasp this truth is to awaken to *chân tâm* (true mind), *chân như* (suchness), and the ultimate reality. By understanding the natural laws of existence and acting in harmony with them, one unlocks the secret to a joyful and fulfilling life in the present moment. By realizing the true nature of life and death, one can channel their full potential toward the growth and prosperity of their country. In all that Trần Thánh Tông pursued, his ultimate aspiration was for every citizen of Dai Viet to cultivate wisdom, virtue, and capability - like the Buddha Śākyamuni,

¹¹ Institute of Literature. (1988). *Poetry and Prose of the Ly - Tran Dynasties* (Vol. II, p. 410). Social Sciences Publishing House.

like the future Buddha Maitreya. As expressed by Emperor Trần Nhân Tông in *Cư trần lạc đạo phú*: “Planting the seeds of compassion, cultivating virtue - who else but Śākyamuni? Observing precepts, cutting off greed and envy - none other than Maitreya.”

In a nation where everyone fully realizes their potential, that country becomes strong and prosperous, standing firm without fear or hesitation in the face of any foreign invasion attempts.

VII. TRAN THANH TONG AND THE EDUCATION OF HUMAN VIRTUES FOR A COMPASSIONATE AND SUSTAINABLE FUTURE

The ideology of Tran Thanh Tong is not confined to the era in which he lived but holds enduring value that can be applied to individuals in any society. In today's context, his perspectives on cultivating human virtues are profoundly significant, especially as Buddhism encourages each person to contribute, according to their abilities and circumstances, to the creation of a happier world. The true strength of a nation lies not only in its economic or military power but fundamentally in the moral integrity of its leaders and the collective consciousness of its people. The enlightened policies of the Tran Dynasty in both nation-building and national defense elevated Dai Viet into a civilized, prosperous, and influential state within the region. Even today, these values remain relevant and should be studied and creatively applied to nurture human virtues, fostering a compassionate and sustainable future.

The ideal of enlightenment and liberation is meant for everyone - whether monastic or layperson, whether living in a temple or the world - as long as one cultivates the mind and nurtures virtue. All people are equal before the truth and the ideal of spiritual awakening. Human beings are inherently Buddhas, yet they often forget their true nature and seek enlightenment outside themselves. As the Buddha taught: “*Be a light unto yourself. Rely on yourself; do not depend on anything else. Rely on the Dharma, do not depend on anything else.*” When one realizes that each person is a Buddha, they allow their Buddha-nature to manifest and must live and act accordingly. If every leader and citizen of a nation embraces this understanding and puts it into practice, then the entire society will be guided by wisdom and compassion. This realization leads to the fulfillment of the ideal: “*Nhất gia nhân, nhất quốc hưng nhân*” (*When one household embodies benevolence, the entire nation flourishes in benevolence*).

Buddhism also encourages individuals to take control of their thoughts and actions. From a humanistic perspective, this is the principle of self-mastery. Once one deeply understands the law of cause and effect (karma), they should be more mindful of their actions, ensuring that their consequences do not bring harm to themselves, their family, society, or the nation. As the Buddha taught, before undertaking any action, whether great or small, one must carefully consider its outcomes. Buddhism affirms that anyone can attain Buddhahood through dedicated practice and self-transformation in daily life. Each person plays a decisive role in reshaping their destiny, striving toward a life of peace and enlightenment, and ultimately realizing Nirvana here in this world.

Human development is influenced by many factors, such as environment, education, and family. However, the final decision ultimately lies with each individual. Buddhist ethics aim to bring the knowledge that each person has acquired - at different levels, with different abilities, and through different experiences - into practical application in daily life. This leads to a transformation of consciousness, fostering self-awareness, self-discipline, and self-practice to achieve one's goals in life.

Rooted in the foundational principle of compassion, Buddhist ethics place great importance on human actions, with benevolence being the most essential practice. If one fully grasps the philosophy of Tran Thanh Tong - his views on life and death, the relationship between body and mind, and the interconnectedness of all beings - then the path to inner peace and harmony becomes clear. When the mind is free from distinctions and attachments, the world unfolds as a place of serenity and boundless possibilities. At times, people live with their focus fixed on the future, forgetting that the present moment is the true gateway to happiness. They seek external pleasures while neglecting their inherent nature. True fulfillment arises from harmonious coexistence, mutual care, and support- not from domination or suppression.

The Tran Dynasty was a golden era built upon a foundation of comprehensive societal progress where every aspect of life flourished. Individuals experienced holistic development - both physically and spiritually - guided by visionary leaders such as King Tran Thanh Tong. With a profound and expansive mind, he attained enlightenment and selflessly shared his wisdom with all, rather than keeping it for himself out of personal gain or selfishness. His aspiration was for everyone to achieve the same level of understanding and fulfillment as he did. The 2030 Agenda for Sustainable Development, with its 17 Sustainable Development Goals (SDGs) and 169 interconnected targets, aims to guide member nations in transforming their approaches to development. It advocates for an inclusive, human-centered, and sustainable model where no one is left behind. By fully realizing the ambitions outlined in this agenda, the lives of all individuals will be profoundly improved, and our world will be transformed for the better. President Ho Chi Minh emphasized that fostering the holistic development of the Vietnamese people requires a focus on four key aspects: virtue (đức), intellect (trí), physical well-being (thể), and aesthetics (mỹ). Among these, he placed the greatest emphasis on "virtue", advocating for individuals to cultivate a pure and ethical mind, reflected in their daily social interactions and relationships. Humans are capable of acquiring, correctly applying, and effectively utilizing the achievements of humanity in culture, science, and technology. They can also innovate and develop new knowledge to address emerging issues arising from reality. As Ho Chi Minh stated, "Each good person, each good deed is like a beautiful flower; together, our nation becomes a vast and thriving garden." In the era of Industry 4.0, building a smart society requires cultivating smart citizens. Many countries are developing "smart cities", but such cities can only thrive if they are built and led by capable and intelligent individuals. This necessitates entrusting

the task to talented and knowledgeable leaders. The 13th National Congress of the Communist Party of Vietnam has identified human development as a strategic priority and a breakthrough mission for the coming years. Only by fostering comprehensive human development, ensuring that individuals possess good health, knowledge, skills, and a strong sense of responsibility toward themselves, their families, and their nation, can Vietnam build a high-quality workforce capable of driving sustainable national progress. President Ho Chi Minh once wrote: “National development requires talent. Although our country may not yet have an abundance of talent, if we carefully select, assign, and utilize people wisely, talent will continue to grow and multiply.”¹² He emphasized the need to “seek out individuals who possess both talent and virtue”, believing that failing to utilize national talent is a serious shortcoming - a waste of valuable human resources essential for building and strengthening the nation. Throughout his leadership of the Vietnamese revolution, Ho Chi Minh stressed that the right person must be assigned to the right role, in alignment with their abilities and strengths. He cautioned against mismatching skills and responsibilities, famously stating that one must not “assign a carpenter to work as a blacksmith.” Misplacing talent leads to inefficiency, stagnation and ultimately hampers national progress. Poor personnel management not only weakens the Party’s effectiveness but also stifles the growth of the nation’s intellectual and leadership capital. In every era, talented and virtuous individuals have been the backbone of national strength. As scholar Than Nhan Trung asserted, “Talent is the lifeblood of a nation. When this lifeblood thrives, the country prospers; when it declines, the nation weakens. Therefore, wise rulers throughout history have always prioritized cultivating and selecting talent as a fundamental task.” During times of war, patriotic individuals dedicate themselves to defending the nation, risking their lives to safeguard its sovereignty. In times of peace, they contribute to the country’s advancement - developing its economy, education, and culture - ensuring prosperity and stability for all citizens. Recognizing and nurturing talent is, therefore, not just a matter of policy but a strategic imperative for a nation’s long-term strength and sustainability.

The Tran Dynasty placed great importance on internal harmony within the royal court, recognizing that unity was essential for building national strength and resisting foreign invasions. Despite personal conflicts between Grand Prince Hung Dao Tran Quoc Tuan and Grand Chancellor Tran Quang Khai, the wisdom and diplomatic skill of Emperor Tran Thanh Tong ensured that they set aside personal grievances for the greater good of the nation. Prioritizing the country’s survival over individual disputes, they united in their efforts to resist the Mongol invasions. The key factor behind Dai Viet’s three resounding victories against the Mongol invaders was this spirit of internal harmony and national solidarity.

In the present era, under new circumstances and facing the demands

¹² Ho Chi Minh (2011), *Complete Works*, National Political Publishing House, p. 114.

of building and defending the Socialist Republic of Vietnam, the historical lesson on the strength of national unity remains profoundly relevant. Fostering solidarity and collective determination has been established as a strategic direction of the Vietnamese revolution, serving as the primary source of strength and a decisive factor in ensuring the sustainable success of national development and defense. President Ho Chi Minh emphasized the fundamental role of unity with his famous words: “*Đoàn kết, đoàn kết, đại đoàn kết; Thành công, thành công, đại thành công*” (*Unity, unity, great unity; Success, success, great success*). Building internal unity is a crucial element in organizational leadership, and maintaining a culture of solidarity requires each individual to balance both negative and positive emotions within themselves. True internal unity demands resolute efforts to eliminate opportunists, agitators, and those who incite wrongdoing that disrupts internal solidarity. In each individual’s mindset, it is important to emphasize the common goal and shared interests of all, uniting everyone toward a common purpose. As President Ho Chi Minh once emphasized: “Let us always remember the word *đồng* (unity) in thought, unity in effort, unity in will, and unity in alliance.” At the 13th National Congress of the Communist Party of Vietnam, comprehensive policies were introduced to strengthen and harness the power of national unity. The congress set forth new guiding principles, elevating the Party’s perspective on this critical issue to greater heights. It underscored the need to ignite patriotism, foster national resilience, and consolidate the strength of national solidarity, all while striving for a prosperous and happy Vietnam.

The Tran Nhan Tong Institute in Vietnam today carries the mission of academically promoting the authentic, enlightened, and intellectual lineage of Buddhism. It aims to contribute to the preservation and development of Vietnamese Buddhism’s finest traditions, the philosophy of Tran Nhan Tong, and the cultural heritage of the Tran dynasty, including the teachings of Tran Thai Tong, Tran Thanh Tong, and Tue Trung Thuong Si, as well as traditional Vietnamese culture as a whole. Associate Professor Nguyen Kim Son, Director of the Tran Nhan Tong Institute, stated: “We seek to illuminate future generations with the light of wisdom, compassion, and boundless love embodied by Tran Nhan Tong through education,” contributing to the formation of a modern Vietnamese identity in the era of globalization. Few may know that half a world away, in Boston, USA, the name of the enlightened Emperor Tran Nhan Tong has been honored through the establishment of an academic institution bearing his name: The Tran Nhan Tong Academy at Harvard University. Founded by a group of scholars at Harvard University, one of the world’s foremost centers of intellectual excellence, this institution recognizes a remarkable Vietnamese historical figure whose legacy represents wisdom and humanity. Thus, the ideals of compassion and unity championed by the Tran dynasty have transcended national boundaries, reaching a global stage.

VIII. CONCLUSION

Within the framework of the United Nations’ Sustainable Development

Goals (SDGs) for 2030 and Vietnam's Roadmap for Sustainable Development, each of us - descendants of Dai Viet - must remain steadfast in our commitment, intellect, and resilience. It is our collective responsibility to embrace compassion, foster solidarity, and contribute to the well-being of our communities.

By upholding the spirit of great national unity, we actively participate in the nation-building and safeguarding efforts, striving towards a prosperous, powerful, and thriving Vietnam. A nation where peace, happiness, and sustainable well-being are not just ideals but realities for all. As such, each individual must recognize their role and responsibility in preserving and advancing this sustainability for generations to come.

MINDFULNESS IN ETHICAL EDUCATION FOR VIETNAMESE YOUTH FOR A COMPASSIONATE AND SUSTAINABLE FUTURE IN THE DIGITAL ERA

Dr. Bui Xuan Dung^{*}

Abstract:

In an increasingly digitalized world, Vietnamese youth face significant ethical challenges that require innovative solutions to promote moral integrity, compassion, and sustainability. The rapid advancement of technology, social media, and globalization has transformed traditional ethical values, leading to concerns about digital responsibility, mental well-being, and social cohesion. Mindfulness, an ancient practice rooted in Buddhist traditions, offers a compelling framework for ethical education by fostering self-awareness, empathy, and responsible decision-making. This paper explores the role of mindfulness in ethical education for Vietnamese youth, emphasizing its potential to cultivate a compassionate and sustainable future in the digital era. Through a mixed-methods approach, the study examines the impact of mindfulness-based interventions (MBIs) on ethical reasoning, emotional regulation, and digital well-being. The findings suggest that integrating mindfulness into education enhances students' moral consciousness, reduces digital distractions, and strengthens their capacity for ethical decision-making. This research contributes to the growing discourse on mindfulness in education and presents a viable solution to address ethical dilemmas faced by Vietnamese youth.

Keywords: *Mindfulness, ethical education, Vietnamese youth, digital well-being.*

^{*} University of Economics Ho Chi Minh City.

I. INTRODUCTION

In the digital age, Vietnamese youth are increasingly facing complex ethical challenges that necessitate innovative approaches in education to foster compassion and sustainability. Integrating mindfulness, deeply rooted in Buddhist traditions, presents a promising solution by cultivating self-awareness, empathy, and ethical decision-making. The Buddha emphasized the importance of mindfulness in moral conduct, stating, “Do not pursue the past. Do not lose yourself in the future. Looking deeply at life as it is here and now, the practitioner dwells in stability and freedom”¹ with the rapid advancement of digital technologies and increasing internet penetration, which reached 79.1% of the Vietnamese population as of 2023² youth are exposed to ethical dilemmas such as misinformation, cyberbullying, and digital addiction. This study explores the role of mindfulness in ethical education to equip Vietnamese youth with essential skills to navigate the moral complexities of the digital world. Recent research has demonstrated that mindfulness-based interventions improve emotional regulation, cognitive flexibility, and ethical reasoning³. Intercultural Competence Development: Exploring International Graduate Student Leader’s Journeys through Contemplation and Mindfulness-Based Inquiry. However, challenges remain in implementing mindfulness in education, particularly in ensuring its cultural relevance and alignment with traditional Buddhist ethics. Addressing these concerns requires structured teacher training, curriculum integration, and interdisciplinary collaboration. By embedding mindfulness into educational frameworks, Vietnam can cultivate a generation of ethically responsible and socially conscious individuals, contributing to a more compassionate and sustainable future.

II. LITTLE REVIEW

In the digital age, Vietnamese youth face complex ethical challenges requiring innovative educational approaches. Integrating mindfulness into education, grounded in Buddhist ethics, offers a promising pathway to cultivate compassion and sustainability among young individuals. Mindfulness, defined as present-moment awareness, enhances self-regulation and ethical decision-making, essential skills for navigating the digital landscape. The Buddha highlighted the importance of mindfulness in ethical behavior, teaching not to cling to the past nor become lost in the future. The practitioner achieves stability and freedom by fully embracing the present moment.⁴

Recent studies indicate that mindfulness-based interventions can effectively address behavioral and psychosocial issues among Vietnamese youth, fostering moral and emotional growth. As of January 2023, Vietnam

¹ May, R. (1999). *Freedom and destiny*. W. W. Norton & Company.

² Thuan, B. B. (2023). Digital literacy of Vietnamese human resources. *The VMOST Journal of Social Sciences and Humanities*, 65 (2), 71 – 84.

³ Bui, T. A. (2023). *Intercultural competence development: Exploring international graduate student leaders’ journeys through contemplation and mindfulness-based inquiry*.

had 77.93 million internet users, accounting for 79.1% of the population, with a 7.3% increase from the previous year⁵. This widespread internet usage underscores the urgency of equipping youth with ethical frameworks to engage responsibly online. Educational programs integrating Buddhist ethics and mindfulness have been implemented in Ho Chi Minh City to educate young Vietnamese in Buddhist teachings, practices, and ethics.⁶ These programs have shown promise in enhancing participants' moral consciousness and social responsibility.

However, the application of mindfulness in educational settings raises ethical concerns, particularly regarding its secular adaptation and potential detachment from its Buddhist roots.⁷ Addressing these concerns requires culturally sensitive implementation strategies that honor the traditional context of mindfulness practices. In conclusion, integrating mindfulness into the ethical education of Vietnamese youth presents a viable solution to foster compassion and sustainability in the digital era. By grounding these practices in Buddhist ethics, educators can provide youth with the tools to navigate the complexities of the digital world ethically and responsibly.

III. METHODS

The study applies the comprehensive methodology of dialectical materialism to clarify the role of mindfulness in moral education for Vietnamese youth in an increasingly digital world. At the same time, the article also uses analysis and synthesis to evaluate the factors affecting the morality of Vietnamese youth in an increasingly digital world.

The analytical method is used to separate the factors affecting the morality of youth, including the development of technology, social media, and globalization, thereby identifying challenges such as digital responsibility, mental health, and social cohesion. Meanwhile, the synthesis method helps to connect aspects of mindfulness - an ancient practice in the Buddhist tradition - with the requirements of modern education, aiming to build self-awareness, compassion, and responsible decision-making ability. The analytical method helps to find the impact of mindfulness-based interventions on young people's moral thinking, emotional regulation, and digital health. The synthetic method clarifies the research results, showing that integrating mindfulness into education not only enhances moral awareness but also helps reduce digital distraction, thereby enhancing ethical decision-making ability. The study contributes to expanding awareness of the application of mindfulness in education and proposes feasible solutions to address ethical issues that Vietnamese youth are facing. In addition, the study also applies the

comparative method to compare the effectiveness of mindfulness education with traditional moral education methods, thereby drawing out the advantages and limitations of each technique. The results from the research methods show that integrating mindfulness into education not only enhances moral awareness but also helps to reduce digital distraction while enhancing ethical decision-making ability. The study contributes to expanding awareness of the application of mindfulness in education and proposes feasible solutions to address moral issues facing Vietnamese youth.

IV. RESULTS

Applying Mindfulness in Moral Education for Vietnamese Youth in the Digital Age

In the digital age, Vietnamese youth encounter complex ethical challenges requiring innovative educational approaches. Mindfulness, deeply rooted in Buddhist traditions, offers a pathway to cultivate ethical awareness and resilience. The Buddha profoundly underscored the pivotal role of mindfulness in cultivating ethical behavior. He taught that clinging to past experiences or becoming entangled in future anxieties distracts the mind from the present moment. Practitioners develop a heightened awareness and presence by fully immersing themselves in the reality of the here and now. This deep engagement with the present fosters inner stability, allowing individuals to remain grounded amidst life's fluctuations. Furthermore, such mindfulness liberates the practitioner from the constraints of habitual thoughts and emotional reactivity, paving the way for true freedom and a balanced, harmonious existence⁸. This teaching underscores the importance of present-moment awareness in making ethical decisions, a principle highly relevant for today's youth navigating the digital landscape.

Integrating mindfulness into the education of Vietnamese youth involves several key components. First, fostering self-awareness enables students to recognize their thoughts and emotions, leading to better self-regulation. Second, developing empathy through mindfulness encourages understanding and compassion toward others, which is essential for online and offline ethical interactions. Third, enhancing attention and focus helps students manage digital distractions, promoting responsible technology use. Finally, cultivating critical thinking skills through mindfulness allows youth to assess the ethical implications of their actions in the digital realm.

Various methods can be used to implement mindfulness education for Vietnamese youth. Incorporating mindfulness-based interventions (MBIs) into school curricula has shown promise. A study exploring the feasibility of such programs in Vietnam found that participants reported increased self-awareness and emotional regulation. Additionally, digital mindfulness programs can be effective. Research indicates that digital MBIs can reduce anxiety and

⁸ Marques, J. (2012). Consciousness at work: A review of some important values, discussed from a Buddhist perspective. *Journal of Business Ethics*, 105, 27 – 40.

improve psychological well-being among adolescents.⁹ Furthermore, training educators in mindfulness equips them to model and teach these practices effectively, creating a supportive environment for students.

The Content Mindfulness and Moral Education in the Digital Age: Helping Vietnamese Youth Orientate Morality and Sustainability

In the digital age, Vietnamese youth encounter complex ethical challenges, including cyberbullying, rumors, and digital addiction. Integrating mindfulness into their education, grounded in Buddhist ethics, offers a promising pathway to cultivate compassion, self-awareness, and ethical decision-making. Buddhist Perspective on Mindfulness in Ethical Conduct Mindfulness, or “sati” in Pali, is central to Buddhist practice, emphasizing present-moment awareness and moral living. In today’s digital era, where constant connectivity and information overload are commonplace, the Buddha’s teaching is not to pursue the past. Do not lose yourself in the future. Looking deeply at life as it is here and now, the practitioner dwells in stability and freedom, which are relevant. As emphasized by the Buddha, mindfulness becomes a crucial tool for maintaining ethical conduct amidst the distractions of modern technology. By focusing on the present moment, individuals can avoid the pitfalls of dwelling on past mistakes or becoming anxious about future uncertainties, which are often exacerbated by the rapid pace of digital interactions. This present-focused awareness enhances decision-making, allowing for more deliberate and morally sound choices rather than impulsive reactions to digital stimuli. Additionally, mindfulness aids in emotional regulation, helping individuals respond thoughtfully rather than react emotionally in online engagements. It fosters integrity and authenticity by enabling people to connect deeply with their true selves, free from the superficial influences of social media. Furthermore, practicing mindfulness contributes to digital well-being by setting healthier boundaries with technology and reducing anxiety and information fatigue. Ultimately, by cultivating a mindful presence, individuals achieve mental stability and freedom, empowering them to navigate the complexities of the digital world with clarity and ethical fortitude. This harmonious balance promotes personal well-being and contributes to a more conscientious and connected digital society¹⁰.

Effective mindfulness education for Vietnamese youth should integrate several essential components: self-awareness, empathy development, and the ability to assess ethical implications in the digital realm. Self-awareness encourages students to recognize their thoughts and emotions, fostering better self-regulation. Empathy development nurtures understanding and compassion towards others, which is crucial for maintaining online and offline ethical interactions. Additionally, cultivating the skills to evaluate the ethical

¹⁰ Harrison, E. (2017). *The foundations of mindfulness: How to cultivate attention, good judgment, and tranquility*. The Experiment.

consequences of actions in the digital space enhances the ability to manage digital distractions and promotes responsible technology use. These elements are deeply rooted in Buddhist teachings emphasizing ethical living and mental cultivation. The Dhammapada (2004) states, “The non-doing of anything wicked, the undertaking of what is good, the purification of one’s mind – this is the teaching of the Buddhas¹¹”. In Vietnam’s current digital landscape, as of January 2023, there were 77.93 million internet users, representing 79.1% of the population, a 7.3% increase from the previous year¹². This widespread internet usage highlights the urgent need to equip youth with robust ethical frameworks to engage responsibly online. By incorporating these mindfulness education components, Vietnamese youth can navigate the complexities of the digital world with integrity and emotional intelligence, ensuring their interactions are respectful and conscientious.

Methods of Implementing Mindfulness Education. Implementing mindfulness education can be approached through various methods.

Implementing mindfulness education can be approached through various evidence-based methods that have shown significant promise in enhancing students’ well-being and ethical development. One practical approach is incorporating mindfulness-based interventions (MBIs) into school curricula. Research conducted in Vietnam demonstrated that such programs increased self-awareness and emotional regulation among students, highlighting their potential in the educational setting. Furthermore, digital platforms have emerged as an accessible and scalable means to deliver mindfulness education. Studies indicate that digital MBIs can effectively reduce anxiety and enhance psychological well-being among adolescents, making them a viable option for widespread implementation. These platforms provide flexibility, enabling students to engage with mindfulness practices conveniently, thus fostering consistent and sustainable engagement. Another critical component in successful implementation is teacher training. Equipping educators with mindfulness skills enhances their well-being and enables them to model and teach these practices effectively, creating a supportive learning environment. Schussler et al. found that teachers who underwent mindfulness training reported lower stress levels and improved classroom management skills, contributing to better student outcomes¹³. Moreover, integrating mindfulness education with cultural practices can significantly enhance its acceptance and effectiveness. Vietnam’s rich Buddhist heritage offers a strong foundation for incorporating mindfulness into youth’s moral and ethical education. Programs integrating Buddhist ethical principles have fostered empathy,

¹³ Schussler, D. L., DeWeese, A., Rasheed, D., DeMauro, A. A., Doyle, S. L., Brown, J. L., ... & Jennings, P. A. (2019). The relationship between adopting mindfulness practice and re-perceiving: A qualitative investigation of CARE for teachers. *Mindfulness*, 10, 2567 – 2582.

compassion, and responsible decision-making among Vietnamese students, aligning mindfulness practices with deeply rooted cultural values. This cultural alignment ensures greater acceptance and long-term sustainability of mindfulness initiatives. In addition, school-wide mindfulness initiatives that engage students, teachers, and parents have proven highly effective. Such holistic approaches underscore the importance of creating an ecosystem that supports mindfulness practice at multiple levels. These challenges, such as a lack of resources, training, and institutional support, can hinder the implementation of education mindfulness for youth. These barriers require policy-level interventions, stakeholder engagement, and continuous program evaluation to ensure effectiveness and scalability.

Various studies support the effectiveness of mindfulness education.

Numerous studies have validated the effectiveness of mindfulness education in fostering ethical awareness, psychological resilience, and overall well-being among adolescents. Research indicates that mindfulness-based programs significantly reduce anxiety and depression in youth, equipping them with essential coping mechanisms to navigate emotional and psychological stress¹⁴. This is particularly relevant in the digital era, where Vietnamese youth are increasingly exposed to cyberbullying, misinformation, and digital addiction. The pervasive nature of social media and online interactions has created an environment where adolescents face unprecedented challenges, often leading to feelings of isolation, anxiety, and identity struggles. Mindfulness education provides a structured approach to developing emotional intelligence and psychological resilience, helping students cultivate a balanced perspective on their digital interactions and personal relationships.

Additionally, mindfulness education enhances ethical decision-making by promoting self-awareness and empathy. Students engaged in mindfulness interventions demonstrate a heightened awareness of their actions and their impact on others, fostering more considerate and responsible behavior. This aligns with Buddhist ethical teachings, emphasizing mindfulness as a tool for moral refinement: “The non-doing of anything wicked, the undertaking of what is good, the purification of one’s mind – this is the teaching of the Buddhas”. Integrating such teachings into educational settings nurtures ethical consciousness and provides students with a culturally relevant framework for personal development. Mindfulness education can bridge traditional values and modern challenges by reinforcing the principles of kindness, compassion, and moral conduct.

Furthermore, mindfulness programs have been linked to increased resilience and well-being in young individuals. A study by Li found that students who practiced mindfulness regularly exhibited more excellent emotional stability, self-regulation, and an enhanced ability to manage

¹⁴ Rawana, J. S., Diplock, B. D., & Chan, S. (2018). Mindfulness-based programs in school settings: Current state of the research. In *Handbook of school-based mental health promotion: An evidence-informed framework for implementation* (pp. 323 – 355).

academic and social pressures¹⁵. This ability to stay grounded and composed in the face of stressors is crucial for academic success and overall mental health. In a competitive educational environment such as Vietnam, where academic excellence is highly valued, implementing mindfulness education can be an essential support system, promoting cognitive development and emotional and social well-being.

Integrating mindfulness education into the Vietnamese national curriculum could be a foundational approach to addressing the ethical and psychological challenges of the digital age. Incorporating mindfulness-based interventions (MBIs) into school programs can give students practical skills for managing stress, improving concentration, and fostering a positive outlook. When implemented effectively, school-based mindfulness programs can create a supportive learning environment where students feel empowered to take charge of their mental health and personal growth. The long-term effects of mindfulness interventions and culturally contextualized programs tailored to the unique socio-cultural dynamics of Vietnamese youth. Understanding the cultural nuances and values that influence the perception and acceptance of mindfulness practices is crucial for ensuring their effectiveness and sustainability. Collaborations between educators, mental health professionals, and cultural scholars can facilitate the development of comprehensive mindfulness curricula that address Vietnamese students' specific needs and aspirations.

V. DISCUSSION

Buddhist philosophy, particularly mindfulness, has been effectively applied to moral education for Vietnamese youth in the context of digital transformation. Integrating mindfulness practices into education has yielded positive outcomes, significantly contributing to students' self-awareness, emotional regulation, and ethical decision-making in the rapidly evolving digital environment. As young individuals face increasing challenges such as cyberbullying, misinformation, and digital addiction, mindfulness programs have provided them with practical tools to navigate these issues with greater ethical integrity and emotional stability. Empirical studies have demonstrated that students who participated in mindfulness-based interventions exhibited a 30% improvement in resolving complex ethical situations online, such as responding to cyberbullying and identifying misinformation. This data underscores the effectiveness of mindfulness education in equipping students with critical thinking and ethical reasoning skills, which are essential for their well-being in the digital age. Moreover, teacher feedback has revealed significant improvements in classroom dynamics, with students exhibiting heightened levels of respect, concentration, and attentiveness while effectively reducing distractions from digital devices. These positive changes reflect a deeper engagement and a more disciplined approach to learning, which can be

¹⁵ Li, X., Ni, X., & Zhang, J. (2024). The chain-mediating effects of mindfulness and sense of control on corporate employees' mental health problems. *Behavioral Sciences*, 14 (8), 654.

attributed to implementing mindfulness in the educational setting. Mindfulness education enhances academic performance and contributes to the youth's overall moral and emotional development by fostering an environment where students are encouraged to cultivate self-awareness and ethical behavior. As students internalize these teachings, they are better equipped to navigate the challenges of the digital age with integrity and mindfulness, ultimately leading to a more harmonious and productive learning atmosphere and emphasizing the importance of ethical living and mental clarity. However, implementing mindfulness in moral education is challenging despite these promising outcomes. Some limitations include the need for more comprehensive teacher training, ensuring cultural sensitivity, and addressing the varying levels of student engagement with mindfulness practices. Additionally, the digital landscape presents new ethical dilemmas that require continuous adaptation and contextualization of mindfulness teachings to remain relevant and practical. Future research should focus on developing culturally contextualized mindfulness programs that resonate with Vietnamese youth's values and daily experiences. Policymakers and educators should collaborate to create a sustainable framework that integrates mindfulness into the national curriculum while addressing potential barriers to implementation.

Despite specific achievements, mindfulness in moral education for Vietnamese youth still faces several limitations that must be addressed to maximize effectiveness. One of the most significant challenges is the lack of teachers with specialized training in mindfulness. Effective implementation of mindfulness-based education requires educators who are well-versed in mindfulness techniques and capable of integrating them into the existing educational framework. However, many teachers lack the necessary training and experience, leading to inconsistent delivery and reduced program effectiveness.

Another significant barrier is the resistance from some parents and students to integrating mindfulness into the curriculum. Cultural perceptions, misunderstandings about mindfulness, and concerns about its relevance to academic success contribute to this resistance. Parents may prioritize traditional academic subjects over mindfulness education, viewing it as a non-essential addition rather than a valuable tool for personal development. Similarly, students may initially struggle to see the practical benefits of mindfulness, especially in the context of their digital lives, where instant gratification and distractions are prevalent.

In addition, the lack of appropriate materials and resources to implement mindfulness programs presents a significant obstacle. Effective mindfulness education requires well-designed curricula, instructional materials, and access to experienced practitioners who can guide students in developing mindfulness skills. However, many schools lack the resources to integrate mindfulness fully into their programs, resulting in fragmented or superficial implementation. This shortage of resources is often linked to limited funding and insufficient institutional support.

The root causes of these limitations may stem from a lack of awareness of the benefits of mindfulness and its potential impact on moral education. Many educators, parents, and policymakers are not fully informed about the positive effects of mindfulness on self-awareness, emotional regulation, and ethical decision-making. Consequently, there is a lack of motivation and support to incorporate mindfulness into the national education system. Additionally, the absence of comprehensive teacher training programs further exacerbates the issue, as educators do not have the opportunity to develop the necessary competencies to teach mindfulness practices effectively.

Previous studies on mindfulness in moral education have primarily focused on general benefits but have not adequately addressed the unique challenges of digital transformation. The rapid proliferation of digital technology has introduced new ethical dilemmas for Vietnamese youth, including issues related to cyberbullying, online misinformation, and digital addiction. Addressing these challenges requires a nuanced approach integrating mindfulness education with digital literacy and ethical awareness.

The current study emphasizes the importance of integrating mindfulness into moral education within digitalization and proposes specific solutions to overcome the limitations above. These solutions include developing comprehensive teacher training programs, increasing public awareness about the benefits of mindfulness, and creating culturally appropriate educational materials that resonate with Vietnamese youth. Furthermore, collaboration between academic institutions, policymakers, and mindfulness practitioners is essential to ensure the successful implementation and sustainability of school mindfulness programs.

The findings of this study highlight the significance of integrating mindfulness-based moral education into Vietnam's national curriculum to address the ethical challenges posed by digital transformation. To improve the effectiveness of mindfulness education in shaping the morality of Vietnamese youth, the study proposes the following three solutions:

Firstly, organizing in-depth training courses for teachers on mindfulness skills, helping them acquire sufficient knowledge, and guiding students in practicing mindfulness in the digital age. Providing professional development programs tailored to the Vietnamese educational context can enhance teachers' capacity to incorporate mindfulness techniques effectively in classroom settings. Developing Appropriate Educational Materials: Compiling and providing mindfulness educational materials specifically designed for Vietnamese youth, combining national cultural values and digital age requirements. These materials should integrate traditional Vietnamese ethics with practical strategies for navigating digital challenges such as online rumors and cyberbullying.

Second, developing and implementing curriculums that integrate mindfulness into moral education, helping students develop self-awareness, emotional control, and ethical decision-making skills in the digital environment. This initiative should be reinforced with consistent evaluation and feedback

mechanisms to ensure its relevance and effectiveness. Implementing these solutions requires close cooperation between educational agencies, schools, families, and society to create a positive learning environment, supporting Vietnamese youth to develop comprehensively in digital transformation. In this regard, Buddhist temples play a crucial role in moral education. As spiritual and ethical guidance centers, temples provide a supportive mindfulness practice and character development environment. Many temples have been actively organizing mindfulness retreats, ethical workshops, and community activities aimed at helping young people cultivate compassion, self-discipline, and moral integrity. By leveraging the rich heritage of Buddhist teachings, temples can complement formal education by offering students practical experiences in mindfulness and ethical living.

Third, collaboration between temples and social organizations can enhance the reach and impact of mindfulness education. Non-governmental organizations (NGOs), youth groups, and community centers can work with temples to develop programs promoting ethical awareness and social responsibility among Vietnamese youth. Such partnerships can facilitate outreach efforts, ensuring mindfulness education reaches underserved communities and vulnerable populations. Programs can include joint workshops, mentorship initiatives, and volunteer activities that foster a sense of collective responsibility and ethical awareness.

Fourth, temples can serve as hubs for intergenerational learning, where experienced monks and practitioners can share their wisdom with younger generations, bridging the gap between traditional values and contemporary challenges. This comprehensive approach to education strengthens students' moral compass and fosters a deep appreciation for cultural heritage and spiritual resilience. Applying mindfulness in moral education for Vietnamese youth in the current context of digital transformation brings many benefits but also faces challenges that must be addressed. Through teacher training, appropriate educational materials, and the integration of mindfulness into the curriculum, we can empower Vietnamese youth with the necessary tools to navigate the complexities of the digital world while staying rooted in ethical principles and cultural values. The successful implementation of these solutions requires ongoing collaboration and commitment from all stakeholders, including educational institutions, families, temples, and social organizations, to create a comprehensive and supportive environment for moral development.

VI. SOLUTION

The ethical complexities of digital transformation necessitate a comprehensive and structured approach to moral education for Vietnamese youth. By fostering self-awareness, empathy, and critical thinking, mindfulness education provides young individuals with essential moral and cognitive skills to navigate the digital age responsibly. The study underscores the importance of a well-structured implementation strategy that includes teacher training programs to ensure effective delivery and cultural alignment. Properly trained educators can guide students in applying mindfulness practices to their daily

lives, fostering ethical decision-making online.

Collaboration with Buddhist scholars is crucial to preserving the authenticity of mindfulness teachings while adapting them to contemporary educational frameworks. Integrating traditional Buddhist principles with modern pedagogical methods can create a culturally relevant and practical approach to moral education. Additionally, digital mindfulness workshops can serve as practical interventions to equip students with strategies for responsible online behavior, mitigating the risks associated with cyberbullying, misinformation, and digital addiction. These workshops can give students practical tools to manage their digital engagement mindfully and cultivate a balanced relationship with technology.

Expanding research in this field is essential to understanding the long-term impacts of mindfulness education on students' moral and psychological development. Future studies should examine the effectiveness of mindfulness-based interventions across different educational levels and regions in Vietnam to identify best practices and areas for improvement. Furthermore, interdisciplinary research incorporating perspectives from psychology, neuroscience, and educational technology can contribute to refining mindfulness programs, making them more accessible and impactful for the digital generation.

Policymakers should consider implementing pilot programs to assess the feasibility and effectiveness of mindfulness education within diverse socio-cultural contexts. These pilot initiatives can provide valuable insights into the challenges and opportunities of scaling mindfulness programs nationwide, ensuring their sustainability and long-term impact. Public awareness campaigns and collaborative efforts between educational institutions, families, and social organizations will also be vital in fostering a supportive ecosystem for mindfulness education.

By advancing research and refining implementation strategies, Vietnam has the potential to cultivate a generation of ethically responsible and emotionally resilient individuals. Equipped with the necessary skills to make sound moral decisions and maintain emotional well-being, these individuals will be well-prepared to contribute positively to a sustainable and morally conscious digital society. Integrating mindfulness into moral education represents a proactive and forward-thinking approach to addressing the ethical challenges posed by digital transformation, ensuring that Vietnamese youth develop into responsible global citizens in the digital era.

MINDFULNESS IN BUDDHIST EDUCATION FOR A COMPASSIONATE AND SUSTAINABLE FUTURE

Dr. Prohlad Roy*

Abstract:

This paper explores the essential role of mindfulness and Buddhist education in fostering a compassionate and sustainable future for humanity. Beginning with a philosophical reflection on the nature of human beings, the study highlights the importance of spiritual enlightenment, ethical living, and self-discipline as foundational elements of personal and societal development. The paper delves into the core teachings of Buddhism - such as the Four Noble Truths, the Noble Eightfold Path, and the concept of karma – and examines their significance in shaping moral consciousness and controlling biological desires. Furthermore, the historical evolution of Buddhist education is discussed, including its institutionalization through monastic systems and its influence on ancient centers of learning like Nalanda and Taxila. Special attention is given to the inclusive nature of Buddhist education, its openness to all social classes and genders, and its alignment with peace, nonviolence, and universal values. By integrating religious, philosophical, and practical knowledge, Buddhist education presents a holistic approach that remains deeply relevant in addressing modern global challenges.

Keywords: *Buddhist education; mindfulness; Four Noble Truths; Noble Eightfold Path; karma; monastic education; Theravada; Mahayana; ethical development; spiritual enlightenment.*

I. INTRODUCTION

Man is born as a lump of flesh and blood with a soul. However, just as he receives light and air from the moment he is born into this world.¹ His parents and relatives gradually raised him with the knowledge of small experiences and enlightened him with the light of knowledge. At some point, he is introduced

* Deputy Director, Agro-Economic Research Centre, Visva-Bharati, Santiniketan, West Bengal, India.

¹ Ambros (2012).

to the knowledge of letters. Then, when he grows up, his intellect and mind develop, and he finds a way to become self-illuminated. Becoming self-illuminated means illuminating oneself with knowledge. He is enlightened by the light of reaching the truth, having judged all the truths of this world, including both direct and indirect logic and arguments. The place of this enlightenment is man's self-improvement, the individual's improvement.² Now, it is not enough to improve or elevate only this individual. Self-improvement or the progress of the individual is central in all the world's religious scriptures. However, along with the good side of this self-improvement, there is also a bad side. One of the negative aspects of the self-sacrifice imposed by several self-centered politicians is great selfishness, depriving everyone of their development, seeing their benefit only slightly, and focusing on their own well-being. Selfishness is not the proper development for an individual or a state; that is, his light will illuminate the person who becomes enlightened himself, the people around him, and the society, and from that society, it will spread to the state, from the state to the whole world.

What is that light? The light is the light of knowledge, the light of wisdom, the light that contains only the light of developing brilliance, in which there is no ego, no burden; a person who is burdened like a stone cannot be enlightened because light has no weight, light has no burden. Instead, this world becomes visible through light. This light of knowledge is needed for the visibility of the truth; the light of wisdom is required. With this wisdom or the light of knowledge, along with developing himself, his principles, ideals, and values also develop within him. These principles, ideals, and values are interconnected with wisdom. For someone who does not have principles and ideals, his wisdom has no value because wisdom is not just memorising knowledge; wisdom is the all-encompassing illumination of his body and mind, in which there can be no dark closed doors. It is already stated in the beginning that man is a lump of flesh and blood; within this flesh and blood body are biological desires and needs. The biological characteristics of these desires and needs are pretty abundant. Greed, passion for food, and willingness to satisfy biological thirst; if he does not get these, he becomes violent and angry. Then he scrambles to get these and becomes aggressive towards each other. This wisdom or actual knowledge is the real one in such a situation. Without this wisdom, biological desires cannot be suppressed; the biological being cannot be controlled. The root of this biological being is desire, the desire that man has for his satisfaction. He does not know how much is needed for this satisfaction and how much is required to suppress his satisfaction; that is why his wisdom is perfected when he knows this. Which of his biological desires should be fulfilled, which should not be, and how much should be fulfilled? That is, controlling this biological desire is controlling the body. If the key to controlling the mind is not discovered, then man cannot be enlightened by the right light; man cannot develop in the light of wisdom. Therefore, to control

² Anderson & Robert (2000).

this biological being, we have to control it with the light of knowledge. We will attain calmness through knowledge, wisdom, honesty, values, morality, and physical practice. Just as this virtue controls our biological desires, it also develops values, decency, and honesty in us. Because if we desire or desire materially, we may not get what we deserve, and to get that right, we have to deprive countless people and create misery in the world. Creating this misery or depriving countless people of conflict, anger, and war and bringing these into our lives is not desirable. We are social beings; we want peace. We want to live together with compassion and honesty with everyone equally; in that case, personal biological desires reduce the rights of others. It is sad for us that it destroys the durability and stability of others.

From this source, man can get this wisdom through religious education. If the spiritual relationship that a religion or religious beliefs and practices establish with the life of a society is instructive, it is called religious education.³

According to the Encyclopaedia, the definition of religious education is - 'Religious Education is a considerably controversial and debated issue in Western societies for three main reasons. First, there is a conceptual problem, depending on whether it is perceived as a religious or an educational activity.'

Recently, the idea of modern educationists regarding religious education is - 'It is an activity designed to increase understanding of important human existence dimensions and encourage cross-cultural understanding. There is an important distinction between education in Religion and Education about Religion.'

Religious education makes the human mind honest, pure, and beautiful. If the human mind is sound, society and the state develop beautifully, and civilisation progresses. For people's economic, social, and national development, honest, hardworking, pure, and beautiful minds are needed. When this development progresses on the path of progress, human life becomes joyful. When stable development is reached, there is no poverty, misery, or suffering in the family, society, or state. People are then happy or live happily. For this, religious education is needed. Religious education alone can bring about stable development. Religious education does not mean performing rituals in temples, mosques, or churches. Religious education means gaining correct knowledge. Religious education includes free learning, free education, free intellect, and the ability to interpret life and the world with an open mind. The education by which one can gain correct knowledge or intellect is religious. If religious education is proper, the soul of the individual, family, and society will be enlightened. Moreover, when this overall development is possible for every person, the country will grow.⁴

People who do not know the true meaning of religion fight over religion, engage in politics, and riot, resulting in division among religions. Division

³ Barnes (2011).

⁴ Clarke & Jennings (2008).

among people disrupts mental peace. Without peace in people's hearts, people cannot progress in any work. As a result, it affects economic, social, and

National development. When development is removed from all aspects, the country deteriorates, harming developing or underdeveloped countries; developed countries' GDP declines, and they will not reach progressive development goals.

It cannot be said that the country's national development is only possible if the wealthy, upper-class, or elite groups improve. Sustainable Development is achieved only when all people improve overall. Religious education is needed at the school level and should not contain religious fanaticism or superstition.

When we talk about religious education, we talk about religion. People do not trust a religion that does not have any educational aspect. People cannot carry that religion for long. Religion without education is all about rituals; people cannot maintain the rituals of keeping rules for long. Due to the era's demands, people are forced to abandon the laws and customs regarding lifestyle. However, the educational aspect of religion is never bound by the regulations. Rituals are not all about everything; they should be a guide to new light inside and outside the person, revealing the eyes of knowledge. Therefore, it is essential to review the theoretical principles of different religions. Religion helps people to move forward in their search for the unknown world. Thus, religion cannot be separated as just spiritual or materialistic. Religion has been considered a practical matter in people's daily lives. Knowing the unknown world and empowering people with disabilities are the primary purposes of daily religious activities.⁵ The expression of this religion is mainly associated with people's daily lives, in most cases through rituals, ceremonies, prayers, daily activities, and rules. Different religions have other rituals, actions, rules, or prayer methods. Knowing or observing religion alone without these rituals seems abstract. Even those who do not make idols or worship formless things have some rituals and activities associated with the essence of that formless religion. People are generally inquisitive about the world and all unknowable activities. However, despite this unknowability, they expect a concrete example. Even the worshippers of formless religions want to see examples. Therefore, people in all countries observe the rules and activities necessary while practising religion, and therefore, religion's distinct characteristics and customs have been observed. Without such behaviours, customs, regulations, and activities, all religions would be seen as the same estuary of the same ocean of origin and essence. Then, all religions have nothing but surrendering themselves to the mighty Supreme Lord. For this reason, the nature of all religions is the Supreme Lord of the Universe. In human religions, the invisible presence of a person with miraculous powers is imagined, and people bow down to religion. Because his power and knowledge surpass everything and the ability to make the impossible possible prevails in him - that is the life force of religion. Therefore, in imagination or reality, the worshippers of all formless

⁵ Fanak (2013).

religions live by taking refuge in an embodied being.

In this religious field, the Supreme Being, the image of the Supreme Being, always imagines or creates that image according to the mighty power or qualities and actions known to us. That is why, if we examine the theories of the different religions of the world, we will see that although theory and religion go together, sometimes they surpass each other. However, the theoretical aspect keeps its main characteristic intact. There are differences between people in religion and many conflicts - and there is more unity and equality. In all religions, there is a strong desire to attain the unattainable through education and knowledge.

With this desire, religious people leave home and family and search for that Supreme Being. The strong desire to search for that Supreme Being and unite with it and the desire to know the unknowable still exist among people today.⁶ It is difficult to present any religion on a small scale. Once upon a time, all the individuals or groups in the world, in society, in the state, in life, in search of answers to questions that arise and to know about those unknown things when people practised and searched day after day or throughout their lives, or generation after generation, and the conclusions they have reached in that world of thought, imagination, and the world as a whole are their acquired knowledge. Based on this acquired knowledge, the rest of the causal explanations and the search for a supernatural person with supreme power continue. Since this religion-centred knowledge practice, study, and education is a significant aspect of human civilisation, the individuals or groups practising all those knowledge, studies, and education would have retained their knowledge, studies, and education and passed them on from generation to generation. All this knowledge, scholarship, and educational practices gradually became the bearers of philosophy or knowledge, and later, as the bearers of religion, passed down from generation to generation, one day it was considered a religion.

For this reason, all religions of the world were originally the main centres of knowledge, scholarship, and education. later, they were transformed into religious institutions and gave birth to new religions. For this reason, education or knowledge is associated with almost all religions. The religions practised since the beginning of the world are very primitive and ancient. In comparison, numerous religions include Judaism, Hinduism, Jainism, Buddhism, Persianism, Christianity, and Islam.

II. BUDDHISM

The biography and teachings of Gautama Buddha are the foundation of Buddhism. Buddhism is the only religion in which a person has scientifically propagated and introduced the religion of knowledge named after himself without receiving any divine revelation.

On reaching South Bihar, he sat under an Ashwattha tree in the forest and started reviewing all his questions and the answers to those questions that

⁶ Devries (2001).

he got from different people. He had been sitting under a tree, analysing and examining, in one mind, for about six years. This period of his life was about six years. People call this period 'penance'. Sitting under the Bodhi tree, he came and said that he had attained enlightenment. This enlightenment is - just as birds can freely fly in the sky and see in all directions, so is the knowledge by which life and the world can be seen freely. Siddhartha is the only one who, after attaining enlightenment or enlightenment, did not come and say that he had attained God, found the Supreme Soul, or received any revelation from God. Therefore, he attained the truth and was proclaimed Buddha or the Enlightened One. He spread the knowledge that he had realised among the people. During his lifetime, many of his disciples and devotees carried out the work of preaching Buddhism. He established the Sangha. He passed away at the age of eighty. After his death, his disciples spread the words and advice of Buddhism.⁷

2.1. Tripitaka

There is a book written in Sanskrit called 'Tripitaka', which is spoken by the people, but Gautama Buddha himself preached his teachings in the language of the ordinary people. The common language of that time was Pali Prakrit, which is very easy to understand. The original teachings, teachings, and advice of Gautama Buddha were written in this Pali language. The book's name in the Pali language is 'Tipitaka'. The Pali Tipitaka contains the life story of Lord Buddha and his teachings for the benefit of many people and happiness of many people.

The extraordinary personality of the Buddha, who has thirty-two types of great man signs, and his face's unparalleled beauty and peace, radiance, and joy, please the beholder's mind. His remarkable personality as a Dharma maker is inextricably linked with correct enlightenment, knowledge and good conduct, wisdom, and compassion. The Tathagata is an arahant because he has killed the enemy, the defilement of the mind. He is fully enlightened because he has attained the proper enlightenment. He is a complete scholar because he is established in the knowledge of the dispelling of delusion and the conduct of the precepts of samadhi. He is a 'Sugata' and a Tathagata because he has proper physical, verbal, and mental movements. He is a 'Sugata' and a Tathagata because he knows all people and the Nibbana beyond the people. He is omniscient because he is unique and unsurpassed. Just as a charioteer tames an unruly horse, so too is he a skilled charioteer to bring misguided people to the right path. He is the Shasta (=teacher) of gods and humans. He is the Buddha who has attained enlightenment by destroying anger, hatred, and delusion. Because of his distinguished virtues, he is different from others and is a great benefactor of people. In the Pali Tipitaka, a stream of nectar emanates from the Buddha's Dharmakaya, which brings liberation. In this, the philosophy of religion in every aspect has been well explained and beautifully described. It makes people see the direct truth instead of wandering in indirect imagination.

⁷ Gyatso (2015).

That which, when embraced, immediately begins to bear fruit - that is why this Dharma is temporal. That which has no time to embrace is why this Dharma is timeless. It invites one to realise the Self, which at every step leads to the ultimate goal of liberation from suffering and Nirvana.

Moreover, which is worthy of being experienced by the wise individual, this Dharmakaya is without sectarianism, universal, omnipresent, eternal, and equally beneficial to all. Moreover, by seeing the congregation of disciples tasting the nectar of the Buddha's words on this teapot, it can be realised that the Dharma taught by the Buddha has no place for blind, reverent devotion and no room for the intellectual indulgence of the wicked. Dharma is efficient; a person who can grasp Dharma becomes well-established on the path of liberation, becomes upright, becomes righteous, becomes seen as appropriate, and the stream of knowledge is good and unobtrusive. Some noble state of this theory is attained. Such a person is venerated, respected, honoured, and righteous by everyone. This Dharma speech has inspired many householders and has blessed their lives. The lives of all these Buddha disciples and Buddha devotees are exemplary for peace-loving people of all countries and of all ages; Tripitaka contains all of India's spiritual and philosophical thoughts more than 2500 years ago. Tripitaka is an ocean with an incomparable treasure of beneficial sayings. The teachings taught by Lord Buddha have directly and indirectly enriched the later religions of India.

The religion introduced in the Tipitaka is called 'Theravada'. This Thera was adopted at the meeting of the Buddha. The Tipitaka is a collection of three books: 1) *Vinaya Pitaka*, 2) *Sutta Pitaka*, and 3) *Abhidhamma Pitaka*. The entire teachings of the Buddha have been compiled in these three books. The word Pitaka means 'basket' or container. However, in the Pali language, the word Pitaka is not used in the sense of a box or container for storing any item. Instead, the word Pitaka is used in the sense of legend or tradition. The Guru-Shishya tradition is the Pitaka. In Buddhist scriptures, the term 'Pitaka' means the basis and content of the book. In Buddhism, 'Tripitaka' is the Buddhist scriptures, i.e., the scriptures full of Buddha's advice, conversations, sayings, anecdotes, rules, etc.

2.2. Vinaya Pitaka

The word 'Binaya' means discipline, moral and mental education. Here, the details of the daily life of the Sangha of the Buddha and the monks and nuns are given; the guru of the monks and nuns prescribes punishment according to the Buddha's orders and instructions according to minor offences or objections and the offence. Binaya is Discipline, Moral code for the Sangha.

To become a member of any Sangha, one has to respect the previous Sangha chief and other members. Moreover, these rules must be followed because there was a possibility of misuse of democracy in the Sangha of the democratic Buddha. Moreover, Gautama Buddha did not want any anti-democratic talk to arise due to the tendency of Buddha's mother, Gautami, and other relatives to use hereditary influence to rise to high positions. Therefore, no one in the Sangha is a relative; everyone is a member. He paid attention to the strictness of

the newcomers and the respect shown to the predecessors. During his lifetime, some were waiting to become Buddha by violating the Buddha's words. They did not even want to follow the Buddha's rules to sit at the top of the Sangha, so disputes arose among them immediately after the Buddha's death. Even the fact that the Buddha's death was a conspiracy remains a matter of doubt.

The *Vinaya Pitaka* has three parts. There are three books in each of the three parts. 1) *Suttavibhanga*, 2) *Khandhak*, 3) *Parivarapathi*. *Buddhamśaraṇaṅgacchāmi dhammamśaraṇaṅgacchāmi saṅghamśaraṇaṅgacchāmi*. 4) *Chullavagga*: This is the second book of the Khandaka and the fourth book of the *Vinaya Pitaka*. The word Chulla means tiny. It is divided into 12 chapters.

d) *Parivarpath*: This is the last book of *Vinaya Pitaka*. It discusses the entire *Vinaya Pitaka* in a concise form. It has 21 chapters. A Buddhist monk compiled it from Sri Lanka. It is a valuable book that straightforwardly presents *Vinaya Pitaka* through questions and answers.

2.3. *Sutta Pitaka*

The Buddha's discourses were initially divided into two parts. The first is the *Vinaya Pitaka*, and the second is the *Dharma Pitaka*. Later, the *Dhamma Pitaka* was split into two parts: the *Suttas* and the *Abhidhamma Pitaka*.

The *Sutta Pitaka* records the history of the Buddha's religion and philosophy. The *Sutta Pitaka* contains the basic principles of the Buddha's religion and an analysis of those principles, including the Buddha's advice for the welfare of householders, etc. The *Sutta Pitaka* discusses the precepts, *samadhi*, wisdom, the five aggregates, the noble truth, the eightfold path, the cessation of suffering, and nirvana in detail. In addition, the religious beliefs, philosophical thoughts, and wartime chronology of the pre-Buddhist era are highlighted. The *Sutta Pitaka* has five parts. Namely: 1) *Dighanikaya*, 2) *Majjhimanikaya*, 3) *Samyutta-Nikaya*, 4) *Anguttaranikaya*, and 5) *Khuddakanikaya*.

2.4. *Abhidhamma Pitaka*

During the lifetime of the Buddha, the *Tripitaka* was not divided into three parts. After the death of the Buddha, the *Dhamma Pitaka* was split into two parts from the *Dhamma Vinaya*. After the *Sutta* section, the *Abhidhamma Pitaka* is discussed. Here, the teachings on *Dhamma Tattva* or mind are discussed in this *Abhidhamma Pitaka*.

Abhidhamma is only a complement to the *Sutta Pitaka*. Here, there is a unique explanation of the teachings of the Buddha. The *dhammas* have been thoroughly analysed and proven here. Judging from this, the definition of *Abhidhamma* given by Acharya Buddha Ghosh is understandable. Buddha Ghosh says in his definition of *Abhidhamma* - "Dhammatireka Dhammavisesatten *Abhidhammoti*" - that There are seven books in the *Abhidhamma Pitaka*. Namely, 1. *Dhamma Sangani*, 2. *Vibhanga*, 3. *Dhatusakatha*, 4. *Puggalapaṇṇanti*, 5. *Conversation*, 6. *Yamaka*, 7. *Pattan*

Arya Satya: When we examine the time of Buddha, we see that various conflicting doctrines and practices confused the public life of that era. Multiple people tried to refute each other's views about the soul, God, and the world.

As a result, a delicate web of arguments was created and filled with unrest. On the one hand, there was the spread of Vedas and Brahmanism and the rituals of Vedic rituals, such as monotheism and cruelty in killing animals. On the other hand, there was the spread of scientific knowledge of arguments against the Vedas. In those days, ascetics and recluses rejected the Vedas, left the world, practised severe penance and austerity, and sought the path to peace and liberation. Materialists were unbelievers, logicians who tried to refute the prevailing views. There was no such great moral ideal before ordinary people; by adopting it, people lived healthy, everyday lives. In this age, the intellect preached the true glory of renunciation and restraint. He preached the emptiness of formalities. The falsehood of the theoretical analysis and the numbness of self-restraint. He preached the four 'noble truths'. He chose five well-known monks and gave them the first advice on turning the wheel of Dharma. Among these are four central truths. For true peace, it is necessary to understand and trust the four truths. The four noble truths are: 1. Suffering, 2. The totality of suffering, 3. The cessation of suffering, 4. The path to the cessation of suffering.

Suffering: This is at the very beginning of the Noble Truths. Life is suffering; birth is suffering; decay is suffering; disease is suffering, and death is also suffering. Meeting with an unpleasant friend is suffering; separation from a pleasant object and any unsatisfied desire is suffering. Gautama Buddha explicitly mentions the suffering of life.

The sum of suffering: Although life is described as suffering, suffering is not the end of life. Buddha believed that every object has one or more causes. Objects are entirely dependent on causes. To understand the nature of an object, one must understand it in terms of its cause. No object in the world, soul or non-soul, is eternal. According to Buddha, there is no soul. What is true about the infinite and unchanging soul is also true about any external object and the material world. There is nothing in the world that is fixed and unchangeable. Change is the nature of matter. Being is understood as a succession of different states. All matter flows through these states of 'production', 'stasis', decay, and cessation. Therefore, matter itself is not impermanent. It is only the process of cause and effect. This is called Dharma. This Dharma is given special importance in Buddhism. Only by knowing this Dharma of matter can a person walk on the path of liberation from suffering.

Everything that happens in the world is happening depending on changing conditions. Therefore, everything is impermanent. Like everything in the world, suffering is also dependent on a cause. Suffering has a cause and effect. There is a chain of causes for suffering. This chain has twelve 'nidans' or causes. These are ignorance, formation, knowledge, name, form, contact with the six bodies, pain, craving, material, existence, race, ageing, and death. Age and death are suffering. However, the cause of this suffering is race or birth. However, the cause of the birth of a living being is craving. From craving comes attraction to material or life. Wherever there is craving, there is a relationship with life. This attraction or relationship is the cause of birth. Of course, the direct cause of

birth is called 'bhava'. Thirst and material take a unique form in birth through this bhava. Therefore, the place of craving is particularly noteworthy among the twelfth nidans. However, the root cause or original cause of suffering is ignorance. Ignorance or ignorance about the nature of the soul and the non-soul is the cause of craving and attraction. The actions that people perform out of ignorance after birth or birth create ignorance. As a result, the twelve causes do not end with birth and death; a new series is created, and the twelve causes revolve in a cycle, which is why it is also called 'bhava-chakra'

The way to eliminate this 'bhava-chakra' is to stop or eliminate the root cause, i.e., to destroy ignorance. Once ignorance is removed, its functions also disappear one by one according to the general law of pratityasamutpada, and finally, birth, birth, and death also come to an end. The cessation of suffering: The cessation of suffering is the third 'noble truth'. If a cause arises, action cannot occur. This is true, but there is no necessity regarding the origin and existence of the cause. Therefore, ignorance is the cause of worldly existence and suffering, but ignorance is not the end of it. Man can remove this ignorance by his efforts. If the cause is destroyed, action is destroyed. Therefore, if ignorance is destroyed, formations and actions are destroyed; if formations are destroyed, knowledge or consciousness is destroyed, and as a result of the destruction of consciousness, name and form are destroyed; if name and form are destroyed, the six bodies or vision are destroyed. As a result, touch or contact of the senses with objects is destroyed. As a result, pain or sensory perception is destroyed, and with the destruction of pain, craving is destroyed. As a result, material and existence are destroyed. Even if existence does not exist, there is no birth or birth. Moreover, if there is no birth, there is no suffering in the form of ageing and death. Moreover, the cessation of this suffering is liberation or nirvana. The path to the cessation of suffering: The path to the cessation of suffering is the fourth 'noble truth'. It has eight paths or parts. That is why it is called the 'eightfold path'. The detailed form of Buddhist principles is observed in these eightfold paths.

Right view, 2. Right resolve, 3. Right speech, 4. Right action, 5. Right livelihood, 6. Right effort, 7. Right mindfulness, 8. Right concentration.

Right view: This is the necessary knowledge about the self and the world. False knowledge or false view is the cause of suffering, so the correct view is the proper knowledge about the four noble truths.

Right resolve: Correct knowledge alone is not enough for Nirvana. This knowledge requires appropriate application in life. For this application, the proper resolution is needed.

Right speech: It is more important to restrain speech. One should refrain from false speech, unpleasant speech and unnecessary speech. This is called right speech.

Right action: The virtues and practices of non-violence, non-stealing or non-stealing, celibacy, non-graha, etc., are essential. For this, the right action is needed.

Right livelihood: Adopting honest and straightforward means to live is necessary. Even to save one's life, one should never deviate from one's ideals. Therefore, for this reason, the right livelihood is needed.

Proper Exercise: Instincts and desires repeatedly hinder a person's righteous life. Therefore, one must remain steadfast in one's resolve and path. Thus, to stay faithful, one needs proper exercise.

Correct Memory: For a person to not be hindered on his path and stray from his resolve, memory and exercise are necessary. For instincts and misconceptions not to hinder one from attaining salvation, one should never forget the truth that he has accepted. That is why correct memory is necessary.

Right Concentration: Proper concentration is necessary to establish and successfully apply the noble truths in life. Through concentration, knowledge is transformed into wisdom; faith is transformed into direct feeling. This wisdom brings peace to life and makes life worthwhile and successful. By paving the way to Nirvana and analysing the Eightfold Path, three principles are found: 'wisdom', 'morality' and 'samadhi'⁸

2.5. Karma

A fundamental concept of Buddhism is '*karma*'. According to Buddhism, the existence of matter is not accepted. Matter or offspring is accepted. Any object, soul or non-soul, is just a process of change. The past and present states are not entirely separate events in this process. Its causes are not precisely mechanical. The past becomes the present through transformation, so even if the past state is destroyed, its transformation remains in the present. In this way, what remains is this process. This process goes forward from generation to generation through transformation. Past actions leave their transformation in the present - through generations. The present places its transformation in the future. The results of actions are not enjoyed under the direction of any transcendental being. Man maintains the continuity of moral life according to his own rules. Moreover, if he follows the Buddha's Nirvana, the transformation and action stop forever.

III. BRANCHES OF BUDDHISM

Disagreements were seen among the followers of Gautama Buddha during his lifetime. However, that disagreement could not be raised about the great personality of Buddha. Sometime after the death of Buddha, the differences became apparent again. As a result, the first Dharma Mahasabha was convened in Rajgriha. In this Mahasabha, there was a discussion about reducing the strictness of the monastic religion. However, after the debate, the doctrine of the old or the older adults was given priority, and the Tipitaka was compiled. This doctrine is known as the old or the old people or the old people. About a hundred years later, in the second Mahasabha, there was a discussion about whether relaxation in 'restraint' could be accepted. After much debate, the strictness of the older adults was finally accepted. However, the progressives

⁸ Waley (2013).

and the Mahasaghihikars were not less in number. They then called the third Mahasabha and named it 'Mahasangati'. Here, the strictness of the older adults was significantly reduced, and more facilities were provided to the ordinary people in Buddhism. After Emperor Ashoka embraced Buddhism, he spread it to various countries, including China, Japan, and Sri Lanka. However, in the first century AD, during the reign of the Kushan king Kanishka, Nagarjuna gave the Mahasanghika doctrine a proper form, named Mahayana. Moreover, the Mahayana followers called 'Theravada' Hinayana.⁹

3.1. *Theravada or Hinayana*

Those who give exceptional value to the life and teachings of Buddha and do not believe in any divine power for liberation are known as Theravada or Hinayana. The ideals and life of Buddha are not only a guide to the path for ordinary people but also a guarantee of reason. Man can attain liberation only through his efforts. Monks should strictly observe the Eightfold Path, and householders should observe it as much as possible. Nirvana is the only desirable thing. Buddha is an ordinary man like all other people. Like Buddha, a monk can attain Buddhahood through his efforts. This Buddhahood has to be achieved through his efforts without taking the help of others. Therefore, Theravada religion is a religion of self-reliance. There is no place for superhuman, supernatural things.

3.2. *Mahayana*

Mahayana followers believe in the teachings of Buddha and Buddha. The desire for compassion is more than the teachings of Buddha. The Bodhisattva form of Buddha is more acceptable.

The Bodhisattva is not Buddha; he is about to attain Buddhahood. He is born for the welfare of all, for liberation. According to Mahayana, Buddha is not one; Buddha is many. All souls or beings are

Manifestations of one Supreme Soul or Tathagata. That Mahatma incarnates as Buddha again and again. This Supreme Soul manifests itself in the world as Dharmakaya or Buddha again and again for the welfare. He has infinite compassion and love for the world. This compassionate Dharmakaya is known as the Lord Tathagata or Amitabha Buddha. Mahayana followers believe in incarnation and preach Gautama Buddha as the incarnation of Dharmakaya. They believe that humans need the compassion of Bodhisattvas for liberation. The Bodhisattva gives his knowledge and wealth to others for their welfare. Therefore, Amitabha Buddha is worshipped as God. Gautama Buddha is imagined as the incarnation of the Supreme Soul.

Later, Buddhism underwent further changes. In the association of various domestic and foreign doctrines, the doctrines, beliefs, rituals and ceremonies among the Buddhists have entered the region, and the Mahayana followers worship the image of Buddha. Whether it is Hinayana or Mahayana, the knowledge of Buddha is the main thing in Buddhism.

Just as the Brahmanical educational system was developed based on the

⁹ চৌধুরী, ২০১৪).

Hindu philosophy of life, the Buddhist educational system was developed based on the Buddhist philosophy of life; these two systems did not come one after the other; that is, the second did not come by replacing the first. Buddhism arose from the Hindu religion, prevalent in its full glory, and continues to exist side by side. Similarly, the Buddhist educational system continues alongside the Brahmanical educational system. The two systems exist simultaneously as rivals and complement to each other. As a result of this coexistence, many traditional processes have also taken place. Brahmanical education has influenced Buddhist education in various ways. However, as long as the Tri-Saran mantra survived as a great power in India, the Buddhist educational system also stood with greatness. The Tri-Saran mantra of Buddha once resounded in the entire East and West with the sound of the Vajramanda. The mantra that awakened the minds of all India.¹⁰

That mantra gave Bharati unshakable speed.

Throughout the journey of many centuries of worldly life-

I bind it with auspicious attraction

In the pursuit of ultimate liberation with one constant centre,

I unite all people in single-minded devotion,

One religion, one community, by the power of one great Guru.

These words of Rabindranath are especially true about Buddhist India.

Buddhists believe in the immortality of the soul. However, the nature of the soul remains hidden from humans. Religion has spoken about unveiling the veil of darkness in various ways, saying “Apabrinnu” and “Tamaso ma jyotirgamaya.” God has said, “Be revealed”. That is why the sun is luminous, and the earth is the whole of life. Humans, too, have to reveal that soul. There is bondage, disorder, and destruction where this revelation is hindered. Suffering is inevitable in this worldly life, plagued by the bondage of desires. Relief from this can be found only through good deeds; this truth is recognised in Buddhism.

When Buddha, with a painful mind, was searching for an answer to why human beings are bound and destroyed and why death is a painful experience, he found the answer that man will be liberated by realising and expressing his soul. His sin and suffering lie in the obstruction of that expression. Rabindranath Tagore beautifully expressed this fundamental truth of Buddhism and the consciousness of life - “He (Buddha) first made people accept certain prohibitions and ordered them to adopt the precepts. He told them, “Do not be greedy, do not be jealous, do not be attached to luxury.” He advised them to remove all the coverings that had encircled them through daily practice. Only when those coverings are removed will the soul attain its pure nature.”¹¹

What is that form? Not emptiness, not inaction. It is friendship, compassion,

¹⁰ Unno (2006).

¹¹ Roy (2015).

love for the Absolute.”

This path of Nirvana, that is, liberation from the cycle of rebirth of the Absolute, is what the Buddha has shown. The soul's liberation will come through the renunciation of desires and the expansion of love. This expansion of love has never been spoken of in such clear language as the Buddha. He said-

“Me’ōñcasabbalōkasmimṃmānasambhābaṃyēaparimāṇaṃ.

Ud’dhamadhō ca tirikhaphaasambādhamabēramasapattaṃ.”

Above and below, everywhere, towards the whole world, without obstacles, without jealousy, without enmity, with boundless mind and friendship. The Buddha also said that just as a mother protects her only son with her life, she will defend all beings with an infinite mind.

This is the essence of Buddhist life consciousness. Instead of the complex rituals of Brahmanism, straightforward words came. However, Buddha knew that things cannot be obtained by cheating. That is why he said that taking precepts is the path to liberation. “Panang na hane, do not kill living beings – this is the precept. Nach adinnamadiye, do not take what is not given to you. Musan bhasa, do not lie. Avoid intoxicants. Do not carry an umbrella on your head. These are all virtues. One by one, one should accumulate as many virtues as possible. These are good. The attainment of good is the stepping stone to love and liberation.”

In the case of Hinduism, instead of Karma Yoga, Buddhism preached the message of overcoming suffering, old age, disease, and afflictions on the path of moral self-improvement and purification and attaining supreme peace or Nirvana.

Adopting the eightfold path and precepts became easy for the commoner, but life could become pure and beautiful only through simplicity. As a result, Buddhism became vastly popular. Moreover, due to the increase in the power of the Kshatriya and Vaishya classes, Buddhism gained their patronage. Denying the impersonality of the Vedas, Buddhism demanded the abolition of caste. Therefore, the status of the non-Brahmin teacher was also recognised equally. He gave due status to the Brahmins.

This movement started with the idea of theoretical reform of religion. However, its simple theory, opposition to caste, and universal appeal made it popular. As a result, social life was affected. The Mahayana branch emerged to transform it into a religion for the ordinary people. The rise of the Mahayana sect in the post-Kanishka era has resulted in mass influence in religion and social policy. This religious and social evolution trend has dramatically influenced education's evolution.

In Buddhist philosophy of life, just like Hindu philosophy, the ultimate goal is to eliminate this life and the world! Both communities accept the four fundamental truths - suffering, the cause of suffering, the end of suffering and nirvana or salvation. However, the main difference between Hindu philosophy and Buddhism is atheism. Hindus consider this worldly life to be part of ‘Ekmebadvitiyam’. Buddhists did not accept that form of God. As a result, there has been a fundamental difference in the concept of meditation in education.

The only goal and ideal of Buddhist teaching is Nirvana. Moral knowledge, moral living, education in discipline in the unattached Sangha life and initiation into the religion of service are considered real education. According to Hindus, the ideal of education is to reunite with the Supreme Soul and end the earthly life cycle through self-realisation. Buddhists also want the end of the cycle of life. However, Nirvana will not be in reunion with the Supreme Soul but in the extinction of desires.

Therefore, instead of the Brahminical Gurukul, the monasteries became the refuge of Buddhist education. The unique advantage of monastery life was the education of restraint and meditation. That is why Buddhist education became centred entirely on the monasteries. The monasteries were the refuge of the monks' community. Therefore, all the responsibilities of education were entrusted to the monks. The rules and regulations of the monastery life were also to be followed by the students.

My educational life began at eight when I took the ordination course. A Buddhist student would approach a teacher or a teacher and respectfully request him to show him the path of spiritual life. He would recite the Tri-Saran mantra respectfully. Then the teacher would receive him. The Sangha society was built based on the joint life of the Guru and the disciple. In this way, no teacher can enter Sangha's life without being a direct disciple. Therefore, the high status of the teacher has been recognised in the Buddhist education system. However, the entire Sangha did not play the role of a teacher. The teacher was a specific person on whom the student's overall education depended.

The significance of Prabrajya is the surrender to enter the Sangha life with the mind of completely renouncing the previous life, that is, the small family life, and entering the Sangha life on the path of a more significant free life. The student had to leave all traces of home life. In this context, it is necessary to say that people of all castes could come as students. It was not told that the Guru would only be a Brahmin. Sangha life, established based on brotherhood and equality, is like a great ocean at the confluence of many streams. After the Prabrajya ceremony, the student was called 'Samaner' or Pabbajit. Pabbajit had to accept ten teaching positions. The student was first allowed to become a refugee of the new religion and Sangha, indicating the significance of the new life. The student had to promise to observe the ten precepts. Accepting things other than charity, impure conduct, eating at untimely times, participating in dances and songs, wearing garlands, footwear, perfumes and ornaments, using kohl and incense, sitting on high seats, and accepting gold and silver - these ten actions were to be avoided at all times.

Although there was universal access to the Sangha schools, people of all castes could attend, it does not mean there were no education restrictions. Buddhist education made a special effort to maintain moral and character purity. For this reason, certain restrictions were imposed on the path to education. Those who were above a certain age could not enter the Sangha. Those with lousy character or disease had no right to receive education. Those employed in government work, soldiers defending the country, or Criminals

had no right to receive the pavvaja. Those in debt or enslaved people could not become students either. The entrance to the Sangha was also closed to the shameless and unruly. Eligible entrants had to obtain the consent of their parents. Pavvaja was not allowed to be used to escape from the world. This system was adopted due to the sanctity of society and moral life and the moral consciousness about the family, culture and the state. Therefore, emphasis was placed on sincere ethics and ethical living.

In Buddhist monasteries, there were two classes of teachers. The teacher of theology was the Upadhyaya. The supervisor of moral life was the Acharya or Karmacharya. The 'saman' had a father-son relationship with the Upadhyaya and the Acharya. To be accepted as a student, the Pabbajit had to pray to the Upadhyaya three times, and he would agree. The guru was responsible for guiding the student's knowledge satisfaction and spiritual life, as well as his maintenance and care in case of illness. After being a devotee for at least thirty days, he would beg for discipleship by wearing yellow clothes and a turban. A person qualified to teach had unadulterated moral conduct, self-absorbed wisdom, unwavering faith in Nirvana, was humble, free from bondage and fearful of sinful acts, and could guide the student on the path of religion and modesty. Since this was the great responsibility of the teacher, he could also expel an unfit student from the monastery. However, he could not do this at will. Such punishment was possible only for lack of devotion to studies, lack of motivation, lack of modesty, or lack of respect for the teacher. The lessons had to be taken in the last part of the night. After five years of mastery of modesty, a second guru was sought. A well-regulated duty bound the life of the teacher and the student.

The daily duty of the disciple was to wake up before the guru, provide him with a toothbrush and a seat, serve him breakfast, and clean the place after eating. The disciple had to go out for daily alms with the guru and walk far from him. It was illegal for the disciple to create obstacles in the guru's conversation, accept alms without permission, or go elsewhere. It was also his duty to serve the guru during his illness. However, despite all this loyalty, it was not illegal for the disciple to leave the guru for any reason. The disciple properly disobeyed the guru if he returned to earthly life, joined another religious group, or incited the disciple to leave the Sangha. Therefore, no matter how close the personal relationship between the guru and the disciple, the interests of the Sangha were above all. A small group of young students under the supervision of a teacher can be called a Buddhist school in its original form. Gradually, these small groups formed larger collective organizations, the viharas. The practice of mutual debate and discussion in Deori spread through the joint pursuit of knowledge of many teachers and students gathered in viharas. Vinaya, Abhidharma, Sutras, Yoga and various folk scriptures were widely prevalent. The account of Nagasena's education shows that he first mastered Brahmanical education and simultaneously acquired scholarship in Buddhist scriptures.¹²

¹² Varela & Evon (1991).

From these accounts, some conclusions can be drawn that pursuing Buddhist education was prevalent even after completing Vedic education. Secondly, Buddhist education was not limited to monks alone. Household students relied on the monastery for theological education, while the birth of secular general education depended on the educational system prevalent outside the monastery. Medicine, law, and arts became particularly rich in secular higher education. The monks living in the monastery also learned handicrafts such as weaving, embroidery, etc. A seven-year curriculum was created in medicine, combining theory and practical education. The famous centres of medicine were Taxila, Rajgriha, and Varanasi. In the monasteries, suitable preparation was required for higher education.

For this, the curriculum was created in stages. Combining religious and secular education with philosophical and practical education brought extreme excellence in Buddhist education. Due to this combination, household students were called Upasaka or Upasika. They were also not free from the bonds of duty. It was also necessary for them to live a humble life to renounce the company of criminals, poison, alcohol and horses. They had many responsibilities towards teachers, monks, parents and children. Therefore, Buddhist education was not necessarily the education of monks in all cases. Buddhist monasteries also established a department of Lokayat education over time. Secular education was quite popular during the ICO's visit to India. Many monks preferred both types of education. Moreover, both types of education were valuable to Buddhists involved in political affairs. Monks had also been granted the right to leave monasticism and return to household life by then. The monasteries also opened their doors to novice students. This class of students was called "human". In this way, monks and non-monks, Buddhists and non-Buddhists, were also taught, and the monasteries were universal centres of learning, and the monks were considered teachers of all qualities. Teaching method For full monasticism, one had to pass various stages of initiation. The teaching method was also according to stages. The first stage method was mainly recitation. Emphasis was placed on reading the content, explaining, giving advice, and final examinations. The second stage method was mainly discussion-based. The third stage was teacher-taught. In the last stage, one had to follow the doctrine alone.

Fa-Hien says that the student's thinking and reasoning were encouraged since it was mainly taught orally. Since theories had to be explained publicly, discussion and logical skills were emphasised. There were also classes and prizes for this skill. Apart from that, gatherings of scholars and discussion circles were held from time to time. Knowledge competitions were held in gatherings of scholars in infamous towns. Emperors such as Harshavardhana patronised such gatherings. Therefore, it can be assumed that the highest level of education was in the 'journey of knowledge'.

At the end of the discussion, it can be concluded that the religious education system was not merely difficult, painful or mechanical. Mechanical education could never have created such an interest in the search for knowledge and truth. The wise were the objects of utmost respect. Being respected by all the

world, wise people were above the bonds of personal, worldly life. Therefore, judging by the results, the Buddhist education system established its claim to existence.

One more thing worth mentioning is the context of the spread of Buddhist education and the teaching method. As this education came into contact with public life, the more the language-medium balance was created. Gautama Buddha ordered the practice of the mother tongue to make the message of religion understandable to ordinary people. Therefore, the Prakrit languages of different regions gained importance. With the favour of the royal power, 'Pali' became the pan-Indian language. The demand for Pali instead of Sanskrit as the medium of education was primarily accepted. However, in the post-Sung era, the Sanskrit language regained prestige and even penetrated the interior of Bihar. Therefore, both Sanskrit and Pali continued to be practised. Fa-Hien himself studied Sanskrit for three years in Pataliputra. Hiuen Tsang also noticed the Brahminical influence and the importance of the Sanskrit language. In fact, in the last years of the Buddhist era, 'Sanskrit' gained special prestige in higher education. However, there was a sub-sampada for mass education. After completing the twelve years of residential education in the monastery, the Upasampada was the beginning of the final ordination. The Upasampada ceremony was held in Prakrit. The new graduate returned to home life through the Convocation. Therefore, the convocation was the beginning of home life. Full monasticism began at the end of education through the upasampada ceremony. Thus, during the Panchaja period, the Upadhyaya-Acharya played the leading role. However, the power to grant monasticism was only vested in the Buddhist Sangha.

Therefore, the Upasampada ceremony was held in front of the entire Sangha. Each matter was decided specifically at the Sangha meeting. A senior monk would present the novice to the assembly and ask for Upasampada. The novice himself would then surrender to the Sangha. After examining him in various ways, if there were no doubt about his qualifications, he would be declared a novice in the opinion of the assembly. His 'age of spiritual life' was calculated from the time of Upasampada. The novice was then taught four things to be observed in the life of a monk, such as leading a life of alms, wearing worn-out clothes, sleeping at the root of a tree and using cow urine as medicine. He was also told four prohibitions, such as giving up sexual intercourse, aversion to theft, giving up killing animals and giving up the arrogance of superhumanity. Buddhist Upasampada was primarily based on reason dependence and was devoid of mystery.¹³

In Vedic India, women had the right to education. Since women's freedom was not violated then, they had the right to education and social and religious rights. Naturally, ancient India produced many renowned scholars.

The verse itself says -

¹³ Roy (2022).

“Purākālpekumārīnāmāuñjibandhanama’iṣyatē
adhyāpanambēdānāmsābitribacanamatathā.”

Women had a high place in society because they had the right to perform yagnas and sacrifices. In the Atharva Veda, we see the god praying for a daughter. The female creator of the Samhita was the Mantradrashtha. A female sage was called a Rishi or Brahnavadini. Romsa, Lopamudra, Ghosha, Jahu, Jarita Paulami, Indrani, Urvashi, Apala, Kadru, Vishwabara, Savitri, Devyani, Maitreyi, Gargi etc. were such sages. Women had full rights to become priests. In the Sama Veda, there are names like Sikata and Nibabari. Female students had the right to be ordained. This right remained intact till the fifth century BCE. Girls used to remain virgins to acquire education. In the Kadambari of Banabhatt, Mahasweta’s body becomes pure and radiant after wearing the Yajnapaveeta. It was the duty of the parents to educate their daughter. A learned girl was considered a matter of pride for the family. It was desirable to give a learned bride to a wise man. Education did not end after the end of Brahmacharya, that is, after marriage. Married women also listened to Vedanta discussions. Women who were able to see the mantras were called Mantraniks or Ritvikas. Kunti, Draupadi, Kaushalya, Tara etc. were also Ritvikas. The Upanishads also mention some capable female teachers - such as Sulta, Pradhiteyi, Maitreyi, and Karshaktafi. Gargi’s discussion with Yajnavalkya, or the participation of Maitreyi, Yajnavalkya’s wife, in the debate, is also proof of this. In Bhavabhuti’s Uttara Ramchari, Atreyi discussed Vedanta with Labkush during Valmiki’s ashram. Similarly, Hulbha taught yoga samadhi and moksha to King Janaka. The place of women in the writing of scriptures was not insignificant either. The books of Katkringa’s Mimamsa Shastra, Apisaali’s Artha Shastra, and Karshakatfi’s grammar are proof of this. Women were also skilled in embroidery, weaving, and even wool weaving. Moreover, women were also made proficient in the fine arts of singing, dancing, etc. It has been said that Nrityagita is a woman’s work. There are sixty-four arts mentioned in Vatsayana’s Kamasutra. Apart from Nrityagita, women were skilled in painting, reciting, composing poetry, playing dice, making garlands, practising beauty, and Puzzles. Slave girls Nati and Barbanita were also skillfully employed in royal affairs. In the Middle Ages, the perfection of their skills in Nrityagita and Kama Shastra resulted from the skill of Devadasi Kingsha, the royal dancer. With the creation of the profession, the trend of female education continued until the time of Manu. Married young women were called Sadyobadhas.

They lived a domestic life instead of leading an entire ascetic life. However, they also had to study a little Vedas. The Brahnavadinis, however, had a separate entity. From the time of Manu, the trend of female education began to decline. Manu said - that marriage is equal to studying the Vedas, service to the husband is equal to living in an ashram, and housework is equal to evening worship. He prescribed that the father’s control in childhood, the husband’s power in married life and the son’s control in old age are the signs of perfection in a woman’s life. The Buddha’s words also stirred the hearts of women. Therefore, at Mahaprajapati and his disciple Ananda’s request, Gautama recognised

women's right to live as nuns. Thus, women also got the right to education.¹⁴ However, their dignity was greatly diminished because their education was arranged with many restrictions. It was not permissible for female nuns to live in the same house with men or touch men. They would receive lessons from a third person in the presence of a guru. Matchmaking was considered a forbidden act for them. Only after passing the test of living a modest life for a few years could they be initiated and ordained as nuns. Separate monasteries were created for nuns. Of course, in this era, the place of women in society naturally declined. In the post-Mauryan era, various foreign invasions and the rise of the Shresthi power in society created many grievances. In a society where Shrestha was nurtured, dancing, singing, and luxuries flourished, but the Natikul were deprived of social status. Despite the narrow-mindedness regarding women's freedom, the Buddhist era produced many virtuous women. Bhikkhuni Sulbha, Sramani Sarabi, Amrapali, Supriya, etc., belong to this category. Unnala was a famous teacher in the monastery of Bhikkhunis. The poetry of bhikkhunis, "Theri Gatha", has also gained fame. The Buddhist educational world can boast of at least thirteen renowned Theris. This category belongs to Mahaprajapati, Sujata, Soma, Anupama, Kshema, Kisagotami, etc. After the invasion of the Huns, mainly due to the Arab and Turkish campaigns, social liberality was destroyed. As women's freedom further declined, the fundamental educational institution of Vedic India was the Gurukul. Although each Gurukul existed separately, the centre for disseminating the highest knowledge was the Brahmin Sangha. The disciples of different Gurukuls used to gather and discuss the fundamental contributions of their respective schools. This is how conferences, discussion groups, and scholarly societies were formed. The Taxila University of ancient India was born in Brahmanical, but life flowed until the Buddhist era. Therefore, this university created a link between both systems. This educational centre is said to have been established by King Bharata, the capital of ancient Gandhara and the place of birth of the serpent. Since ruins have been discovered at three locations near Rawalpindi, it is assumed that its history was created through fragmentation.¹⁵ The rise and fall of Taxila, located at the northwestern gateway of India, on the path of Persian, Greek, Bactrian, Sakan, and Kushan invasions, also influenced the fate of this university. Foreign scripts, arts, and literary styles also influenced it.

The Taxila "University" was not a large-scale joint institution. It was merely a gathering of scholars. Therefore, students from all over India gathered here. However, each teacher and school was autonomous. The teacher had the right to determine the curriculum and admit or exclude students. There was no system of academic examinations or certificates. However, the scholarship here was Universally recognised. Prosenjit, Jivaka, Panini, and Kautilya were Taxila's contributions. Therefore, students gathered here from all over North and East India. The real fame of Taxila as a university lay in the fame of the

¹⁴ Loy (2005).

¹⁵ McMahan (2008).

teachers. Taxila was the centre of the highest education. Therefore, there were no male students here. After completing primary education, the higher education student entered at about sixteen. The students usually lived in the Guru's house. However, wealthy students either paid for maintenance or built their own houses. There was also an approved hostel. Many schools in Taxila also had a salary system. Of course, salaries were paid even after the end of education. Sometimes, the rich local people supported the students. Apart from that, there were also many invitations to social events. The salary was so small that the school could not run on it. Therefore, the teacher also had to depend on the society.

Some schools in Taxila had a large number of students. Except for the Chandals, there was no class, caste or wealth discrimination. Caste division was not evident in the selection of subjects either. Therefore, democracy and manual labour played a role in education. The simple life of these schools had a tone of discipline in the upper villages. Regardless of their status and status, everyone had to live a regulated life according to a fixed schedule.

The curriculum of Taxila included the Triveda, various sciences, arts, technology and the eighteen arts. Of particular note are astronomy, astrology, commerce, agriculture, accounting, serpent science, magic, hunting, medicine, dance, drawing, etc. Here, an attempt was made to combine abstract and practical knowledge. There was a system of acquiring direct experience in herbal medicine in medical science. In many cases, schools were also open only to Brahmins or Kshatriyas, adopting the equality of the curriculum. After completing the course, the students travelled the country, deepening their knowledge and expanding their minds.

The glory of this university remained intact until the Kushan period. However, after that, it declined. Fa-Hian did not witness anything important here. Then, the wave of Hun invasions came and destroyed everything. In the seventh century, at the time of Hiu-en-sang, there were traces of its existence, but there was no sign of glory.

In the Buddhist educational system, the monasteries were the academic institutions. Although many small monasteries emerged, the large monasteries, which the king enlarged, were the best examples of Buddhist universities. Nalanda was the most famous of all the universities created constitutionally under the joint management of many teachers and students.

The ruins of Nalanda are located 7 miles north of Rajgir. This university is mentioned in Buddhist and Jain texts. Taranath has indicated that Nalanda was the birthplace of Sariputta. Hiu-en-Tsang has given eyewitness accounts. The beginning of Nalanda University was based on the monastery built by Emperor Ashoka.

There are many proverbs about the name of Nalanda. Some say it was named after the village called Nal; some say it was named after the serpent-sucking Padmadighi. The etymological meaning written in Jataka is, however, more acceptable. Na+Alam+Da, meaning "one who has no aversion to giving",

is Nalanda's true identity.

Although it had its initial beginnings during the reign of Emperor Ashoka, Nalanda became famous during the triumphant march of Mahayana Buddhism. The account of Hiu-en-Sang indicates this gradual development. Initially formed with the donations of five hundred sages, this monastery grew primarily over the centuries, surpassing the Gupta era, the era of Harshavardhana, and even the Pala era.

Eyewitness accounts of that era describe the beautiful surroundings of Nalanda. A wide path led from the gate to the schoolhouse within the high surrounding wall. All around were huge multi-storey buildings and cloud-touching monastery spires. The rooms on the highest floor were above the clouds. Moreover, on the ground, lotus ponds swayed amidst deep golden flowers. However, the life of the teacher and student in the monastery was in complete contrast to this external splendour. Education was unpaid. The four necessities of life - food, clothes, bed and medicine - were provided free of charge. According to the experience of Hiu-en-Tsang, the students of Nalanda received 220 zombies, 20 nutmegs, Mahasali rice, milk, ghee butter, etc., free of charge.

Nalanda, Buddhist India's seat and an international learning centre, offered postgraduate specialised education. The age of admission was 20 years. Admission was also possible at the age of 15, but in that case, 5 years of special preparation was required. Access to high-quality education was restricted. One had to pass a rigorous examination by the gatekeeper. Only 20 per cent of those who wanted to enter were admitted. Nevertheless, a stream of students flowed in from India, Southeast Asia, and outside India, and there was no shortage of students. Nalanda students earned a good reputation in later life because of their high-quality theoretical and moral education. One thousand five hundred teachers taught 8,500 students in 100 different subjects in lecture halls, day and night, without sleep.

This integrated form attracted foreign countries. Fa-Hien, Hiu-en-Sang, Tao He, Ico came from China; Tao Sing, Tao Ling from Korea. Students came from Sinhala, Sumatra, Java, and Tibet. Inspired by this internationalism, Nalanda scholars Kumarjiva, Gunavarman, Paramartha and others went on religious pilgrimages to China, Tibet and other countries. This internationalism in education is still desirable today. Nalanda was in glory even during the time of 'I Sing'. However, despite the patronage of the Tibetan and Gauda kings, its glory began to wane from the end of the eighth century. Nalanda's glory also ended with the end of the Pala dynasty. When the internal life of Nalanda was in decline due to clan conflicts and internal strife, Bakhtiyar Khalji's expedition came. The history of Nalanda also ended with the fall of Muslim rule.¹⁶

Vikramshila Mahavihara was a contribution of the Pala emperors and was favoured by them. Emperor Dharmapala built this "vihara" on the banks of the

¹⁶ Mollier (2009).

Ganges in northern Bihar. There are different opinions about where the vihara was located.

Some say it was near Nalanda, some say in Bhagalpur district. The monastery adorned with the Mahabodhi statue was at the centre of the well-built walled enclosure. The central monastery was surrounded by 53 smaller monasteries and 54 more buildings. The Vihara, consisting of 108 monasteries, had 108 head monks and officials such as Acharya, Upacharya, Upadhyaya, Karmaparidashak, etc. The authority of the entire vihara was in the hands of a board of directors consisting of teachers. It is noteworthy from this source that the great Pala emperors simultaneously patronised Nalanda and Vikramshila. Dharmapala was the Acharya of both. It is assumed that the directors of Vikramshila also governed Nalanda. There was an exchange of teachers between the two universities. Dipankar Srigyan and Abhaykar Gupta taught at both places.

There were six colleges in Vikramshila. Each of them had 108 teachers. In the middle was the Gyan Bhavan. The Gyan Bhavan had six doors towards the six colleges. Six gatekeepers guarded the six doors. The images of Nagarjuna and Atisha Dipankar were painted on both sides of the main entrance. The most learned person was the patriarch of the monastery. During the time of Dharmapala, the patriarch was Buddha Gyanpada. The most famous patriarch in the history of this monastery was of course, Dipankar Sri Gyan Atisha. The curriculum or regulations of Vikramshila are not directly known because all the evidence was destroyed when this monastery was destroyed. However, from the close relationship with Nalanda, it can be assumed that the curriculum and regulations like those of Nalanda were prevalent here too. However, it is natural that Vikramshila was also influenced by the spread of Tantric Buddhism in the latter part of the Pala dynasty. Vikramshila was also famous for its scholars. Jnanapada, Prabhakaramati, Jnansramitra, and Dipankar Srijan are the names of this monastery. Tibetans still revere their role in spreading Buddhism in Tibet.

However, like Nalanda, Vikramshila was also destroyed. It is stated in the Tabakat-i-Nasari that the victorious Muslim army, considering this walled monastery to be a fortress, razed it to the ground and killed all the inhabitants. Those who managed to defend themselves fled to Tibet. Even amidst the destruction, no one was found in the monastery who could decipher the books that were saved. After recovering the meaning of the books, the victorious heroes learned that what they had destroyed was a university. Vikramshila was damaged, but Vikramshila remained in the history of Tibet.

However, the new economy, society, new mentality, and, above all, the latest education system of the modern era gradually faded Nadia's glory. However, somehow surviving through adversity, the Sanskrit schools of Nabadwip survive today as a symbol of ancient education. It is noteworthy in this context that although the Buddhist educational centres were destroyed during the Middle Ages, the Hindu educational centres of Varanasi, Mithila, Nadia, etc., maintained their existence throughout the Middle Ages despite the intense hostility of the Muslim royal power and the creation of social

divisions.¹⁷ The Vedic culture and education of ancient India absorbed various musical influences in its evolution and created a unified tone. The impact of multiple nations, such as Persians, Greeks, Shakas, Kushans, Huns, etc., from outside, and the influence of various reform movements at different stages from within, combined with all these, gave Hindu civilisation and education its unique form.

Gradually, the Buddha would sit in the forest near the abodes of various disciples or in the locality and give religious teachings to all the people. He would hold assemblies or conferences and instruct them to follow Buddhism's rules, regulations, teachings and sutras properly. The religion of the Buddha was democratic. He would take the Buddhist Sangha's and disciples' opinions, including monks and nuns, and then make decisions democratically.

Sometime after the death of Gautama Buddha, in the struggle between the new and old in Buddhism, the older adults following the Buddha were not in favour of changing those rules, customs and teachings. The new people tried to change them and popularise their views, considering the time and place. As a result, Buddhism was divided into two parts - Hinayana and Mahayana.

Both groups were committed to the propagation and expansion of Buddhism. However, the Mahayana followers relaxed the rules of Buddha and mixed them with idol worship, Brahmanism, reincarnation, miracles, Tantra and the circumstances of the country.

During the reign of Emperor Bimbisara, Buddhism took the form of the royal religion. Buddhism and education received royal favour and soon spread. Then Emperor Ashoka, through his son Mahendra and daughter Sanghamitra, propagated and spread Buddhism along with Bodhidrum in countries.

In Sri Lanka, Tibet, China, Japan, Siam, Java, etc, tourists like Fa Hien, Hiuen Tsang, and others came to India and returned home with Buddhist knowledge, education, initiation, and culture.

Later, Atish Dipankar went to Tibet and propagated and expanded the education and philosophy of Buddhism. There was Buddhist rule throughout India for a long time.

However, even after the end of Buddhist rule and the advent of Brahminical rule, the Buddhist teachings of the Buddhist rule remained strong in India. The Dharma Chakra of Buddha, which Ashoka built, is in the middle of the national flag of independent India. The Ashoka Pillar, which Buddhist followers revere, is the national official symbol of 'Satyameva Jayate' in independent India. Buddhist education is included in the traditional education curriculum in history, philosophy, sociology, yoga, religious education, etc., worldwide. In the modern world, Buddhism has spread widely in major Asian countries, especially China, Japan, Vietnam, Thailand, Myanmar, Indonesia, Sri Lanka, Java, Sumatra, Philippines, Bhutan, etc. Although Buddhism has spread in countries such as India, Nepal, Bangladesh, America, England, Africa, etc., it is

¹⁷ Roy (2022).

not in large numbers. However, Buddhist teachings' non-violence, humanity, human rights, and moral principles have played a significant role in the United Nations, the World Human Rights Organization, etc. Especially in establishing world peace, the importance of Buddhist education is immense.

The role of those who have played in the spread of Buddhist education is -
1. The role of writers, 2. The role of monks and nuns of the Sangha, 3. The role of Buddhist Sangeeti, 4. The role of kings and nobles, 5. The role of educational institutions.

i. The role of writers: From the lifetime of Gautama Buddha to recent times, religious books, medical texts, biographies, history, philosophy, stories, etc., including the life, ideals, teachings and enlightenment of the Buddha, have been written, as have various types of books, including commentary and commentary on the Buddhist practice system, and in recent times, many books have been written on Buddhism. Since the authors of all these books have made outstanding contributions to preserving and developing Buddhist education, the world has the most significant number of books on Buddhism.

ii. Role of the monks and nuns of the Sangha: The monks and nuns of the Buddhist Sangha take an active role in promoting and expanding the educational system of the Buddhist Sangha. In other words, these monks and nuns have kept Buddhism and religious education alive. If it had not been for these monks and nuns through their Sangha, Buddhism would have disappeared from India and many other countries.

iii. The role of Buddhist Sangeeti: After the death of Gautama Buddha, Buddhist Sangeets or conferences played a significant role. All the people of Buddhism, Buddha devotees and like-minded people gathered through the Buddhist Sangeet. In that Sangeet conference, the past and present of Buddhism were reviewed, and the future path was decided. Here, the direction of new paths and the outline of Buddhist education were determined through the discussions and speeches of many Buddhist scholars. As a result, Buddhist education was further developed through these Sangeets and conferences.

iv. Role of Kings and Nobles: If kings and nobles accept and propagate a religion, then that religion is propagated as the royal religion or throughout the state. Because the rest of the people followed the nobles, kings, and nobles, they had a role in spreading religious education.

v. Role of educational institutions: The most significant role is to instil religious education in the human mind from childhood to adulthood. Schools, colleges, and universities have been vital in spreading Buddhist education through the Buddhist Sangha. Buddhist education was studied in Buddhist monasteries all over India and in other countries of the world. Even now, along with Buddhist education in Buddhist monasteries, Buddhist studies, comparative theology, philosophy, history and education science are taught beautifully in modern universities. As a result, the spread of Buddhist education is ongoing.

Therefore, the spread of Buddhist education is progressing at a rapid pace. The contribution of Buddhist education to establishing peace in the universe

is the greatest.

If we look into the history of education in the world, we will see that people have mastered the education of survival since the primitive age. Their primary education was to collect food, eat food, and protect themselves from the hostile environment. However, people gradually evolved from gathering food to producing food. Fear and obedience to natural forces appeared in their minds. Then, they got rid of their lives of suffering and hardship, and finally, they protested and enjoyed a free life. Among all these events, only self-defence techniques were helpful to them in their family education. The rest of the education was first started through religious teachers and priests. Therefore, the first initiation, propagation and expansion of all education, institutional, non-institutional rules, outside the rules, was through religious education. This religious education was the first to bring education to the court of people. However, mass and oral education revitalised human society in a new way. People have found life and salvation in this religion for thousands of years. In all countries, education started with religious institutions by religious men. Although this education was first in religious educational institutions, it became widespread and expanded for the needs of the state.

Gautama Buddha has started in this place how a human being made of flesh and blood controls his biological desires and, being enlightened by the light of knowledge, controls that biological being and creates himself not only for himself but also for the world, for society, for the state, and awakens peace, non-violence and compassion in the minds of the world's people. Along with all these, if our biological being goes out of control and we make mistakes due to the persecution of biological beings, we can commit various social crimes, biological inconsistencies, or various kinds of sins that can be aroused in our minds. In this case, Gautama Buddha thinks that if someone can come out of remorse, repentance and fear within him and understands that he has mistaken and wants to correct his mistakes due to ignorance, then there is infinite forgiveness, infinite kindness, and infinite love for him. This forgiveness, endless love or infinite kindness is in the Buddha, in the words of the Buddha, by which people who are fallen and hated can be drawn into the bosom and illuminated and revealed again in the light. This is one of the aspects of the Buddha that illuminates or reveals life by suppressing the biological essence of a person. However, one must be careful; those who continuously deprive countless people and commit crimes, those who oppress countless people by doing injustice, take an aggressive attitude. They show dominance in society and want to keep others in society. One country wants to stay another country in society. The strong one destroys others with his strength. Similarly, there are some people with intelligence and political aspects who, instead of the belligerence of war, try to put people in danger with intelligence and stupidity and want to keep people in power. If such a person is accused and does not ask for forgiveness if he does not repent or want to correct himself, he has made mistakes consciously, but Gautama Buddha did not want to show forgiveness or mercy for him. In this case, it is not to be released with words of forgiveness

or kindness, but to accept him and first free the evil short-sightedness, cruelty, and politics within him and make him a straightforward person. Therefore, if he can reach the stability of the intellect through practice, then only he can become worthy of forgiveness; he will not have to be forgiven separately.

So, man's gradual progress towards freedom from diseases, ailments, and ageing cannot be eliminated through sadhana or meditation; if man has to find a solution without understanding its cause, man must invent and solve the cause. Knowing the way to get rid of diseases and ailments without getting affected by them and finding a way to get rid of them without getting affected by ageing, on the one hand, just as man has to see this way of liberation through practice in our individual life. Similarly, personal life can be fulfilled through the virtues of society. Just as man must create an antidote to prevent any disease, man must make innovations through wisdom or knowledge to prevent disease. This is the science of Gautama Buddha.

According to Buddha, the sustainable development we talk about does not mean staying still in one place. Instead, Buddha repeatedly spoke of gradual development; sustainable development is not stagnant in one place. For example, if a person reads two books a year and does not increase the number of books he reads in the following years, his memory has not developed. For sustainable development, he must increase the number of books he reads in the following years. That is, sustainable development in daily life means more development in human life. This development will never be horizontal or vertical but will continue for eternity without stopping anywhere. This gradual development of man means ignoring all biological beings and moving forward continuously through his wisdom or self-illumination. This gradual development is the religion of man, and this gradual development is the actual sustainable development.¹⁸ Therefore, for stable development, gradual development is needed; this development does not mean stopping at any place; that is, if it is drawn on graph paper, then the development line will not be vertical or horizontal. Instead, the development line will not be fixed anywhere and will continue to move forward. When this development reaches its peak, the development line reaches 90 degrees, and if it stops at a stable state, the development line continues horizontally after reaching a certain height. This development line reaches 90 degrees or continues horizontally; neither can be called gradual development. For gradual development, the angular upward line is ideal and desirable. Therefore, through the practice of the chapters or sayings of the 'Eightfold Path' of Gautama Buddha or the high-quality qualities that people achieve, not only the stable development of life but also the stable development of the family, the stable development of society and the acceleration of their knowledge, if this stable developed environment is created, people will no longer be the cause of harm to anyone, they will not be the cause of trampling each other, all people will move forward in unity. As they move forward, that ray of light will come within everyone,

¹⁸ Kittiprapas (2015).

and just as two rays of light do not create shadows on each other when walking side by side, similarly, every person illuminated by light cannot trample each other. However, if a ray of light hits another lightless object, its shadow may be created, or the light may return. That is why man cannot live alone. The light of knowledge, practice, and social development enlightens us. If man can inspire all countries or the world, each ray of light will be considered a garland of stars in the wider world. Then darkness will depart forever. Darkness will be visible only when the man is enlightened and does not allow others to be enlightened. Moreover, if a man cannot create selflessness by not uniting others with this light, he will be covered in darkness one day.

Then, the light of wisdom or the light of knowledge will not be able to develop. As a result, the reflected light, like the light of our life development, will return in the opposite direction. That is why if the increasing light spreads in all directions, in all individuals, in all people, in the world, then that light ray will travel together evenly without creating any obstacles and will never become a shadow and hinder anyone. This saying of Gautama Buddha is true.

IV. CONCLUSION

In conclusion, Buddhist education offers a profound path toward the holistic development of individuals and society. Rooted in mindfulness, wisdom, compassion, and moral discipline, it transcends mere academic knowledge to cultivate inner peace, ethical living, and spiritual awakening. The teachings of Gautama Buddha, particularly the Four Noble Truths and the Noble Eightfold Path, form the foundation of a system that harmonizes personal transformation with societal well-being. From ancient monasteries like Nalanda and Vikramshila to modern global institutions, Buddhist education continues to inspire values of non-violence, tolerance, and sustainable living. In an age where the world is increasingly plagued by conflict, environmental degradation, and moral decline, embracing the essence of Buddhist education can guide humanity toward a compassionate and sustainable future. Therefore, integrating the spiritual and ethical aspects of Buddhist thought into contemporary education systems may not only preserve cultural heritage but also address the urgent need for a more humane and enlightened society.

SYNERGIZING TRADITION AND TECHNOLOGY: EVALUATING THE IMPACT OF MINDFULNESS-BASED NEUROFEEDBACK ON STRESS AND EMOTIONAL REGULATION IN BUDDHIST MONKS

Dr. Anand Pratap Singh*

Abstract:

This study explores the integration of mindfulness and biofeedback as a method to improve stress regulation, emotional control, and quality of life in Buddhist monks. Using a quasi-experimental design, 35 monks aged 25 – 65 were divided into two groups: one received an eight-week mindfulness-based biofeedback training, and the other continued regular mindfulness practices. Standardised assessments, including the Perceived Stress Scale (PSS) and the Difficulties in Emotion Regulation Scale (DERS), were conducted before and one month after the intervention. Results showed significant improvements in emotional regulation ($p < 0.05$) and reductions in perceived stress ($p < 0.01$) in the biofeedback group compared to the control. The findings highlight the potential of combining real-time physiological feedback with traditional contemplative techniques to enhance mental and emotional well-being. The study suggests that biofeedback can be effectively integrated into mindfulness practices, offering a novel approach to self-regulation. Future research could examine the long-term effects and broader applicability across different populations. This work positions mindfulness-based biofeedback as a promising bridge between ancient wisdom and modern technology in holistic health care.

Keywords: *Mindfulness-based biofeedback, stress reduction, emotional regulation.*

I. INTRODUCTION

Mindfulness, a practice deeply rooted in Buddhist philosophy and spiritual traditions, has been an integral part of human consciousness exploration for centuries. It is characterised by an intentional focus on present-moment awareness, cultivating a non-judgmental and accepting attitude toward thoughts, emotions, and bodily sensations.¹ The origins of mindfulness trace back to the teachings of Siddhartha Gautama, the Buddha, who emphasised mindfulness (*sati*) as a fundamental path to achieving enlightenment. His teachings, particularly in the Satipatthana Sutta, describe mindfulness as a systematic approach to cultivating awareness through observation of the body, feelings, mind, and mental objects.² Over time, these principles evolved into structured meditative practices within Buddhist monastic traditions, shaping the spiritual and psychological resilience of monks and lay practitioners alike.³

In Buddhist monastic settings, mindfulness serves not only as a meditative discipline but also as a means of emotional and cognitive regulation. Monks undergo rigorous training to enhance their ability to maintain sustained attention and equanimity, fostering deep introspection and heightened awareness. The traditional practices of *samatha* (concentration meditation) and *vipassana* (insight meditation) are fundamental to Buddhist training, allowing practitioners to cultivate stability of mind and insight into the nature of reality.⁴ These methods emphasise disciplined awareness of the breath, bodily sensations, and mental fluctuations, enabling monks to achieve heightened states of consciousness and emotional balance. Over centuries, Buddhist monks have refined these techniques, demonstrating exceptional self-regulatory abilities that contribute to their mental resilience and overall well-being.⁵

Beyond monastic life, the principles of mindfulness have transcended religious and spiritual contexts, gaining recognition in psychology, neuroscience, and healthcare. In the late 20th century, Western scholars and clinicians, such as Jon Kabat-Zinn, integrated mindfulness into therapeutic interventions, leading to the development of Mindfulness-Based Stress Reduction (MBSR) and Mindfulness-Based Cognitive Therapy (MBCT).⁶ These structured programs have been widely adopted in clinical and non-clinical settings, demonstrating efficacy in reducing stress, anxiety, and emotional dysregulation.⁷ The growing body of scientific literature on mindfulness has revealed its profound impact on mental health, cognitive function, and physiological well-being. Research utilising neuroimaging techniques has

shown that mindfulness practice can induce neuroplastic changes in the brain, enhancing activity in regions associated with attention regulation, emotional processing, and self-awareness.⁸

For one of the central mechanisms for the benefits of mindfulness, emotional regulation plays a central role. Thus, mindfulness encourages an adaptive response to emotions by helping consciousness to become aware, accept, and not react to the changes in transient mental states.⁹ Mindfulness Studies have found that individuals who practice mindfulness are better able to be emotionally resilient and react less to stressors.¹⁰ Especially in the age of today's accelerated and pressured lifestyle and emotional dysregulation prevalent in many mental health disorders, such as depression, anxiety, and post-traumatic stress disorder (PTSD), this capacity to modulate emotional responses is highly important.¹¹ Mindfulness teaches people how to see their thoughts and emotions without getting triggered right away, thereby creating a sense of anchorage in the inner and psychological stability.

There are further physiological effects of mindfulness on stress reduction and general health. The autonomic nervous system regulation by mindfulness meditation was demonstrated in the studies,¹² characterised by a decrease in sympathetic (fight or flight) activation and an increase in parasympathetic (relaxation and recovery) activity. Regular mindfulness practitioners display lower cortisol levels, decreased heart rate, and improved immune function, and this reflects this shift in autonomic balance.¹³ Moreover, mindfulness has been associated with better heart rate variability (HRV), a main sign of physiological preparedness and adaptive stress response.¹⁴ This works to underpin that, as a result of the interplay between mind and body, these contemplative practices have a real impact on physical health and longevity.

Mindfulness has also been a focus of cognitive neuroscience that is worthy of intersection with modern scientific findings. Research in electroencephalography (EEG) and functional magnetic resonance imaging (fMRI) showed that mindfulness meditation has different neurophysiological patterns.¹⁵ When these patterns of brainwaves are compared across time for long-term practitioners, prefrontal cortex (PFC) alpha and theta wave activity increase, as well as greater connectivity between PFC regions associated with self-regulation and emotional control.¹⁶ These findings are in line with the

results from the empirical validations of mindfulness effects.¹⁷

Despite the extensive research on mindfulness, challenges remain in optimising its application across diverse populations. Mindfulness training that is traditionally implemented can take a long time and require a lot of hard work and practice before there are any significant benefits.¹⁸ While Buddhist monks can be very self-regulated, new meditators find it hard to stick to their practice of focus and consistency.¹⁹ As a result, there has been an increase in the interest in methods to aid in mindfulness training and improve learning, making this more accessible and faster and easier for people making use of any place, among proposed tools to increase mindfulness practice with emerging technologies such as neurofeedback because of real-time physiological feedback, reinforcement of self-regulation, and to encourage deeper states of meditative absorption.²⁰

Evidence-based techniques, such as neurofeedback, which people can use to monitor and control physical processes, have been shown to increase mindfulness training.²¹ Neurofeedback delivers immediate feedback on physiological states such as heart rate variability, brainwave activity, and skin conductance; therefore, people can become aware of and learn to regulate their internal processes better.²² The combination of mindfulness with neurofeedback is a promising way to enhance traditional mindfulness approaches and optimise the number of their advantages. Initial research indicates that combining mindfulness with neurofeedback training might improve emotional regulation, reduce stress, and help generally increase well-being. While we have done this, we still need further research into the synergies between these approaches and the implementation of best practices for them.

For that reason, mindfulness evolved from its original Buddhist roots and became broadly studied and operationalised in contemporary psychology and neuroscience. It proved to be a valuable tool for improving emotional regulation, stress reduction, and the increase of physiological well-being. Efforts to integrate emerging technologies with traditional mindfulness practices may lead to the optimisation of self-regulation and well-being in scientific exploration. By merging the insights of ancient wisdom with the modern scientific advancements of human consciousness, a new interest tunnel is rapidly developing, in which the modern relevance of mindfulness plays a critical role.

II. RATIONALE OF THE STUDY

The burgeoning of stress-related disorders, emotional dysregulation, and

¹⁷ Murphy (2016).

¹⁸ Như trên.

¹⁹ Kristeller (2021).

²⁰ Kristeller & Wolever (2011).

²¹ Daubenmier et al. (2021).

²² Kristeller (2021).

mental health issues in today's society have led to a search for more effective and evidence-based interventions.²³ Associations with enhanced emotional well-being, stress reduction, and enhanced self-regulation are long linked to the use of traditional mindfulness practices.²⁴ In terms of its efficacy and mechanisms, much has been studied and applied to mindfulness meditation in many settings. So, it is being tested in other populations, including those with long histories of meditation, such as Buddhist monks.²⁵ Specifically, it is necessary to investigate the possibility of mindfulness integration with neurofeedback to improve the self-regulation and emotional resilience of inexperienced practitioners.

Given the advances in understanding mindfulness through scientific research, most of the work is with novice practitioners or with clinical populations who are not meditators. This provides a unique population from which the upper limits of mindfulness practice and its neurophysiological correlates can be studied: Buddhist monks who have spent years of disciplined mindfulness training.²⁶ Investigating how neurofeedback may be used to enhance traditional mindfulness techniques in experienced meditators²⁷ can give further insight into the mechanisms of self-regulation and the potential applications of technology with contemplative practices.

A second reason for this study stems in part from the large body of literature on the neurophysiological impact of mindfulness. Studies in neurosciences have shown that experienced meditators show characteristics of brain waves: alpha and theta brain waves, in particular, are related to relaxation, focused attention, and emotion control.²⁸ While these findings show the positive effects of mindfulness on brain function, few studies have validated that such physiological feedback not only increases these effects but optimises them in real time.²⁹ One of the ways to measure and enhance brainwave regulation is through the use of neurofeedback, such as EEG-based neurofeedback, which allows for the practitioner to become aware of and control their mental states better.³⁰ Using this Buddhist monk as a model, this study aims to ascertain whether the conjunction of neurofeedback with mindfulness helps to improve their capacity to regulate their physiological response so as to become more emotionally stable and stress resilient.

This research is also needed due to the increasing use of neurofeedback in the clinical and therapeutic context. One effectiveness of neurofeedback is in treating anxiety, depression, PTSD, and other mental health disorders,

³⁰ Gruzelier (2014).

all of which rely on self-regulation and stress reactivity reduction.³¹ Yet, its application in highly disciplined and experienced meditative populations remains unexplored.³² The research here tries to validate the neurofeedback effectiveness in the population with already high levels of self-awareness and attentional control – Buddhist monks. Neurofeedback may offer the possibility to refine their mindfulness practice further, and thus, it represents a major advantage for populations extending from healthcare professionals and educators to high-stress professions.³³

Additionally, the advent of new technology hastened the opportunities to increase traditional contemplative practice. Given mindfulness's growing worldwide renown, combining mindfulness training with neurofeedback may be a relatively novel way of enhancing meditation outcomes.³⁴ Understanding the role of neurofeedback in addition to mindfulness techniques, as the scientific literature suggests, will allow the development of personalised mindfulness interventions that can be tailored to individual needs.³⁵

This study is finally needed to bridge ancient contemplative wisdom with modern scientific methodologies. Mindfulness has been practised for centuries, but only when empirical research and scientific validation can be provided can mindfulness be considered to be credible in all contemporary healthcare and psychological interventions.³⁶ This study explores the associations of mindfulness-based neurofeedback with their traditional practices among Buddhist monks to ground evidence of its integration with technology in order to contribute theoretically and empirically to the discourse on mental health, well-being, and self-regulation strategies in different populations.³⁷

III. METHODS

3.1. Participant recruitment and demographics

Participants were 35 Buddhist monks, and the recruitment was conducted in collaboration with monastery leaders, who informed eligible monks about the study and invited volunteers. Inclusion criteria required participants to be male ordained monks aged 25 – 65 years with at least 2 years of regular mindfulness meditation practice. In the context of this particular study, only male participants were included because Buddhist monastic communities, especially traditional monasteries in Asia (such as those involved in this research), are typically gender-segregated and predominantly male. Selecting only male Buddhist monks allowed for consistency and control over cultural, lifestyle, and practice-related variables, ensuring greater homogeneity within the sample. This approach reduced variability that could arise from mixed-

³² Tan et al. (2020).

³³ Davis & Hayes (2011).

³⁴ Brandmeyer& Delorme (2021).

³⁵ Wielgosz et al. (2019).

³⁶ Lutz et al. (2008).

³⁷ Tang, Hölzel; Posner (2015).

gender groups due to differences in physiological responses, stress patterns, or meditation experiences influenced by societal, biological, or hormonal factors. Monks had to be free of cardiovascular conditions or medications that could affect heart rate variability and proficient enough in the English language to complete questionnaires. Exclusion criteria included any known cardiac arrhythmias, use of beta-blockers or other medications influencing heart rate, and psychiatric or neurological disorders that might interfere with meditation practice. All participants provided informed consent before enrolment.

A total of 38 monks were initially screened, of whom 35 met the criteria and agreed to participate. These 35 monks (age $M = 44.5$ years, $SD = 11.6$, range 25–65) formed the final sample. Table 1 presents the demographic and baseline characteristics of participants in each group. The sample was entirely male. The monks had, on average, 15.0 years ($SD = 8.7$) of meditation experience, reflecting long-term practice in mindfulness techniques. Baseline measures of perceived stress and emotion regulation difficulties were moderate on average (mean baseline Perceived Stress Scale score ~ 17.7 ; mean Difficulties in Emotion Regulation Scale score ~ 64.6), indicating some variability in stress and emotion regulation even within this monastic sample. There were no significant differences between the two groups in age, years of meditation experience, or baseline psychological measures, confirming successful initial group equivalence (see Table 1).

3.2. Study design

This study employed a quasi-experimental, two-group pre-test/post-test design. Participants were randomly assigned to one of two conditions: (1) a neurofeedback-assisted mindfulness training group (HRV neurofeedback group, $n = 17$) or (2) a control group engaging in traditional mindfulness practice without neurofeedback (control group, $n = 18$). Randomisation was done using a simple draw from a sealed envelope for each participant after baseline assessment, ensuring allocation concealment. To promote balance in age distribution, randomisation was stratified by age bracket (25 – 44 vs. 45 – 65 years), such that monks from each age group were evenly allocated to the two conditions. Still, the pre- and post-intervention assessments were administered in a standardised manner for both groups.

The intervention period lasted eight weeks for both groups. Both groups continued their regular daily monastic routines and meditation practices, with the only difference being the addition of the HRV neurofeedback component for the intervention group. The study design can be considered quasi-experimental because the participants were a convenience sample of monks (not randomly sampled from the general population), and the intervention took place in a naturalistic setting. Nonetheless, the use of random assignment to conditions aimed to reduce selection bias and establish comparable groups. Both groups were assessed one week before the start of the intervention (pretest) and in the final week of the 8-week intervention (posttest). No significant differences were observed between the groups at baseline on key measures, indicating that randomisation was effective.

3.3. HRV-Based neurofeedback training protocol

Participants in the neurofeedback-assisted mindfulness group received training in mindfulness meditation augmented with heart rate variability (HRV) neurofeedback. Each monk in this group was assessed using an HRV neurofeedback device consisting of a heart rate sensor and a feedback display. The device used a fingertip photoplethysmography sensor (equivalent to a pulse oximeter) connected to a handheld unit that provided real-time feedback on the participant's heart rhythms and HRV.

The HRV neurofeedback training sessions were integrated into the monks' daily meditation practice. Monks in the HRV group were instructed to perform slow diaphragmatic breathing at a pace of approximately six breaths per minute (the resonance frequency for maximising HRV in most individuals) while maintaining a mindful focus on their breath and the feedback provided by the device. Each formal training session lasted about 20 minutes and was conducted in two sessions every week for the 8 weeks. During these sessions, monks sat in their usual meditation posture, wore the HRV sensor, and attempted to cultivate a calm, focused state. The device gave immediate feedback, allowing participants to adjust their breathing and mental focus to achieve greater heart rhythm coherence (a state of synchronised breathing and heart rate oscillation). In essence, the neurofeedback guided them to subtly modify their breathing and relaxation response to increase their HRV. This approach is consistent with standard HRV neurofeedback techniques that involve slow breathing with a feedback device. An initial orientation session was held in week 1 to familiarise the monks with the neurofeedback equipment and to practice the paced breathing technique.

Participants in the control group practiced mindfulness meditation as usual, without any technological assistance. They were asked to meditate daily for 20 minutes, focusing on their breath or using their typical mindfulness techniques (such as observing thoughts and sensations non-judgmentally), matching the schedule of the HRV group. The control group thus received an equivalent "dose" of mindfulness practice time minus the neurofeedback element. This was intended to isolate the effect of the neurofeedback-enhanced training. Both groups continued any other routine spiritual practices, but no new interventions were introduced outside of the study protocol.

3.4. Assessment measures

Outcome measures were collected for both groups at baseline (pre-intervention) and after the 8-week intervention (post-intervention). Psychological outcomes included perceived stress and emotion regulation difficulties, while physiological outcomes focused on heart rate variability. All self-report measures were administered in a quiet room at the monastery, and a researcher was available to clarify any questions.

- **Perceived stress:** Perceived stress levels were measured using the 10-item Perceived Stress Scale (PSS-10). The PSS-10 is a widely used instrument for assessing the degree to which situations in one's life are

appraised as stressful. Participants rated how often they found their lives unpredictable, uncontrollable, or overwhelming in the last month on a 5-point Likert scale. The PSS yields a total score ranging from 0 to 40, with higher scores indicating greater perceived stress. This scale has well-established validity and reliability in diverse populations. In the present sample, the PSS was used to gauge subjective stress both before and after the mindfulness training period.

- **Emotion regulation:** Difficulties in emotion regulation were assessed using the Difficulties in Emotion Regulation Scale (DERS). The DERS is a 36-item self-report questionnaire that measures problems in regulating emotions, covering aspects such as non-acceptance of emotional responses, difficulties engaging in goal-directed behaviour when distressed, impulse control difficulties, lack of emotional awareness, limited access to emotion regulation strategies, and lack of emotional clarity. Each item is rated on a 5-point scale, and a higher total score indicates greater difficulties in emotion regulation. The DERS has been widely used in research as a measure of emotion dysregulation (with strong psychometric properties reported in its validation). We administered the full DERS at pre- and post-intervention to determine whether mindfulness training (with or without neurofeedback) improved participants' emotion regulation abilities. For analysis, we focused on the total DERS score as the primary indicator of emotion regulation difficulties while also noting changes in subscale scores for descriptive purposes.

- **Heart rate variability:** Heart rate variability was measured as an index of physiological regulation and the primary target of the neurofeedback training. HRV data were collected using the neurofeedback device for all participants during a 5 minute seated resting period, both at baseline and post-intervention. For consistency, even control participants (who did not train with the device) were hooked up to the same HRV sensor during these assessments to obtain comparable readings. The primary HRV metric analysed was the root mean square of successive differences (RMSSD) of inter-beat intervals, expressed in milliseconds. RMSSD is a time-domain measure of HRV that primarily reflects parasympathetic (vagal) activity and is commonly used in short-term recordings. However, our hypothesis and primary outcome focused on the overall HRV level (indexed by RMSSD). All HRV recordings were performed in the morning, at least 2 hours after the last meal or caffeine intake, and participants were asked to refrain from intense physical activity on the assessment days. We followed established recommendations for HRV data collection and processing (e.g., consistent time of day controlled breathing instructions during measurement) to ensure data quality and comparability. Both pre-and post-intervention HRV assessments were conducted in a similar environment (quiet room, seated posture) for both groups.

3.5. Compliance and monitoring

Adherence to the intervention was emphasised and monitored throughout the study. Participants in the HRV neurofeedback group were asked to log their daily training sessions using a provided diary and through the neurofeedback device's internal session tracking. The device automatically recorded each session's duration and a summary of HRV metrics, which were reviewed weekly by the research team. Monks in the HRV group received daily reminders (either in person or via a note from the study coordinator) to complete their 20 minute session, and they met with a study facilitator at the end of each week to upload device data and discuss their practice. These weekly check-ins served both to support the participants and to verify compliance (via the stored device data) objectively. This approach of daily practice with reminders and weekly monitoring is consistent with prior HRV neurofeedback protocols, helping to ensure high adherence. Over the 8 weeks, adherence in the HRV group was excellent. On average, participants completed Ninety per cent of the prescribed sessions (approximately 36 out of 40 possible sessions), and all 17 monks in this group completed at least 30 sessions.

In the control group, participants likewise maintained a daily meditation log, noting the time and duration of their mindfulness practice each day. They also received similar weekly visits from the researchers. During these visits, control group monks discussed their meditation practice and any issues, and their logs were checked for completeness. This parallel monitoring was designed to equalise participant contact with researchers across groups and to reinforce compliance in the control group. The overall adherence in the control condition was also high; monks in this group reported meditating 5.5 days per week on average for the full 8 weeks (roughly equivalent to 88% compliance with the requested frequency). There were no drop-outs from the study; all 35 monks who began the intervention continued through to the post-intervention assessment. Any minor deviations or missed sessions were recorded, and these instances were rare and evenly distributed between groups. The high compliance rates can be attributed to the participant's intrinsic motivation and disciplined lifestyle, as well as the ongoing support and accountability measures put in place.

IV. DATA ANALYSIS

After completion of the study, data were analysed to evaluate the effect of HRV neurofeedback-assisted mindfulness training versus traditional mindfulness on stress, emotion regulation, and HRV. All analyses were conducted using SPSS version 25 (IBM Corp.) and cross-verified with R (v4.0.3) for accuracy. Prior to hypothesis testing, data were screened for normality and outliers. The PSS and DERS scores were approximately normally distributed (Shapiro–Wilk $p > .05$ in each group), and the HRV RMSSD values showed a slight positive skew, which was corrected by log transformation for confirmatory analyses; however, for ease of interpretation, raw values (in ms) are reported in descriptive statistics and tables. Levene's tests indicated homogeneity of variance between groups at baseline for all measures.

A series of mixed-design (repeated-measures) ANOVA tests were used to examine changes from pre- to post-intervention and to compare those changes between the two groups. For each primary outcome (PSS score, DERS score, and HRV RMSSD), we conducted a 2 (Group: HRV neurofeedback vs. Control) \times 2 (Time: Pre vs. Post) ANOVA. The Group \times Time interaction term in each ANOVA tested whether the change over time in the outcome differed significantly between the neurofeedback and control groups. A significant interaction would indicate an intervention effect. For the self-report measures, we additionally ran paired sample *t*-tests within each group to evaluate pre-post changes and independent sample *t*-tests on change scores (post minus pre) between groups as a robustness check. For HRV, because baseline HRV can be age-dependent, we performed an ancillary analysis of covariance (ANCOVA) with baseline RMSSD as a covariate when comparing post-intervention HRV between groups; this did not substantially alter the results.

Effect sizes were calculated to complement null hypothesis significance testing. Partial eta-squared (η^2) was reported for ANOVA effects. The Group \times Time interaction effect size was in the medium range for both PSS and DERS outcomes. We also computed Cohen's *d* for within-group pre-post changes. All statistical tests were two-tailed with an alpha level of 0.05 to determine significance. The data met assumptions for ANOVA, and where assumptions were borderline (as with the HRV variance), we confirmed that non-parametric analyses (Wilcoxon signed-rank and rank-sum tests) led to the same substantive conclusions.

Table 1. Participant Demographics and Baseline Characteristics
All values are presented as mean (SD) or as otherwise noted. PSS = Perceived Stress Scale; DERS = Difficulties in Emotion Regulation Scale; RMSSD = root mean square of successive differences (HRV metric).

Characteristic	HRV Neurofeedback (n=17)	Control (n=18)	Total (N=35)
Age, mean (SD)	45.2 (12.0)	43.8 (11.5)	44.5 (11.6)
Age range (years)	26–64	25–65	25–65
Sex (male)	17 (100%)	18 (100%)	35 (100%)
Years of meditation, mean (SD)	15.3 (8.5)	14.8 (9.0)	15.0 (8.7)
Baseline PSS score, mean (SD)	18.0 (4.5)	17.5 (5.0)	17.7 (4.7)
Baseline DERS score, mean (SD)	65.4 (15.2)	63.9 (14.8)	64.6 (14.9)
Baseline RMSSD (ms), mean (SD)	30.5 (11.0)	28.9 (12.5)	29.7 (11.8)

Table 2. Heart Rate Variability (HRV) Changes from Pre- to Post-Intervention

Resting HRV was measured by RMSSD (in milliseconds) before and after the 8-week intervention for each group. The *P*-value reflects the Group × Time interaction effect for change in HRV (mixed ANOVA).

HRV Metric	Neurofeed-back Pre (Mean±SD)	Neurofeed-back Post (Mean±SD)	Control Pre (Mean±SD)	Control Post (Mean±SD)	p (Group×Time)
RMSSD (ms)	30.5 ± 11.0	42.0 ± 13.2	28.9 ± 12.5	32.0 ± 13.0	< 0.05

Table 3. Pre- and Post-Intervention Psychological Outcomes (PSS and DERS) by Group

Mean (SD) scores on the Perceived Stress Scale (PSS) and Difficulties in Emotion Regulation Scale (DERS) for each group, pre- and post-intervention. *p* (Group×Time) indicates the significance of the interaction between group and time, i.e. whether the pre-post change differed by group.

Outcome Measure	Neurofeedback Pre (Mean±SD)	Neurofeedback Post (Mean±SD)	Control Pre (Mean±SD)	Control Post (Mean±SD)	P (Group×Time)
Perceived Stress Scale (PSS)	18.0 ± 4.5	12.1 ± 3.8	17.5 ± 5.0	15.0 ± 4.6	< 0.01
Difficulties in Emotion Regulation Scale (DERS)	65.4 ± 15.2	50.0 ± 12.0	63.9 ± 14.8	58.4 ± 13.0	< 0.05

V. RESULTS OF THE STUDY

This study assessed the efficacy of mindfulness-based neurofeedback using heart rate variability (HRV) in Buddhist monks, evaluating its impact on perceived stress and emotional regulation. Thirty-five Buddhist monks aged between 25 and 65 participated, randomly assigned to either the neurofeedback-assisted mindfulness group (n = 17) or a traditional mindfulness control group (n = 18). The primary outcomes evaluated were changes in perceived stress, measured by the Perceived Stress Scale (PSS), and emotional regulation, assessed using the Difficulties in Emotion Regulation Scale (DERS). Additionally, physiological outcomes were measured via heart rate variability (HRV), specifically through the root mean square of successive differences (RMSSD).

Table 1 summarises the demographic characteristics of participants,

confirming the initial homogeneity between the intervention and control groups in terms of age, meditation experience, and baseline psychometric measures. Both groups were equivalent at baseline, indicating successful randomisation and comparability across demographic variables and initial psychological states.

5.1. Perceived Stress Scale (PSS) outcomes

Participants in the neurofeedback-assisted mindfulness group exhibited significant reductions in perceived stress from baseline to post-intervention. Specifically, the mean PSS score in this group decreased substantially from 18.0 ± 4.5 at baseline to 12.0 ± 3.1 at post-intervention. This improvement was statistically significant with a p-value of < 0.01 . In comparison, the control group, practising traditional mindfulness meditation without neurofeedback, also showed a modest decrease in perceived stress scores from 17.5 ± 4.8 at baseline to 15.9 ± 4.0 post-intervention. However, this reduction was notably less pronounced than in the neurofeedback group, indicating that the addition of HRV-based neurofeedback significantly enhanced the mindfulness intervention's effectiveness in managing stress.

These findings were confirmed through a repeated-measures ANOVA, which demonstrated a significant interaction effect (Group \times Time, $F(1,33) = 10.45$, $p < 0.01$, $\eta^2 = 0.22$). Paired-sample t-tests further substantiated these results, revealing significant pre-post reductions in the neurofeedback group ($t(16) = 6.05$, $p < 0.01$, Cohen's $d = 1.46$), while the control group showed only modest improvements ($t = 2.10$, $p = 0.05$, Cohen's $d = 0.47$).

5.2. Difficulties in Emotion Regulation Scale (DERS) outcomes

Similar trends were observed regarding emotional regulation. Participants in the neurofeedback group demonstrated substantial improvements in emotional regulation abilities, with mean total DERS scores decreasing from 65.4 ± 15.2 at baseline to 49.8 ± 10.7 after eight weeks of training. This reflects a notable improvement in emotional regulation skills, including increased emotional clarity, reduced impulsivity, and better adaptive responses to emotional stressors. In contrast, the control group showed only moderate reductions from a baseline DERS mean score of 63.9 ± 14.8 to 58.3 ± 13.9 post-intervention.

Repeated-measures ANOVA analysis indicated a statistically significant Group \times Time interaction for total DERS scores ($F = 6.55$, $p < 0.05$, partial $\eta^2 = 0.16$). Paired t-tests further highlighted that, participants undergoing neurofeedback training achieved significant reductions in emotion regulation difficulties ($t = 5.12$, $p < 0.001$, Cohen's $d = 1.24$). In contrast, the control group's improvement was marginally significant ($t = 1.95$, $p = 0.06$, Cohen's $d = 0.41$).

5.3. Heart Rate Variability (HRV) outcomes

Heart rate variability, assessed through RMSSD values, significantly improved in the neurofeedback group, reflecting greater physiological relaxation and autonomic nervous system balance. Baseline HRV RMSSD values for the

neurofeedback group were initially 30.5 ± 11.0 ms and significantly increased to 42.3 ± 9.8 ms post-intervention. This improvement indicated enhanced parasympathetic activity, which is associated with reduced physiological stress responses and greater emotional resilience. Conversely, the control group's HRV showed minimal changes, increasing only slightly from 28.9 ± 12.5 ms at baseline to 31.8 ± 11.7 ms post-intervention.

Mixed-design ANOVA revealed a significant Group \times Time interaction effect for HRV outcomes ($F = 9.85$, $p < 0.05$, partial $\eta^2 = 0.29$). Paired t -tests within the neurofeedback group confirmed the substantial increase in HRV ($t = 6.25$, $p < 0.001$, Cohen's $d = 1.52$), while changes within the control group were non-significant ($t = 1.78$, $p = 0.09$, Cohen's $d = 0.34$).

Overall, the results strongly indicate that integrating HRV-based neurofeedback with mindfulness meditation substantially enhanced stress management, emotional regulation, and physiological self-regulation compared to traditional mindfulness meditation alone. The significant interactions observed in perceived stress, emotion regulation difficulties, and HRV improvements suggest that real-time physiological feedback can effectively augment mindfulness training, even among highly experienced meditators such as Buddhist monks. This evidence supports the efficacy of neurofeedback-assisted mindfulness as an advanced technique for emotional and physiological self-regulation, demonstrating greater benefits than traditional mindfulness practices alone. Tables summarising these findings are included to enhance clarity and support data interpretation.

VI. DISCUSSION

These findings highlight the great potential of using mindfulness practice combined with HRV-based neurofeedback to reduce stress and enhance emotional regulation. Mindfulness-based neurofeedback interventions get people to pay attention to their physiological processes in realtime, giving an individual greater self-awareness and better self-regulation.³⁸ Integrating this meditation practice into the previous holds promise as a way to add to traditional mindfulness practices, and in particular the experience of meditation, of individuals with a considerable background in meditation, such as Buddhist monks.

It was confirmed that under normal circumstances, when traditional mindfulness training is used alone, it does have significant effects on stress reduction and emotional regulation.³⁹ But, adding a technology to neurofeedback amplifies the positive outcomes by a huge margin. Participants in the neurofeedback assisted mindfulness group experienced greater decreases in perceived stress and far more successful dealing with emotional responses than participants in the traditional mindfulness group. Overall, these results support the effects of neurofeedback to boost awareness and intentional

³⁸ Thibault et al. (2018).

³⁹ Tang, Hölzel, Posner (2015).

autonomic modulation to augment self-regulation and emotional stability.⁴⁰

The results of increased HRV metrics in response to treatment with mindfulness-based neurofeedback are one critical mechanism by which mindfulness-based neurofeedback appears to exert beneficial effects. HRV increase in the neurofeedback group is substantial, particularly RMSSD increase, which would indicate a marked increase in autonomic flexibility and parasympathetic predominance,⁴¹ which are physiological resilience and stress recovery indicators. It may be possible that these changes have a neurophysiological underpinning due to more trampoline vagal tone regulation in order to be more emotionally adaptable and less stressed.⁴² Neurofeedback devices provide real-time physiological feedback about the state of a learner's relaxation and focus, which seems to be imperative to training monks to achieve and sustain more profound states of relaxation and concentration compared to what can be independently accomplished by traditional meditation.⁴³

Importantly, this study demonstrates that even highly experienced practitioners, such as Buddhist monks, who already possess extensive mindfulness training, can benefit substantially from neurofeedback augmentation. This finding expands the applicability of neurofeedback interventions, traditionally used in clinical and novice populations, to more experienced practitioners.⁴⁴ It provides empirical evidence supporting the use of neurofeedback technology to optimise the effectiveness of mindfulness meditation, particularly in enhancing self-regulatory abilities in populations already skilled in meditative practices.

Nevertheless, certain limitations of this study merit acknowledgment. As a quasi-experimental design with a small sample size, generalisation is limited. Moreover, as such, a unique monastic population is studied here, and direct generalizability may be limited to other populations not characterised by monasticism. Limitations of these findings could be addressed by future research using randomised controlled trials on larger and more diverse samples in order to confirm and generalise these findings. Further investigation of the durability of these improvements over longer follow-up would further broaden the understanding of how long-term mindfulness-based neurofeedback works.⁴⁵

Furthermore, mechanisms associated with these effects might be investigated by studying the relationships between the brain mechanisms of neurofeedback and mindfulness with advanced neuroimaging techniques (such as functional MRI). This research could help identify specific neural pathways activated by mindfulness training assisted by neurofeedback, which could provide information about specific tailored interventions used for a variety of psychological and stress-related

conditions.⁴⁶

Finally, we conclude that neurofeedback and mindfulness together offer practical and clinical advantages for stress reduction and enhancement of emotional regulation. These promising results pave the way for mindfulness-based neurofeedback to be very fruitful progress in contemplative and emotional science, providing a fresh opportunity for improving inner consciousness, inner alertness, and overall well-being.

VII. CONCLUSION

This study demonstrates the significant potential of integrating mindfulness-based neurofeedback, particularly heart rate variability (HRV) neurofeedback, as an effective approach for enhancing mental and physiological health. The results clearly illustrate that combining neurofeedback with traditional mindfulness practices can yield superior outcomes in stress reduction and emotional regulation compared to mindfulness alone. Specifically, the significant improvements observed in perceived stress levels, emotional regulation abilities, and HRV metrics among Buddhist monks highlight the value of this synergistic approach. This integration not only validates ancient contemplative techniques through modern scientific evidence but also introduces practical guidelines for incorporating technological advancements into established mindfulness traditions.

The study reinforces the understanding that neurofeedback is a powerful adjunct to mindfulness meditation. It provides practitioners with real-time physiological feedback, facilitating heightened awareness of internal states and enabling practitioners to regulate their autonomic responses and emotional states more effectively. Consequently, neurofeedback training significantly enhances the inherent benefits of mindfulness, such as increased emotional resilience, improved stress management, and greater psychological well-being.

Moreover, the effectiveness of mindfulness-based neurofeedback in this unique sample of experienced Buddhist monks highlights its broad applicability. These monks, already highly skilled in meditation, benefited significantly from the neurofeedback component, indicating that even highly experienced meditators can further enhance their practice through technological intervention. This outcome underscores the broader applicability of mindfulness-based neurofeedback beyond clinical or novice populations, positioning it as a promising approach for a wide range of individuals seeking improved self-regulation and emotional stability.

The successful implementation of neurofeedback within traditional contemplative practices exemplifies how modern technology can effectively complement ancient wisdom, creating a synergistic approach to human health and well-being. This integration provides a valuable model for future interventions, suggesting potential applications across diverse settings, including healthcare, education, and occupational wellness programs. The

⁴⁶ Lutz et al. (2008).

demonstrated efficacy of mindfulness-based neurofeedback in enhancing physiological markers of resilience, such as HRV, further emphasises its potential role in promoting overall physical health and longevity.

Future research should continue to explore the durability of mindfulness-based neurofeedback outcomes over longer follow-up periods and across varied demographic groups. Investigating the neurophysiological mechanisms underlying these benefits with advanced neuroimaging techniques would provide additional insights into how neurofeedback enhances mindfulness practice. Moreover, the development of tailored mindfulness-based neurofeedback interventions for specific clinical and non-clinical populations could further optimise its effectiveness and accessibility.

In conclusion, mindfulness-based neurofeedback is an innovative approach that bridges ancient mindfulness practices with contemporary scientific advancements. Its demonstrated effectiveness in enhancing emotional regulation, reducing stress, and promoting physiological resilience highlights its potential to improve human mental and physical well-being significantly. These positive findings advocate for broader application and integration of mindfulness-based neurofeedback in healthcare, educational, and workplace settings, offering a practical, evidence-based strategy for achieving holistic health and well-being.

RIGHTEOUS PRINCIPLES IN DHARMA: FOUNDATION OF EMOTIONAL LITERACY AND MINDFULNESS MEDITATIONS FOR WELLBEING OF PEOPLE UNDER STRESS

Premraj Khankhane*

Abstract:

Emotions under stress can lead to suffering, not solely due to external factors, but from faulty thinking and attachment to impermanence. This paper examines how the Buddha's teaching on *saṅkhāra-dukkha* – suffering from mental formations – relates to emotional distress across different socioeconomic groups. It emphasizes the Noble Eightfold Path as a foundation for emotional learning and ethical transformation. A four-year online meditation program based on the Eightfold Path was conducted with 101 participants exhibiting traits of greed, hatred, and delusion. Among them, 24 were involved in domestic violence, 13 in non-vegetarian habits, and 26 in substance use. Post-program results showed significant behavioral improvements: 91.6% reduced domestic violence, 38.4% shifted dietary habits, and 92.6% decreased substance use. The study also observed growth in self-awareness, empathy, and altruism. Some participants progressed to deeper meditative states (*jhanas*) under experienced Dhammācharis. Findings highlight the Eightfold Path as a holistic model for cultivating wisdom, morality, and compassion, neutralizing toxic emotions in afflicted individuals, while enhancing well-being in others. This Middle Path framework offers a sustainable approach to emotional literacy and social harmony at individual, family, and national levels.

Keywords: *Prabuddha, Noble middle-path, afflictive emotions, negative tendencies, dhamma.*

I. INTRODUCTION

Emotions, wrote Aristotle (384 – 322 BCE), are all those feelings that so change men as to affect their judgements and that are also attended by pain or pleasure.¹ Such are anger, pity, fear and the like, with their opposites.” The theory of universal emotions posits that certain emotions are experienced and expressed in similar ways by people across all cultures around the world. This concept, rooted in the research of Charles Darwin and later expanded by psychologist Dr. Paul Ekman, identifies six core emotions: happiness, sadness, fear, disgust, anger, and surprise. When we feel stressed, angry, or hurt, we tend to react impulsively. We are in a state of fight-or-flight and tend to react emotionally, that is, to overreact. That overreaction is emotional reactivity. That overreaction is emotional reactivity. In that moment, our perceptions of the situation are altered. Emotions can be reactions to internal stimuli (such as thoughts or memories) or events that occur in our environment. If the stimulus is emotionally important, the information is relayed to the automatic nervous system (ANS), whose activation leads to a fight-or-flight response. Anger, aggression, fear, and stress are all common emotional triggers.² When we are triggered without awareness of our emotions, we react in a certain way out of habit. Being aware of emotional triggers is essential to maintain emotional balance. Emotional balance is about getting the balance of pleasant and unpleasant feelings right, at least most of the time, so that we can have positive mental well-being.

Developing ability to recognize, understand, and manage one’s own emotions as well as the emotions of others is the emotional literacy which plays a critical role in overall mental health and wellbeing. Emotional literacy is the unity of understanding, strategy, and skills that a person can develop throughout life.³ Emotional education and developing intelligence is an essential part of wisdom. Wisdom is the use of one’s knowledge and experience to make good judgements. It is the interpreting and understanding of knowledge that leads to greater insight (e.g., common sense).⁴ In descriptive knowledge one knows facts; in interpretive knowledge, one knows the significance of the descriptively known facts. Developing wisdom is of central importance in Buddhist traditions, where the ultimate aim is often presented as “seeing things as they are” or as gaining a penetrative understanding of all phenomena, which in turn is described as ultimately leading to the complete freedom from suffering.⁵

According to Buddhist view the root cause of people's suffering (*Dukkha*) is the ignorance (*Avidya*). The concept refers to ignorance or misconceptions about the nature of metaphysical reality, in particular about the impermanence and anatta doctrines about reality. It is the root cause of *Dukkha* (suffering, pain, unsatisfactoriness and asserted as the first link in dependent origination (*Pratitya sumudpada*) of a process that leads to craving (*Trishna*).⁶

Within the Buddhist *sutras*, *dukkha* has a broad meaning, and is divided in three categories: first is *Dukkha-dukkha*, aversion to physical suffering – this includes the physical and mental sufferings of birth, aging, illness, dying; distress due to what is not desirable. Second is *Viparinama-dukkha*, the frustration of disappearing happiness – this is the *dukkha* of pleasant or happy experiences changing to unpleasant when the causes and conditions that produced the pleasant experiences cease. Third is *Sankhara-dukkha*, the unsatisfactoriness of changing and impermanent “things” – the incapability of conditioned things to give us lasting happiness.

In the present context, third type of suffering related to marginalized people who don't have enough This includes “a basic unsatisfactoriness pervading all existence, all forms of life, because all forms of life are changing, impermanent and without any inner core or substance.”⁷ On this level, the term indicates a lack of lasting satisfaction, or a sense that things never measure up to our expectations or standards resources to meet out their daily hand to mouth demands are sufferers due to financial stress. At the same time persons who have enough resources experiences happy feelings are also unsatisfied. Having excessive desires such people fall in *Kamchanda* (Passions). They are highly passionate in achieving the materialistic things that compel to remain attached to pleasurable feelings (*Vedana*) and demands for excessive materialistic things. In order to fulfill the personal demands people are more involved in *Kamchanda*. Sensory desire (*kāmacchanda*): seeking for pleasure through the five senses of sight, sound, smell, taste, and physical feeling. In failure to achieve desired things such people become unhappy. As a consequences, they are under terrible stress. Stress is a feeling of emotional or physical tension. It can come from any event or thought that makes you feel frustrated, angry, or nervous. Stress is your body's reaction to a challenge or demand. In short bursts, stress can be positive, such as when it helps you avoid danger or meet a deadline. But when stress lasts for a long time, it may harm your health. Scientific reports suggest that around 8-10 percent of people are suffering worldwide from mental distress including anxiety, depression, schizophrenia disorders.⁸

Besides this, emotional mental illnesses are a matter of concern in the United States since the U.S. has the highest annual prevalence rates (26 percent) for mental illnesses among a comparison of 14 developing and developed countries.⁹ While approximately 80 percent of all people in the United States with a mental disorder eventually receive some form of treatment, on average, persons do not access care until nearly a decade following the development of their illness, and less than one-third of people who seek help receive minimally adequate care. The government offers everyone programs and services, but veterans receive the most help. there is certain eligibility criteria that have to be met.¹⁰ Among the causes of mental diseases, unsatisfaction was the major reason. In addition, a worldwide increase in mental health problems, including widespread depression and anxiety were reported by World health Organization (2022) during covid-19 pandemic.

The emphasis on ethical conduct in Buddhism encourages individuals to lead virtuous lives which includes refraining from actions that harm others.¹¹ The seventh and eighth component of Buddha's eight fold path relate to mindfulness and meditation practices have influenced on modern society by promoting mental well-being and stress reduction techniques leading to the integration of mindfulness in various therapeutic and self-improvement programs.¹²

Mental health encompasses emotional, psychological, and social well-being, influencing cognition, perception, and behaviour. According to World Health Organization (WHO), it is a "state of well-being in which the individual realizes his or her abilities, can cope with the normal stresses of life, can work productively and fruitfully, and can contribute to his or her normal stresses of life, can work productively and fruitfully, and can contribute to his or her community."¹³ It likewise determines how an individual handles stress, interpersonal relationships, and decision-making.¹⁴ Mental health includes subjective well-being, perceived self-efficacy, autonomy, competence, intergenerational dependence, and self-actualization of one's intellectual

and emotional potential, among others.¹⁵ From the perspectives of positive psychology or holism, mental health may include an individual's ability to enjoy life and to create a balance between life activities and efforts to achieve psychological resilience.¹⁶

1.1. Objective

The main objectives of this paper are to examine the Buddhist principles and practices that address root causes of human sufferings, to explore how mindfulness meditation practices can be applied as a complementary tool of psychological interventions for emotional disorders and to develop compassion (*Metta*) for promoting empathy and fraternity in society.

1.2. Methodology

A qualitative method is used to conduct the research study. Both primary and secondary sources were used to gather the data. Ancient suttas in the Tripitka, Dhammapad and Buddha worshipping books were used as primary data. Recently published articles in the national and international journals, published articles from conference proceedings, etc. used as secondary data. Questionnaire-based data was collected from Triratna Boudh Mahasangh (TBM) New Delhi who had conducted online Dhyan Sandhya (evening meditation programme every day for its 101 members including author during the Covid-19 pandemic with effect from June 22, 2020 till June 21, 2024. One and half hour programme daily continued in the evening hours (6.30 to 8.0 PM). Five meditations including *Anapan sati* (mindfulness), *Metta Bhavna* (loving kindness), *Kayanusati* (body scan), *Buddhanusati*, Chintan (Contemplation) were conducted in a week. Dhyan Sandhya (online evening meditation) phase -1 continued for 4 years with effect from 6.30 to 8.00 PM since 22nd June 2020 to 21st June 2024 covered covid pandemic period on 6 days in every week during 4 years. Except Sunday online evening meditation programme continued daily on all days. Dhyan Sandhya (evening meditation) used to start after taking five precepts (Panchsheel) and chanting of tri-ratna gatha. Practice of noble eight fold path was the foundation of the evening programme in the form of 30-35 minutes dharma desna (*Pariyatti*) and practice of mindfulness meditations (*Patipatti*) for 40 minutes. Subsequently question-answers sessions and concluded with Dhamma palan sutta. The topics of Dhamma lectures delivered were related to causes of suffering (cause and effect or *Pratitya Samutpad*), ten klesh including five hindrances of mindfulness (mental defilements), meaning of important suttas viz., Rattan sutta, Karnimey Sutta, Maha mangal Sutta etc. and short stories as an example from tripitaka covering different components of eight fold path i.e right understanding, right aspirations, right speech, right conduct, right livelihood; seven awakening factors (*Sapta bodhyang*) for right efforts. In a

practical form (*pattipatti*), the 7th and 8th component (right mindfulness and right concentration (*Samadhi*)) of eight fold path were practiced for 40 to 50 minutes depending on the type of meditation. Each meditation was conducted for 40 minutes except loving kindness meditation which was conducted for 50 minutes by senior Dhammacharis who had experience of more ten to 15 years.

Participants : The age of participants included senior Dhammachari, senior Dhamma Mitra (GRF), Dhamma Mitra and Dhamma youth above 18 years old belonging to medium to low socio-economic status.

II. RESULTS AND DISCUSSION

2.1. Origin of sufferings (*Dukkha*) in *Dharma* and its relationship with stress

Within the Buddhist *sutras*, *dukkha* has a broad meaning and is divided in three categories:

2.1.1. *Dukkha-dukkha*, aversion to physical suffering – this includes the physical and mental sufferings of birth, aging, illness, dying, and distress due to what is not desirable.

2.1.2. *Viparinama-dukkha*, the frustration of disappearing happiness – this is the *dukkha* of pleasant or happy experiences changing to unpleasant when the causes and conditions that produced the pleasant experiences cease.

2.1.3. *Sankhara-dukkha*, the unsatisfactoriness of changing and impermanent “things” – the incapability of conditioned things to give us lasting happiness. This includes- a basic unsatisfactoriness pervading all existence, all forms of life, because all forms of life are changing, impermanent and without any inner core or substance. On this level, the term indicates a lack of lasting satisfaction, or a sense that things never measure up to our expectations or standards.

Among three types of sufferings, Buddha stressed on *Sankhara-dukkha* which arises due to ignorance (*Avidya*) of the unsatisfactoriness of changing and impermanent things. In the present time, marginalized people who don't have enough resources to meet out their daily hand to mouth demands are sufferers due to financial stress. Poverty in India remains a major challenge. Unemployment rate in India rose sharply to 9.2 per cent in June 2024.¹⁷ According to Montez et al. (2014), workers experience high levels of work–family conflict and insecurity due to severe competing demands on their time and consequently experience lower health outcomes.¹⁸ Stack and Meredith (2018) reported that single working parents experienced grinding poverty, psychological distress, and anxiety even when they employed on a full-time basis, because of their low hourly rates of pay.¹⁹ On the contrary, persons who

have adequate resources experiences greediness. Having no break on excessive desires they develop the habit of craving and subsequently develop the strong attachment with the objects they desire.

At these stages one is involved in sensory desire (*kāmacchanda*): seeking for pleasure through the five senses of sight, sound, smell, taste and physical feeling. Due to ignorance such people are trapped in the Bhav-chakra (dependent origination). Having involved in passions (*Kamchanda*) they spend their life's time in achieving materialistic things but still remain unsatisfactory. According to the law of dependent origination which is also called *Pratītyasamutpāda* (cause and effect), such people seem to have reached the craving (*Taṇhā*) level depicted in wheel of dependent origination. Craving subsequently give rise to next stage related to highly attachment to the material objects. Having developed clinging attitude for desired thing, a mental situation compel them to work extra beyond official hours for the employees in offices. Due to faulty work life balance such people are sufferers of domestic conflicts. LinkedIn survey (2020) based on over 2.9 million responses concluded that employees struggling work-life balance were 4.4 times more likely to show symptoms of occupational burnout.²⁰ Unhappily married couples suffer 3 – 25 times the risk of developing clinical depression.²¹ Scientific reports suggest that around 10 percent of People worldwide from mental disorders like anxiety, depression, schizophrenia etc.

2.2. Toxic emotions in Buddhism and its relation with craving mind

Unwholesome mental states are the mental defilements that can arise from the three unwholesome roots of greed (*lobha*), hatred (*dosa*) and delusion (*moha*). These are mental states in Buddhism lasting longer are destructive emotions affect human behaviours. The three poisons (Sanskrit: *triviṣa*; Tibetan: *dug gsum*) or the three unwholesome roots (Sanskrit: *akuśala-mūla*; Pāli: *akusala-mūla*), in Buddhism, refer to the three root *kleshas*: *Moha* (delusion, confusion), *Raga* (sensual attachment, greed), and *Dvesha* (aversion, hate). These three poisons are considered to be three afflictions or character flaws innate in a human being, the root of craving (*Taṇhā*) and thus in part the cause of *Dukkha* (suffering, pain, unsatisfactoriness).

Craving: It focus on three mental processes that are considered to be fundamental toxins of the mind. The first of these is craving. Craving is also associated with negative psychological states such as stress, exhaustion, anxiety, depression, and despair, and with maladaptive behaviours such as gambling, scavenging, hoarding, trickery, and theft. Craving is analogous to a drunken man. This is symbolized by man drinking wine. Just as this man's thirst is never satisfied, so the person deluded by greed is never satisfied and crave more things.

²⁰ Wikipedia https://en.wikipedia.org/wiki/Work-life_balance

²¹ Barua S. (2021) The Status of Women in Vedic and Buddha's Periods Journal of International Buddhist Studies, 13(2), 61 – 74.

Why are all vulnerable to addiction. Whether it's a compulsion to constantly check social media, binge eating, smoking, excessive drinking, or any other behaviors reported by Judson Brewer.²² According to him, we may find ourselves uncontrollably repeating. Why are bad habits so hard to overcome? Craving exists in both behavioural and drug addictions. In behavioral addiction, the target of craving is the completion of a certain action. Craving as a belief about physiological states associated with action completion. Both prior expectation and new evidence contribute to current craving for an action.²³ Craving is said to be afflictive, for it disrupts the balance of the mind, easily giving rise to anxiety, misery, fear, and anger; and it is unrealistic in the sense that it falsely displaces the source of one's well being from one's own mind to objects.²⁴

Hatred (Aversion):

Aversion refers to feelings of aggression, anger, and hatred. Hatred is the second of the fundamental afflictions of the mind and is a reverse reflection of craving. It is represented by a snake. Its opposite is loving kindness. Hatred or hate is an intense negative emotional response towards certain people, things or ideas, usually related to opposition or revulsion toward something.²⁵ Hatred is often associated with intense feelings of anger, contempt, and disgust. In the same vein as attachment where we only try to get the things we want, when we experience. We push away (usually aggressively) the things that we dislike. If we allow our ignorance to take over, we can conjure up hatred for the things that we dislike and the people we see as blocking our desires. The external environment makes an adverse effect on one's mind. That is, hatred, or malevolence, is driven by the wish to harm or destroy anything that obstructs the selfish pursuit of desirable objects and situations for me and mine. As an emotion, hatred can be short-lived or long-lasting.²⁶ It can be of low intensity - 'I hate broccoli' - or high intensity: 'I hate the whole world.'²⁷ Feelings of aggression happens when intense emotions are "triggered" by an external event. Often, the event leaves you feeling hurt, angry, or defensive. A best example is of Angulimal who grows up as an intelligent young man in Sravasti and during his studies becomes the favourite student of his teacher. However, out of jealousy, fellow students set him up against his teacher. In an attempt

to get rid of Āṅgūlimāla, the teacher sends him on a deadly mission to find a thousand human fingers to complete his studies.

Delusion: Delusion or Ignorance means lack of knowledge or understanding. The third, most fundamental affliction of the mind is the delusion of grasping onto one's own and others' reified personal identities as real and concrete. Ignorance builds up over time and becomes ingrained within our deepest inner assumptions as fears and anxieties. Ignorance is analogous to an old and blind person hobbling with a cane. The man is unable to see, yet he believes he can use his stick. The small area covered by the stick is what the blind actually knows, which is very limited. According to Buddhism, the self is constantly in a state of dynamic flux, arises in different ways, and is profoundly interdependent with other people and the environment. However, people habitually obscure the actual nature of the self by superimposing on reality the concepts of permanence, singularity, and autonomy. This is the initial element of the dependent origination (cause and effect) cycle of desire and suffering comprehended by Lord Buddha during his enlightenment. The ignorant one is not aware of the sufferings in their true perspective. Ignorance is not to see the truth as it appears in reality. According to German psychiatrist Emil Kraepelin, patients with delusional disorder remain coherent, sensible and reasonable.²⁸ An individual expresses an idea or belief with unusual persistence or force, even when evidence suggests the contrary.

Delusional disorder, traditionally synonymous with paranoia, is a mental illness in which a person has delusions, but with no accompanying prominent hallucinations, thought disorder, mood disorder, or significant flattening of affect²⁹

Other Mental Tendencies (defilements): Unwholesome mental states are the mental defilements that can arise from the above explained three unwholesome roots of greed (*lobha*), hatred (*dosa*) and delusion (*moha*). The other mental defilements are conceit or self importance (*mana*), wrong view (*ditthi*), doubt (*vicikiccha*), laziness (*thina*), restlessness (*uddacca*), shameless (*ahihirika*) and fearlessness (*anottappa*).

2.3. Afflictive (distressing) emotions and its impact on life activities

Emotional distress happens when negative, uncomfortable, or distressing emotions impact you so deeply that it disrupts your daily quality of life. Afflictive emotions have significant impact in the well-being of the person. These emotions can generate a feeling of general discomfort, affecting the way the person feels about themselves, others, and the environment. They are: anger, pride, jealousy, attachment and ignorance. Anger destroys our state of mind. When one is angry, one loses the power to reason.³⁰ The distressing

²⁸ Winokur, G (1977). "Delusional Disorder (Paranoia)". Comprehensive Psychiatry. 18 (6): 511 – 521. doi:10.1016/s0010-440x(97)90001-8.

²⁹ Semple, David. "Oxford Hand Book of Psychiatry" Oxford Press. 2005. p 230

³⁰ <https://www.mentesabiertaspsicologia.com/blog-psicologia/afflictive-emo->

emotions can have a profound impact on various aspects of life. life of a person. The list of negative emotions affecting emotional, cognitive and physiological level of individual is given in Table 1.

Table 1: Effect of affective emotions on emotional, cognitive, physiological and interpersonal relationships

Emotional Effect	Cognitive Effect	Physiological Effect	Interpersonal Effect
Afflictive Emotions			
Sadness	Fear	Stress, and intense sadness	deep sadness
Guilt or Anger			uncontrolled anger
Anxiety		anxiety	extreme anxiety
Hopelessness			
Impact			
Persistent discomfort Mood	Difficulty to concentrate	tachycardia, or sweating,	affecting the way they communicate, difficult to express
Self esteem	Difficulty to process information	muscle tension	positive emotions, relate to others and establish emotional bonds.
Self perception		gastrointestinal problems.	cause social isolation and loneliness, conflict with others

including ignorance, attachment and aversion. All other negative predispositions are produced on the basis of these three.³¹ Therefore, it is essential to identify the In general, any defilement or emotion which obscures the mind are often related with three toxic emotions triggers to understanding and managing distressing emotions more effectively. Such emotions of afflictive in nature are often associated with specific triggers such as situations, events, thoughts causing negative emotions in the person. Distressing emotions can have a profound impact on various aspects of life. life of a person. Afflictive

tions-characteristics-and-management

³¹ Khenchen Konchog Gyaltsen (2009). A Complete Guide to the Buddhist Path. p. 451 (from the glossary).

emotions are characterized by their intensity, duration, impact on emotional well-being, specific triggers and effects at an emotional, cognitive, physiological and social level. Negative affect is a general dimension of subjective distress and dissatisfaction that subsumes a broad range of specific lower-order negative mood states, including fear, sadness, anger, and guilt. Its emergence in structural analyses indicates that these various negative emotions significantly co-occur both within and across individuals. Thus, someone who is feeling sad also is likely to report significant levels of fear, anger, guilt, and so on.

III. BBUDDHA'S PHILOSOPHICAL FOUNDATION OF EMOTIONAL LEARNING IN DHARMA: TWO EXTREMES

Emotions are physical and mental states brought on by neurophysiological changes, variously associated with thoughts, feelings, behavioral responses, and a degree of pleasure or displeasure.³² Emotional education involves developing skills to understand, manage, and express emotions effectively, fostering greater self-awareness and interpersonal relationships. It empowers individuals to navigate life with emotional intelligence and resilience. The Buddha's first sermon is a foundation to build up wisdom, practice morality & develop compassion. Buddhist basic principles in dharma (Pali-dhamma) that addresses human sufferings include the five precepts (Pancha sheel), noble eight fold path (middle path) and parmitas. Lord Buddha had addressed these basic principles in a sequence in his first sermon to five parivrajakas at Sarnath (Uttar Pradesh, India). His audience consisted of five ascetics who had been his former companions: Kondañña, Assaji, Bhaddiya, Vappa, and Mahānāma, all five were the ascetics with whom he had shared six years of hardship. Lord Buddha said there were two extremes, a life of pleasure and a life of self-mortification. One says let us eat and drink, for tomorrow we die. The other says, kill all vāsanās (desires) because they bring rebirth. He rejected both as unbecoming to man. He was a believer in the Madhyama Marga (*Majjhima Patipada*), the middle path, which is neither the path of pleasure nor the path of self-mortification. Answer me this," he said to the Parivrajakas, "So long as your self remains active and continues to lust after either worldly or heavenly pleasures, is not all mortification vain?" And they (*Parivrajakas*) answered, "It is as thou sayest." Sensuality is experiencing the world through your senses; through touch, taste, smell, sound and sight in a way that is pleasing. Buddha said "Sensuality of all kinds is enervating (moral weakening). The sensual man is a slave of his passion. All pleasure-seeking is degrading and vulgar. But I say unto you that to satisfy the needs of life is not an evil; to keep the body in good

³² Panksepp, Jaak (2005). Affective neuroscience: the foundations of human and animal emotions ([Reprint] ed.). Oxford [u.a.]: Oxford Univ. Press. p. 9. ISBN 978-0195096736. , Damasio AR (May 1998). "Emotion in the perspective of an integrated nervous system". Brain Research. Brain Research Reviews. 26 (2-3): 83-86, Ekman, Paul; Davidson, Richard J. (1994). The Nature of emotion: fundamental questions. New York: Oxford University Press. pp. 291-293. ISBN 978-019508944, Schacter, Daniel L.; Gilbert, Daniel T.; Wegner, Daniel M. (2011). Psychology (2nd ed.). New York: Worth Publishers. p. 310. ISBN 978-1429237192

health is a duty, or otherwise you shall not be able to keep your mind strong and clear and have the lamp of wisdom burning. There is a middle path which avoids both these extremes. Know ye, that, this is the path which I preach.³³

On hearing this, the Parivrajakas became extremely impatient to know what the path was and requested the Buddha to expound it to them. The Buddha agreed. He began by saying that his path which is his *Dhamma* (religion) had nothing to do with God and Soul. The centre of his Dharma is man and the relation of man to man in his life on earth. This he said was his first postulate. His second postulate was that men are living in sorrow, in misery and poverty. The world is full of suffering and that how to remove this suffering from the world is the only purpose of Dharma (*Dhamma*). Nothing else is Dharma (*Dhamma*). The recognition of the existence of suffering and to show the way to remove suffering is the foundation and basis of his Dhamma.

Subsequently the Parivrajakas then asked Buddha: "If the foundation of your Dharma (Pali:*Dhamma*) is the recognition of the existence of suffering and the removal of suffering, tell us how does your Dharma remove suffering ! The Buddha then told them that according to his Dharma if every person followed (i) the Path of Purity ; (ii) the Path of Righteousness ; and (iii) the Path of Virtue, it would bring about the end of all suffering.

Path of purity: Practice of sila (virtue)

The precepts are: not killing, not stealing, not misusing sex, not engaging in false speech, and not indulging in intoxicants. Many new Buddhists take the five precepts with their refuge vow. These five precepts form the basis of several parts of Buddhist doctrine, both lay and monastic. The Buddhist sadhana consists of *sila* (virtue), *samadhi* (concentration) and *panna* (wisdom). The latter two are not possible without the first one. Sila pertains to both individual and social life. With regard to their fundamental role in Buddhist ethics, the precepts have been compared with human rights because of their universal nature, and some scholars argue they can complement the concept of human rights. The first precept consists of a prohibition of killing, both humans and all animals. The second precept prohibits theft and related activities such as fraud and forgery. The third precept refers to sexual misconduct, and has been defined by modern teachers with terms such as sexual responsibility and long-term commitment. The fourth precept involves falsehood spoken or committed to by action, as well as malicious speech, harsh speech and gossip. The fifth precept prohibits intoxication through alcohol, drugs, or other means.³⁴

IV. PHILOSOPHICAL AND SPIRITUAL FOUNDATION OF EDUCATION: THE NOBLE EIGHTFOLD PATH

The Buddha next addressed the Parivrajakas on the righteous path i.e, Ashtangamarga. He began his discourse with the exposition of Samma Ditti (Right Views), the first and foremost element in the Ashtangmarga. "To realize the importance of *Samma Ditti*," the Buddha said to the Parivrajakas: "O, ye, Parivrajakas, you must realize that the world is a dungeon and man is a prisoner in the dungeon. "This dungeon is full of darkness. So dark is it that scarce anything at all can rightly be seen by the prisoner. The prisoner cannot see that he is a prisoner. "Indeed, man has not only become blind by living too long in the darkness, but he very much doubts if any such strange thing as light is said to be, can ever exist at all "Mind is the only instrument through which light can come to man.

4.1. Right Understanding (*Samma Ditti*)

It is the first and foremost element of path. it is a right view to understand the existence of suffering and removal of suffering. Samma Ditti requires the abandonment of superstition and supernaturalism for which it requires free mind and free thought.

4.2. Right aspirations (*Samma Sankappo*)

Every man has aims, aspirations and ambitions. Second component is right intention i.e, *Samma Sankappo* teaches that such aims, aspirations and ambitions shall be noble and praiseworthy and not ignoble and unworthy. The, second component of path describes how our thoughts lead to positive and negative emotions. Thus, first and two i.e, component of right view and right intention respectively forms the basis of development of wisdom.

4.3. Right speech (*Samma Vacca*)

(a) that one should speak only that which is true; (b) that one should not speak what is false; (c) that one should not speak evil of others; (d) that one should refrain from slander; (e) that one should not use angry and abusive language towards any fellow man; (f) that one should speak kindly and courteously to all; (g) that one should not indulge in pointless, foolish talk, but let his speech be sensible and to the purpose.

4.4. Right conduct

Right conduct (*Samma Kamanto*) teaches right behaviour. It teaches that every action should be founded on respect for the feelings and rights of others. What is the norm for *Samma Kamanto* ? The norm is that course of conduct which is most in harmony with the fundamental laws of existence. When his actions are in harmony with these laws they may be taken to be in accord with *Samma Kamanto*.

4.5. Right livelihood

Transformation of Society, Buddha said Every individual has to earn his livelihood. But there are ways and ways of earning one's livelihood. Some are bad; some are good. Bad ways are those which cause injury or injustice

to others. Good ways are those by which the individual earns his livelihood without causing injury or injustice to others. This is *Samma Ajivo*. It means earning livelihood without breaking the five precepts. For example, how can one's livelihood be regarded as pure if he earns it by stealing the things of others or by killing human beings. Our dishonest means of earning livelihood will be detrimental to the welfare of the society. Right livelihood therefore important both for the individual's spiritual journey as well for peace and prosperity of society in which we live.³⁵

4.6. Right effort and right mindfulness: Way for neutralizing afflictive emotions

Right Effort (*Samma Vyayamo*): Right Endeavour is primary endeavour to remove *Avijja* ; to reach the door that leads out of this painful prison house, to swing it open. Right endeavour has four purposes. One is to prevent states of mind which are in conflict with the noble eight fold path (*Ashtangamarga*). Second is to suppress such states of mind which may already have arisen. Third is to bring into existence states of mind which will help a man to fulfil the requirements of the *Ashtangamarga*. Fourth is to promote the further growth and increase of such states of mind as already y may have arisen. *Avijja* means ignorance (*Moha*) which is one of the toxic emotion leads to unwholesome thoughts in individual person. There are of three types of unwholesome thoughts: a). Thoughts of sensual desire (*kama sankappa*), b) Thoughts of hatred (*vyapada sankappa*) and c) Thoughts of cruelty (*vihimsa sankappa*)³⁶[36]. Sensual desire in Buddhism encompasses cravings for sensory pleasures that distract from doing daily activities and life's spiritual goals, notably Nibbana. Ignorance (delusion) is marked by attachments that hinder enlightenment and bind beings to the cycle of rebirth, termed "tanha."

4.7. Anti-dote to craving, hatred and cruelty

4.7.1. Thoughts of craving (Alcohol and other drug)

Traditional models of craving have been based primarily on the concept of classical conditioning. In recent years, however, researchers increasingly have introduced cognitive concepts, such as memory, expectancies, interpretation, and automatic behavior, into their conceptualizations of craving. These efforts have culminated in the development of four cognitive models of craving: cognitive labelling, outcome expectancy, dual-affect, and cognitive processing. The cognitive processing model posits that although many alcohol use behaviours have become automatized processes in the course of an alcoholic's drinking career, craving is a nonautomatic process that requires mental effort and is limited by a person's cognitive capacity. This model also implies that alcohol use and alcohol-seeking behaviour can occur

³⁶ Gethin, Rupert (1998), Foundations of Buddhism, Oxford University Press p. 81.

in the absence of craving.³⁷ The craving for sensory pleasures that can lead to temporary boredom and discontent.³⁸ The craving for sensory pleasures that distracts individuals from deeper teachings such as Nibbana.³⁹

4.7.2. Thoughts of hatred (*vyapada sankappa*)

Hatred or hate is defined as a deep seated extreme emotional dislike. According to Freud, “hate” is defined as an ego state that wishes to destroy the source of its unhappiness. Hate is an emotion that masks personal insecurities. Hatred is traumatizing physically, emotionally and morally. It therefore demands greater attention because the most common and lasting effects of hatred involve mental health concerns. Not only is it important to know the impact of hatred on the victim but perhaps more important is to understand the psychology of the person who hates (the hater). Developing self awareness is antidote may help in the prevention of various crimes like rape, murder and even terrorism.⁴⁰

4.7.3. Thoughts of cruelty (*vihimsa sankappa*)

Cruelty is the intentional infliction of suffering or the inaction towards another’s suffering when a clear remedy is readily available.⁴¹ Animal cruelty in childhood, although generally viewed as abnormal or deviant, for years was not considered symptomatic of any particular psychiatric disorder. Although animal cruelty is currently used as a diagnostic criterion for conduct disorder, research establishing the diagnostic significance of this behaviour is essentially non-existent. In the current study, investigators tested the hypothesis that a history of substantial animal cruelty is associated with a diagnosis of antisocial personality disorder (APD) and looked for associations with other disorders commonly diagnosed in a population of criminal defendants. Forty-eight subjects, criminal defendants who had histories of substantial animal cruelty, were matched with defendants without this history. Data were systematically obtained from the files by using four specifically designed data retrieval outlines. A history of animal cruelty during childhood was significantly associated with APD, antisocial personality traits, and polysubstance abuse. Mental retardation, psychotic disorders, and alcohol abuse showed no such association.⁴² *Samma Satti* calls for mindfulness and thoughtfulness. It means constant wakefulness

of the mind. Watch and ward by the mind over the evil passions is another name for Samma Satti.

4.8. Right mindfulness: Control of mental defilements

Mental defilements are the unskilled (unwholesome) thoughts come in mind. With regard to three unwholesome thoughts, Lord Buddha suggested five techniques to make efforts by abandonment of these negative thoughts. These are i) reflect on a different object connected

4.9. Right mindfulness: Control of mental defilements

Mental defilements are the unskilled (unwholesome) thoughts come in mind. With regard to three unwholesome thoughts, Lord Buddha suggested five techniques to make efforts by abandonment of these negative thoughts. These are i) Reflect on a different object connected with wholesome thoughts, ii) Ponder on the disadvantages of the unwholesome thoughts such as the confusion, delusion and suffering they can bring iii) Stop paying any attention to them iv) Reflect on removing the source such as the thought formation of the unwholesome thoughts and v) Restrain, subdue and beat down the evil mind by the power of good mind.⁴³ Right effort is primarily psychological. It consists in unremitting work on oneself and upon one's own mind by means of preventing, eradicating, developing and maintaining. Preventing and eradicating are related to unskilful states where as developing and maintaining are related to skilful states in mind.

4.10. Right Meditation (*Samma Samadhi*)

Buddha said to Parivrajakas, there are five fetters or hindrances (*klesh*) which come in the way of a person trying to achieve *Samma Ditti*, *Samma Sankappo*, *Samma Vacca*, *Samma Kamanto*, *Samma Ajeevo*, *Samma Vyayamo* and *Samma Satti*. In order to overcome roots of suffering and hindrances (*klesh*) including are covetousness, ill-will, sloth and torpor, doubt and indecision, it is necessary to practice Samma Samadhi (right meditation) including *Anapansati*. Samadhi is mere concentration. No doubt it leads to Dhyanic states which are self-induced, holding the five hindrances in suspense. But these Dhyana states are temporary. Consequently the suspension of the hindrances is also temporary. What is necessary is a permanent turn to the mind. Such a permanent turn can be achieved only by Samma Samadhi. Mere Samadhi is negative inasmuch as it leads to temporary suspension of the hindrances. In it there is no training to the mind. Samma Samadhi is positive. It trains the mind to concentrate and to allow of some *Kusala Kamma* (Good Deeds and Thoughts) during concentration and thereby eliminate the tendency of the mind to be drawn towards *Akusala Kamma* (Bad Deeds and Bad Thoughts) arising from the hindrances. Samma Samadhi gives a habit to the mind to think of good and always to think of good. Samma Samadhi gives the mind necessary motive power to do good. The integrated impact of all the components of noble path

⁴³ Bhikkhu Nanamoli and Bhikkhu Bodhi 1995, *Vitakkasanthana Sutta*, Translation of the Middle Length Discourses of the Buddha, Wisdom Publications.

is discussed in next section.

V. EXPERIMENTAL OBSERVATIONS ON PRACTICE OF NOBLE EIGHT FOLD PATH: A CASE STUDY

Five meditations including meditation *Anapansati* (mindfulness), *Metta Bhavna* (loving kindness), *Kayanusati* (body scan), *Buddhanusati*, *Chintan* (Contemplation) were conducted in a week. *Dhyan Sandhya* (Evening Meditation) used to start after taking five precepts (*Panchsheel*). Practice of noble eight fold path was the foundation of the evening programme in the form of dharma desna (*Pariyatti*) and practice of mindfulness meditations (*Patipatti*). Dhamma lectures (*Pariyatti*) were delivered including causes of suffering (cause and effect or *Pratitya samutpad*), *klesh* including hindrances of mindfulness (mental defilements), meaning of important suttas (*Rattan sutta*, *Karnimey Sutta*), *Maha mangal Sutta* etc. and short stories as an example from *tripitaka* covering different components of eight fold path i.e right understanding, right aspirations, right speech, right conduct, right livelihood; seven awakening factors (*Sapta bodhyang*) for right efforts. In a practical form the 7th and 8th component (right mindfulness and right concentration (*Samadhi*) of eight fold path were practiced for 40 to 50 minutes depending on the type of meditation. Each meditation was conducted for 40 minutes except loving kindness meditation which was conducted for 50 minutes by senior *Dhammacharis* who had experience of more ten years.

5.1. Impact on afflictive emotions

The general observations in terms of domestic violence and behaviour (speaking, honesty, intra & interpersonal relationships), eating habits, habits of substance use and developments of altruism are given in table 2.

Table 2. Impact of mindfulness meditation practices on transformation of afflictive emotions to positive emotions (virtues) of People during four years

Afflictive emotions (distressing)	Before Joining TBM	After Joining TBM	Percent (%)	Relation with Precepts (Sheel)	Development of kushal emotions (virtues)
Out of 26 members					
Domestic Violence (Hatred-anger)	24	2	91.60 (decreased)	1st	Forgiveness (Control of Hostility)
Eating habits (Greed)	3 (Non-veg)	2 (Veg)	33.33 (decreased)	1st	Compassion (Metta) towards animals
Substance use (Delusion)	26	2	92.60 (decreased)	5th	Wisdom (Mindfulness)

Domestic violence: At the time of joining Dhyan Sandhya (evening meditation) among 101 members, 24 members were involved in domestic violence by the men with the family members (abusing and beating to wife, children). There were hostile relations at family and community levels. After four years of joining there reduced the habit of violence from 24 to 2 members in terms of 91.6 percent reduction.

Eating habits: At the time of joining Dhyan Sandhya (evening meditation) among 101 members, 98 members were vegetarians and only 3 members were involved in eating non-vegetarian food. Although members have got awareness to consume optimum food according to body requirements but there appeared little improvement i.e decrease of 33.3 percent persons.

Substance use : At the time of joining Dhyan Sandhya (evening meditation) among 101 members, 26 members were involved the habit of chewing of tobacco, drinking alcohol etc. After four years of joining there reduced the habit of substance use from 26 to 2 members in terms of 92.6 percent reduction of substance use.

Strategic effect:

The foundation of mindfulness meditation was practice of noble path including five precepts (morality)

5.2. Impact on altruism and consciousness

The effect of integrated practice of meditations including Anapansati (mindfulness), *Metta Bhavna* (loving kindness), *Kayanusati* (vipassana), *Buddhanusati* and *Chintan* (Contemplation) on the consciousness level and attitude of altruism are discussed in following sections.

5.3. Experimental impact of mindfulness meditations on different stages of Jhana (Dhyan)

The general observations in terms of altruism and progressing stages of Anapan sati meditation in terms of consciousness level of members participated in Dhyan Sandhya (evening meditation) are given in Table 3. The effect of integrated practice of meditations before and after Joining in explained under different heads: As far as spiritual growth is concerned based on questionnaire reported by Bodhi Prakash (TBM) (1st stage) 90, 70, 41, 11 members reached to Pratham (first), Dwitiya (Second), Tiritiya (third), Chaturtha (fourth) and above Chaturtha (fourth) stage jhanas of Anapanasati meditation. Based on the data, on an average members have recover from initial high fear and build up the inner confidence. The Anapanasati meditation technique comes under mindfulness meditation technique as Sati in the name implies mindfulness or being with the self and in our study we have seen that the depression levels have reduced with Anapanasati meditation (30). Hence, Ven Sumedh Thero (2019) highlighted this Anapansati as part of therapeutic uses under mindfulness meditation.⁴⁴

⁴⁴ Ven Sumedh Thero (2019) Meditation as a tool for Psychotherapy. Sch J Psychol & behave. Sci 2 (3): 197-209.

Table 3. Effect of mindfulness meditation practices on consciousness level of participants after four years

Meditative absorption	Number of Participants			
Stages of meditative absorption (Jhana)	Before Joining programme	after 4 years of Joining	Percent (%)	Relation with consciousness level
1 st stage of Jhana (Pratham Dhyana)	101	90	89.12	Sense restraint
2 nd stage of Jhana (Dwitiya Dhyana)	101	71	69.30	Born of concentration
3 rd stage of Jhana (Tritiya Dhyana)	101	41	40.60	Mindfulness
4 th stage of Jhana (Chaturtha Dhyana)	101	11	10.89%	Equanimity
Impact of Mindfulness				
Altruism (Dan)	101	26	25.74	Karuna & Maitri
Cooperative attitude	101	31	30.12	Charity/Empathy

Mindfulness meditation might be considered the mother of all meditation. Many other types of meditation have stemmed from mindfulness, and it may have the most scientific evidence supporting it.⁴⁵ One basic classification of meditation techniques divides them into samatha (calming the mind) and vipassana (cultivating insight). In the Theravada traditions emphasizing vipassana, these are often seen as separate techniques, while Mahayana Buddhism generally stresses the union of samatha and vipassana. While interpreted in the Theravada-tradition as describing a deepening concentration and one-pointedness, originally the *jhānas* seem to describe a development from investigating body and mind and abandoning unwholesome states, to perfected equanimity and watchfulness.⁴⁶

First stage of Jhana: Among the 101 participants, large number i.e 90 participants had reached to the first stage of Jhana (Pratham Dhyana). According to Johansson , separated (*vivicceva*) desire for sensual pleasures, separated (*vivicca*) from [other] unwholesome states (*akusalehi dhammehi*, unwholesome dhammas,⁴⁷ a practitioner enters upon and abides in the first

⁵⁵ Lusthaus, Dan (2002), *Buddhist Phenomenology: A Philosophical Investigation of Yogacara Buddhism and the Ch’eng Wei-shih Lun*, Routledge <https://philpapers.org/rec/LUSBPA>

Third stage of Jhana: Out of total 101 members, only 41 participants have touched to the 3rd stage of Jhana. Participants who are practicing these meditation practices since long time of more than 8 but less than 15 years. They are mostly senior Dhamma mitras and some Dhammacharis . With the fading away of piti, a bhikkhu abides in upekkhā (equanimity,” “affective detachment”, *sato* (mindful) and [with] *sampajañña* (“fully knowing,”⁵⁶ “discerning awareness.”⁵⁷ [Still] experiencing sukha with the body, he enters upon and abides in the third jhana, on account of which the noble ones announce, “abiding in [bodily] pleasure, one is equanimous and mindful”.

Fourth stage of Jhana: Among the total members, very few (10.89%) participants touched occasionally to the stages of fourth jhana. There the who are practicing the meditations since more than 15 years are the very senior Dhammacharis. With the abandoning of [the desire for] sukha (“pleasure”) and [aversion to] dukkha (“pain”) and with the previous disappearance of [the inner movement between] *somanassa* (“gladness,” and *domanassa* (“discontent”), a bhikkhu enters upon and abides in the fourth jhana, which is adukkham asukham (“neither-painful-nor-pleasurable, “freedom from pleasure and pain”. Dhammacharis at this stage are spreading maitri to the all members, to the society, to the nation and all the people on globe, sentient being in the universe through the practice of loving-kindness meditation (Metta Bhavna). Rather than a fleeting emotion or mood aroused by sensory and conceptual stimuli, sukha is an en- during trait that arises from a mind in a state of equilibrium and entails a conceptually unstructured and unfiltered awareness of the true nature of reality. Many Buddhist contemplatives claim to have experienced sukha, which increases as a result of sustained training.⁵⁸ The pleasant feeling experienced in the deep absorption states (jhana) during higher stages of concentration meditation has no latent tendency of desire for sense pleasure (*kamaraganusaya*) underlying it.

Thus in our studies, confidence level of members had improved from low to medium level. Such observations are supported that meditation, and more specifically loving-kindness meditation, can help generate the positive emotions needed to build personal resources [58]. Many interventions on loving-kindness emphasize the idea of achieving personal happiness through feelings of love or good relationships with others, whereas interventions on compassion often encourage one to pay attention to and take care of suffering

⁵⁶ Arbel, Keren (2016), Early Buddhist Meditation: The Four Jhanas as the Actualization of Insight, Taylor & Francis, ISBN 9781317383994, <https://www.routledge.com> > Arbel > book

⁵⁸ Fredrickson B. L, Michael A. Cohn, Kimberly A. Coffey, Jolynn Pek, and Sandra M. Finkel (2008) Open Hearts Build Lives: Positive Emotions, Induced Through Loving-Kindness Meditation, Build Consequential Personal Resources. J Pers Soc Psychol. 2008 Nov; 95 (5): 1045 – 1062.

people, even in the midst of one's own suffering.⁵⁹ All Buddhist schools teach that through tranquility (Samatha) meditation, the *kilesas* are pacified, though not eradicated, and through insight (Vipassana) the true nature of the *kilesas* are neutralized. When the empty nature of the Self and the Mind is fully understood, there is no longer a root for the disturbing emotions to be attached to, and the disturbing emotions lose their power to distract the mind.

VI. DEVELOPMENT OF POSITIVE EMOTIONS: ALTRUISM (DAN) AND METTA (EMPATHY)

In case of Dan (altruism) giving attitude, out of 101 members 26 members improved Dan giving ability and 31 members improved their cooperative ability (Table 2 and 3). As a result of practice of mindfulness meditations had developed the empathy, the effect of which had seen in terms of direct involvement of 23 members of TBM in charity work. *Metta parmita* encourages for altruistic nature i.e *Dan parmita* of distribution of food, cloth and medicines to society irrespective of their caste, color, religion during second wave of Covid-19 in New Delhi (India). Number of people benefited from charity activity were around 500 families.⁶⁰

From the above, it is shown that the impact of package of practices of righteous principles including five precepts, noble eight fold path and *parmitas* found effective in improvement of personal qualities in terms of individual's wisdom. If a wisdom of at least one family member is improved, it has impact on positive environment at family level. If five families are aware and practices the Dharma noble middle path, it may have impact at colony/community level. If colonies are aware, it may have impact of good positive emotions in terms of reduction of temperament level (anger), friendly inter-personal behaviour among family members and neighbour. This way work is needed for changing the negative irrational minds into rational minds. Rational minded people can give justice, freedom, equality and fraternity to the people at national and international level.

VII. RIGHTEOUS PRINCIPLES AND PRACTICES IN DHARMA THROUGH THE PERSPECTIVE OF PSYCHOLOGY

From the standpoint of modern cognitive psychology, the Noble Eightfold Path can be seen as rooted in what is called cognitive dissonance, which is the perception of incompatibility between two cognitions. In the essay "Buddhism Meets Western Science", Gay Watson explains this dissonance as it relates to Buddhist teaching: Buddhism has always been concerned with feelings, emotions, sensations, and cognition. The Buddha points both to cognitive and emotional causes of suffering. The emotional cause is desire and its

⁵⁹ Lutz, A., Greischar, L. L., Perlman, D. M., and Davidson, R. J. (2009). BOLD signal in insula is differentially related to cardiac function during compassion meditation in experts vs. novices. *Neuroimage* 47, 1038–1046. doi: 10.1016/j.neuroimage.2009.04.081

⁶⁰ Tejodhamma (2024) Triratna Boudh Mahasangh Naglok Nagpur <https://thebuddhist-centre.com> > people-to-people > report

negative opposite, aversion. The cognitive cause is ignorance of the way things truly occur, or of three marks of existence: that all things are unsatisfactory, impermanent, and without essential self.⁶¹ The Noble Eightfold Path is, from this psychological viewpoint, an attempt to resolve this dissonance by changing patterns of thought and behaviour. It is for this reason that the first element of the path is right understanding (*sammā-ditṭhi*), which is how one's mind views the world. Under the wisdom (*paññā*) subdivision of the Noble Eightfold Path, this worldview is intimately connected with the second element, right thought (*sammā-saṅkappa*), which concerns the patterns of thought and intention that controls one's actions.

Two components of noble eight fold path i.e, right understanding, right aspirations contributes to develop wisdom among non-afflictive emotional people. Third, fourth components covering practice of five precepts and sixth and seventh component covering right effort and mindful meditation including *Anapanasati* (four stages) concentration, loving-kindness meditation, *Kayanusati* (*Vipassana*) and contemplation (*Chintan*) found effective on persons having different kind of afflictive emotions. Senior participants practicing the path for long time (10 to 15 years) are experiencing Sukha (real happiness) i.e enduring happiness in psychological terms. Thus, noble middle path is the foundation of overall development in terms of emotional, cognitive and behavioural development of the participants in evening meditation conducted during four years period. Thus from the standpoint of emotional and behavioural psychology, Buddhist practices are itself therapy for enduring happiness and maintaining well-being of all.

Mindfulness and other Buddhist meditation techniques have been advocated in the West by psychologists and expert Buddhist meditation teachers such as Dipa Ma, Anagarika Munindra, Thích Nhất Hạnh, Pema Chödrön, Clive Sherlock, Mother Saymagyi, S. N. Goenka, Jon Kabat-Zinn, Jack Kornfield, Joseph Goldstein, Tara Brach, Alan Clements, and Sharon Salzberg, who have been widely attributed with playing a significant role in integrating the healing aspects of Buddhist meditation practices with the concept of psychological awareness, healing, and well-being.

Lord Buddha also like existentialist does not believe in speculating on metaphysical problems. According to existentialists the nature of existence varies and is individualized to each person. Our life is defined by our existence, and our existence is made up of our relationship to other people and things in the world. They believe each person must choose and commit to meaning and direction in life. Buddha said that life is suffering. Existential psychology speaks of ontological anxiety (dread, angst). Ontological anxiety has to do with the absolute threat of extinction and ontic anxiety with the relative threat to self-preservation and self-enhancement. From this condition there is no escape.⁶²

⁶¹ Nalanda Buddhist Society <http://nalanda.org.my>

⁶² Hendrix H (1967) The ontological character of anxiety J Relig Health 1967 Jan; 6 (1): 46 – 65.

Buddha said that suffering is due to attachment. Existential psychology also has some similar concepts. We cling to things in the hope that they will provide us with a certain benefit.

Buddha said that suffering can be extinguished. The Buddhist concept of nirvana through the middle way i.e, eight fold path is quite similar to the existentialists' freedom. Freedom has, in fact, been used in Buddhism in the context of freedom the effects of karma. For the existentialist, freedom is a fact of our being, one which we often ignore. Finally, Buddha says that there is a way to extinguish suffering. For the existential psychologist, the therapist must take an assertive role in helping the client become aware of the reality of his or her suffering and its roots. Likewise, the client must take an assertive role in working towards improvement—even though it means facing the fears they've been working so hard to avoid, and especially facing the fear that they will "lose" themselves in the process.⁶³

VIII. CONCLUSION

- Righteous principles in Buddhism explains that virtuous (positive, constructive, wholesome) emotions lead to happiness in the long term, while non-virtuous (negative, destructive, unwholesome) emotions lead to suffering.
- Noble middle path is amalgam of righteous thoughts and rational emotions -the way to focusses on a holistic approach to wellbeing of both for non-afflictive and afflictive people. First three components i.e, right views (Understanding), right aspirations and right speech are antidote to delusion (faulty thinking) which have implications in cognitive process.
- Right conduct, the fourth component of middle path is a foundation for development of positive attitude of people as a preventive measure for involved in immoral activities and a foundation base for developing morality to learn mindfulness meditations.
- Right livelihood as a fifth component focusses on optimum requirement of essential materialistic things. It may help to stop craving of the things at individual, community, society and at national level.
- Right efforts or Dhamma vicaya i.e investigation of kind of thoughts occupied in mind and efforts to sideline and non-treatment to negative emotions (covetousness, greed), jealousy (*Dwesh*), ignorance (*Moha*). Virya along with Dhamma vicaya and Pitti applied to regain mindfulness to dispose sloth and torpor.
- Right mindfulness i.e, seveth component covers 1st and 2nd Dhyan

Gautama Buddha the Unique Psychotherapist. [Last accessed on 2012 Oct 26]. Available from: <http://www.lankaweb.com/news/items/2010/04/21/gautama-buddha-the-unique-psychotherapist/2010>.

stages of Anapansati mindfulness meditations in which *Vitarka* are suspended. Mindfulness based Cognitive Therapy practiced for patients of bipolar disorders is more effective to improve the cognitive behavioural therapy.

- Right samadhi i.e, 3rd and 4th Jhana stages of *Anapansati* (*vipassana*) promotes to achieve higher levels of consciousness for senior practitioner who is acquiring spirituality and touch to equanimous status mind in terms of *Uppekha* are liable to avail real happiness and capable to see reality. Higher concentration develops non-attachment in terms to let go to the toxic emotions and person became free from the negative clouds of greed, hatred and delusion.
- Thus, noble eight fold path is the holistic foundation of emotional learning. Practice of all components of Buddha's noble path themselves offer a therapy, not just for the disturbed, but for all who seek to improve the quality of their lives.

Future research:

- Assess the quantitative effect of afflictive emotion and role of mindfulness meditations as an intervention to improve the daily activities of disturbed people under stress.
- More research attention is required on the effect of integrated *dhamma* (dharma) principles (*Pali-Pariyatti*) and practices (*pariyatti*) as a holistic approach on the wellbeing of people of different personalities including introverts, extroverts, and neuroticism.

ACKNOWLEDGEMENT

Charusheela P. Khankhane, Post Graduate Scholar (Clinical Psychology), Amity University Noida (U.P.) India has equally contributed in preparation of this manuscript. I thank Ven. Bhante Dr. Sumedh Thero, Sumedh Bhoomi Buddha Vihar Jhansi India for the motivation for UNDV conference. I also acknowledge the moral support from Bhante Rin Ran Cambodian Buddhist Monastery New Delhi for providing access to various Dharma activities conducted since February 2019. I am grateful to Dhammachari Bodhi Prakash and team, Triratna Boudh Mahasangh (TBM) Delhi Pradesh, India for participation to associated members of Visakha Sangha in long term 'Evening Meditation Program' conducted online since June 2019 and for providing data of TBM members for this manuscript. Thanks to President, Indigenous Federation of Commerce and Industries for submitting Congratulatory Message to organizers UNDV Vesak 2025, Vietnam.

EDUCATION, MINDFULNESS, SUSTAINABILITY: THE BUDDHIST WAY FORWARD

Dr. Prof. Maya Joshi*

Abstract:

In an age marked by ecological crisis, social fragmentation, and the limits of modern education, this paper explores how Buddhist philosophy offers a transformative framework for reimagining education, sustainability, and mindfulness. Drawing on foundational concepts such as *pratītyasamutpāda* (dependent origination), *anitya* (impermanence), *anātma* (non-self), and *śūnyatā* (emptiness), the study argues that interdependence and ethical awareness must be central to future educational paradigms. Through analysis of literature, modern Buddhist thought, and utopian imagination – particularly Rahul Sankrityayan’s *The Twenty Second Century* – the paper advocates for a Buddhist-inspired education rooted in wisdom (*prajñā*), compassion (*karuṇā*), and ecological consciousness. It critiques neoliberal and instrumental models of modern learning, proposing instead a holistic, value-driven, and interdisciplinary approach. Mindfulness, when grounded in ethics, emerges as a vital tool for individual transformation and collective healing. The study emphasizes the need for systemic change, integrating insights from Buddhist psychology, economics, and aesthetics. Ultimately, it calls for an education that cultivates inner awareness and outer responsibility, enabling humanity to co-create a just and sustainable future for all sentient beings.

Keywords: *Pratityasamutpada, anitya, anatma, sunyata.*

I. INTRODUCTION

Education must respond to the state of the world and the demands of the times. Thus, we must ask ourselves this question in context: What might be the ideal shape of education in these times of the what the Indian writer Amitav Ghosh has called “The Great Derangement”? (Ghosh, 2016) In the era of

* University of Delhi.

anthropogenic climate change and the alarming speed and scale of biodiversity loss, addressing our fractured relationship with Nature and ways of building more environmentally sustainable futures is no longer a luxurious option: it is an urgent necessity. No wonder sustainability – defined as the ability to have anything maintained at a certain rate or level – is the new buzzword. The analogous word or concept that comes close to this in urgency and significance is peace. Wars – within and without, with other humans and with nature – continue to plague us, even as fragile ceasefires offer thin and short-lived consolation.

The world, as the Buddha said millennia ago, is indeed burning: whether due to alarming degrees of global warming and seemingly unquenchable forest fires or due to conflicts between peoples, communities, and nations. However, sustainability and peace are both complex words requiring deeper investigation and definition. We must ask ourselves related questions such as: sustainability for whom and of what kind of life/ style? And peace in what form? The absence of war is surely not peace, and an anthropocentrically seen view of sustainability is not only narrow and destructive of other species, it is, in fact, in the long run, unsustainable. As I see it, Buddhist philosophical concepts and understanding of these concepts can help us go beyond the short-term quick-fixes and band-aids that we often resort to. They encourage a deeper investigation of cause and consequence than technologically driven or bureaucratically unimaginative solutions that tend to be commonly accepted and executed today. We must address the fact that our solutions are not working. The news from experts who study the crisis is not good. Imaginative and authentic approaches to the problem are required. Buddhist investigations into the nature of reality can help diagnose the problem accurately, in an important first step.

In the Buddhist view, Mindfulness, Peace, and Sustainability are profoundly interconnected. Buddhist Education addresses these concerns in a suitably interrelated manner. I shall be exploring these key Buddhist concepts in the light of some thinkers from modern India and beyond that turn for inspiration to the past in order to imagine possible futures. Turning the gaze to Buddhist-inspired dreams from a century ago provides a historical perspective on our last century and sobering reflections on how far we are from achieving some of those desired goals. We must also traverse some difficult terrains in this enterprise, such as the mutually exclusive claims of tradition and modernity, religion and secularism, and the contradictions of the economic and social structures within which practices of mind training take place in contemporary life. Some literary reflections from the last century can also help us identify and diagnose the source of the challenges facing us. But first, it might help to take a quick philosophical detour via some key Buddhist concepts.

Inter-relationality is enshrined as a fundamental concept in Buddhist philosophy. The Sanskrit term *pratityasamutpada* (Dependent Origination or Co-dependent Origination) references a theory of causation that sees all conditioned phenomena as arising due to the presence of other conditioned phenomena. In this chain of arising, there are no sole or single entities that

exist in and of themselves. An implication of this is *anitya* (Pali *anicca*), or the impermanence of all phenomena. Dependent Origination is thus the corollary to the concept of *sunyata*, or the inherent emptiness of all phenomena. Thus, the illusion of the self as an independent, permanent, separate entity is undone. *Anatmavada* (the doctrine of 'no self' which posits the illusion of permanence in a aggregation of *skandhas*) thus postulates a recognition, profoundly humbling, of the fundamental ignorance of working with narrow, selfish motives of possessiveness and greed. As per Buddhist epistemology and ontology, interrelationality is the core concept that connects all – the earth and its various inhabitants, humans divided by race, ethnicity, gender or religion, the human and the non-human worlds, and within living beings, the mind and the body. All are linked in a chain of causation that is so profound that to even contemplate otherwise is an error of judgment. Although the distinction between *samvrtisatya* (relative or conventional truth) and *paramarthatatya* (ultimate truth) somewhat complicates the idea of the self and the world (there is karma and rebirth that recognises a sort of conventional self as ethical agent), it is possible to see that self as co-dependently arisen from other factors and therefore both always already subject to change and a possible agent of ethical action and change. This does not involve the pre-condition that profound selflessness be first grasped in an arduous process of enlightenment-seeking; it only recognises that the Dharmic path results in the good of all beings, the (conventional) self included. In this lies the hope for collective mindful action for a sustainable future.

Fortunately – or unfortunately, for this is happening rather belatedly – contemporary science is beginning to recognise this chain of causation now, moving away from the narrow anthropocentric, atomistic, and dualistic frameworks that hampered the full understanding of these phenomena in earlier scientific discourse. To these divisions, we may wish to add the profound connection between the social, the political, and the philosophical, between the micro and macro aspects of our existence: our relationship with how we clothe and feed our our bodies, how we process our thoughts and feelings, our social and economic relations and our political commitments. These have clear implications for our idea of what constitutes the good human life.

II. EDUCATION FOR THE GOOD HUMAN LIFE

It is possible to argue that Buddha Dharma, despite the emphasis on Nirvana as the ceasing of the cycle of becoming, is focused on the attainment of the good human life here and now. Buddhist ethics would certainly imply that. Ethics (*Vinaya*) indeed is the pre-condition for practicing most Buddhist paths. But how is this goodness defined? What are its contours? More specifically, for our purpose in this specific session, what role does education play in the attainment of this ideal life?

It could be argued that Buddha Dharma is nothing but a program of education. Recognising ignorance as the root cause of all suffering, the removal of that epistemic ignorance from its roots is the way to nirvana, the ultimate goal or telos. For the Bodhisattva ideal, the emphasis on deferring

that personal goal in the larger cause of alleviating the sufferings of all sentient beings adds a further dimension to the element of education. The Bodhisattva must be well-versed in all the arts and sciences to be effective in the world. The removal or transformation of ignorance and the two other main afflictive emotions – attachment and anger – are thus key to Buddhist practice.

Here, we run into problems with the conventional idea of ignorance and also by implication, with the modern idea of education. One could argue that Buddhist education runs counter to the thrust of modern education, especially in its most recent avatar as a slave of industry and profit. Modern education is producing “successful” professionals, but what is the nature of that success? How much benefit is that model of education conferring upon a world rife with inequality and injustice on the one hand, and on the other, excessive concentration of wealth and power in the hands of the few? Knowledge, as pursued today, is not wholesome. Linking education to a productivity model emptied of ethical content and welfare focus is creating a sick society and a sicker world. It adds to individual and collective *dukkha* (suffering). This realisation is dawnign upon those entrenched in systems dedicated to the conventional notions of the good life, ideas and ideals that has held sway over the world over a century. For example, one recent issue of the American magazine *The Atlantic* points to the failure of the Ivy League Universities – commonly held to be a great model of academic excellence – in helping create a wholesome polity or society. “We want a society run by people who are smart, yes, but who are also wise, perceptive, curious, caring, resilient, and committed to the common good,” concludes the author in a scathing essay that the magazine ran as its lead story. (Brooks, 40) . Could the same not be said to be true of all current cultures and educational systems emulating the American model that has arguably been the hegemonic global model? So how then do we create a society run by individuals who possess these essential qualities of perceptivity, care, resilience, and the commitment to the greater common good?

In Buddhism, the opposite of ignorance is not knowledge – understood as accumulated information or skills for achieving certain worldly goals. It is, more fundamentally, a thorough examination of the causes of suffering, with a view to removing them. Suffering, again, is not understood only in terms of obvious forms of physical or mental suffering – though those are never denied – but requires deeper investigation into attachment to a false sense of a separate self and to the permanence of all phenomena. Further, the ability to master one’s destructive emotions, such as anger, is central to the task of being a Buddhist, and the work of many contemporary Buddhist masters has focused on spreading awareness of this insight, often in collaboration with modern psychologists and neurologists. (Goleman 2003).

Teachers of diverse forms of mindfulness such as Goenka ji and Thay (Thich Nhat Hanh) have taught and emphasised the value of Mindfulness practice (*Smriti*, Sanskrit; *Sati*, Pali), and their teachings have benefitted countless human beings outside the formal sphere of schools and universities. Since their teachings have also been adapted to spaces outside those of

conventional religiosity, it is easier to bring this into mainstream discourse by detaching them from religious affiliations that might attract resistance from adherents of different faiths. The modern world is driven by secularism, though, arguably, religion is making a comeback in ways that are perhaps not the most enlightened: orthodoxy, dogma, sectarianism and absence of tolerance for other beliefs. The secularising of mindfulness is a significant and desirable aspect of its appeal in the modern world. In fact, in the context of a discussion of the connection between Buddhism and modernity, there is an interesting overlap but also distinction between the two: it has been pointed out perceptively that “the mental states that are the goals of Vipassana (Sanskrit Vipasyana) meditation – awareness, discrimination, analysis – are congruent with the analytical attitude that allows one to master the world... But [significantly] this exploration of levels of consciousness did not lead the Buddhists to a mastery of the physical world similar to the one that occurred in the West since the scientific revolution.” (Benavides, 547)

However, even though historically the development of the Buddhist world has not followed the trajectory of the industrial world, with its damaging discourse of mastery over the natural world seen as existing outside the human, in contemporary times with the global reach of Buddhism far beyond the cultures it was born in and initially spread to, and with globalised capitalism and technological modernity having transformed those cultures entirely, we must revise that generalisation. So, instead of being posited as a superior gift from Buddhist cultures of nations, Mindfulness practice could perhaps be taught independently of a blanket celebration of all traditionally Buddhist cultures, seeing as they have such mixed experiences and trajectories. This, teaching Mindfulness without teaching all aspects of Buddha Dharma to make it more beneficial to adherents to other faiths or for that matter, no faith at all, seems like a feasible option.

However, mindfulness without a deeply ethical foundation can have downright negative consequences. For eg, a mindfully focused sniper or a mindfully efficient CEO of a large corporation selling harmful goods or treating its workers as resources to be exploited for maximum profit is far from wholesome. It can simply be more effective in reinforcing harm in a world that is far from perfect in its modes of social and economic organisation. The unsustainable capacity of unchecked extractive capitalism that currently dominates can only become more efficient under these circumstances. Therefore, secularised versions of mindfulness must be combined with secular ethics to hold up genuine hope for the possibility of the proper applicability of mindfulness practice.

All this does not preclude the pursuit and attainment of very specific knowledge of specific disciplines such as philosophy or astronomy, medicine or mathematics that we may find enshrined in the ancient Indian university of Nalanda, internationally-renowned for its academic range and rigor in its time. The Bodhisattva path, one might add, enjoins upon the Bodhisattva to specifically acquire mastery of all the worldly arts and sciences, the better to

fulfil the purpose of alleviating the suffering of all sentient beings. Of course, Nalanda was not specifically in the business of producing bodhisattvas. But somewhere, Mahayana Buddhism did guide its aims and objectives. It is clear that in the 21st century, the specific glory of Nalanda cannot be resurrected, try as we might. Of its vast syllabus, today, some may question the need for astrology while others may look askance upon magic, both part of the old curriculum. In any case, a return to the past is theoretically impossible and even perhaps undesirable. Our challenges belong to our times; they are products of our peculiar pathologies. But we can learn. We can turn to the past for some inspiration.

III. LESSONS FROM AN IMAGINED UTOPIA

I am driven here to reflect on a text in Hindi that was imagined in 1918, though published in 1923. called *Baisvin Sadi*, translated as *The Twenty Second Century*. (Joshi 2021)

It is a remarkable (though perhaps wanting in hindsight) imagination of a Utopia by one of India's most fascinating figures: the intrepid scholar-explorer Mahapandit Rahul Sankrityayan (1893 - 1963) before he became the Buddhist Mahapandit Rahul Sankrityayan. While still Kedarnath Vidyarthi, the young man of 25 wrote this utopian futuristic fiction in which we see the world in the imagined 22nd century as seen by an erstwhile teacher from Nalanda, who has gone into a long slumber in a cave and wakes into an entirely different reality than the war torn world of 1918. When the book was conceived, World War I was still going on, and India was fighting for its independence from British colonialism. The author was at the time imprisoned in a British colonial prison after having offered peaceful Satyagraha to protest against the brutal killing by English soldiers of peacefully gathered Indians at Jallianwala Bagh in Amritsar in the Northern part of India. The book was thus written in the shadow of violence. It was also composed in the context of one of the largest peaceful mobilizations of the 20th century under the leadership of Mohandas Karamchand Gandhi.

A quick glimpse at the contents of the book indicates the Buddhist influence. Though the author had yet many years from his visit to Sri Lanka to Vidyalankar Perivena to study Pali scripture and delve into Buddhism deeply to finally embrace Buddha Dharma to emerge as Bhikshu Rahul Sankrityayan, he was already imagining resurrected universities of Buddhist lineage – Nalanda, Vikramshila, and Taxila. Why did he turn to the glorious Buddhist past of India to enlighten the vision of an ideal future? It must be pointed out that he was also inspired by ideas of socialism and though not formally educated in its tenets (his education had been in traditional knowledge systems, but he possessed a remarkable ability for learning in a bricoleur mode), he conjured up a vision of a future where humans have evolved themselves out of all primitive modes of being such as violence and war, patriarchy, feudalism and inequalities of all kinds. The abolition of private property having been achieved, the world is now run along the principles of equity and justice, with a positive emphasis on learning, curiosity, friendliness, and compassion. Another of its features is

the evolution of humanity beyond religion, into a kind of humanism. We meet joyful, wholesome farmers – men and women working alongside – whose four hours of daily labour (technology has been harnessed to remove the need for longer workdays!) leaves them with ample time for the development of their other faculties, such as music and dance, besides a taste for philosophy! Small, independent, but ultimately globally integrated villages run their affairs with local self-government, and everyone has the means – collectively owned and shared – for their full human flourishing. Remarkably, for our purposes, though religion has been abandoned as a useless residue of the dark past of humanity, there is a gleaming image of the Buddha at the resurrected Nalanda University, which now teaches a fully updated curriculum of all the modern disciplines, along with traditional schools of philosophy. The image of the Buddha as a great teacher in this context raises fascinating questions. As has been mentioned, Sankrityayan was yet to fully discover Buddhism, something that would lead him to serve the cause of resurrecting the glorious legacy of India's forgotten Buddhist past. He would do that some years later in the late 1920s when he travelled to Vidyalankar Perivena, the largest monastic institution in Sri Lanka, to study Pali and Buddhism and don the robes.

However, that the ideal image of a future world in 2124 would have the figure of the Buddha points to many things, not least the fact that many did and continue to find inspiration for an equal world of dignity and well-being for all in the ancient teachings. Ambedkar is just one among them. The movement of Engaged Buddhism has also argued along the same lines. This is not the space to go into those details, and that literature and history are well known to this audience. For our purposes here, the centrality of the idea of *education* in the Buddhist context needs to be stressed. Further, in the narrative of *Baisvin Sadi*, our chief protagonist is an ancient teacher from the past who woke up 200 years into the future. This white-bearded old man, coming out of a cave, is shown to be a somewhat wide-eyed witness to the miracle of this new world. However, though he constantly compares the past (backward and full of folly) with the ideal future in which he finds himself, he also has lessons for the evolved humans. These lessons come straight out of Buddhist philosophy: to not rest on their laurels and achievements and to constantly seek more understanding. This model of constant evolution and inner growth, of learning as the only constant, is the ideal that Rahul Sankrityayan also held up in his epigraph to his autobiography, *Meri Jeevan Yatra* (My Life Journey), an epigraph he derived from the Buddha's last words to his disciples: "I have taken ideas as a raft to carry me across, not a load to be born on the head."

What does this narrative tell us about the possible use of Buddhist knowledge in the future? The author seems to assume that the exercise of reason is enough for a profound change to come about in human priorities and will reveal to humans the futility of their destructive, harmful, and cruel ways. However, what it also stresses is that the pre-condition for that utopia to be a sustainable one is material in nature – the replacement of a system resting upon individual profit with one that considers the sharing of all resources. Once the

element of private greed is removed from the equation, everything appears to fall into place. In 2025, in a world that has seen the excesses of communism, one may look upon the naivete of this perspective with appropriate irony and the wisdom of hindsight. However, we have lately been witness to the extraordinary damage – to biodiversity in the widest sense and to the vulnerable sections of society – that the unchecked pursuit of profit for a few has led us into. The valuing of greed as an ultimate good and the desirability of individual self-aggrandisement sold as a desirable goal by our media and advertising, and, one might add, our educational systems, are perhaps the core drivers for the unsustainable “growth” that we are witnessing today.

The questions that this text compels us to examine are these: What is the role of economic structures – and forms of governance based on them – in determining our fate as a species? Can small efforts at mindful living – recycling, reducing wastage, planting trees (all of these are practices in the ideal world depicted with great prescience in the book) save us from the disasters that look us in the face, now more so than a hundred years ago? Given the scale of the great derangement, the great disconnect with a correct mindset – what else is needed? Can we afford a world that dutifully recycles its waste but allows war as an industry, for example? Can we think of consumption as a good in itself, pushing up GDPs even as it pushes up the statistics on pollution, ill-health, and ecological destruction? While the answers to these questions will require a deep dive into an interdisciplinary study of the polycrises facing us, the Buddhist tradition certainly provides some guidance in how one may ameliorate the condition.

What would a Buddhist-inspired world look like, and what would be the place of Buddhist ideas in that be? The precise answer to that question depends on what we consider to be the core points of Buddhism. Is monasticism the focus of it? Because that would preclude the possibility of a wider engagement. Buddhism offers a rich range of insights into human psychology, society, economics, literature, and politics. The intersections with the sciences – especially with quantum physics – are another matter. Ethics and wisdom are the core of the curriculum. This does not require a preaching monk-like figure who dispenses wisdom from a height or a great distance. A Buddhist education would be hands-on. It would be attentive to and insist upon a connection between intention and consequence. It would prioritize the cultivation of the right attitude – humility and confidence, curiosity and deep reflection, and a quest for knowledge that is profoundly tied to the larger consequences of that knowledge.

Buddhist philosophy as a discipline would be rigorous in logic and epistemology. That seems to be the most obvious form of Buddhist education in the current academic framework of disciplines. Even Madhyamika philosophy’s intricacies can lead one to a non-reificatory approach to phenomena, and far from being nihilistic, can make hope possible. (Garfield 1995) But it is in other fields – more ‘secular’ and less esoteric, as it were – that the intervention of Buddhist ideas would be most transformational.

The contours of Buddhist Economics have been debated and elaborated in the past. Schumacher's idea that small is beautiful would inform it. (Schumacher 1973, 2010). Engaged Buddhism has elaborated on many of these principles. It would stress non-extractive, regenerative, and social welfare-oriented practices. It has implications for what we consider desirable and beautiful. So one may contemplate Buddhist Aesthetics alongside Buddhist Psychology, which has much to teach us in terms of the power of the mind in shaping our reality and the power of attachment and clinging in creating *dukkha* (suffering). The *kleshas* are to be avoided, and positive mental attitudes such as calm abiding, compassion, generosity, rejoicing, and 'letting go' are profoundly contributive towards mental health.

A curriculum that can help all this can deep dive into the world of literature for inspiration. While all great literature, it could be argued, helps us become more fully human, specifically Buddhist literature brings many of these themes together in aesthetically pleasing and affectively powerful ways. From the *Jataka Tales* in Pali to a Sanskrit classic such as *Buddhacarita* by Asvaghosa, holding up the Buddha's life and the development of the sangha along certain principles of minimally violent and exploitative ways of living can be taken as exemplary. The teachings contained in this literature – stressing compassion, wisdom, and an understanding of the principles of cause and effect – are the next step. Santideva's *Bodhicaryavatara* would be a classic poem in the Mahayana tradition, expounding on the Bodhisattva ideal in verses of eternally moving beauty and sublimity. *The Jataka Tales* could be read as much for their profound insights into the interconnectedness of all species as for their lessons in ethics and morality. The Sanskrit *Vimalakirtinirdesha Sutra* is an excellent example of how laypeople can be inspired to reflect on core Buddhist principles of compassion and an expansion of the sense of self through an imaginatively engaging Mahayana text. The gentle irony with which it treats the excessively serious monastics is also a useful clue to how to loosen the hold of rigid beliefs and hierarchies.

But perhaps the most significant teaching of the Buddha for the times would be the non-reification of identity and a willingness to accept change. The "self correcting powers [that] have been operating in the experience of men and women of Buddhist persuasion for twenty-five centuries" (Jacobson, 1983. P. 133) are imperative to address the constantly evolving challenges to sustainability and survival. This does not mean the passive acceptance of human-made crises like climate change. It does mean working closely with the other self-correcting community of scientists to reflect deeply on dogmas that no longer serve us. This would require constant effort to diagnose a problem with critical and clinical precision and the application of specific antidotes to the problem/s identified. Detachment and cool distance would be essential components of this process since judgment is most often clouded by cognitive biases and personal preferences. In this, the claims of science and religion could be reconciled, and a collaborative approach to what is a problem of global proportions would be evolved. This involves and education across

disciplinary silos and boundaries, as well as conversations between different sects of Buddhism to arrive at commonly held beliefs beyond dogmatic sectarian assertions of difference.

The emphasis on *Bahujan Hitaya, Bahujan Sukhaya* – the good of the many, the happiness of the many – is crucial to Buddhism's socially oriented tendencies that inspired both Ambedkar and Sankritayayan. They should be the central motivation of Buddhist education. (Joshi 2019) It would ensure that science and technology be developed for the well-being and flourishing of all beings, including the earth, seen not as a resource to be exploited but as a living entity.

To add a profoundly affective dimension to this, meditative practices that require the cultivation of connection with our corporeality and of oneness with all natural phenomena would help greatly. I can think of no one more inspiring in this regard than Ven. Thich Nhat Hanh, whose poetically mindful approach to the smallest aspects of our existence – a single breath, a single step, a single leaf, a single flower – opens up a rich array of imaginatively graspable and somatically palpable possibilities for re-cognising our lost connection with the earth and our mortality. I would have no hesitation in suggesting that reading a book like the astrophysicist and public intellectual Carl Sagan's *Cosmos* would be a wonderfully resonant way to bring this Buddhist mindfulness into a constructive dialogue with a modern scientist deeply concerned with the fate of our little blue-green planet and the fast disappearing species that inhabit it. Ecological awareness and non-harm to the weakest, most vulnerable sections of society are built into this effort.

IV. CONCLUSION

Considering the complexity of the issues that face humanity, better described as polycrises, especially the disconnect with other life forms and with the earth, our home, Buddhist wisdom, especially in the form of mindfulness, has an enormously significant role. However, the teaching of mindfulness cannot be detached from the larger context of the structures of power that govern us. Mindfulness merely as a technique for attaining greater efficiency in the work force, or as a way of escaping into a calm world for a few designated minutes each day in a ritualistic manner, or to be practiced in very small private ways, will not significantly allow us to address the crises facing us. We need to shed our comforting illusions. Our current model of the world – economic, social, and educational – is dysfunctional because they are based on greed, hate, and delusion. Being mindful of that larger issue, with clarity and dispassionate analysis based on the principle of *pratityasamutpada* (dependent origination), is what we need. Buddhist education should ultimately be an education in self-analysis and mind-training such that the cognitive biases we are so prone to can be shed. This can work alongside modern science if the pursuit of that science is also driven by the greater common good, lit by *prajna* (Wisdom), and guided by *karuna* (Compassion). Then alone can an alternative world that can be a sustaining and sustainable world – a home for all species – be contemplated.

THE EVOLUTION OF BHIKKHUNI EDUCATION FROM ANCIENT INDIA TO THE PRESENT WITH SPECIAL REFERENCE TO WESTERN INDIA: BUDDHIST COMPASSION IN ACTION

Dr. Pallavi Nalawde-Jambhale*

Abstract:

This paper is an attempt to examine and explore the evolution of Monastic education for the female in western India from ancient to present times. By studying epigraphical and architectural evidence, it is an attempt to examine the early existence of nunneries, The study tries to focus the structured educational framework of ancient *Bhikkhuni* s, as evidenced by inscriptions detailing their roles as teachers and patrons. However, a significant gap in historical records reveals the decline of the *Bhikkhuni Sangha* in later periods. The research then transitions to the modern era, documenting the revival efforts led by contemporary *Bhikkhuni*. Through case studies and interviews, it explores the challenges faced by *Bhikkhuni*, including gender discrimination, limited educational opportunities, and institutional constraints. Despite these obstacles, the paper showcases the impactful initiatives undertaken to promote *Bhikkhuni* education. The study is an attempt to emphasize the ongoing struggle for recognition and support, highlighting the necessity of institutional backing and societal acceptance to ensure the continued flourishing of *Bhikkhuni* education in India.

Keywords: *Buddhism, evolution of Bhikkhuni, compassion.*

* HoD, Centre for Buddhist Studies, Director (I/C), K. J. Somaiya Institute of Dharma Studies, Somaiya Vidyavihar University, Mumbai.

I. INTRODUCTION

The establishment of the *Bhikkhuni Sangha*, initiated by Mahaprajapati Gautami, was a revolutionary step in granting women access to Buddhist education. Though limited by institutional and societal restrictions, Buddhist nuns received formal training in *Vinaya* (monastic discipline), *Sutta* (discourses), and meditation. However, beyond literary sources, inscriptions provide concrete evidence of *Bhikkhuni* education and their contributions to Buddhist scholarship. These inscriptions, found in various monastic sites, shed light on the educational roles of nuns as teachers, donors, and disciples of learned monks.

This paper explores the journey of *Bhikkhuni* education in Western India from ancient times to the present, examining its current condition and the challenges faced today.

Objectives of this study:

1. To examine the early sites of nunneries based on epigraphical evidence.
2. To document and study the efforts and challenges faced by modern *Bhikkhunis* in establishing the *Bhikkhuni Sangha* and Buddhist education.

To achieve this, an epigraphical and architectural study has been done. Case studies were taken to document and examine the status based on the interviews conducted with two *Bhikkhunis* of Western India to assess their present-day conditions.

The education of *Bhikkhunis* (female Buddhist monastics) in Western India has been hindered by multiple socio-cultural and institutional challenges. This paper explores these challenges, including gender-based discrimination within monastic circles, lack of formal educational support, and the struggle for recognition. Based on an interview with *Bhikkhuni* as the study also highlights recent efforts and challenges toward the re-establishment of the *Bhikkhuni Sangha* and Buddhist education.

II. EVIDENCE OF THE *BHIKKHUNI SANGHA* IN THE ANCIENT PERIOD

The Buddha was initially resistant to the establishment of an order of nuns. However, he ultimately yielded to Ananda's well-reasoned arguments and the persistent efforts of Mahapajapati Gautami, leading to the creation of the Order of Nuns. The *Cullavagga* of the *Vinaya Pitaka* documents the establishment of the nunnery.

Given the societal status of women during that period, numerous restrictions were imposed on the movement of nuns. In general, they were not permitted to reside in forests. Instead, they were allowed to stay in *uddosita* (out-houses), *upassaya* (hermitages), and *navakamma* (cottages specifically constructed for them).¹ The lifestyle prescribed for nuns closely mirrored that of monks, albeit with some variations in the *Patimokkha* rules.

¹ Sankrityayan (1994), p. 538.

For centuries, women who took ordination not only practiced and realised the Buddha's teachings but also played a vital role in their communities. Women have been linked to Buddhism in various capacities, including as *upasikas*, *theris*, and teachers.

Regrettably, historical evidence of *Bhikkhuni Sangha s* in ancient India is scarce. Most of the available information has been derived from two primary sources: ancient texts and contemporary devotional practices. The role of archaeology in this regard has been relatively unexplored.

Earlier works:

Inscriptions have long served as a critical resource for understanding the history of Buddhism. B. C. Law (Law, 1939 - 1940) undertook the task of compiling inscriptional evidence attesting to the presence of the Buddhist *Bhikkhuni* order in India, analysing its consistency with literary sources and accounts from foreign travellers.

A more recent study by Garima Kaushik attempts to identify nunneries or *Bhikkhuni Viharas*. While literary and epigraphic records contain extensive references to monasteries for monks, information on nunneries is exceedingly limited. Kaushik's work seeks to document literary references to nunneries and substantiate them with archaeological findings. Her study also incorporates ethnographic data from contemporary nunneries and insights into the lives of *Bhikkhunis*.

Most nunneries were situated in or near villages. These were mostly short-term settlements, which contributed to their minimal presence in historical records. Donations to the *Sangha* were predominantly directed toward the *Bhikkhu* community.

Garima Kaushik has examined multiple Buddhist monastic sites, including Nalanda, Sanchi, Nagarjunakonda, Sravasti, and Junnar. Many of these sites contain circular structures, which she has identified as nunneries or *Bhikkhuni Sanghas*.

One of the most significant examples of rock-cut architecture is Tulja Lena at Junnar, which features a circular *caityagriha*. Kaushik has identified Tulja Cave as a *Bhikkhuni Sangha* based on its circular design.

Another important piece of evidence regarding nunneries is found in the caves of Junnar. An inscription in Cave 33 of the Sivaneri Hills records a donation made by Giribhuti of the Apaguriyas, which included a cave and a cistern. It also mentions a nunnery belonging to the Dhammottariya School, along with a perpetual endowment of *Karsapanas* for its upkeep (Nagaraju, 1981, p. 332).

Circular Architecture of Nunneries (Garima Kaushik's Work)

Women have significantly contributed to the patronage of Buddhism, both as lay followers and as nuns. Numerous inscriptions provide evidence of donations made by royal women, *theris*, and *upasikas*.

Apart from inscriptions documenting female patronage, another indirect

indicator of women's presence at monastic sites is the abundance of sculptural representations of women, *mithuna* couples, and *Jataka* narratives featuring lay themes (Garima, 2016, p. 22).

Garima Kaushik has linked specific circular structures to female patronage based on contextual findings and associated antiquities (Garima, 2016, p. 22). Early reliefs at Sanchi, Bharhut, and Amaravati depict circular structures. One of the earliest such structures was excavated at Bijak-ki-pahadi in Bairat. Kaushik's analysis indicates that circular structures often had significant female patronage and a notable female presence (Garima, 2016, p. 24). *Apsidal* and circular *caityas* coexisted during the same period (Garima, 2016, p. 24).

Recent excavations at Sui Vihara near Bahawalpur uncovered a circular platform with sun-dried bricks and supporting walls. A previously discovered Kanishka inscription at the site mentions "Viharaswamini," which Kaushik has identified as an indication of a *Bhikkhuni Sangha* (Garima, 2016, p. 26).

Canonical texts specify that a *Bhikkhuni Vihara* should ideally be located within a city or village, unlike a monastery, which should be neither too distant nor too close. Various rules dictated the proximity of *Bhikkhuni Viharas* to monasteries, ensuring security, shared religious observances such as *uposatha*, and equitable access to *dana*, which the *Bhikkhu Sangha* tended to receive in greater abundance

About Junnar

Junnar was an eminent *Theravada* Buddhist centre, as evidenced by the numerous rock-cut caves in the region. Presently a key town in Pune District, Maharashtra, Junnar once housed one of the largest Buddhist establishments in the area, with approximately 300 rock-cut excavations. These caves are scattered across the surrounding hills within a three-mile radius.

The Mina River is situated near Junnar, leading some scholars to identify the ancient *Min nagara*, the capital of Nahapana, with Junnar (Dhavalikar, 1984, p. 12). The name *Junnar* is believed to derive from *Junanagara*, meaning "The Ancient City." Others have linked it to *Tagara*, though *Tagara* has been more definitively identified with Ter in Marathwada's Osmanabad district (Nagaraju, 1981, p. 133). Some scholars also equate Junnar with ancient *Dhenukakata* (Dhavalikar, 1984, p. 12).

The Junnar caves, largely constructed during the Satavahana period, date from the earliest Satavahana phase (circa 1st century BCE) to the later Satavahana period (2nd century CE) (Dhavalikar, 1984, p. 12). Following this era, Junnar's significance declined, and architectural activity ceased. Dr. Dhavalikar attributes the caves to the later Satavahana period, except for the Tulja Leni circular *caitya*, which is dated to the 1st century BCE.

Tulja Caves, Junnar:

Located approximately 5 km west of Junnar, the Tulja Caves are situated on Tuljabai Hill. Accessible via a deviation from the Junnar-Nanaghat road, these caves are aligned in a row overlooking a valley and are oriented east-northeast (Nagaraju, 1981, p. 133).

Tulja Cave 3 features a circular hall with a central stupa surrounded by twelve octagonal columns. A one-meter-wide aisle encircles the stupa. The stupa's drum and dome are largely intact, though the latter is significantly damaged. The cave front is broken due to erosion (Nagaraju, 1981, p. 134).

Based on its architectural uniqueness and associated inscriptions, Tulja Cave presents compelling evidence of its potential function as a *Bhikkhuni Sangha*.

III. EDUCATIONAL FRAMEWORK FOR BHIKKHUNIS

3.1. Curriculum and Training

The education of *Bhikkhunis* in these *Bhikkhuni Sanghas* was structured within monastic institutions and focused on three core areas: *Vinaya*, *Dhamma*, and *Meditation*. *Bhikkhunis* followed the *Bhikkhuni Patimokkha*, which contained 311 rules. This training emphasized ethics, communal living, and personal discipline, preparing nuns for monastic leadership.

Bhikkhunis studied core Buddhist texts such as the *Sutta Pitaka*, *Dhammapada*, and *Jataka Tales*. Advanced *Bhikkhunis* engaged in philosophical discourse on impermanence (*anicca*), suffering (*dukkha*), and non-self (*anatta*).

Training in *Samatha* (concentration) and *Vipassana* (insight) meditation helped *Bhikkhunis* develop wisdom (*prajna*) and inner discipline. Some inscriptions suggest that *Bhikkhunis* not only practiced but also taught meditation techniques.

3.2. Learning methods and instructional practices

As in the broader Buddhist tradition, *Bhikkhunis* followed an oral tradition, memorizing and reciting texts daily. Their training was overseen by senior *Bhikkhunis* and occasionally by monks, ensuring the transmission of doctrinal knowledge. Some inscriptions record *Bhikkhunis* engaging in discussions with monks and lay followers, indicating their participation in intellectual discourse.

3.3. Epigraphic evidence of *bhikkhuni* education

Inscriptions provide substantial proof of *Bhikkhuni* involvement in education. These records appear in cave inscriptions, pillar edicts, and monastery records, detailing their contributions as students, teachers, and benefactors. Inscriptions mention *Bhikkhunis* as *Acaryas* (teachers), implying they held formal teaching positions in monasteries.

Some *Bhikkhunis* are recorded as direct disciples of renowned monks, highlighting cross-gender mentorship within monastic communities.

3.4. Patronage of educational institutions

Donor inscriptions at various rock-cut monasteries in western India confirm that *Bhikkhunis* sponsored monasteries and educational centres. Some *Bhikkhunis* contributed to the construction of viharas, ensuring the sustainability of learning spaces.

Inscriptions record donations made by *Bhikkhunis* for religious and educational purposes, as seen at Sanchi and Bharhut. Buddhist caves in

Maharashtra contain inscriptions referring to the donations of nuns, some of whom must have been teachers, scholars, or even benefactors.

3.5. Challenges and constraints

Gender-Based Restrictions and Limited Institutional Support: Though inscriptional records suggest that *Bhikkhunis* were scholars, it is well known that the Eight *Garudhammas* imposed hierarchical limitations, requiring *Bhikkhunis* to defer to monks in educational and religious matters.

Bhikkhunis had to seek ordination in the presence of both the *Bhikkhu* and *Bhikkhuni Sanghas*, reinforcing their dependent status. Compared to monks, *Bhikkhunis* had fewer educational resources and facilities.

Unfortunately, there is no evidence of the *Bhikkhuni Sangha* in the later period. A more detailed study of monastic architecture is needed to understand its decline. It is likely that the *Bhikkhuni Sangha* gradually disappeared, as there is no literary or epigraphical evidence of its existence in the later period. The disappearance of the *Bhikkhuni Sangha* in India by the 11th century CE further curtailed their access to education.

3.6. Literary contributions of educated *bhikkhuni*

We do, however, have literary records of the contributions of educated *Bhikkhuni*. Texts like the *Therigatha* preserve poetic verses composed by early *Bhikkhuni*, showcasing their deep intellectual and spiritual insights. Some *Bhikkhunis* composed commentaries on Buddhist scriptures, though much of this literature has been lost.

However, no specific literature written by *Bhikkhunis* from Western India or focusing on their condition has been found.

3.7. Preservation and transmission of knowledge

Bhikkhunis have played a very important role in preserving and transmitting Buddhist teachings for many centuries despite facing various challenges. We all are aware of role played by them to spread Buddhism across globe especially during Mauryan period.

The history of *Bhikkhuni Sangha* at Junnar gives invaluable insights into role of nuns in early Buddhism. Inscriptions highlight their educational contributions, patronage and dedication to the practice but often been overlooked.

With the disappearance of the *Bhikkhuni Sangha* eventually from India, its legacy endured through texts, inscriptions, and its influence on Buddhist traditions worldwide.

With the study of historical records of western India, a significant gap becomes more evident. In the absence of literary sources or archaeological evidence documenting the presence and activities becomes more difficult. Either these records have been lost over time, remain undiscovered, or were never systematically documented in historical texts. This absence makes it difficult to trace the contributions and roles of Buddhist nuns in this region during ancient and medieval periods.

Until due to the efforts of Dr. B. R. Ambedkar in modern times that the *Bhikkhuni Sangha* experienced a revival. His efforts rejuvenated Buddhism in India and provided a platform for women to embrace monastic path once again. Following it a gradual yet noticeable increase in women's interest in Buddhism emerged in Western India. Initially as a lay practitioner participating in teachings and community activities and over a time some took further step by embracing monastic life and ordination as *Bhikkhuni*.

With this resurgence, many longstanding challenges surrounding female ordination in Buddhism arise. Traditional barriers, societal expectations, and institutional limitations continue to be obstacles in women's acceptance as ordained members of the *Sangha*. However, their unwavering determination and resilience ensure that their spiritual aspirations remain undeterred.

A common trend found throughout history and still relevant today is that many women seeking ordination face hardships within their families or society. Few often, joining the *Sangha* serves as an escape from oppressive circumstances, including domestic struggles, discrimination, or lack of opportunities. However, it is at the same time important to recognise that many women now choose this path independently, driven by intellectual and spiritual curiosity rather than external pressures. They actively seek knowledge, engage with Buddhist philosophy, and consciously dedicate themselves to monastic life.

With the contemporary era, new challenges have emerged along with traditional ones. With the emergence of modern education and an evolving social landscape necessitate a balanced approach that integrates both traditional Buddhist learning and contemporary academic education. Bridging this gap is essential for the *Bhikkhuni Sangha* to thrive in today's world, ensuring that Buddhist nuns are equipped with both spiritual wisdom and practical knowledge to engage meaningfully with society.

IV. REVIVAL OF BHIKKHUNI EDUCATION IN THE MODERN ERA

4.1. Challenges faced by *bhikkhunis*

Gender Discrimination within the Sangha: Most significant obstacle as always faced by *Bhikkhunis* is gender discrimination within the monastic order. Most of the *Bhikkhunis* express that though Buddha himself permitted to ordain women, the contemporary *BhikkhuSangha* in India often ignores the revival of the *Bhikkhuni* order. This opposition is largely driven by concerns over status, authority, and the potential redistribution of monastic resources but also patriarchal societal norms. Many *Bhikkhus* are still hesitant to acknowledge *Bhikkhuni* ordination.

Lack of educational opportunities: Opportunities to formal education in Buddhist philosophy, history, and scriptures remains a critical issue for many *Bhikkhunis*. Due to centuries of decline and neglect, institutions that once provided systematic training for *Bhikkhunis* have disappeared. As a result, many female struggles to gain in-depth knowledge of Buddhist teachings, limiting their ability to teach and lead within the community. In the absence of

structured educational pathways and opportunities for *Bhikkhunis* to participate in scholarly discourse or engage in scriptural studies are also reduced at the same level as their male counterparts.

Absence of a United *Sangha*: *Bhikkhu Sangha* are always well-established and organized, in contrast *Bhikkhunis* often lack a cohesive and structured monastic community. This significantly impacts their collective learning, spiritual development, and ability to advocate for their rights within the larger Buddhist framework. Without a strong and unified institution, *Bhikkhunis* struggle to gain recognition, receive necessary support, or establish monasteries where they can practice independently. The lack of institutional backing further isolates them, making their religious journey more challenging.

Financial and institutional constraints: Another crucial challenge is the financial and institutional dependency on foreign *Bhikkhuni Sangha*. Many Indian *Bhikkhunis* have to travel abroad to receive full ordination, which is a financial burden on them. The minimum or absence of funding from domestic regions is also an obstacle in their ordination. Addressing these challenges requires a collaborative effort among Buddhist leaders, scholars, and practitioners to support and empower female monastic education. Many initiatives which will have a large impact must be undertaken to promote it.

To examine the status of *Bhikkhuni Sangha* I tried to reach out to the few *Bhikkhunis* but could reach out to two *Bhikkhunis*. Interviews of following two *Bhikkhunis* were taken. Following information is based on the interviews taken of them.

4.2. Bhikkhuni Suniti

A Visionary Pioneer in *Bhikkhuni* Education *Bhikkhuni Suniti* is a profoundly dedicated and remarkably visionary leader who has played an instrumental and groundbreaking role in the historic re-establishment, revitalization, and progressive advancement of *Bhikkhuni* education in India. With an acute understanding of the critical necessity for young female monastics to undergo rigorous, structured, and spiritually enriching training, she took the transformative and historic step of founding the *Metta Maitri Sangha* – a purpose-driven, mission-oriented institution exclusively committed to the specialized training of *Samaneris* and the widespread dissemination of profound, authentic Dhamma education.

As per her information her Monumental Contributions to *Bhikkhuni* Education: Conducting Comprehensive *Samaneri* Retreats With an unwavering and deep-rooted commitment to educational equality and spiritual empowerment, *Bhikkhuni Suniti* has meticulously organized, coordinated, and conducted multiple high-impact retreats that ensure female novices receive the same level of rigorous training, disciplined practice, and profound spiritual enlightenment as their male counterparts. These meticulously structured and spiritually enriching retreats provide invaluable opportunities for intensive academic study, immersive meditation practices, and disciplined adherence to monastic traditions that form the very foundation of the *Bhikkhuni* order.

Establishing the Historic *Bhikkhuni Sangha Sthapana Divas* (2014): In a groundbreaking, pioneering effort to spread awareness, foster a deeper understanding, and invigorate the *Bhikkhuni* re-establishment movement, *Bhikkhuni* Suniti initiated, spearheaded, and celebrated the first-ever *Bhikkhuni Sangha Sthapana Divas* in Nagpur in the year 2014. This landmark and transformative event served as an essential platform to highlight the profound significance of *Bhikkhuni* education and strengthen the collective movement for rightful recognition, empowerment, and unwavering support of female monastics.

Expanding Online Dhamma Education and Digital Outreach: Harnessing the far-reaching and transformative potential of modern digital technologies, *Bhikkhuni* Suniti has effectively utilized a diverse array of social media platforms – such as Facebook, YouTube, and other online forums – to extend the accessibility of Buddhist education to an ever-expanding, global audience. Through these innovative digital avenues, she has successfully provided enriching and enlightening teachings, intellectually stimulating discussions, and meticulously structured courses on Buddhist philosophy, monastic discipline, and the profound and intricate *Vinaya* code.

Advocating for Self-Sufficient *Bhikkhuni* Ordination in India Recognising the paramount importance of India's self-reliance and self-sufficiency in *Bhikkhuni* ordination, *Bhikkhuni* Suniti has wholeheartedly dedicated herself to fostering an autonomous, independent, and sustainable monastic system. She has actively initiated, and reinforced efforts to establish a self-sustaining and fully independent *Bhikkhuni* ordination process within India, thereby significantly reducing the historical dependence on foreign monastic institutions for full ordination and structured training. Her Vision for the Future With an unwavering sense of purpose, an indomitable spirit, and an unshakable resolve, *Bhikkhuni* Suniti envisions the establishment of a permanent, fully-equipped, and well-resourced *Bhikkhuni* education and training centre. This sacred sanctuary will serve as a transformative and spiritual haven where young women can receive full ordination, undergo extensive, immersive Buddhist training, and cultivate deep, profound spiritual wisdom without external obstacles, societal limitations, or institutional restrictions. Through this monumental endeavour, she aspires to create a self-sustaining and flourishing environment where *Bhikkhunis* can pursue their monastic aspirations with absolute dedication, unwavering faith, and limitless opportunities for growth and enlightenment.

4.3. *Bhikkhuni* Shakya Dhammadina

A Dedicated Educator and Inspiring Leader *Bhikkhuni* Shakya Dhammadina, a highly educated, deeply committed, and spiritually inclined young woman from Haryana, made the resolute and unwavering decision to embrace the spiritual path without hesitation. She was ordained in the year 2017 and underwent meticulous, rigorous, and disciplined training as a *Bhikkhuni*. Before her full ordination, she diligently served as an Anagarika and travelled to Nepal, where she encountered and engaged with senior

Anagarikas who mentored, guided, and inspired her on her spiritual journey. However, during her early experiences, she observed and identified a prevalent misconception – that layperson often assumed that women became *Bhikkhunis* solely due to dissatisfaction in their family lives. Additionally, she recognized the limitations imposed upon *Anagarikas*, who lacked teaching privileges and were often relegated to menial, behind-the-scenes roles such as cleaning and caretaking. Seeking full ordination and deeper spiritual fulfilment, she embarked on a transformative journey to Thailand, where she successfully completed the meticulous and structured three-step ordination process (*Samaneri* - *Sikkhamana* - *Bhikkhuni*) and received her higher ordination in the year 2020.

Connection to Western India: Although originally from Haryana, *Bhikkhuni* Shakya Dhammadina relocated to Nagpur to pursue higher education and broaden her knowledge of Buddhist studies. With the unwavering support and encouragement of Bhanteji Shilvansha, she enrolled at Nagpur University, where she successfully pursued postgraduate studies in Buddhist Studies. Her remarkable ability to convey the Dhamma effectively and meaningfully attracted a growing number of laypeople to her insightful teachings. A senior *Bhikkhu* recognized her immense potential and became her sponsor, enabling her to complete her Master's degree with outstanding academic excellence. During the challenging period of the COVID-19 pandemic, she continued her disciplined practice in Kosambi, receiving consistent support and actively engaging in Dhamma outreach, particularly among children and youth.

Training Future *Bhikkhunis* Recognizing the pressing and urgent need for systematic, structured, and comprehensive *Bhikkhuni* training programs, she took the pioneering initiative to establish well-organized training programs:

2022 (Savner, near Nagpur): Conducted a transformative 15-day *Samaneri* training course for 25 - 30 women, marking the first such event in the region.

2023 (Savner): Organized and led another intensive training session for 17 *Samaneris*, overcoming logistical challenges and traveling extensively with the trainees for alms and Dhamma talks.

2023 (Sarnath): Secured a newly renovated training centre and successfully conducted two intensive *Samaneri* training sessions, each accommodating 25 dedicated participants.

4.4. Initiatives for *bhikkhuni* education

Formation of the All-India *Bhikkhuni* Sangha: In a momentous step toward strengthening *Bhikkhuni* education, a distinguished committee consisting of twelve highly dedicated *Bhikkhunis* was meticulously established. This esteemed collective was formed with the noble intention of providing unwavering support, structured training, and comprehensive developmental programs for women embracing the monastic path.

Establishment of the Metta Maitri Sangha: Founded by the deeply committed and visionary *Bhikkhuni* Suniti, the Metta Maitri Sangha stands as a pioneering institution dedicated exclusively to the formal education, rigorous

training, and profound spiritual enlightenment of young women entering the noble monastic life. This institution provides an unparalleled platform for structured learning, ensuring that aspiring *Bhikkhunis* receive guidance in both traditional Buddhist studies and practical *Vinaya* disciplines.

Utilisation of Advanced Digital Platforms for Widespread Learning: With the growth of digital connectivity in the new era and popularity of social media platforms most notably Facebook, YouTube, Instagram *Bhikkhunis* have skillfully leaned to harness to disseminate the Dhamma teachings. These new platforms have started to serve as dynamic channels for sharing thought-provoking discourses, online courses and insightful discussions. Making Buddhist education more assessable and available to global audience.

Organised *Samaneri* (Novice) Retreats and Intensive Training Programs: To bridge the gap between educational disparity between male and female monastic education meticulously and systematically planned *Samaneri* retreats have been initiated. These specialised retreats provide an inclusive, well-rounded, and equal learning opportunity where female novices are given comprehensive exposure to Buddhist teachings, disciplined training in monastic conduct, and a profound understanding of teachings.

Projects of *Bhikkhuni* Suniti and *Bhikkhuni* Shakya Dhammadina:

- ***Sangha* Day:** A large-scale gathering to raise awareness about the struggles faced by *Bhikkhunis* and to promote the expansion of Dhamma education.
- **Permanent Training Centres:** Both *Bhikkhunis* are actively seeking and striving to establish a dedicated space for large-scale *Samaneri* training and Buddhist education.

4.5. Current state and future prospects

Struggle for recognition and education rights and support from Institution continues even today for *Bhikkhunis* in Western India. Initiative to celebrate *Bhikkhuni* Day or organising international conferences have increased awareness and visibility for their struggles though with lots of opposition. Success of their long-term struggle has attracted institutional backing, widespread societal acceptance, and sustained financial support to ensure the continued growth, empowerment, and flourishing of *Bhikkhuni* education in India.

Path of Education for *Bhikkhunis* in Western India has been marked by resistance. While challenges remain, initiatives led by *Bhikkhuni* of modern era provide a hopeful path forward. Ensuring equal educational opportunities for *Bhikkhunis* based on gender equality but also to preserve the rich tradition of India.

Institutions like The Gautami Mahapajapati Educational Foundation, established in 2022, dedicated to the education and training of Buddhist monastic communities, with a particular focus on *Bhikkhuni*, *Samaneras*, and *Samaneris*. Named after Mahapajapati Gotami, the first woman to receive ordination in Buddhism. This initiative foundation carries forward legacy to provide rigorous) training. This initiative is a small effort to bridge historical

gaps in monastic education. It also ensures that both male and female monastics receive comprehensive education. One of the major role aspects of the foundation is its commitment to maintaining a common syllabus for both *Bhikkhus* and *Bhikkhuni*. This equalised approach is instrumental in bridging the gap between gender issue especially in the education... The foundation claims to support a scholarly environment that encourages critical thinking, scriptural study, and practical implementation of Buddhist principles in daily life. At the helm of this transformative initiative are *Bhikkhuni* Suniti and Vijaya Maitreya, who serve as Joint Directors of the institution. According to her leadership plays a crucial role in nuns receiving the necessary religious instruction and the empowerment needed to take on leadership roles within the Buddhist Sangha.

Challenges and Future Prospects: Despite its efforts various challenges are faced by this institution which also reflect historical struggle withing Buddhist Monastic traditions. If these hurdles are address in a proper way expansion and success of the work is possible.

Limited Institutional Support: As reflected through records of history , *Bhikkhunis* have always faced resource constraints compared to their male counterparts. The lack of funding and institutional backing always faced a major challenge in establishing of educational centres for nuns. As traditional institutions that have always received a support , *Bhikkhuni* -led institutions often struggle to sustain and receive financial and material resources.

Gender-Based Hierarchical Structures: Although *Bhikkhuni* ordination has been revived in certain parts of the world, traditional restrictions still impose barriers to full acceptance and integration. Overcoming these deeply ingrained societal biases remains an ongoing challenge.

Historical records, particularly epigraphic evidence, highlight the invaluable role of *Bhikkhunis* in the evolution of Buddhist education in ancient India. Despite many challenges, *Bhikkhunis* always participated in textual learning, and the patronage of Buddhist institutions. Their contributions, immortalised in inscriptions, serve as a testament to their dedication to the preservation and dissemination of Buddhist teachings. These historical accounts continue to inspire current efforts to further strengthen the *Bhikkhuni* Sangha, particularly in the domain of education.

V. CONCLUSION

The historical and modern struggles of *Bhikkhunis* in Western India have always created a hindrances the access of education and leadership to Buddhist women. Despite support right from the ancient times gender biases and absence of institutional backing has severely limited *Bhikkhuni*'s role in religious pursuit.

Epigraphic and archaeological evidence from sites such as Junnar highlights the historical presence of *Bhikkhunis* as scholars, donors, and teachers. They must have participated in monastic education and religious patronage. But slowly declined with disappearance of their role in Buddhism.

In modern times, we see the evidence and say hypothetically that *Bhikkhunis* continue to face major with limited access to formal education, financial constraints, and resistance from society. The absence of a unified *Bhikkhuni Sangha* further creates hindrance to their struggle to fight for equal opportunities. We can say hypothetically that modern initiatives, have started creating new platforms for *Bhikkhuni* education. The popularity and access to digital technologies and online learning has also emerged as an effective tool in transforming and *Bhikkhunis* to access Buddhist education.

The efforts of emerging are crucial in reviving *Bhikkhuni* education in Western India, though should be done on vast scale. By putting efforts to establish educational institutions, organising retreats, may helped to lay the foundation for a more inclusive Buddhist monastic system. Still institutional and financial support remains essential for long-term progress.

Moving forward, overcoming institutional biases, securing formal recognition for *Bhikkhunis*, and expanding access to educational resources are crucial steps in restoring the rightful place of women in Buddhist monasticism. By fostering an inclusive learning environment and upholding the egalitarian principles of Buddhism, the path can be paved for future generations of *Bhikkhunis* to thrive as scholars, teachers, and spiritual leaders

PSYCHOLOGICAL FOUNDATIONS AND PRACTICES IN BUDDHIST EDUCATION

Dr. Ajit Kumar*

Abstract:

Buddhist education emphasizes the holistic development of individuals through self-awareness, moral discipline, and the cultivation of wisdom. This paper explores the psychological dynamics inherent in Buddhist education, focusing on the intersection of cognitive psychology and Buddhist teachings. It examines how Buddhist practices, such as meditation and mindfulness, influence cognition, mental processes, and behavioral patterns, leading to a transformative process that alleviates suffering. Additionally, the paper delves into the motivational aspects of Buddhist psychology, highlighting its therapeutic applications for achieving mental harmony and Nirvana. By aligning with modern educational psychology and integrating principles of self-discipline, creativity, and inner transformation, Buddhist education provides a comprehensive framework for personal growth and societal peace. The findings suggest that Buddhist education's psychological insights offer valuable contributions to contemporary educational methodologies.

Keywords: *Buddhist education, psychological dynamics, cognitive psychology, motivation, mindfulness, Nirvana, self-awareness, transformation, therapeutic applications, education philosophy.*

I. INTRODUCTION

Buddhist education is profoundly interwoven with psychological principles that emphasize self-awareness, ethical discipline (*sīla*), and the cultivation of mental clarity (*samādhi*). Rooted in the teachings of Siddhartha Gautama, Buddhism presents a framework that resonates with contemporary psychological theories concerning cognition, emotional regulation, and behavioral transformation. The integration of these psychological foundations within Buddhist pedagogy fosters a holistic approach to learning, one that nurtures intellectual, emotional, and spiritual dimensions of human

* Director, Public Relations, Sharda University, Greater Noida, India.

development. This study explores the psychological underpinnings of Buddhist education, critically analyzing its core practices – including mindfulness (*sati*), meditation (*bhāvanā*), and ethical training – in shaping human cognition and behavior. Furthermore, it investigates the intersection between Buddhist contemplative traditions and modern psychological research, highlighting their mutual insights into the processes of mental conditioning, self-regulation, and psychological resilience.

Buddhist education is not merely a system of transmitting doctrinal knowledge; rather, it embodies a transformative path that fosters moral integrity, self-awareness, and the development of wisdom (*paññā*). At its core lies an intricate interplay between cognitive psychology and Buddhist epistemology, wherein meditative practices facilitate cognitive restructuring, emotional regulation, and behavioral refinement. This paper delves into the motivational dimensions of Buddhist psychology, examining how its therapeutic methodologies – grounded in mindfulness and introspective awareness – offer profound applications for mental well-being, conflict resolution, and the realization of inner harmony (*Nibbāna*). By aligning with modern educational psychology and integrating key principles of self-discipline, creative cognition, and existential transformation, Buddhist education provides a comprehensive and adaptive model for both individual flourishing and collective harmony in society.

The pedagogical approach in Buddhism can be likened to the analogy of footwear: while everyone wears shoes, no single pair fits all. This metaphor underscores the fundamental Buddhist principle of karmic individuality, recognizing that each person carries their own unique karmic imprints (*vipāka*), which shape their receptivity to learning and transformation. In the same vein, the Buddha employed skillful means (*upāya*) – such as the imagery of a boat ferrying beings across the river of suffering – to illustrate the adaptability of the Dhamma to diverse temperaments and conditions. Consequently, when discussing Buddhist education, one must also consider the *means* of education: the necessary conditions for effective teaching and learning, the methodological tools for research and inquiry, and the pedagogical strategies that facilitate both theoretical understanding and experiential realization.

From a Buddhist perspective, all aspects of life – whether formal practices such as scriptural study, recitation of the Buddha's name (*nembutsu*), chanting (*paritta*), and meditation, or seemingly mundane activities like sweeping the floor, fetching water, or chopping wood – can serve as vehicles for mental cultivation and purification. These daily actions, when performed with mindfulness and right intention (*sammā saṅkappa*), become integral to the process of inner refinement and ethical living. Thus, any educational model or system that claims to be aligned with Buddhist principles yet fails to uphold the ultimate aim of mental purification and wisdom is fundamentally misaligned with the true spirit of the Dhamma. Buddhist education, therefore, is not limited to monastic scholarship or meditative discipline; it is an evolving, adaptive, and dynamic framework that continuously seeks to refine human consciousness, cultivate compassion, and contribute to the greater good of all sentient beings.

II. DEFINITION OF PSYCHOLOGICAL DYNAMICS

The word ‘psychology’ is a Greek term that generally means the science of the mind.¹ Etymologically, the Greek word ‘psychology’ is derived from the Latin terms *psyche* and *logos*, where ‘*psyche*’ refers to the mind, soul, or spirit, and ‘*logos*’ refers to knowledge, discourse, or study.² Psychology, originating from the Greek words *psyche* (mind, soul) and *logos* (knowledge or discourse), is the study of the mind and its influence on behavior.³ Although human mental activity is invisible, it is observable through behavior, making psychology an essential tool for understanding human motivation and actions. However, human mental activity is something we cannot observe with the naked eye but through an external form, which is called “*behaviour*”. Therefore, in order to understand how the human spirit works must be learned through external psychological performance.

Psychology is often understood as the study of human desires, needs, and behavioral tendencies in response to various situations. In everyday discourse, some perceive psychology as the ability to comprehend and even influence the motivations of others, sometimes equating it with the capacity to control or persuade. However, the scope of psychology extends far beyond individual will, preferences, and actions; it encompasses an intricate web of cognitive, emotional, and social phenomena. Every human expression – be it verbal communication, bodily gestures, or complex decision-making processes – carries a psychological dimension that reveals underlying thought patterns and emotional states. Contemporary psychology investigates fundamental aspects of human cognition, motivation, perception, and behavior, seeking to unravel the intricate forces that shape human experiences. Behavioral patterns, influenced by conscious and unconscious motivations, often exhibit layers of complexity, reflecting the dynamic and adaptive nature of the human mind. Psychologists employ rigorous research methodologies, including experimental and observational studies, to systematically explore these dimensions of human psychology.

With the advancement of science and technology, psychology has evolved into a multidisciplinary field that integrates empirical research with theoretical inquiry. Cognitive neuroscience, artificial intelligence, and data-driven behavioral analytics now contribute to a deeper understanding of mental processes, enhancing our ability to address psychological challenges in diverse contexts. While psychological research continues to offer valuable insights into human nature, it is essential to acknowledge the limitations of empirical methods in capturing the full richness of human consciousness. The pursuit of psychological knowledge, therefore, remains an ever-evolving

endeavor, striving to bridge the gap between empirical data and the profound complexities of human experience.

In contemporary psychology, the concept of the *heart* – often metaphorically associated with emotions and cognition – primarily pertains to the interplay between perception, feeling, and the underlying motivations that drive human behavior. Motivation serves as the foundation of all human actions, shaping decisions and behavioral expressions in response to internal and external stimuli. To analyze psychological phenomena effectively, it is crucial to examine the intricate relationship between motivation and the behaviors that stem from it. However, psychological states do not always manifest uniformly in behavior; the same internal state can give rise to diverse external expressions, just as similar external behaviors may originate from distinct psychological states. Thus, solely observing external conduct does not provide a comprehensive understanding of an individual's psychological processes. Behavior is not necessarily a direct and singular reflection of one's internal state but can be polymorphic, meaning that multiple behaviors may stem from a single psychological condition, or conversely, a variety of mental states may give rise to seemingly identical actions. Understanding the complexities of this relationship is essential in exploring human psychology.

The study of *psychological foundations* involves an exploration of the dynamic interplay between cognitive processes, emotional responses, and motivational drives that collectively influence human behavior. It seeks to uncover the underlying mechanisms that dictate why individuals act in specific ways and how internal and external motivations shape behavioral patterns. These psychological dynamics illuminate the intricate forces that govern decision-making, adaptive responses, and personality formation. Psychological systems that emphasize motivation and mental processes – such as psychoanalysis and Gestalt psychology – provide valuable insights into the structure of the mind and its operational mechanisms. However, psychological dynamics are not confined to any singular theoretical model; rather, they encompass a broad spectrum of perspectives that address the complexities of human cognition and emotion.

A key inquiry in psychology revolves around fundamental questions such as: What compels individuals to take action? How do psychological needs and survival instincts shape human choices? Why does every individual develop a unique personality? By examining these aspects, psychological research continues to deepen our understanding of human behavior, fostering a more nuanced perspective on the interwoven nature of mind, motivation, and action.

III. UNDERSTANDING COGNITION

Cognition refers to the mental processes involved in gaining knowledge and understanding, including perception, reasoning, and memory.⁴ While these processes are not directly observable, they manifest through behavior.

⁴ Neisser, U. (1967). *Cognitive Psychology*. Appleton-Century-Crofts, 149.

The Buddha's teachings align with modern psychological understanding, emphasizing that cognitive processes influence how we perceive and interact with the world.

Buddhist psychology teaches that cognition is a combination of sensory input and conceptual processes.⁵ The Buddha explored methods such as self-discipline, meditation, and concentration to enhance cognitive development, ultimately leading to the eradication of ignorance. These methods align with the gradual development of mental faculties and are crucial to attaining wisdom and enlightenment.⁶ Cognition⁷ means the meaning. *Knowing* is a matter of mental activity, language use, imagination, and conception generation (stimulating circumstances and for likes of the response had). This kind of *knowing process* is something that cannot be seen; we cannot see what is called speculation, reasoning, or memory, but we can observe and study behaviour born from these activities. The Buddha taught that our cognitive process is the reality of the sensory process, our perception is also the conceptual and imaginary component of the non-sensory combined in one place. The Buddha's psychological knowledge and the science of the nature of modern psychology are similar.

The Buddha tried various methods such as penance and self-mortification, avoidance and seclusion, etc. develop the self. This kind of development of high power was not some kind of mysticism but rather the natural development of some kind of human potential; it was not the sudden appearance of some force but a gradual development. This gradual development involves three stages: moral attitude, samadhi or concentration, and the cultivation of wisdom. This type of input required a lifetime of experimentation, and the Buddha finally attained the eradication of ignorance and the bonds of afflictions. Anyone who studies and learns about the cognitive psychology of Buddhism cannot be indifferent to these highly perceptive psychological fields.

IV. PSYCHODYNAMICS AND COGNITIVE THERAPY IN BUDDHISM

Cognitive psychology is deeply interconnected with psychodynamics. The Buddha analyzed the psychological dynamics of human suffering, aiming to understand its root causes and find methods to reduce it. Buddhist psychology, therefore, provides a framework for self-improvement by addressing desires and perceptions, which influence cognition.⁸ Motivation, in Buddhist psychology, is seen as both physiological and psychological, impacting desires, actions,

⁶ Rahula, W. (1974). *What the Buddha Taught*. Grove Press, 57.

⁷ Cognitive verbs refer to people's perception of things and phenomena by the senses such as: See, notice, watch, listen, hear, feel, touch, smell, taste...

⁸ Kabat-Zinn, J. (1990). *Full Catastrophe Living: Using the Wisdom of Your Body and Mind to Face Stress, Pain, and Illness*. Delacorte Pres, 144 - 156.

and mental states.⁹ The Buddha's teachings emphasize transforming the mind to address insecurity, anxiety, and suffering, offering a path to inner peace. This psychological transformation involves a process of purifying perception, which aligns with modern therapeutic practices.¹⁰

While modern psychology primarily addresses mental illness through diagnostic and therapeutic frameworks, Buddhist psychology emphasizes the cultivation of inner harmony and the resolution of existential conflict. The fundamental aim is to refine cognitive processes to transcend suffering and attain ultimate liberation, a state known as *nirvana*. In this context, cognitive psychology is inextricably linked to psychodynamics, as the Buddha meticulously analyzed the psychological mechanisms underlying human suffering (*dukkha*) and sought practical methods for its cessation. His teachings underscore the necessity of heightened cognitive awareness and self-transformation, recognizing that human desires influence cognition just as perceptions shape desires.

Motivation, as a driving force within the human mind, governs action and directs individuals toward particular goals. It is traditionally categorized into physiological and psychological domains. Physiological motivations encompass fundamental survival instincts, while psychological motivations pertain to the internal states of urgency, insecurity, restlessness, anxiety, and suffering. Buddhist psychology, rather than merely categorizing these states, seeks to address their root causes, offering a non-dualistic approach to guiding sentient beings toward well-being and liberation. From the standpoint of contemporary Western psychology, therapy is commonly associated with the treatment of clinical mental disorders. However, within Buddhist psychology, the concept of *therapy* extends beyond clinical interventions to encompass the complete eradication of psychological conflict and internal distress. The canonical Buddhist scriptures provide extensive discourse on the motivational dimensions of psychology, positioning mindfulness, ethical conduct, and meditative training as integral components of mental transformation.

The Buddha did not advocate for the suppression or rejection of sensory experiences but rather for their refinement through disciplined training. Instead of severing ties with the sensory world, he encouraged the purification and regulation of perception, ensuring that external stimuli do not disrupt inner equanimity. This process of cognitive purification aligns closely with psychotherapeutic constructivism, wherein human perception and inquiry shape the mental frameworks that define reality. Consequently, Buddhist psychology places perception at the core of its therapeutic paradigm, recognizing its role in restructuring cognition and alleviating psychological distress.

⁹ Hofmann, S. G. (2011). *Mindfulness and Cognitive Behavioral Therapy: A Critical Review of the Evidence*. *Clinical Psychology Review*, 31 (3), 557 – 565.

¹⁰ Wilber, K. (2000). *Integral Psychology: Consciousness, Spirit, Psychology, Therapy*. Shambhala.

Both modern psychology and Buddhist psychology share a common therapeutic goal – *samācariya*, or harmonious living – which serves as a foundation for psychological well-being and spiritual liberation. This principle applies universally, encompassing familial relationships, societal interactions, and professional environments. While formal psychotherapy, as understood in the Western tradition, emerged in the 19th century with the pioneering work of Wilhelm Wundt and William James, Buddhist psychological inquiry predates these developments by millennia. The Buddha's profound analysis of the human mind laid the groundwork for a structured understanding of motivation, cognition, and behavior, offering a comprehensive blueprint for mental transformation. His teachings continue to influence contemporary discussions on psychology, providing timeless insights into the pursuit of inner peace and the alleviation of suffering.

Through the perspective of educational psychology presented in the philosophy of *Vijñāna* or *Vijñāpti*, the beginning is from the all-ground consciousness (*Ālayavijñāna*), and the end is also the all-ground consciousness. Thus, the *Ālayavijñāna* is the two sides of the actual *Nirvāna*. Since the *Ālayavijñāna* contains both impure and pure nuclei, the goal of the Buddhist psychoeducational method is to make the impure and unwholesome nuclei in the *Ālayavijñāna* dissolve, returning the pure and immaculate nature to the consciousness. This is the meaning to *leave birth and death without Nirvāna, to reach Nirvāna must go into samsara; because Nirvana and samsara are not two, not different*.¹¹ On the other hand, on the professional level, the goal of the educational psychology system in the philosophy *Vijñāna* or *Vijñāpti* is to aim for a transformation (*Asrayaparāvṛtti* or *Parāvṛtti*) that is, to change the entire basic inner structure of the mind (Transformation at the base), releasing the seeds of subject and object in the working process of mind (*Citta*) and mental factors (*cetasika*) or to put it more specifically, to remove the seeds of wandering thoughts in the psychological evolution of the perceiver and the perceived object. Therefore, the psychological system of Buddhist education not only focuses on examining psychological phenomena such as happiness, sadness, suffering, and happiness... but also captures the essence of psychological phenomena i.e. seeds, the energy of the past and the present habit and karma, Gandhabha,¹² etc., leading causes of insecurity, confusion, and psychological crisis. Therefore, achieving a transformation in consciousness is the ultimate goal - Nirvana liberation.

V. THE SPIRIT OF BUDDHIST EDUCATION

Buddhist education is fundamentally a process of self-cultivation that fosters deep self-awareness, urging individuals to seek truth through their own dynamic and creative engagement with reality. Unlike conventional

¹¹ This issue is detailed in the Mahayana treatises and canon. See *the Nirvana Sutra, the Middle Way Commentary, and the Heart Sutra (Prajñāpāramitāhṛdayasūtram)*.

¹² In Buddhism, this term also refers to a being in the intermediate state (between death and rebirth).

pedagogical approaches that prioritize the accumulation of external knowledge, Buddhist education centers on the awakening (*bodhi*) of the individual's consciousness, enabling them to discern the profound interconnection between actions (*karma*) and their consequent experiences of happiness and suffering (*samsara* and *nirvana*). Within this framework, each individual is not merely a passive recipient of knowledge but rather the architect of their existential trajectory. Through the sustained practice of mindfulness (*sati*) and introspective awareness, individuals come to recognize their intrinsic capacity to take responsibility for their mental states, actively shaping their path toward wisdom (*prajñā*) and ultimate liberation. Education, in this sense, is not simply an intellectual endeavor but a transformative process aimed at harmonizing cognition and ethical conduct, allowing individuals to align their actions with their true nature (*dharmatā*).

This perspective resonates with certain philosophical underpinnings of Western educational thought, particularly those articulated by scholars such as Stanley Hall and John Dewey. Dewey, in particular, emphasized the dynamic nature of the human psyche, advocating for an educational paradigm that nurtures an individual's innate potential through experiential learning, self-discipline, and character formation. Buddhist education similarly upholds the principle of self-directed learning, not as a means of fulfilling external societal expectations but as an inward journey toward self-realization (*ātma-bodha*). Unlike rigid didactic instruction, Buddhist education flourishes within fluid, relational contexts - manifesting in the interdependent exchanges between teachers and students, parents and children, mentors and disciples. These relationships are not merely hierarchical structures of transmission but dynamic, reciprocal engagements that encourage inquiry, contemplation, and personal growth. In this sense, education is best understood as a relational process (*pratītyasamutpāda*), wherein knowledge is not imposed but awakened within the individual.

In the spirit of Buddhist pedagogy, the mind of the student remains at the heart of all educational efforts, for it is within the mind that the seeds (*bīja*) of wisdom and ignorance, virtue and vice, and enlightenment and delusion take root. The *alaya-vijñāna* (storehouse consciousness), as expounded in *Yogācāra* philosophy, holds within it the potential for both mundane suffering and transcendental liberation. Whether these latent tendencies manifest as either the afflictive states of *samsara* or the awakened realization of *nirvana* depends upon the individual's volitional engagement with their consciousness. Thus, Buddhist education does not seek to dictate external dogmas but rather to cultivate an individual's capacity to discern, refine, and ultimately liberate their mind from conditioned limitations. It is an invitation to awaken to the deeper dimensions of existence, where knowledge is not separate from being and where wisdom is cultivated through direct, embodied experience rather than passive reception.

In essence, Buddhist education aspires to guide individuals toward the realization that they are the sole custodians of their own mental and spiritual

well-being. The path to awakening is neither imposed from without nor dictated by external authority; rather, it unfolds as an internal process of discernment, discipline, and self-transformation. It is through this profound engagement with the self – where the heart and mind function in harmony – that true learning occurs, not as a mere acquisition of facts, but as a journey toward ultimate freedom (*vimutti*).

Thus, each person, after realizing the truth about the origin of suffering and happiness, chooses for himself a life, a life according to his own will. Here, through the lens of Mind Only and Buddhism in general, there is no powerful person or superman who can reign and dominate a person's life other than his consciousness. Nor is there any supernatural force that can reward or punish man, just as there is no greater authority than that of the mind in man itself. Even concepts such as karma, karma, habit habits, etc., are all created by the consciousness of each individual. Karma is a real, present life that people carry with them wherever they go. But what is Karma? The Buddha taught: "*Karma* is volitional action", or action generated from the mind; and He taught that: "Man is the owner of *karma*, heir to *karma*. *Karma* is the relative, the womb from which man was born". Thus, the spirit of Buddhist education is the spirit of awakening people and returning them to themselves. Here, the consciousness of each individual always plays a central role in all areas of life. Stanley Hall, an American psychologist, and his student John Dewey, a pragmatic philosopher, were the proponents of a new educational method in America in the late 19th century and early 20th century. Given the new educational method promoted by Hall and Dewey, once in vogue and still influencing American education today in the way that "the development of the human psyche arises from within. Thus, such progress is not caused by external impulses. And education must take the child as the starting point, must be based on its psychology, not that of the person who teaches it, must be based on the capacity and needs of each child, and must take self-discipline as a means, the child is the center of the school".¹³

Regarding the world of psychology in education, Dewey said that "Children's psyche is not a crystal that stands still and remains constant, but it is a 'dynamic' acting, ceaselessly progressing".¹⁴ For him, what is called the self is essentially nothing more than the process of activity. It is a latent energy source in the mind and is always working to find a way to manifest its '*true nature*', and that process of constant activity is expressed in three forms: i) Will, ii) Perception, and iii) Character. According to Dewey, education is the training of character. That is, first of all, education helps the motivation available in each person's mind, activates and calls to the original human motivation, and then guides it to develop and adapt to the needs of the world society. Finally, Dewey concludes as follows: "Education is not a job of teaching letters and languages,

¹³ Radhakrishnan, S., and Muirhead, J. H., eds., *Contemporary Indian Philosophy*, George Allen and Unwin Ltd, Humanities Press Inc, Newyork, 1996, p 104.

¹⁴ Panda, K. C., *Elements of Child Development*, Kalyani Publishers, New Delhi, 2001, p 13.

but first of all letting children live and work according to their progress, according to the beating of their hearts, in an atmosphere of convenience. Let their whole body, disposition, and mind be in harmony and flourish. Education means learning, but learning by life and in life. From there, Dewey proposed the principles of education, such as:¹⁵

1. the principle of co-generational education,
2. the principle of functional pedagogy, and
3. Principle of social consciousness.

Buddhist psychological principles have significantly influenced contemporary psychology, particularly in the areas of mindfulness-based interventions, cognitive therapy, and emotional intelligence. The adaptation of mindfulness in clinical psychology has led to the development of therapies such as mindfulness-based stress reduction and mindfulness-based cognitive therapy. These approaches are used to treat conditions such as anxiety, depression, and PTSD.¹⁶ The concept of right thought (*samma sankappa*) in Buddhism parallels cognitive-behavioral therapy, which emphasizes changing maladaptive thought patterns to improve mental health. By promoting awareness of negative thoughts and replacing them with positive perspectives, both Buddhist education and cognitive-behavioral therapy facilitate emotional well-being. The practice of loving-kindness (*mettā*) and compassion (*karuṇā*) enhances emotional intelligence by fostering empathy and interpersonal skills. Studies have shown that individuals who practice loving-kindness meditation exhibit greater emotional regulation and prosocial behavior.¹⁷

VI. CONCLUSION

From the examples above, we observe that modern education, at least to some extent, has encountered key aspects of the Buddhist educational spirit—particularly in its emphasis on self-awareness, consciousness, and the cultivation of psychological potentials. The principles of self-mastery, self-discipline, dynamism, and creativity that characterize contemporary educational philosophies resonate with the pedagogical approach that the Buddha imparted to his disciples more than twenty-five centuries ago. As is widely recognized, religious education plays a crucial role in fostering global harmony and peace. Peace serves as the foundation upon which all aspects of national and societal development rest, and without unity and stability, even the fulfillment of material necessities becomes a formidable challenge. In this context, Buddhist education has long been regarded as an inseparable component of ethical and philosophical thought, offering insights that

¹⁵ Principle of co-generation: Is an incentive to act - to make the mind flow out, not cramming and imposing like pouring water into a bucket.

¹⁶ Baer, R. A. (2003). Mindfulness training as a clinical intervention: A conceptual and empirical review. *Clinical Psychology: Science and Practice*, 10 (2), 125 – 143.

¹⁷ Kabat-Zinn, J. (2003). Mindfulness-based interventions in context: Past, present, and future. *Clinical Psychology: Science and Practice*, 10 (2), 144 – 156.

transcend time and cultural boundaries.

The psychological foundations and applied methodologies of Buddhist education provide a comprehensive framework for cognitive, emotional, and ethical development. By placing emphasis on mindfulness (*sati*), meditative concentration (*samādhi*), and ethical conduct (*śīla*), Buddhist pedagogy cultivates mental clarity, resilience, and compassion – qualities essential for holistic well-being. The integration of these principles into modern psychology and educational systems underscores their enduring relevance in shaping human consciousness and fostering a balanced approach to learning. Future research and interdisciplinary applications of Buddhist educational practices hold the potential to deepen their contributions to both psychological well-being and contemporary pedagogy.

Nevertheless, while Buddhist education offers profound psychological and ethical insights, challenges arise when attempting to integrate these practices into mainstream educational frameworks. Certain Buddhist concepts may require reinterpretation or contextual adaptation to align with secular, scientifically grounded pedagogies. Furthermore, empirical research remains necessary to substantiate the efficacy of Buddhist educational methodologies, ensuring their credibility within evidence-based academic discourse. The fusion of Buddhist principles with contemporary educational theories could pave the way for a more integrative, human-centered approach to learning – one that nurtures not only intellectual competence but also ethical awareness and inner transformation.

In an era marked by increasing global interconnectedness, Buddhist education assumes a renewed significance within modern educational paradigms. Rooted in the principles of self-discipline, mindfulness, and ethical refinement, its values resonate with contemporary approaches that emphasize the holistic development of individuals. More than ever, the spirit of Buddhist education offers a path toward fostering intercultural understanding, personal growth, and collective well-being. By promoting inner harmony, it lays the groundwork for lasting peace and global cooperation, reinforcing the notion that education is not merely the transmission of knowledge but a transformative journey toward wisdom, ethical responsibility, and the realization of human potential.

THE PRAGMATIC APPROACH IN DISSEMINATING MINDFULNESS EDUCATION AND PRACTICES FOR COMPASSIONATE AND PEACEFUL COEXISTENCE IN INDONESIA

Dr. Willie Japaries*

Abstract:

Background: Mindfulness meditation education and practices have been widely disseminated among people from diverse socio-economic and religious backgrounds. This dissemination has often taken a pragmatic approach, deliberately downplaying the connection between mindfulness meditation and Buddhism. In Indonesia's pluralistic society, where practicing or adopting teachings from another religion can be a sensitive issue, such an approach is crucial for broader acceptance.

Aim: This article aims to share experiences in disseminating mindfulness meditation education and practices within Indonesia's pluralistic society.

Results: While the pragmatic approach to disseminating mindfulness education in Indonesia primarily draws upon Buddhist teachings such as *Arogya Parama Lābha* (health is the highest gain), *Dhammanusati* (reflection on the Dhamma), and the *Kalama Sutta*, non-Buddhists have embraced mindfulness practice largely due to its scientifically validated benefits and personal experiences of its positive effects. This pragmatic approach has played a crucial role in fostering compassionate and peaceful coexistence among different religious communities in Indonesia.

Conclusion: Mindfulness meditation education and practice can be widely and peacefully propagated in Indonesia's predominantly non-Buddhist society through a pragmatic, non-sectarian approach that respects religious diversity while emphasizing the universal benefits of mindfulness.

* Nalanda Institute of Indonesia.

Keywords: *Mindfulness, meditation, ehipassiko, arogya, pragmatic approach.*

I. MINDFULNESS AS BENEFICIAL PRACTICE

Mindfulness, or *sati* in Pali, is the practice of being fully present and engaged in the moment, free from judgment and distraction. It involves observing one's thoughts, emotions, and surroundings with awareness and equanimity. In Buddhism, mindfulness is regarded as a fundamental practice that can be applied to all aspects of life, from simple daily activities to complex interpersonal interactions.¹

This article shares experiences in pragmatically disseminating Buddhist mindfulness teachings in education and practice within Indonesia's pluralistic society. By presenting mindfulness in a way that aligns with universal human values, it can be accepted with joy and benefit all individuals, regardless of their religious or social backgrounds.

Indonesia is the largest Muslim-majority country in the world, with a population of more than 200 million. The Indonesian government officially recognizes six religions: Islam, Christianity, Catholicism, Hinduism, Buddhism, and Confucianism. The Buddhist community in Indonesia is a minority, comprising less than one percent of the population. Buddhism in Indonesia consists of various sects, with the three largest being *Theravāda*, *Mahāyāna*, and *Vajrayāna*.

II. BUDDHIST FORMAL EDUCATION IN INDONESIA

In the realm of formal Buddhist education, Nalanda Institute is the oldest institution, founded 44 years ago. Initially, the Nalanda Institute of Indonesia had only one study program, Dharma Ācariya, which was dedicated to producing Buddhist teachers. Today, the institute offers six study programs.

- Dharma Ācariya – Bachelor's and master's degrees in Buddhist teaching (*established in 1976 and 2012, respectively*).
- Dharma Usada – Bachelor's degree in Dharma-Based Health Studies (*established in 2013*).
- Business Management – Bachelor's degree (*established in 2023*).
- Communication – Bachelor's degree (*established in 2023*).
- Early Childhood Education – Bachelor's degree (*established in 2023*).

2.1. Two pragmatic approaches to teaching meditation

Mindfulness studies are a key feature of our curriculum, especially in the Dharma Ācariya and Dharma Usada programs. However, the teaching methods differ significantly between the two programs due to the students' diverse backgrounds.

Students in the Dharma Ācariya program are almost entirely Buddhists, while those in the Dharma Usada program are mostly non-Buddhists, with

¹ Wasantha Warnasuriya, (2023).

the majority being Muslim. These differences in teaching methods align with the Buddha's approach to offering the Dharma in a way that is tailored to individuals' needs and levels of understanding.²

In the Dharma Ācariya program, meditation is taught in a normative manner, with direct references to the *Tipiṭaka* texts.

In the Dharma Usada program, where most students are non-Buddhists, meditation cannot be taught using citations from the *Tipiṭaka*. Instead, it is introduced through evidence-based publications, ensuring that the teachings are accessible and acceptable within a diverse religious context.

This pragmatic approach is rooted in the Buddhist principles of Dhammanusati (reflection on the Dharma) and the Kalama Sutta, which encourages inquiry and personal experience as a basis for accepting teachings

2.2. Dhammānussati, or Recollection on the Dhamma, states:

“Svākkhātō Bhagavatā Dhammo, sandiṭṭhiko, akāliko, ehipassiko, opanayiko, paccattarī veditabbo viññūhī ti.”³

This means: “Well taught by the Blessed One is the Dhamma – visible here and now, timeless, open to all, to be personally realized and applied, and understood individually by the wise.”

So, mindfulness or meditation as Dhamma should be learned or more accurately investigated intellectually or scientifically. As Lee Kane, the editor of Buddha Weekly put it, as follows:

“Ehipassiko: The Dhamma welcomes all beings to put it to the test and to experience it for themselves.”⁴

In the *Kalmatta Sutta* (Sutra) Buddha's position on intellectual exploration and free inquiry are explicitly stated:

“Do not believe in something because it is reported. Do not believe in something because it has been practiced by generations or becomes a tradition or part of a culture. Do not believe in something because a scripture says it is so. Do not believe in something believing a god has inspired it. Do not believe in something a teacher tells you to. Do not believe in something because the authorities say it is so. Do not believe in hearsay, rumor, speculative opinion, public opinion, or mere acceptance to logic and inference alone. Help yourself, accept as completely true only that which is praised by the wise and which you test for yourself and know to be good for yourself and others.”⁵

⁵ Lee Kane (editor). Ehipassiko: encouraging investigation — Buddha taught logic to give

2.3. *Ehipassiko* or investigation results of meditation

In the modern era, *ehipassiko* or investigation of mindfulness meditation is achieved through scientific methods as the objective way to prove the truth of an idea or concept. Most of the investigation of the effect of meditation is related to its health benefits, as free from or getting rid of physical and mental suffering is the prime concern for all people. The following are excerpts of major investigative or scientific results from various authoritative sources regarding mindfulness meditation as foundation to propagate mindfulness or meditation to the pluralistic society.

2.3.1. Meditation effects against various mental and physical diseases

The U.S. Department of Health & Human Services National Institutes of Health, National Center for Complementary and Integrative Health (NCCIH) defines meditation as a mind and body practice that has a long history of use for increasing calmness and physical relaxation, improving psychological balance, coping with illness, and enhancing overall health and well-being. Mind and body practices focus on the interactions among the brain, mind, body, and behavior. There are many types of meditation, but most have four elements in common: a quiet location with as few distractions as possible; a specific, comfortable posture (sitting, lying down, walking, or in other positions); a focus of attention (a specially chosen word or set of words, an object, or the sensations of the breath); and an open attitude (letting distractions come and go naturally without judging them).⁶

About the effectiveness of meditation, NCCIH cites some research that suggests practicing meditation may reduce blood pressure, symptoms of irritable bowel syndrome, anxiety and depression, and insomnia.

The results of 13 studies of mindfulness-based interventions for stopping smoking had promising results regarding craving, smoking cessation, and relapse prevention.

Results from a 2011 NCCIH-funded study of 279 adults who participated in an 8-week Mindfulness-Based Stress Reduction (MBSR) program found that changes in spirituality were associated with better mental health and quality of life.

Guidelines from the American College of Chest Physicians published in 2013 suggest that MBSR and meditation may help to reduce stress, anxiety, pain, and depression while enhancing mood and self-esteem in people with lung cancer.

National Center for Complementary and Integrative Health 4 Meditation: Clinical practice guidelines issued in 2014 by the Society for Integrative

us confidence in Dharma — not perpetual doubt. Buddha Weekly. Available at: https://buddhaweekly.com/dont-have-faith-in-buddha-buddha-taught-the-logic-of-karma-method-and-wisdom-not-a-religious-belief-system/#google_vignette)

⁶ NIH-NCCIH. Meditation. https://files.nccih.nih.gov/s3fs-public/Meditation_04-25-2016.pdf.

Oncology (SIC) recommend meditation as supportive care to reduce stress, anxiety, depression, and fatigue in patients treated for breast cancer. The SIC also recommends its use to improve quality of life in these people.

Meditation-based programs may be helpful in reducing common menopausal symptoms, including the frequency and intensity of hot flashes, sleep and mood disturbances, stress, and muscle and joint pain. However, differences in study designs mean that no firm conclusions can be drawn.

A few studies have been conducted on the effects of meditation for attention deficit hyperactivity disorder (ADHD), hence there isn't sufficient evidence to support its use for this condition.

A 2014 research review suggested that mind and body practices, including meditation, reduce chemical identifiers of inflammation and show promise in helping to regulate the immune system.

Results from a 2013 NCCIH-supported study involving 49 adults suggest that 8 weeks of mindfulness training may reduce stress-induced inflammation better than a health program that includes physical activity, education about diet, and music therapy.

A small study funded in part by NCCIH found that mindfulness meditation does help to control pain. In another NCCIH-funded study, adults aged 20 to 70 who had chronic low back pain received either mindfulness-based stress reduction (MBSR) training, cognitive-behavioral therapy (CBT), or usual care. The MBSR and CBT participants had a similar level of improvement, and it was greater than those who got usual care, including long after the training ended. The researchers found that participants in the MBSR and CBT groups had greater improvement in functional limitation and back pain at 26 and 52 weeks compared with those who had usual care.

About safety and side effects of meditation, scientific evidence shows that meditation is generally considered to be safe for healthy people. There have been rare reports that meditation could cause or worsen symptoms in people with certain mental or psychiatric problems like anxiety and depression. People with mental or physical health conditions should speak with their health care providers before starting a meditative practice, and make their meditation instructor aware of their condition.

2.3.2. Meditation effects on cardiovascular health

American Heart Association (AHA) has issued scientific statement regarding meditation and cardiovascular risk reduction (Levine et al, 2017). AHA states, that despite numerous advances in the prevention and treatment of atherosclerosis, cardiovascular disease remains a leading cause of morbidity and mortality. Novel and inexpensive interventions that can contribute to the primary and secondary prevention of cardiovascular disease are of interest. Numerous studies have reported on the benefits of meditation. Meditation instruction and practice is widely accessible and inexpensive and may thus be a potential attractive cost-effective adjunct to more traditional medical therapies. Accordingly, AHA scientific statement systematically reviewed the data on

the potential benefits of meditation on cardiovascular risk. It concludes, that overall, studies of meditation suggest a possible benefit on cardiovascular risk, although the overall quality and, in some cases, quantity of study data are modest. Given the low costs and low risks of this intervention, meditation may be considered as an adjunct to guideline-directed cardiovascular risk reduction by those interested in this lifestyle modification, with the understanding that the benefits of such intervention remain to be better established. Further research on meditation and cardiovascular risk is warranted.⁷

2.3.3. Meditation effects on prosocial behaviors

A systematic review and meta-analysis of the effects of meditation on empathy, compassion, and prosocial behaviors was conducted by searching the big data of published scientific evidence from various databases, including PubMed, MEDLINE, PsycINFO, Cochrane etc. From 26 randomized controlled trials with 1,714 subjects collected, the results demonstrated small to medium effects of meditation on self-reported and observable outcomes ($p < .001$) and suggest psychosocial and neurophysiological mechanisms of action. Subgroup analyses also supported small to medium effects of meditation even when compared to active control groups. So, the conclusion is that meditation can improve positive pro-social emotions and behaviors.⁸

2.3.4. Effective dose of meditation

A randomized trial was done to investigate the effects of meditation practice frequency in a 2-week compassion-based meditation intervention delivered via the Healthy Minds Program app. Undergraduates with clinically elevated depression and/or anxiety ($N = 351$) were randomized to a massed (one 20-min meditation per day) or distributed condition (two 10-min meditations per day). Psychological distress (composite of depression and anxiety), experiential avoidance, fear of missing out, loneliness, and self-compassion were assessed pre- and post-intervention. This study suggests practicing meditation with a smartphone-based meditation app once per day for 20 min or twice per day for 10 min each time is associated with equivalent improvements on psychological distress and other outcomes. This supports the possibility that meditation practice may be flexibly distributed across a day and will produce similar outcomes.⁹

2.3.5. Participant characteristics affecting outcomes of meditation¹⁰

Scientific studies have been done to identify certain individual traits affect the outcomes of meditation practices. A systematic search yielded 51 eligible studies with 7782 participants. It discovered that a higher baseline level of psychopathology or depression was associated with deterioration in mental health after a meditation intervention. On the other hand, participants with

⁷ Levine et al (2017).

⁸ Luberto CM et al (2018).

⁹ Riordan KM, et al (2024).

¹⁰ Buric I, et al, 2022; West TN, et al, (2022).

higher scores on interpersonal variables, motivation, medical conditions, and mindfulness showed higher levels of positive meditation outcomes. Higher well-being and stress were simultaneously associated with moderate increases in negative and positive meditation outcomes. Participant demographics, psychological traits, self-concept, and length of meditation practice did not significantly influence the response to meditation. Conclusion of the meta-analysis was that participant baseline characteristics significantly influence the response to mindfulness and transcendental meditation interventions. Although more work is needed to validate these results and develop clinical recommendations, the results suggest the importance of actively monitoring the experiences of individuals undertaking meditation interventions, particularly individuals with high levels of psychopathology and depression who are more likely to experience negative outcomes of meditation.¹¹

Another study investigated how either mindfulness meditation or loving-kindness meditation could affect the emotion profiles of 113 individuals from low socio-economic status with anxious and avoidant attachment shift, both across time and on a particular day. The results showed that individuals with average to high levels of attachment anxiety particularly benefit from mindfulness meditation in terms of longitudinal boosts in positive emotions and reductions in negative emotions. However, both meditation practices improved same-day positive emotions and reduced same-day negative emotions for those greater in attachment anxiety. Additionally, both meditation practices appeared to reduce negative emotions over time for those greater in attachment avoidance. These findings carry important implications for improving emotional health and well-being among those most at risk for negative mental and physical health outcomes in late-life.¹² The results of those studies show that individuals with high levels of psychopathology and depression should be careful to avoid negative outcomes of meditation. While higher chance of positive outcomes from meditation practices among individuals with higher scores on interpersonal variables, motivation, medical conditions, and mindfulness, also for those from low socio-economic status with average to high level of attachment anxiety.

2.4. Active or moving meditation

In addition to mindfulness meditation classes, the Dharma Usada study program also incorporates active or moving meditation, which refers to meditation in motion. This practice involves focusing on the task at hand and integrating mindfulness into daily activities, such as preparing food, cleaning, walking, and other routine tasks. Active meditation serves as a complement to traditional seated meditation and is particularly beneficial for individuals who find it challenging to remain still in a conventional meditation setting.¹³ In the Dharma Usada program, active meditation is specifically applied in performing

¹¹ Buric I, et al (2022).

¹² West TN, et al, (2022).

¹³ Cheryl C. et al., (2022).

various therapeutic skills based on the Tipiṭaka, including acupuncture, massage, patient care, herbal therapy, and more, as described below.

2.4.1. Acupuncture or needling

Acupuncture or needling has been stated in the Buddhist canons, Saddharma-Pundarika or Lotus Sutra and Chinese Buddhist Canon. Two scholars, i.e. Li Liangsong from Beijing University of Chinese Medicine, and Lin Zhaogeng from China Medical University, Taizhong, Taiwan-China, have revealed in details history of acupuncture in Chinese Buddhist Canon. The Buddhist acupuncture was mentioned in the time of Buddha, including substantial acupuncture, finger acupuncture and mental acupuncture. The substantial acupuncture refers to metal needle, plant needle, stone needle, bone needle, etc. Finger acupuncture means taking finger as a needle. Mental acupuncture implies that the Buddhism idea is considered in acupuncture. Secondly, the Buddhist medicine is the combination of acupuncture and herbal medicine. The needle box had become the necessity of the medical scholars in traveling.¹⁴

And in the Lotus Sutra, needle is used to introduce pounded herbs into the body for treatment. The context is clear from stanza 55 to 57, as follows. "...55. But a great physician taking compassion on the blind man, goes to the Himalaya, where (seeking) across, up and down, 56. He fetches from the mountain four plants; the herb Of-all-colours-flavours-and-cases, and others. These he intends to apply. 57. He applies them in this manner: one he gives to the blind man after chewing it, another after pounding, again another by introducing it with the point of a needle into the man's body."

2.4.2. Massage for health

Massage (*parimaddana* or *ucchadana*) and limb rubbing (*sambahana*) were already well-known during the Buddha's time. Attentive children would massage their aged parents limbs¹⁵ and sensual massage that stopped just short of being sexual was also known.¹⁶ Nuns having their forearms, backs, hands, calves, feet, thighs and faces massaged with a cow's leg bone. Probably the roundels at the ends of the bones were rubbed up and down the body. One could even have one's gums massaged.¹⁷ The Buddha forbade monks from having massages for pleasure¹⁸ although he seems to have approved of therapeutic massage. On one occasion he is recorded as having been 'oiled' (*sinehetha*) over several days when He was suffering from a particular illness.¹⁹ The meaning of this term is not clear. It may refer to the Ayurvedic practice of administering medicine in oil applied to the skin or to an oil massage. There is

¹⁴ Li & Lin, (2017).

¹⁵ A. I, 62.

¹⁶ A. IV, 54.

¹⁷ Vin. II, 266.

¹⁸ D. I, 7.

¹⁹ Vin. I, 279.

also a reference to Ananda massaging the Buddha's limbs when He was old.²⁰

2.5. Compassionate care for the patients

Compassion (*karunā*) is the ability to feel the distress or pain of others as if it were one's own. Sometimes it is also referred to as empathy (*anuddyatā*), commiseration (*dayā*), fellow feeling (*anuggaha*) or sympathy (*anukampā*). Compassion is the second of the four Brahma Vihāras and was more highly praised by the Buddha than any other virtue because it is the root of so many other virtues. The Jātakamālā says: 'Compassion gives birth to all the other virtues just as cooling rain makes the crops grow. When a person is compassionate he has no desire to harm his neighbour, his body, speech and mind are purified, concern for his neighbour's welfare increases and states like kindness, patience, happiness and good reputation grow. So, as a doctor or therapist, being compassionate is absolutely needed.

In a Buddhist equivalent to the Hippocratic Oath, He once said: "One who cares for the sick is fit to do so if he has five qualities. He can prepare medicine, he knows what is healing and administers it but never administers what is harmful, he cares for the patient out of love not out of desire for gain, he is unmoved by excrement, urine, vomit and spittle, and from time to time he can instruct, uplift, gladden and encourage the patient with talk on Dhamma."²¹ The Buddha said that patients should be treated and nursed even if they are going to die, out of compassion for them.²²

III. HEALTHY FOOD HABITS

The Buddha puts a sacred attention and great importance on mindfulness in food selection, preparation, and consumption, as shown in the following excerpts.

3.1. The Buddha once said that "the body comes into being because of food and is dependent on food."²³ In another place He said that a poor diet can also lead to sickness²⁴ as can overeating.²⁵

3.2. The Buddha said that in giving food to a hungry person you give them more than just material substance, you also give them all the things that food imparts - life, beauty, satisfaction, strength and intelligence.²⁶

3.3. A common food He often ate was rice gruel which was probably made by boiling rice and water to a thin consistency and adding salt, a garlic clove and a few pepper corns. The Buddha said there were five advantages of this gruel; it dispels hunger, quenches thirst, regulates wind, cleanses the bowels

²⁶ A. III, 42; <https://www.buddhisma2z.com/content.php?id=139>.

and helps digest the remnants of food.²⁷

3.4. Once King Pasenadi came to the Buddha bloated and breathing in a laboured manner as a result of having eaten yet another enormous meal. Seeing this the Buddha said: “When a person is mindful and thus knows moderation in eating, his ailments diminish, he ages gently and he protects his life.” The king got the hint and asked his nephew to repeat these words to him whenever he was taking his meals. As a result the king gradually reduced his food intake, lost weight and regained his slim figure.²⁸

Buddhism, mindful eating, and healing in Dharma Usada

The Buddha emphasized the importance of mindful eating and moderation in maintaining good health and preventing various illnesses, including obesity, as illustrated in the case of **King Pasenadi**. He also stressed the significance of combining diverse flavors of herbal foodstuffs to promote overall physical and mental well-being.

Buddhism views love and compassion as essential elements that can enhance nearly every aspect of life – including food. Whether it be in preparing, sharing, or consuming meals, love adds an invaluable dimension.

A commentary on the Jātaka states: “There is no taste equal to love. The four sweet things given with indifference are not as tasty as coarse millet given with love.”²⁹

The Buddha reinforced this idea, saying: “Fine or coarse, much or little, one can eat anything made with love. Indeed, love is the highest taste.”³⁰

Dharma Usada and the integration of Buddhist healing

At Nalanda Institute’s Dharma Usada program in Indonesia, meditation-based education and practices are designed to cultivate loving-kindness and compassion, particularly through relieving physical and mental suffering using natural, Dharma-based methods.

This holistic body of knowledge integrates various mindfulness-based therapeutic modalities, all of which center on the principle of health and balance – a concept shared by both Buddhist medicine and Traditional Chinese Medicine (TCM). This principle is encapsulated in the balance of Yin and Yang, which resonates with the Buddhist concept of “The Middle Way.”

3.1. The connection between Buddhist medicine and Traditional Chinese Medicine (TCM)

A remarkable example of this integration can be found at the Nanhai Buddhism Academy in Hainan, China, which has established a Dharma medicine program that teaches acupuncture, herbal medicine, qigong, and

²⁷ A. III, 250, <https://www.buddhisma2z.com/content.php?id=104>.

²⁸ S. I, 81 - 2; <https://www.buddhisma2z.com/content.php?id=105>.

²⁹ Ja. III, 142.

³⁰ Ja. III, 145. <https://www.buddhisma2z.com/content.php?id=139>.

other TCM-based healing techniques.³¹ This historical convergence highlights how both Buddhist medicine and TCM arrived at the same fundamental truth: balance is the key to health.

The Buddha himself defined health (*appābādhata* or *ārogya*) as:

“Having well-being, good digestion, not being too cold or too hot, maintaining balance, and being capable of activity.”³²

Similarly, Traditional Chinese Medicine (TCM) defines health as a harmonious balance of Yin (cold) and Yang (hot), along with the balancing of the five elements, acupuncture, diet therapy, herbal medicine, and other holistic treatments.³³

3.2. Buddhism’s deep historical connection to healing in China

Buddhism has been deeply intertwined with healing practices throughout its history in China. Some of the early translated Buddhist scriptures introduced Indian concepts of the body, explaining illness through theories such as *tridoṣa* (imbalances of bodily fluids and internal winds). Other texts discuss *materia medica*, monastic rules on healing and hygiene, and ritual practices devoted to Bhaiṣajyaguru (the Medicine Buddha), Avalokiteśvara (Guanyin Bodhisattva), and other deities associated with healing.

Beyond translations, a vast corpus of indigenous Chinese Buddhist medical texts emerged between the 2nd and 10th centuries CE. Among the most influential works were:

- Yijing’s 義淨 (635 – 713) writings on Indian monastic medical practices
- Daoxuan’s 道宣 (596 – 667) vinaya commentary on monastic healing regulations
- Daoshi’s 道世 (? – 683) encyclopedic chapter on illness and Buddhist healing traditions
- Zhiyi’s 智顗 (538 – 597) treatises on meditation as a healing method
- Huijiao’s 慧皎 (497 – 554) hagiographies documenting Buddhist healing practices

As Buddhism spread throughout Chinese society during the Sui and Tang dynasties, its medical knowledge was increasingly adopted by eminent Chinese physicians. Scholars such as:

Tao Hongjing 陶弘景 (452 – 536)

Chao Yuanfang 巢元方 (550 – 630)

Wang Tao 王焘 (670 – 755)

Sun Simiao 孫思邈 (581 – 682)

Incorporated Buddhist healing principles into their medical treatises,

³¹ 南海佛学院. (n.d.). 南海佛学院. <https://www.nhfx.net/>

³² A. III, 103.

³³ Wu Hongyu & Kohle N., (2021).

further cementing the fusion of Buddhist and Chinese medicine.³⁴

IV. MINDFULNESS PRACTICES DEVELOPMENT IN INDONESIA

4.1. Historical roots of mindfulness in Indonesian tradition

Meditation or mindfulness practices have long been an integral part of Indonesian – particularly Javanese – tradition. Locally, these practices are known as “semedi” or “bertapa”, which involve deep contemplation or meditation, often conducted in remote or sacred places recognized by society.

According to experts, Javanese spiritual traditions are a syncretic blend of Hindu-Buddhist influences interwoven with Islamic elements. For Javanese practitioners of semedi, mindfulness is believed to facilitate spiritual transcendence and union with God.³⁵

In modern times, mindfulness education and practices have evolved beyond any specific religious affiliation. Instead, they have become a universal approach to mental, spiritual, and physical well-being, with a strong emphasis on relieving suffering and promoting holistic health.

4.2. The rise of mindfulness awareness in contemporary Indonesia

The dissemination of mindfulness practices for health benefits in Indonesia began as early as the 1980s. Since 1986, informative articles on the benefits of meditation have been regularly published in national newspapers and magazines, covering a range of health-related topics, such as:

- Stress reduction
- Asthma management
- Hypertension control

Table-1: Various publications regarding meditation in Indonesian national media in the 1980s.

No	Public media name	Date published	Title
1	Sinar Harapan daily	1 st February 1986, p.6	Meditasi sebagai penawar stress (meditation as stress reliever).
2	Sinar Harapan daily	8 th April 1986, p. 6	Meditasi mengendalikan hip-ertensi (meditation to control hypertension)
3	Sinar Harapan daily	3 rd May 1986: 6	Meditasi meredakan asma (meditation relieving asthma)
4	Sinar Harapan daily	27 th June 1986: 6	Meditasi penangkal narko-tika (meditation overcome narcotics)

11	Majalah Kedokteran Indonesia	1990, vol. 40 (1): 69-72	Efek dan manfaat olahraga meditatif (effects and benefits of meditative exercise)

4.3. The expansion of mindfulness meditation in Indonesia

The widespread dissemination of meditation coincided with the massive rise of Taichi Qigong and breathing exercise campaigns during the same period.

Today, one of the most prominent mindfulness meditation organizations for health in Indonesia is Bali Usada, headquartered on Bali Island. The Bali Usada Meditation for Health Training Center was established in 1993 under the leadership of Master Yogi Merta Ada.³⁶

Bali Usada's main chant originates from the Buddhist aspiration:

"May all beings be happy" (*Sabbe sattā bhavantu sukhitattā*)

However, to ensure religious inclusivity, it has been modified to:

"May all live happily" (*Semoga semua hidup berbahagia*).

This adaptation exemplifies pragmatic flexibility in disseminating Dharma-based practices within Indonesia's pluralistic society. Bali Usada has hundreds

³⁶ Bali Usada. (n.d.). *Meditasi Kesehatan Bali Usada*. <https://baliusada.com/>

of thousands of followers, many of whom have experienced the healing benefits of mindfulness meditation, including help them going through the COVID pandemic.

Another well-known mindfulness meditation organization in Indonesia is the Dhamma Java Vipassana Meditation Center, located in Gunung Geulis, Bogor. This center teaches Vipassana meditation in the tradition of S.N. Goenka, following the lineage of Sayagyi U Ba Khin. Vipassana, one of the oldest meditation techniques from India (dating back 2,500 years), emphasizes perceiving reality as it is and is regarded as a universal remedy for suffering - a practice referred to as "the art of living."³⁷

Many Buddhist primary and secondary schools have also adopted and promoted mindfulness character building as their main pillar in educating students from all religious background. Please refer to Table-2 below for details.

V. THE ROLE OF DIGITAL HEALTH PLATFORMS IN PROMOTING MINDFULNESS

More recently, the Indonesian Ministry of Health has begun promoting mindfulness meditation through Alodokter, an online medical platform. Since its launch in 2014, Alodokter has become Indonesia's leading health platform, with:

- More than 30 million active users per month
- A network of 80,000 medical doctors

The platform provides reliable, accessible, and user-friendly health information to the public anytime and anywhere (*Alodokter*, [source](#)).

The Alodokter platform contains comprehensive content on meditation, including various methods and their health benefits, as summarized in Table-2.

Additionally, other nationwide platforms have contributed to the dissemination of mindfulness meditation for health and education to the general public, including:

- Halodoc
- Radio Republik Indonesia (RRI)
- Universities
- Primary and secondary schools
- Mental hospitals

These initiatives highlight the growing recognition of mindfulness meditation as a valuable practice for physical, mental, and emotional well-being across diverse sectors in Indonesia.

VI. NEXT STEPS FOR MINDFULNESS-BASED MEDITATIVE THERAPY

As Buddhism continues to spread westward, the relationship between Buddhism and medicine has once again taken center stage in cross-cultural exchanges. Scientific research into the mental and physical benefits of Buddhist meditation has been extensively conducted by institutions such as the Mind & Life Institute, various centers for Mindfulness-Based Stress Reduction (MBSR), and individual researchers in fields such as psychology, psychiatry, and neurology.

For instance, the University of Pennsylvania’s Mindfulness, Stress & Health Lab (source) is currently researching how mindfulness meditation can improve symptoms of stress, depression, and inflammation in adults living with HIV. Studies conducted by Penn researchers and other scientists have already demonstrated the positive effects of meditation, including:

- Reduction in stress, addiction, and depression
- Improvements in memory and attention
- Slowing of the aging process
- Enhancement of general well-being

These benefits are now widely recognized, and many popular books, magazines, and online resources on Buddhism in English highlight these findings as key reasons for adopting Buddhist practices.³⁸

6.1. Mindfulness therapy in Indonesia's healthcare system

In Indonesia, Government Regulation Number 28 of 2024 – which implements the 2023 Act on Health – has officially recognized spiritual health as a component of mental health, rehabilitative care, and palliative care. This marks a significant step toward integrating mindfulness and meditation therapy into the national healthcare system as a Dharma-based therapeutic approach.

A notable benchmark for such integration can be seen in Bhutan, a Buddhist country where the Medicine Buddha holds deep cultural and religious significance as the ultimate healer. In Bhutan, his iconography is present in all hospitals, wards, and clinics, as well as in both allopathic and traditional medical educational institutions. These images serve as focal points for cultivating mindfulness and promoting healing, symbolizing the holistic integration of medicine and spiritual well-being.

Additionally, Bhutan's public healthcare system provides patients with a genuine choice between biomedical and traditional treatments, often within the same medical facility.³⁹ This unique model highlights how modern medicine and traditional healing practices can coexist, offering insights for Indonesia as it moves toward establishing mindfulness-based therapy as a formal branch of healthcare.

6.2. Epilogue

Medicine, health, and healing have been integral to Buddhism since its origins. Long before the global popularity of mindfulness and meditation, Buddhism provided conceptual frameworks for understanding illness and introduced a wide range of therapeutic interventions for caring for the sick.

Today, Buddhist traditions, healers, and institutions continue to play a significant role in medical care, influencing various fields such as mental health, biomedicine, and even responses to the COVID-19 pandemic.⁴⁰

This article has explored the development of mindfulness-based Buddhist medicine in Indonesia, highlighting how it has been widely disseminated through pragmatic approaches in education and practice. These efforts contribute to the realization of compassionate and peaceful coexistence within Indonesia's pluralistic society.

MINDFULNESS IN EDUCATION FOR A COMPASSIONATE AND SUSTAINABLE FUTURE

Dr. Rupa B. Dangar (Gujarat-India)*

Abstract:

Education in the most advanced world frequently focuses on scholarly accomplishment over the capacity to appreciate anyone on a deeper level, moral mindfulness, and social obligation. Nonetheless, the Buddhist act of care offers a comprehensive way to deal with discovery that sustains both individual prosperity and aggregate concordance. Established in the Buddhist way of thinking, care cultivates mindfulness, flexibility, and sympathy — characteristics fundamental for making an additional fair and reasonable future. This paper investigates the job of Buddhist care in schooling, looking at its effect on understudies' close to home guideline, moral direction, and natural awareness. This study contends that training ought to go past regular information transmission to incorporate inward change. By incorporating Buddhist care rehearses, instructors can develop an age that focuses on shrewdness, sympathy, and manageability. A careful school system established in the Buddhist way of thinking holds the possibility to agreeably shape a future where individual prosperity and aggregate thriving coincide.

Keywords: *Buddhist mindfulness, education, compassion, sustainability, ethical awareness, interconnectedness.*

I. INTRODUCTION

Schooling in the cutting-edge world frequently focuses on scholastic accomplishment over the ability to appreciate people on a deeper level, moral mindfulness, and social obligation. Nonetheless, the Buddhist act of care offers an all-encompassing way to deal with discovery that sustains both individual prosperity and aggregate concordance. Established in the Buddhist way of thinking, care cultivates mindfulness, strength, and sympathy —

* Academician.

characteristics fundamental for making a quickly impacting world, Training should develop past regular information transmission to address the close to home, moral, and natural difficulties of contemporary society. The Buddhist practice of care gives a significant structure to encouraging inward harmony, social congruity, and maintainable living. Dissimilar to traditional instruction, which frequently stresses contest and outer accomplishment, care develops mindfulness, sympathy, and a profound feeling of interconnectedness with every living being. Buddhist care, established in the lessons of the Buddha, urges people to notice their contemplations and feelings without connection or judgment. This training upgrades center and profound guideline as well as supports moral direction and biological cognizance. By coordinating care into instruction, understudies can foster flexibility, the capacity to understand individuals at their core, and a promise to social and natural prosperity. Schools and colleges overall are progressively consolidating care programs, perceiving their positive effect on understudy psychological well-being, scholarly execution, and relational connections.

Besides, care lines up with manageability training by advancing consciousness of the interconnected idea of life. Buddhist standards, for example, non-hurting (*ahimsa*), right vocation, and careful utilization give moral direction to tending to worldwide difficulties like environmental change, social imbalance, and material overconsumption. By embracing care-based instructive methodologies, establishments can develop future pioneers who are mentally fit as well as morally and ecologically mindful.

This paper investigates the hypothetical and down-to-earth ramifications of incorporating Buddhist care into training. It inspects experimental investigations, case examinations, and philosophical points of view to feature how care adds to individual prosperity, social sympathy, and biological maintainability. At last, this study advocates for a groundbreaking instructive worldview where care fills in as a scaffold between inward turn of events and worldwide obligation, mineral just and supportable future. This paper investigates the role of Buddhist care in schooling, analyzing its effect on understudies' guidelines, moral navigation, and natural awareness. This study contends that instruction ought to go past traditional information transmission to incorporate inward change. By coordinating Buddhist care rehearses, teachers can develop an age that focuses on insight, empathy, and maintainability. A careful school system established in the Buddhist way of thinking holds the possibility to shape a future where individual prosperity and aggregate thriving coincide.

Objectives

- To investigate the Buddhist underpinnings of care and their importance in present-day schooling, accentuating lessons from the Pāli Group, Mahayana messages, and contemporary Buddhist researchers.
- To look at the job of care in encouraging empathy among understudies and teachers, drawing experiences from Buddhist morals and practices like adoring kindness (*Mettā*) and sympathy (*Karuṇā*).

- To dissect the effect of care put together instruction with respect to understudies' mental, close to home, and moral turn of events, involving Buddhist philosophical viewpoints as a directing system.
- To explore how care training adds to supportability by developing natural mindfulness, moral obligation, and interconnected thinking in accordance with Buddhist ecological morals.
- To evaluate existing care-based instructive projects and their arrangement with Buddhist standards, distinguishing qualities, difficulties, and regions for improvement.
- To propose a Buddhist-informed instructive model that incorporates care practices to support all-encompassing prosperity, moral initiative, and feasible living among understudies.
- To feature the drawn-out cultural advantages of care schooling established in the Buddhist way of thinking, including compromise, psychological well-being improvement, and natural stewardship.

II. UNDERSTANDING MINDFULNESS: A HISTORICAL AND CONCEPTUAL OVERVIEW

Care is an old practice with profound roots in the Buddhist way of thinking and contemplation customs. It has been broadly perceived for its capability to change human cognizance, advance mindfulness, and develop profound flexibility. In recent years, care has acquired expanding consideration in mental, clinical, and instructive fields because of its capacity to upgrade mental prosperity, mental capabilities, and relational connections. The consolidation of care into schooling is a developing development pointed toward encouraging scholastic greatness as well as the capacity to understand people on a profound level, moral mindfulness, and maintainable reasoning among understudies.

2.1. The foundations of Buddhist mindfulness

Care, known as *Sati* in Pāli, is one of the center standards of Buddhist practice. It is fundamentally examined in the *Satipaṭṭhāna Sutta* (The Talk on the Four Underpinnings of Care), where the Buddha frames an orderly way to deal with developing care. These four establishments include:

- i. Care of the Body (*Kāyānupassanā*) - Attention to actual sensations, breath, act, and real developments.
- ii. Care of sentiments (*Vedanānupassanā*) - Perception of feelings and sensations, whether charming, horrendous, or unbiased.
- iii. Care of the brain (*Cittānupassanā*) - Familiarity with mental states, considerations, and awareness.
- iv. Care of mental items (*Dhammānupassanā*) - Noticing contemplations according to Buddhist lessons (e.g., fleetingness, enduring, non-self).

Every one of these aspects gives a thorough system to mindfulness, close to home guidelines, and moral direction, which are all critical for instructive turn of events. Consolidating these care rehearses in homerooms can assist understudies with developing concentration, flexibility, and self-control.

2.2. The role of mindfulness in the Noble Eightfold

Way Care (*Sammā-sati*) is likewise one of the vital parts of the Respectable Eightfold Way, the directing system for moral and otherworldly advancement in Buddhism. The Eightfold Way incorporates:

- Right View (*Sammā-diṭṭhi*) - Figuring out the idea of the real world.
- Right Aim (*Sammā-saṅkappa*) - Developing healthy contemplations.
- Right Discourse (*Sammā-vācā*) - Talking honestly and generously.
- Smart Activity (*Sammā-kammanta*) - Participating in a moral way of behaving.
- Right Vocation (*Sammā-ājīva*) - Picking a calling that benefits society.
- Right Exertion (*Sammā-vāyāma*) - Pursuing self-restraint and positive routines.
- Right Care (*Sammā-sati*) - Creating present-second mindfulness.
- Right Fixation (*Sammā-samādhi*) - Accomplishing profound mental concentration and understanding.

Care in Current Brain research

Contemporary brain research has progressively perceived care as a strong mediation for upgrading mental prosperity. Jon Kabat-Zinn, a vital figure in present-day care research, created Care Based Pressure Decrease (MBSR), a program that applies Buddhist care methods in mainstream settings. Concentrates on mental brain research and neuroscience have shown that care upgrades prefrontal cortex action, further developing consideration guideline, drive control, and the capacity to understand people on a deeper level — which are all critical abilities for understudies.

Neuroscientific research has exhibited that care practice:

- Increments dark matter thickness in regions connected with learning, memory, and close to home guideline.
- Diminishes pressure and tension, working on understudies' capacity to adapt to scholastic difficulties.
- Upgrades mental adaptability, prompting better critical thinking abilities and imagination.
- Advances mindfulness and sympathy, cultivating positive companion connections and study hall elements.

These discoveries build up the possibility that Buddhist care can act as both a mental and moral preparation device in instructive settings.

In training, Right Care is especially huge because it improves understudies' capacity to focus, self-direct, and take part in moral thinking. When joined with different parts of the Eightfold Way, care turns into an apparatus for comprehensive turn of events, encouraging scholarly and moral development in students.

In training, care has turned into a huge device for cultivating profound equilibrium, further developing the capacity to focus, and upgrading growth

opportunities. It is incorporated into school educational plans overall through organized projects, for example, Care Based Pressure Decrease (MBSR) and Care Based Mental Treatment (MBCT). By presenting care in study halls, teachers plan to establish a learning climate that supports sympathy, moral thinking, and economical reasoning, which are all essential for tending to contemporary worldwide difficulties.

The Pertinence of Buddhist Care in Present-day Schooling

Buddhist care varies from mainstream care in its more extensive moral and philosophical aspects. In conventional Buddhist lessons, care isn't simply a mental procedure but a way to shrewdness and moral clearness. It is profoundly associated with other Buddhist standards like right exertion, right fixation, and right view, which all in all add to all-encompassing self-advancement.

With regard to instruction, Buddhist care can act as an establishment for moral and moral learning. It urges understudies to foster self-control, persistence, sympathy, and decisive reasoning, which are all fundamental characteristics for dependable worldwide residents. The development of right care (*sammā-sati*) assists people in perceiving their interconnectedness with others and the climate, cultivating a feeling of aggregate liability toward social and biological prosperity.

Moreover, Buddhist care lines up with contemporary mental hypotheses of learning and conduct. Concentrates on mental neuroscience have shown that care upgrades prefrontal cortex movement, which is answerable for direction, close to home guideline, and drive control. In instructive settings, this converts into working on self-guideline, strength, and flexibility among understudies, empowering them to really explore scholarly tensions and social difficulties.

III. THE ROLE OF MINDFULNESS IN CULTIVATING COMPASSION IN EDUCATION

One of the most significant commitments of Buddhist care to instruction is its capacity to develop empathy and moral obligation. Sympathy (*karuṇā*), in the Buddhist way of thinking, is the normal reaction to misery and is viewed as a critical calculation of individual and cultural change. Careful practices like adoring consideration contemplation (*mettā bhāvanā*) and sympathy reflection are intended to extend one's feeling of compassion and care for other people.

Care and sympathy are interconnected ideas that, when coordinated into instruction, encourage comprehensive understudy improvement, the ability to understand people at their core, and moral cognizance. Established in the Buddhist way of thinking, these practices urge a fair way to deal with discovering what develops mindfulness, graciousness, and a feeling of obligation toward others and the climate. This segment investigates the job of care and empathy in training, their mental and moral ramifications, common sense applications, and certifiable contextual analyses exhibiting their groundbreaking effect.

IV. DEFINING COMPASSION IN BUDDHIST PHILOSOPHY

In Buddhist lessons, empathy (*karuṇā*) is a focal moral standard. It alludes to the capacity to perceive the enduring of others and answer with certified care

and thoughtfulness. The Dalai Lama characterizes empathy as “an aversion to the enduring of others with a profound obligation to lighten it.”

The Four *Brahmavihārās* (Divine Homesteads) in Buddhism stress sympathy as a fundamental quality for individual and aggregate prosperity:

- i. Adoring Thoughtfulness (*Mettā*) - Wishing bliss and prosperity for all creatures.
- ii. Empathy (*Karuṇā*) - The longing to ease languishing.
- iii. Thoughtful Bliss (*Muditā*) - Celebrating in others’ joy and achievement.
- iv. Serenity (*Upekkhā*) - Keeping a decent brain in all circumstances.

When applied to instruction, these standards establish a learning climate that supports the capacity to understand people on a profound level, a moral way of behaving, and social congruity.

4.1. The relationship between mindfulness and compassion

Care (*Sati*) and sympathy (*Karuṇā*) are profoundly interconnected: Care upgrades mindfulness, empowering understudies and teachers to perceive their feelings and reactions without judgment. Sympathy broadens this mindfulness outward, reassuring generosity and grasping in associations with others. Logical exploration upholds this association:

- Neuroscientific concentrates on showing that care practice enacts cerebrum districts related to sympathy and profound guidance (e.g., the prefrontal cortex and insula).
- Mental exploration shows that careful people display more significant levels of sympathy, tolerance, and profound flexibility.
- Schools coordinating care-based sympathy programs report a decrease in harassment, uneasiness, and study hall clashes.

4.2. The role of mindfulness and compassion in student development

Upgrading the ability to appreciate individuals on a deeper level and Self-Guideline

The capacity to understand people on a profound level (EI) is a basic expertise for progress in scholastics, connections, and vocation improvement. Daniel Goleman, a trailblazer in EI research, distinguishes five key parts:

- i. Mindfulness - Perceiving and grasping feelings.
- ii. Self-Guideline - Dealing with feelings valuably.
- iii. Inspiration - Utilizing feelings to drive achievement.
- iv. Sympathy - Figuring out others’ sentiments.

4.3. Interactive abilities - Overseeing connections actually

Care and empathy preparing improve each of the five parts by:

- Assisting understudies with creating tolerance and versatility in unpleasant circumstances.
- Training self-guideline strategies to forestall imprudent responses.

- Empowering a development mentality that cultivates scholarly inspiration.
- Developing compassion, prompting more grounded peer connections and diminished clashes.

In this way, caring care changes schooling into a device for both self-awareness and social obligation.

V. FOSTERING ETHICAL DECISION-MAKING AND SOCIAL RESPONSIBILITY

Care and sympathy assume an urgent part in creating moral and moral thinking in understudies. Buddhist morals underline non-hurt (ahimsa), trustworthiness, and careful activities, rules that line up with moral training models around the world.

How care and empathy upgrade morals in schooling:

Empowering cognizant independent direction - Understudies figure out how to ponder the results of their activities prior to answering imprudently.

Diminishing animosity and clashes - Schools executing care programs report fewer episodes of tormenting and peer brutality.

Advancing civil rights and ecological mindfulness - Sympathy-driven schooling energizes a dependable way of behaving toward society and nature.

In an instructive setting, care assists understudies with fostering a more profound feeling of close-to-home mindfulness and relational responsiveness. Research has shown that care-based mediations in schools lead to:

- Decreased animosity and tormenting conduct
- Expanded prosocial ways of behaving like generosity, appreciation, and participation
- Further developed educator understudy connections, encouraging a more comprehensive and steady learning climate
- Improved capacity to appreciate anyone at their core, permitting understudies to answer clashes with persistence and seeing instead of reactivity

Instructors who incorporate care into their showing strategies likewise benefit from expanded self-empathy and stress the board abilities, prompting a more compassionate way to deal with understudy commitment. This shift is especially vital in the present high-pressure scholastic frameworks, where understudies and educators the same face uneasiness, burnout, and execution related pressure.

VI. MINDFULNESS AND SUSTAINABILITY: CREATING A CONSCIOUS FUTURE

Care and Manageability in Training

Manageability is one of the most squeezing worries of the 21st 100 years, influencing each part of human existence, including schooling. As the world wrestles with ecological corruption, environmental change, and asset

consumption, schooling should assume an urgent part in cultivating supportable practices. Nonetheless, supportability isn't only about moderating normal assets; likewise about developing a mentality that energizes moral obligation, interconnectedness, and careful living. This is where care, well established in the Buddhist way of thinking, turns into a fundamental device in molding an economical future. By coordinating care into schooling, establishments can impart in understudies a feeling of mindfulness, obligation, and sympathy toward both human social orders and the regular world.

Care, a training focused on present-second mindfulness and non-critical perception, improves a singular's capacity to pursue insightful and moral choices. With regard to maintainability, care assists understudies with fostering a more profound appreciation for nature, a feeling of obligation toward people in the future, and the capacity to take on economical ways of behaving in day-to-day existence. The Buddhist rule of *Pratītyasamutpāda* (related co-emerging) underscores that all creatures and normal components are interconnected. When applied to schooling, this idea urges understudies to see themselves as a component of a bigger natural framework where their decisions — what they consume, how they act, and how they interact with society — have sweeping outcomes.

This part investigates how care encourages manageability in schooling by upgrading attention to natural and social issues, advancing mindful utilization, and outfitting understudies with the profound flexibility expected to address maintainability challenges. It will likewise look at how careful instructive practices shape moral administration, pragmatic utilizations of care in manageability schooling, and contextual analyses from around the world that feature the viability of these methodologies.

The Association Among Care and Supportability

The connection between care and manageability is well established in the standards of mindfulness, sympathy, and moral obligation. Buddhist lessons underscore non-hurting (*Ahimsa*), balance, and care as key moral qualities, all of which line up with present-day manageability objectives. The act of care cultivates an intense familiarity with what individual activities mean for the more extensive environment. For instance, an understudy who rehearses care might turn out to be more mindful of inefficient utilization propensities, over-dependence on plastic, or the natural results of unnecessary meat utilization. This increased mindfulness normally prompts more manageable decisions, like decreasing waste, rationing energy, and supporting moral organizations.

Care likewise energizes self-restraint and limitation, critical characteristics in battling the consumerist attitude that drives ecological abuse. Numerous the most advanced social orders are profoundly settled in realism, where people frequently consume an overabundance, prompting unnecessary waste and asset consumption. By developing care, people figure out how to separate among needs and needs, cultivating a feeling of appreciation and happiness with what they have. Buddhist lessons advocate for the Center Way, a way of life that maintains a strategic distance from limits and advances balance. When

applied to maintainability, this implies taking on a reasonable way to deal with utilization, guaranteeing that assets are utilized carefully and dependably.

Logical exploration has progressively shown that care prompts more elevated levels of natural cognizance and support of manageability ways of behaving. Studies have shown that people who participate in normal care rehearses will quite often have lower carbon impressions, consume less, and participate in additional supportable ways of behaving, like reusing and preservation endeavors. Moreover, instructive organizations that coordinate care into their maintainability educational programs report expanded understudy commitment in ecological drives. By creating careful mindfulness, understudies comprehend manageability on a scholarly level as well as incorporate it as an individual worth framework, prompting long-haul conduct change.

Care and Practical Independent direction

Perhaps one of the best tests in accomplishing maintainability is the propensity of people and social orders to make foolish, accommodation-driven choices. Whether it is picking dispensable plastic over reusable other options, deciding on quick design, or focusing on monetary development over natural security, numerous impractical practices come from an absence of care in direction. Care helps address this test by encouraging a more purposeful and intelligent way to deal with decisions, guaranteeing that people consider the drawn-out effect of their activities as opposed to momentary comfort.

For example, a school that integrates care-based natural training might urge understudies to stop and reflect prior to settling on decisions about utilization. Prior to buying another item, understudies can be directed through careful request: Do I truly require this? How was this item made? What are the ecological and social outcomes of my buy? This sort of careful reflection normally prompts more moral and supportable decisions, lessening inefficient utilization designs. Essentially, care rehearses in navigation can be applied to regions, for example, food utilization, energy use, and transportation decisions, empowering people to take on ways of behaving that are both economical and sympathetic.

Moreover, care assumes a key part in advancing moral authority, which is pivotal for accomplishing huge scope supportability objectives. Careful pioneers are bound to focus on long-haul manageability over momentary benefits, advocate for arrangements that safeguard the climate, and motivate others to embrace dependable practices. A few colleges overall have presented care-based supportability initiative projects, which train future policymakers, business pioneers, and natural activists to move toward decision-production with lucidity, empathy, and moral trustworthiness. These projects have shown that people prepared in care are bound to foster creative, reasonable arrangements and encourage cooperative ways to deal with ecological difficulties.

Pragmatic Uses of Care in Supportability Training

Instructive establishments all over the planet are progressively

incorporating care into sustainability programs through educational program changes, experiential learning, and institutional approaches. A few powerful procedures include:

i. Care-Based Natural Morals - Schools can integrate care rehearses into morals courses, assisting understudies with figuring out the ethical components of maintainability and ecological obligation.

ii. Eco-Care Retreats - Understudies can take part in open-air care withdraws where they participate in directed reflection, nature strolls, and manageable residing rehearses. These encounters cultivate a profound, special interaction with nature and support practical ways of behaving.

iii. Feasible Utilization Practices - Schools can present care-based programs that urge understudies to think about their day-to-day utilization designs and foster cognizant utilization propensities.

iv. Local area Commitment Activities - Care-based maintainability schooling can stretch out past the homeroom by including understudies in local area drove ecological drives, for example, tree planting, tidy up drives, and preservation programs.

By coordinating these practices, instructive establishments can make a culture of care and manageability, guaranteeing that understudies comprehend ecological issues as well as effectively add to arrangements.

Care and manageability are profoundly interconnected, both in ways of thinking and practice. By encouraging mindfulness, moral direction, and close-to-home versatility, care engages understudies and teachers to embrace feasible ways of life that go outside scholarly ability to grasp down-to-earth, ordinary application. As instructive establishments embrace care-based supportability programs, they develop an age of cognizant, empathetic, and dependable people who are focused on safeguarding the two individuals and the planet. Despite developing natural difficulties, care offers a way toward a more maintainable and amicable future, guaranteeing that instruction grants information as well as sustains the qualities essential for enduring change.

Past private and social prosperity, care can impact supportable reasoning and natural obligation. The Buddhist idea of reliant beginning (*pratītyasamutpāda*) instructs that all peculiarities, including human existence, exist in a trap of interconnected connections. This understanding cultivates an eco-cognizant attitude, empowering people to make moral decisions that add to natural maintainability.

In schooling, care-based supportability programs plan to:

- Energize eco-mindfulness by cultivating careful utilization and waste decrease
- Foster a feeling of planetary obligation by coordinating care with ecological morals
- Advance reasonable way of life propensities, like careful eating, eco-accommodating decisions, and moderation

- Diminish eco-nervousness by assisting understudies with moving toward environment-related worries with clearness and versatility

Studies have shown that care upgrades are supportive of natural mentalities and ways of behaving by moving people according to narcissistic viewpoints to a more extensive biological cognizance. Schools that integrate care into their supportability endeavors frequently report expanded understudy cooperation in ecological drives, for example, protection projects, zero-squander missions, and tree-establishing exercises.

VII. DEVELOPING A BUDDHIST-INSPIRED MINDFULNESS MODEL FOR EDUCATION

Training today faces various difficulties, going from pressure and psychological wellness worries among understudies to an absence of moral establishing in learning. In a time driven by quick mechanical progressions, cutthroat tensions, and natural emergencies, the requirement for a comprehensive, moral, and economical instructive model has become more earnest than at any other time. A Buddhist-enlivened care model for instruction offers a groundbreaking methodology, incorporating mindfulness, sympathy, moral discipline, and intelligence into the growing experience. Not at all like regular care models that fundamentally rely on pressure decrease, a Buddhist structure installs care inside a more extensive philosophical and moral setting, advancing inward harmony, moral living, and social obligation.

The center standards of Buddhism — care (*Sati*), insight (*Prajñā*), and moral direct (*Śīla*) — can act as the establishment for a care based instructive model that encourages mental abilities as well as the capacity to understand people on a profound level, flexibility, and a profound feeling of interconnectedness with society and nature. This segment investigates how a Buddhist-propelled care model can be planned and executed in instructive foundations, its effect on understudies and teachers, and pragmatic systems for coordinating it into the cutting-edge educational program.

Center Buddhist Standards in Schooling

7.1. The job of care (*sati*) in learning

Care (*Sati*) is the foundation of Buddhist work, underscoring second-to-second mindfulness and profound commitment to one's viewpoints, activities, and environmental elements. In an instructive setting, care improves consideration, center, and mental clearness, permitting understudies to handle data successfully and draw in with learning materials in a significant way.

Present-day understudies frequently battle with interruption, tension, and data over-burden, prompting unfortunate maintenance and scholastic burnout. A Buddhist-roused care model develops a condition of loosened up sharpness, where understudies remain completely present in the educational experience without being overpowered. Careful learning includes:

Deep listening – Empowering understudies to listen mindfully to educators, peers, and their contemplations without judgment.

Focused attention – Preparing understudies to support consideration during talks, conversations, and self-study.

Reflective thinking – Advancing self-request and consideration as a feature of the educational experience.

A few examinations on care in schooling have shown that ordinary care practice further develops focus, profound guidelines, and scholarly execution. Schools that integrate care-preparing into everyday timetables report expanded understudy commitment and diminished feelings of anxiety.

7.2. Moral discipline (śīla) and character improvement

Buddhism puts extraordinary accentuation on moral discipline (Śīla), which alludes to developing moral ideals and a mindful way of behaving. Not at all like customary instruction, which frequently focuses on scholastic accomplishment over character improvement, a Buddhist-motivated care model incorporates moral preparation into the growing experience.

Key moral qualities from Buddhism that line up with instructive objectives incorporate:

Non-harming (Ahimsa) - Empowering consideration, compassion, and regard for all creatures.

Truthfulness (Satya) – Advancing trustworthiness and honesty in scholar and individual life.

Right Speech and Right Action - Encouraging deferential correspondence and moral independent direction.

Mindful Consumption – Training understudies to be aware of material utilization and natural obligation.

By integrating moral care into schooling, understudies foster areas of strength for a compass, which directs their way of behaving both inside and past the study hall. Research proposes that schools accentuating character training close by scholastic learning produce understudies who are all the more socially dependable and sincerely adjusted.

Pragmatic procedures for incorporating moral care into instruction include:

Mindfulness-based ethics discussions – Drawing in understudies in conversations about moral situations and moral direction.

Compassion-focused meditation – Developing sympathy through cherishing consideration (*Metta*) rehearses.

Service-learning projects – Empowering understudies to partake in local area administration and natural manageability drives.

By cultivating moral mindfulness, a Buddhist-roused care model sustains empathetic, socially dependable people who contribute emphatically to society.

VIII. WISDOM (PRAJÑĀ) AND CRITICAL THINKING

Shrewdness (*Prajñā*) in Buddhism isn't only scholarly information but a savvy comprehension of reality that emerges from profound thought and

mindfulness. Present-day training frequently accentuates retention and government-sanctioned testing, generally ruling out decisive reasoning and self-reflection. A Buddhist way to deal with schooling urges understudies to develop intelligence through request, reflection, and experiential learning. Incorporating Buddhist epistemology into education helps students develop:

Self-awareness – Grasping their contemplations, feelings, and inspirations.

Interconnected thinking – Perceiving the association of all information and peculiarities.

Critical inquiry – Addressing suppositions and looking for more profound comprehension.

A Buddhist-motivated care model advances Socratic discourse, experiential learning, and thoughtful request, guaranteeing that understudies obtain information as well as foster the capacity to apply it seriously in their lives. Schools and colleges that integrate intelligent practices into their educational programs report more elevated levels of understudy commitment, imagination, and autonomous reasoning.

IX. DEVELOPING A BUDDHIST-INSPIRED MINDFULNESS CURRICULUM

9.1. Day-to-day care practices

An organized care routine coordinated into the school day can assist understudies with fostering a predictable care practice. Schools can carry out:

Morning mindfulness sessions – Five to ten minutes of reflection to begin the day with lucidity and concentration.

Mindful breathing exercises – Short breathing practices when classes to keep up with mindfulness.

Silent reflection periods – Committed time for self-request, examination, or journaling.

These practices establish a quiet and centered learning climate, diminishing uneasiness and further developing understudy prosperity.

9.2. Scrutinizing learning and experiential instruction

Experiential learning upgrades commitment, maintenance, and more profound comprehension. A Buddhist-propelled care model integrates:

Mindful reading and writing – Empowering understudies to peruse texts gradually and reflect profoundly.

Contemplative discussions – Engaging in dialogues that promote awareness and ethical reasoning.

Nature-based mindfulness – Outside learning exercises that cultivate an association with the regular world.

By moving from a detached figuring out how to experiential, intelligent schooling, understudies foster an all-encompassing comprehension of information.

9.3. Teacher training in mindfulness-based education

For care to be successfully incorporated into schooling, instructors should go through specific preparation. A Buddhist-roused model incorporates:

Mindfulness teacher training programs – Teachers figure out how to apply care in teaching methods.

Compassion-based classroom management – Preparing educators to deal with study hall elements with sympathy and persistence.

Personal mindfulness practice for teachers – Empowering instructors to develop their own care practice for prosperity.

At the point when instructors encapsulate care, sympathy, and insight, understudies normally assimilate these qualities. Research shows that careful instructors make more comprehensive, aware, and successful learning conditions.

9.4. Implementing Buddhist mindfulness in schools

9.4.1. Bhutan's gross public bliss schooling model

Bhutan incorporates Buddhist care standards into its school system, zeroing in on all-encompassing prosperity as opposed to scholarly accomplishment alone. Understudies practice everyday reflection, moral thinking, and ecological care, bringing about more significant levels of understudy fulfillment and close-to-home prosperity.

9.4.2. Care-based training in Thai religious schools

Buddhist religious schools in Thailand consolidate care, moral preparation, and local area administration into their educational plans. These organizations produce understudies areas of strength for with values, flexibility, and social obligation.

9.4.3. Care in Western Colleges

Organizations like Harvard and Oxford have presented care-based initiative projects roused by Buddhist standards, assisting understudies with creating moral critical thinking abilities and the capacity to appreciate anyone on a deeper level.

A Buddhist-enlivened care model for training offers a groundbreaking way to deal with picking up, encouraging scholarly greatness, moral obligation, and close-to-home prosperity. By coordinating care (Sati), moral lead (Śīla), and intelligence (Prajñā), training can move from a simple information-based framework to one that supports mindfulness, sympathy, and supportability. Executing this model requires institutional responsibility, educator preparation, and educational program change; however, its effect is significant — forming understudies who are mentally competent as well as careful, moral, and connected with worldwide residents. In a world confronting expanding social and natural difficulties, a Buddhist-roused instructive model gives a way toward a more empathetic, feasible, and illuminated future.

X. CONCLUSION

Integrating mindfulness into education offers a promising pathway toward fostering a compassionate and sustainable future. Mindfulness practices

enhance students' emotional regulation, resilience, and academic performance, thereby contributing to a more empathetic and effective learning environment.

10.1. Benefits of mindfulness in education

Emotional Regulation and Resilience: Mindfulness equips students with tools to manage stress and recover from challenges, leading to improved mental health and well-being. Research indicates that students with mindfulness and compassion skills experience less stress and learn more from challenging experiences.

Academic Performance: Mindfulness practices are positively related to resilience, which in turn enhances academic performance. Being mindful is considered a key competence in education for sustainable development, allowing students to face their education with a greater capacity for personal growth.

Sustainable Consumption and Compassion: Mindfulness training can cultivate introspective abilities, facilitating learning processes that are conducive to sustainable consumption and compassionate behavior. This approach aligns with the Sustainable Development Goals by promoting responsible consumption and fostering a compassionate mindset.

10.2. Implementing mindfulness practices

Teacher Training: Programs like the Cultivating Awareness and Resilience in Education (CARE) initiative provide teachers with mindfulness-based professional development, enhancing their social and emotional competence and improving classroom interactions.

Student Programs: Introducing mindfulness practices in schools can transform classrooms into emotionally safe spaces, increasing feelings of connectedness and promoting higher autonomy in learning.

In conclusion, embedding mindfulness into educational frameworks not only supports individual growth but also cultivates a compassionate and sustainable future by fostering empathy, resilience, and responsible behavior among students.

MINDFULNESS IN EDUCATION FOR A COMPASSIONATE, CONSIDERATE, AND SUSTAINABLE FUTURE: INTEGRATING BUDDHIST WISDOMS TO MODERN TEACHING TO PROMOTE COLLECTIVE WELLBEING AND AWAKENING

Dr. Tanushree Sharma*

Abstract:

The paper explores the intersection of Buddhist wisdom and modern education, emphasizing how mindfulness can transform pedagogy, foster ethical awareness, and promote a balanced approach to knowledge acquisition. It argues that contemporary education must integrate spiritual and philosophical insights from Buddhist traditions to cultivate moral integrity, emotional resilience, and collective well-being. The authors highlight the historical roots of Buddhist education, its focus on wisdom (*paññā*), ethical conduct (*sīla*), and mental discipline (*samādhi*), and how these principles remain relevant in addressing challenges in today's fast-paced, technology-driven learning environments. A key contribution of the paper is its critique of neoliberal influences on education, which often prioritize market-driven outcomes over holistic human development. By advocating for a mindfulness-based approach, the authors propose an educational paradigm shift that nurtures self-awareness, social responsibility, and intercultural harmony. Furthermore, the paper presents the Noble Eightfold Path as a blueprint for ethical learning, reinforcing the idea that true education should transcend mere information transmission and inspire learners towards moral and intellectual excellence. Through a critical examination of Buddhist epistemology and pedagogy, the paper underscores the urgency of reshaping modern education systems to align with the ethical and philosophical foundations of Buddhist thought,

* Amity University Uttar Pradesh, India.

ensuring that future generations are equipped not only with knowledge but also with the wisdom to apply it for the betterment of humanity.

Keywords: *Buddhism, mindfulness, compassion, sustainable future.*

I. INTRODUCTION

Education is one of the foundational aspects of a well-functioning society. The Term Education has been ascribed different definitions, but none of them have given an exact meaning and answer to the term 'Education', at present. Education, like philosophy, is also closely related to human life. Therefore, being an important life activity, education is also greatly influenced by philosophy. Various fields of philosophy, like political philosophy, social philosophy, and economic philosophy, have great influence on the various aspects of education like educational procedures, processes, policies, planning, and its implementation, from both the theoretical and practical aspects.

Human Beings are rational beings on Earth, and they have the ability to think and reason more so than other beings. Bhāgavad Gītā and Early Buddhism, undoubtedly the best-known philosophical traditions of India. Even though they seem to hold mutually opposed points of view in relation to some major philosophical questions such as those of God, Idol Worshipping, Soul, Scriptural authority, etc, they are both held in very high esteem and are acclaimed for their Moral earnestness, Spiritual insight, and Philosophical profundity. Buddhism is the pinnacle of the world's philosophy, and it stipulates the paramount path towards ultimate happiness, perfection in life with the understanding of the Philosophy. The approach towards education in Buddhism has a holistic approach towards human life that leads to a personality transformation integrating the highest form of humanity through ethical, intellectual and spiritual perfection.

Chin kung, in his book 'BUDDHISM AS AN EDUCATION' mentions that wisdom is the goal of Buddhist education and all human beings inherently possess the potential to obtain this goal. In Buddhist philosophy, wisdom is not just about acquiring knowledge or intellectual understanding but also about cultivating a profound insight into the nature of reality. It involves developing a clear and discerning mind that can see things as they truly are, unobscured by ignorance, delusions, and misconceptions. However, being restrained by unawareness, one cannot apprehend their innate nature. Therefore, Buddhist education aims to help regain and cultivate a strong foundation of moral principles and values, such as compassion, honesty, and non-harming the intrinsic nature of human beings (Kung, n.d.).

For instance, as the necessities adjust so must there be a modification in the education, worsening which the organization will mechanically be superfluous. The structure of development of society is principally perceived in the educational covetous to get it, transmitted from educational boundaries to society at considerable size. An endeavour through this paper to epitomise the Buddhist tradition, Evolving concentration, mindfulness, and awareness through various meditation practices, such as mindfulness of breath, body,

and emotions which is considered as a source of knowledge and wisdom specifically in, depictions about Ethics and beliefs of Buddhist philosophy and ideology, mindfulness as a pre-requisite in modern education, society, reality, self, perception and existence as well as their implications on alternative educational practice human suffering and its continuities.

II. FUTURE OF MODERN EDUCATION: PERSONALIZED, MINDFUL, AND ACCESSIBLE

Education is a key element in the development of any country. Rapid expansion in Education can lead to overcrowding and resource constraints, including inadequate infrastructure, insufficient funding, and shortages of qualified teachers. Multiple dynamics and structures define a Society. A society is a complex and multifaceted entity that is shaped by a variety of dynamic and structural factors. The everyday interactions and relationships between individuals and groups that shape a society's culture, values, and beliefs that shape the behaviour and interactions of individuals within a society.. The rapid development of advanced technology has created the challenge of complicated changes in life styles, values, behaviours, and ethics Therefore, the problems of a society uncertain of itself, are extending into the educational institution and ascribe to education a decisive role in the development of a culture of high quality dialogue, to promote effective and efficient intercultural dialogue. The movement of individuals and groups within a society's social hierarchy can be influenced by factors such as education, economic opportunity, and social connections. The design of a new culture involves creating a set of shared values, norms, and practices that shape the behaviour and interactions of individuals within a community or society emerging then through education and, as such, the educational reality in the world reveals new needs and new grounds to learn. In the era of the third millennium, remarkable changes are spreading that affect lifestyles at the end of this last century, characterized by the fusion of cultures. In particular, the world of education has historically possessed the means to solve problems and manage conflicts; from here, to know what kind of relationship is to detect between culture, dialogue, and education, without forgetting, however, that the real task of education has always been highly social and cultural.¹

At that time, societal activities were both supportive of, as well as supported by science practices. The positive side was that it enabled the science to work such that it influenced individual moral and spiritual evolution, besides fostering morals and higher values. But compared to that system the present system is not very supportive of science practices and is found to be significantly deteriorated. It was argued that the current science practicing ideology is strongly acting against the individual's inner moral and spiritual

¹ Cited In *Beliefs And Behaviours In Education And Culture: Cultural Determinants And Education* (Coord.: Marius-Mircea CrişAn, Roxana-Andreea Toma. – Bucureşti: Pro Universitaria, (2016); Quoted By Norma Zakaria, Ed; *Essays On Educating For The Culture Of Dialogue, A Challenge For The Dialogue Of Cultures*, p. 11.

unfolding and fulfilment (Witz, 1996). Such opposing ideology may restrict an individual from appreciating the goodness and beauty of life and truth. Thus, it cannot provide proper orientation and bases for a sound mind in a sound body that upholds morals and values, which were historically provided by society, religion, traditional cultural values, and moralities.² The mistake is not to pay more attention to our mental consciousness. Entire generations have been brought up with a materialistic outlook in a materialistic culture and way of life. Although they want to live in peace, they don't know how to tackle their destructive emotions, which are their biggest obstacle.

Education is a human endeavour that has been a cornerstone of human progress and development throughout history. It is a complex and multifaceted process that involves the transmission of knowledge, skills, and values from one generation to another. Since the 19th century rapid science and technological advancements, the use of technology and data to provide personalised learning experiences tailored to individual students' needs and abilities. Many Individuals, particularly in disadvantaged communities, lack access to quality education due to factors such as poverty, location, and social status. In ancient India, where religion was the focus of all activities, its educational focus was directed towards the students' needs of religious and spiritual development. Mahatma Gandhi, the father of Basic Education, considers education as a means to develop man. He said, "By education I mean an all-round drawing out of the best in child and man-body, mind and spirit."³ The terms 'moral' and "ethics" denote the idea of custom: An ethical issue is "relevant if it is one that any thinking person must face."

His Holiness Dalai Lama has some amazing insights on the importance of Buddhism in Education. He believes that Education should not only focus on academic achievement but also on developing Hearts and Minds. He emphasizes the need for a more holistic approach to education, one that combines intellectual and emotional development. "We need to improve the current education system by introducing instructions on ways to cultivate positive emotions like warm-heartedness. Relying on religious tradition won't appeal to everyone. We need a more universal approach based on common experience, common sense and scientific findings". The Dalai Lama suggests that by incorporating Buddhist values and principles into Education, we can help children develop a sense of empathy, compassion, and responsibility, which are essential for creating a more harmonious and peaceful World. His Holiness drew attention to ancient Indian traditions that deal with concentration and insight, shamatha and vipashyana, that have accumulated profound understanding of the workings of the mind. The Buddhist texts also

³ Aggarwal, J. C. (1999). *Theory And Principles Of Education: Philosophical And Sociological Bases Of Education*. New Delhi, India, Vikas Publishing House, p. 237.

are full of references, which very clearly bear out the fact that Buddhism upholds the path of Knowledge (jñānamārga). The attainment of enlightenment or Nibbāna, liberation from transmigration, the understanding of the Four Noble Truths, the practice of the Eightfold Noble path, etc., all fundamentally depend on the path of knowledge. These high attainments of Buddhist culture can be accompanied only by the exercise of Knowledge.

Preceding the nineteenth century, science in ancient India was a thriving field that made significant contributions to various disciplines. The ancient Indian scientist and their contributions to various disciplines, including ancient Indian scientists and their contributions, and ancient Indian scientific texts all demonstrate the rich and fascinating history of Science before the nineteenth century. Science observes existed galloped on ethical and conscientious moral values beside an escalation of philosophical and metaphysical aspects of science education. A solo article of earliest Indian has existed in the course of its history supplementary by devout beside radical, or moneymaking influences. Although these terms have dissimilar heritages, philosophers use these footings interchangeably.

According to Peter Singer,⁴ Agendas reflecting Moral values, ethics, and mindfulness in schools arise within and are influenced by broader neoliberal structures and ideologies. Although the aim of public education is not intended to be about profitability, productivity, and consumption per se, it is nevertheless a contested site that is subject to market forces and demands. The fundamental principles of social, political, and economic life were welded into a comprehensive theory, which is called Religion in Hindu thought. Like the culture and traditions of India, the system of education also has a rich history of its own. The knowledge acquired by people of ancient times was passed on from one generation to another and is reflected even in the teachings of today. Dr. R. K. Mukherjee said, “Learning in India through the ages had been prized and pursued not for its own sake, if we may so put it, but for the sake, and as a part, of religion. It was sought as the means of self-realization, as the means to the highest end of life, viz. Mukti or Emancipation”. Ideals and values of the then society. In the history of Indian thought, knowledge has occupied an important position since ancient times. This characteristic could easily be recognized in Vedic literature. As rituals were everything to the Indians of Brāhmaṇas, so knowledge was everything to the Indians of Upaniṣads. Knowledge was thus of supreme value for the Brāhmaṇa of Upaniṣads, whether in speculation or practical life. There is no evil deed for ‘one who knows thus.’ Knowledge will cancel all sins and crimes that he commits. Morality and ethics are thus absolutely void its value before knowledge. Later on, the idea was somewhat modified. Morality and good conduct were declared to be requisite as knowledge. Buddhism gives the highest regard for wisdom (paññā) and purity (visuddhi) of the mind from mental defilements, and the worst condemnation

⁴ Singer, P. (2013). *The point of view of the universe: Sidgwick and contemporary ethics*. Oxford University Press, p. 98.

for ignorance. Wisdom is not something that is accumulated, but it comes from deep reflection. In Buddhist terms, the knowledge acquired by learning is called “*sutamaya ñāṇa*”. The other two are “*cintamaya ñāṇa*” - the knowledge acquired by thinking- and “*bhavanāmaya ñāṇa*” - the knowledge acquired through practicing meditation. Based on three Buddhist principles of learning and training: higher virtue (*adhisīla-sikkhā*), higher mind (*adhicitta-sikkhā*), and higher wisdom (*adhipaññā-sikkhā*), the various practices of the eightfold path are intertwined. They are all relevant and important practices on the path of ethics. The other two essential fundamentals are Bodhicitta and Shunyata. Bodhicitta in all of its forms is about allowing compassion for others to lead us all to wisdom by releasing us from the fetters of self-clinging. Shunyata is a fundamental belief that nothing exists independently. It is akin to the idea of everything being connected.

Knowledge is consequently considered as crucial to Buddhist philosophy, besides on the further influence ignorance is observed upon as one of the furthestmost repugnant iniquities.⁵ Buddhist comprehension is constantly meticulous through honest integrity and ethics. Human beings have the distinct entitlement and prerequisite of holding intellectual power, of questioning their position, and so on. If anyone is stimulated to this locus of inquisitorial of one’s suffering, one is not an unflawed human being. Buddhist Education is a holistic approach to learning that aims to cultivate the mind, body, and spirit. The basic principles and ideologies are rooted in three-fold training causes as *sīla*, *samādhi*, and *paññā*. Morality (*śīla*) is the practice of ethics and morality, which includes the cultivation of virtues such as compassion, honesty, and nonviolence. Meditation (*samādhi*): The practice of mental discipline, which includes the cultivation of virtues such as concentration, mindfulness, and wisdom. Wisdom (*paññā*): The practice of developing a deeper understanding of the nature of reality, which includes the cultivation of insight into the impermanent, suffering, and non-self-nature of all phenomena. Buddhism fixes proliferation and design to help individuals develop wisdom, ethics, and mental discipline on the lines of doctrines of education as *pariyatti*, *paṭipatti*, and *paṭivedha* that formulates the basis of the various schools of philosophy of Buddhist education. *Paṭipatti* and *pariyatti* are well-thought-out as the practicalities of education since they stand phase’s principal to liberation. Since this ancient standpoint, we can attain an educational arrangement, consuming methodical procedures, such as: the *nissaya*-method and *katha*-method. *Nissaya* developed fundamentals when Buddhist learning was exclusive in the monastery, whereas *Katha* turned out to be indispensable whilst the *vihara* established the *Māha-vihara*. *Nissaya* – are the approaches expended with beginner levels, implemented as with the monastic educational system. This process grasps the instructor foremost above the pupil. It is described by handover of realisation in which the scholar collects dharma-authority by the instruction of monks (*Vinaya*), moral stories

⁵ Upadhyaya, K. N. (2008). *Early Buddhism And The Bhagavadgita*. Delhi, Motilal Banarsidass, p. 152.

(*jātaka*), or basics of Buddhadharma. These are to be remembered through and through chanting.⁶ Consequently, those who commence to question wherefore they are suffering or where they emanated from and where they will go after death, are inquisitive to comprehend the metaphysics of life. It is not allowed to ascend as spontaneously as it delights, as in the Upaniṣads and other Indian philosophical schools emerged later on, the later form of Buddhism being included. Being inquisitive about the knowledge of life is a fundamental aspect of human nature. It is a driving force that propels us to explore, discover, and understand the mysteries of existence. Curiosity is rooted in our desire to make sense of the world, to find meaning and purpose, and to navigate the complexities; however, in Buddhism, knowledge and virtue are acknowledged, and a bearer of knowledge is well-thought-out to be righteous, or an intelligent man is anticipated to be respectable. Although ethics has reacted to social problems (as has philosophy in general), this reaction was mostly abstract and indirect. The difference between traditional and applied ethics lies in the latter's direct approach to social problems.⁷

When it comes to self-improvement, we know a lot of approaches. To get fit, you eat right and exercise. To grow in physical strength, you must train and lift weights. To improve your memory, you must get enough sleep and intentionally learn new things. Education is a persuasive step in continuing to be competitive and enhancing your skills. Whether you're starting your career or frequent to continue to build upon your years of experience, tracking educational training helps you keep moving forward.⁸ During the ancient period, Taxila was undoubtedly the most advanced place of learning in India. The mode of Education was unique and advanced. Distinctive from earlier Gurukuls, Taxila and Nalanda attracted foreign students.. It played a significant role in the development of Buddhist philosophy, Vedic Studies, Ayurveda, mathematics, astronomy, logic, debates, and discourses. By the 7th century BC, it was a famous seat of learning, "attracting scholars from distant cities like Rajagriha, Banaras and Mithila".⁹ Advanced change in the quality of education was during this period, which can be seen by the fact that "Whoever learns by heart, writes, observes, asks questions and waits upon the learned, has his intellect developed like a lotus by sun's rays. Education is designed to educate man intellectually, physically, spiritually, morally, and accomplishing on practically.¹⁰ Buddhists had the concept of monistic colleges back then, which were neither sectarian in their outlook nor purely theological in their courses. Buddhist philosophy played an important role in their scheme of education, but due attention was also given to the study of the religion and philosophy of the different sects in

Hinduism and Jainism. However, the legacy of these Buddhist monastic colleges continues to be felt, with many of them still standing today as testaments to the rich cultural and spiritual heritage of India.

Chinese scholar “Yuan Chwang” spent in studying the Hindu religion and philosophy in Buddhist monasteries here in India. It is said: “The education was not confined only to theology, philosophy and logic but Sanskrit literature, medicine, astronomy-cum-astrology, and works on polity and administration. This puts them excel them in a good position in debates. However, Buddhist education was far from cramming of texts.¹¹ The Buddhist, to attain high culture must, first of all, be a moral man. ‘Establishing himself on morality, an intelligent man cultivates concentration of the mind and knowledge; the ardent and prudent monk will extricate that entanglement.’¹² “One who is always in the exploration of the human existence, including the nature of consciousness, the meaning of life, and something greater than oneself, possession of morality and knowledge, who is well tranquillized, energetic and, cross the flood of transmigration hard to cross”.¹³ A willingness to ask questions, seek answers, and explore new ideas through consciousness. The Buddha esteemed knowledge very highly, but he does not place it above morality, as Upaniṣads do; nor does he identify knowledge with morality. They always go together, and the latter leads the way. This is the general Buddhist notion of the relationship between knowledge and morality.¹⁴

The mandate of Buddhist culture stayed none merely for nonphysical and conscientious training and learning nevertheless also for scientific and methodical education and learning. In Observance of the prosperity of humanity in sight, Buddhist monasteries integrated the methodological and devout Guidance with education. The scholar is obligated to experience a practical course of the particular subject even after completing his study. In this assembly, with the instance of Jivaka. That is why it is commented, “It is apparent, consequently, that the learning centres puffed nationalised ethos and create group ecstatic, and the petition for the information of mechanical and methodical education laterally with religious and all-purpose education was satisfied. The division between both the secular and religious knowledge, of practical and philosophical subjects thus enters the curricula of Buddhist ten students under his charge.”¹⁵

The theme staples of analysis exist in the Buddhist traditions and moral fables. In Buddhism, around two traditions that lead to the life of a monk: one necessitates unceasing meditation, this is entitled ‘Vipassana Dhura’ and the additional revising and schooling the Dhamma that is entitled ‘Gantha Dhura’. Amid this twofold practice, it is requisite on every monk to yield up some of

these customs in harmony with his disposition, environment and intention. The prospectus of the monastics involved what were termed as Suttanta, Dhamma, and Vinaya, together with Suttas and Sutta-vibhanga. Vipassana Dhura is observed whilst the powerful practise of purging one's speech, action and thought. Buddha warns against the bookish learning of a monk as: "Though he narrates the sacrosanct texts a lot, but entertainments not consequently that oblivious man is like a cowboy reckoning other's cattle and not obtaining the products of the cow. He shares not the fruits of the tranquil man".¹⁶ This undoubtedly signifies that even if an individual develops expert intellectually subsequently erudition by heart from the texts, but he has yet to practice of what has been heart and learnt by him using following the right path. He remains only a learner until he completes the whole process.¹⁷

III. ESSENTIAL PERCEPTION OF BUDDHIST ETHICS

Buddhist ethics, consequently, consume an adjacent connotation through a social philosophy. This social viewpoint is similarly abundantly established. We devise in the Buddhist texts an interpretation of the description and origin of the group and the foundations of social transformation. There is also a relation between the nature and purposes of government, the arrangement of the supreme social direction, and how it is possible to be fetched approximately. Buddhist ethics are not subjective ideals developed by man for his utilitarian purpose. Nor are they arbitrarily imposed from without. Man-made laws and social customs do not form the basis of Buddhist ethics. Buddhist ethics treasures the situation basis not on the everchanging social imposts however relatively on the invariable laws of nature. In Buddhism, the concept of karma refers to the idea that an Individual's actions have consequences that affect their future experiences. Buddhist ethical standards are essentially a fragment of nature and the invariable and unchangeable law of cause and effect (kamma). The humble statistic that Buddhist ethics are engrained in biological decree marks its ideologies equally convenient and suitable to the modern world.¹⁸ In Buddhism, the actions of man are three-fold: bodily action (kayakarma), vocal action (vacikarma), and mental action (manokarma).¹⁹ The concept of Kamma is based on the principle of cause and effect, where every action, thought, and intention has an impact on the Individual's future. It is this three-fold action of man that reasons and bases him to meander in samsāra; and respectable actions are those that subsidise towards life being more pleasurable and contented here (ditthadhammasukha) as well as grant happiness in the world to emanate (samprayahita). The Buddhist concept of Kamma is often summerized by the phrase "what you sow, you reap." An action done with a positive intention, such as helping someone in need, is considered nourishing, while an action done with a negative intention, such

as harming someone, is considered objectionable, ending in the consciousness of the truth or Nibbāna; and all actions that go against these are bad. This opinion and belief is always genuine, notwithstanding the time and space. This signifies that those desiring to accomplish happiness in an imminent life must concoct for it here and now. Buddhism is a kirivavāda structure, a faith propagating reception in the magnitude of action. The doctrine of ethics or sīla is its essential principle, and Nirvāna is its essential objective of holy life.²⁰ The supplementary expressions used to symbolise 'good' and 'bad' are puñña and papa.²¹ Rendering to the Pāli - English Dictionary, it is verified that 'puñña' is always represented as the foundation and condition of heavenly rebirth and a future blissful state, the enjoyment and duration of which depends on the amount of merit accumulated in a former existence.²² In this sense, Papa could be rendered 'the foundation and condition of suffering in woeful states'. These two terms in their usage in the Pāli canon seem to be concerned mainly with the idea of karma, which is known as the psychological force that determines the future state of a being, according to the good and bad he does. Thus, in the Mahamangala Sutta the Buddha says that the fact of having a store of accumulated good karma is an auspicious thing for a person.²³

In Buddhism, the very nature of worldly life, including the circumstances in which one lives and the world one confronts, is "suffering". To transcend these pains in the world and realize an ultimate and complete life, one deals with the ignorance and greed found within ourselves, abstains from evil, and cultivate good. Getting rid of existing evil, working not to produce additional evil; to work at nurturing goodness, to destroy any pre-existent evil – when doing this, one achieves liberation and bliss for oneself and others. The good dharma of Buddhism is a dharma of purity with a nature of tranquility benefiting both oneself and others in this present life and future lives. For example, from the Abhidharmakosa sastra (Treasury of Metaphysics): "Calm karma is called the good".²⁴ It is also a common understanding that in Buddhist society, monks are considered as spiritual teachers and instructors of the society. The laity, when they are in trouble, also approach the monks. They seek counsel and advice thinking that they can help them. So the monks have to deal and cope with the problems of the laity. Ajahn Brahm shares his experience of the role of a monk as a counselor: "Monks and senior monks especially, have to sit in their monastery, listen to people's problems and accept all their rubbish. Marital problems, difficulties with teenage children, rows with relations, financial problems- we hear the lot".²⁵

According to Bodhi (1998), when discussing education based on Buddhist principles (Dhamma), educators have to determine the ideals of education (p. 2). She says that the Buddha held up five qualities of a model student, whether monk or layperson, i.e., faith, virtue, generosity, learning, and wisdom.²⁶ Bodhi (1998) believes that education should be aimed at the development of positive virtues such as kindness, honesty, purity, truthfulness, and mental sobriety. The task of education is 'to draw forth from the mind its innate potential for understanding' (p.1). Education informed by Buddhism 'aims at a parallel transformation of human character and intelligence, holding both in balance and ensuring that both are brought to fulfillment'. To this end, 'the practical side of education must be integrated with other requirements designed to bring the potentialities of human nature to maturity in the way envisioned by the Buddha.'²⁷ Such an education must instill values. However, the commercialisation of education and the economic order designed to drive maximum profits are major problems in achieving such a goal.²⁸

The Mahagosinga Sutta shows a dialogue of Abhidhamma between two monks - one to ask questions, one to answer, and together they conclude Dhammasaṅgāni (composition of Dharma) which classifies as Abhidharma.²⁹ Intellectually, kathas are also used in suttas, and in the commentaries on suttas, called Nidesa (explanation), composed of two books, the Maha (major) and the Culla (minor). We could also find catechisms inside these groups of teaching, called patisambhida-magga (way of analyzing), which comprises character, lexicon, glossary, summary, et cetera.³⁰ The Noble Eightfold Path (*Ariya-aṭṭhaṅgikamagga*), which is one of the particularities of Buddhist education, is considered as the essential of Buddha's teachings. Thus, the Buddha proclaimed the Noble Eightfold Path as the only path to liberation (*Nibbāna*); it was the criterion by which he judged the teachings of other schools and found them wanting. It is the Holy path consisting of eight branches as: Right View (*Sammā-ditṭhi*), Right Thought (*Sammā-saṅkappa*); Right Speech (*Sammā-vācā*); Right Action (*Sammā-kammanta*); Right Livelihood (*Sammā-ājīva*); Right Effort (*Sammā-vāyāma*); Right Mindfulness (*Sammā-sati*); Right Concentration (*Sammā-samādhi*).³¹ Having himself first tried these two extremes and having found them to be useless, the Buddha discovered, through personal experience, the Middle Path, which gives vision and knowledge and leads to calm, insight, and enlightenment, *Nibbāna*.³²

³² Walpola, Sri Rahula. (1974). *What The Buddha Taught*, New York: Grove Press, p. 45.

Vietnamese Zen Teacher Thich Nhat Hanh wrote: “Our happiness and the happiness of those around us depend on our degree of Right View. Touching reality deeply - knowing what is going on inside and outside of ourselves - is the way to liberate ourselves from the suffering that is caused by wrong perceptions. The Right View is not an ideology, a system, or even a path. It is the insight we have into the reality of life, a living insight that fills us with understanding, peace, and love.”³³ There are two factors contributing to the arising of the Right View: Having a spiritual teacher from whom you can learn (Paratoghosa) and having the capacity for and use of systematic, critical reflection (*Yonisomanasikāra*).³⁴ And by such action, it is to be a cause to the arising of Samma-dīṭṭhi. According to the Buddhist texts, the Buddha always teaches monks to have and to be a spiritual friend among them as he is, too. I perceive, monk, no other single condition by which the Ariyan Eightfold Path, if not yet arisen, can arise or by which, if arisen, the Ariyan Eightfold Path can reach perfection of culture, save (the condition of) friendship with the spiritual friend.³⁵ In the process of entering the Buddhist educational way, positive guidance is essential. When analyzing the term Paratoghosa, i.e., listening to the teaching of others, it is important to note the Pāli word Kalyāṇmitta. Venerable Phradhammapīṭaka, a scholar of Buddhism, says that “Kalyāṇamitta refers to a person who is well prepared with the proper qualities to teach, suggest, point out, encourage, assist, and give guidance for getting started on the path of Buddhist training.”³⁶ It has been taught in the six directions that friends are recognized as the north direction, it shows how to act to friends and friends give good action in return.³⁷ For the persons who will act as good spiritual friends, it is imperative to be endowed with the seven following qualities: a) Piyo (endearing), b) Garu (worthy of respect), c) Bhāvanīyo (inspiring), d) Vattā (capable of speaking effectively), e) Vacanakkhammo (patient with words), f) Gambiraṇa katham kattā (capable of expounding on the profound), g) No caṭṭhāne niyojaye (not leading in wrongful ways).³⁸ Therefore, the Paratoghosa is an external factor, which leads to the Samma-dīṭṭhi, have to go hand by hand with an internal factor; systematic thought or reflection (*Yonisomanasikāra*). Paratoghosa endows the right systematic reflection of real nature by understanding the conditional causes and of common events in accordance with social issues by distinguishing particular or social attitude. It has enough ability to search the causes and supporting conditions, and finally, it realizes the events clearly.

³⁸ *Dhp* 64.

As the Buddha declared, “As an internal factor, I see nothing that leads to such great benefit as systematic reflection (Yonisomanasikāra).³⁹ A crucial problem in the process of Indian education administration outcome nowadays is inadequate quality. This problem involves various sources such as the family system, education pedagogy, educational environments, qualities of teacher, and effective curriculum. If these sources of the problem have been solved, then academic graduates will have been qualified with significant characteristics of ability to analytical, critical thinking as well as to solve one’s problems. A path which a learner to have such a characteristic is to integrate the yonisomanasikāra thinking system into the Indian education system supported by society and family members through gradual formation until those learners have skills sufficient to enhance their quality of life. Systematic reflection is the ability to think clearly, to look at things with critical eyes, breaking them down into their constituent factors and analyzing their causal condition.⁴⁰

Let us now consider Thich Nhat Hanh’s view on systematic reflection: If you are a right viewed Buddhist, when you are concentrating on reading a paper on Dhamma under a big tree, and look at a white cloud floating slowly through the blue sky, you will also see that cloud on your paper. You will think in the dependent way that without clouds, there would be no rain, without rain, there would be no trees, so we could not make paper. The cloud is essential for the tree, and the tree is essential for paper to exist. If the cloud were not here, the tree and the sheet of paper you read could not be here, either. So we can see that the cloud, the tree, and the paper are interdependent. If we look into the sheet of paper even more deeply, we can see the sunshine in it. If the sunshine were not here, the forest could not grow, so we know that the sunshine is also part of this sheet of paper. If we continue to look further, we can see the logger who cut the tree in the forest and brought it in to the mill to be transformed into paper, and we see the rice field nearby. Without rice as daily food, the logger cannot exist, therefore, rice is also a part of the paper. Looking even more deeply, we can see we are in it too, because when we look at the sheet of paper, the sheet is part of our perception. So we can say that everything coexists and everything, even our mental processes, are conditioned and interdependent.⁴¹ We also discover how unskillful speech degrades personal relationships and diminishes the possibility of peace in our world. Right Livelihood (*Sammā-ājīva*) is earning one’s living by no wrong means. It refers to avoidance of forms of livelihood and leads one into wrong ways and earning one’s living by righteous means. The definition of Right Livelihood is given as follows: “Bhikkhus, what is the Right Livelihood? Right Livelihood is the noble disciples completely stop all improper means of livelihood and sustain themselves according to the way of

³⁹ A. I. 17.

proper livelihood.⁴² Those wrong livelihoods are conditioned by greed, lust, selfishness, and desire for power. To be involved in these wrong ways of life will degrade the quality of our lives day by day and will ultimately drive us away from Nibbāna. Therefore, the Buddha encourages us to earn a living by righteous means. We should live by a profession that is honorable, blameless, and innocent of harm to others.

IV. CONCLUSION

Mindfulness is the catchword these days. Merely it's, indeed, just discharging watchful thoughtfulness to your thoughts, your body, and whatever's around your surroundings. It gives young minds methods and practices for comforting themselves when their emotions feel dejected. Mindfulness is an unpretentious and potent tool to bland mental well-being and make peace with anxiety. Youngsters can deal better, often better than adults. Therefore, the objectives of Buddhist education remained to create full development of not only the adult man, the realisation of his character, etching of social obligation, upgrade of social well-being, increase the drive of national ethnicity and harmonisation of secular and religious rudiments of establishments. Students became judicious, humanist, logical, and free from superstitions. *Therefore*, the ultimate objective of mindfulness is to demonstrate that young minds have cognizance of their emotions and then to acquire how to device them well.. The principal goal of Buddhist Education is to be wide open and accessible to the societies and people of all walks of life by bringing an enormous transformation of an imprudent to wise, beast to pastor. By elucidating in Buddhist structure, the first objective of education is to support persons to realize menace and jeopardy within themselves, accepting them as they genuinely are, and endeavours towards the amputation of these mistakes. If we centre Buddhist education on the Teacher, it is said: "He existed as the guardian of his pupils and was answerable for their health and studies, morals and their spiritual progress. This includes his material, mental, moral and intellectual development."

The primary objective of Buddhist practise is to accomplish self-determination and freedom from suffering by far sighting the outer world and refrain on self from self-gratification as it is by abandoning the one-sided and misinforming projection that is twisted by our considerations. Buddhist Education intends to create an able man, a sage, intellectual, moral, non-violent & secular man. Students must be unrestricted from ravenousness, hankering, and ignorance. A very imperative resource to scope the goal is to abstain from corroding and rancorous activities as this action's basis damage to others. Additionally, according to Buddhist teachings, those who clench the persistence of freedom act in a demonstrative and sympathetic approach towards others, helping these others in turn to be more happy and free. Ethical action is consequently and accordingly both an important part of the Buddhist path and an important aspect of the results said to flow from that path.

MINDFULNESS OF ART EDUCATION FROM BUDDHIST PERSPECTIVES: A PATHWAY TO FOSTERING HOLISTIC YOUTH DEVELOPMENT IN THE NEW ERA

PhD. Le Thi Kieu Van*

Abstract:

Art education has long been recognized for its potential to enhance adolescents' creativity, self-expression, and cultural awareness. In recent years, mindfulness, conceptualized as the intentional, non-judgmental awareness of the present moment, has gained traction as a versatile approach to fostering social-emotional learning and overall well-being. This paper examines how Buddhist-derived mindfulness principles can be incorporated into art education to foster emotional resilience, moral discernment, and creative development among contemporary youth. Drawing upon expanded statistical data, policy frameworks (e.g., UNESCO, WHO), and in-depth case studies from multiple cultural contexts, the paper underscores the pivotal role of mindfulness-based art programs in shaping students' ethical values, identity formation, and empathetic interactions. By weaving Buddhist ethical dimensions such as Right Mindfulness, Non-Attachment, and Compassion into the creative process, young learners not only enhance their artistic skills but also strengthen their sense of belonging and purpose. Furthermore, the paper outlines best practices in curriculum design, teacher training, policy advocacy, and strategies to overcome cultural, resource, and assessment challenges. The discussion culminates in a call for educators, policymakers, and researchers to embody a holistic, human-centered approach to nurturing a generation that is at once imaginative, empathetic, and ethically grounded, capable of navigating the complexities of the 21st century with creativity and compassion.

Keywords: *art education, mindfulness, Buddhist principles, self-expression, educational policy, youth development, social-emotional learning, holistic education, compassion*

* Senior Lecturer & Dean of the Faculty of Foreign Languages, Van Hien University.

I. INTRODUCTION

1.1. Rationale

Calls for holistic development increasingly characterize the contemporary educational landscape. Schools worldwide are expected to cultivate academic competence and emotional intelligence, moral discernment, and a sense of civic responsibility in students.¹ Art education, historically valued for nurturing creativity and self-expression, has taken on a broader role, engaging students with a wide range of cultural, ethical, and interpersonal questions². Parallel to these shifts, mindfulness, often described as a skill for focused, present-moment awareness, has emerged as a crucial strategy to address growing concerns about student stress, anxiety, and disengagement³.

Within these converging trends, Buddhist philosophy offers a unique perspective on mindfulness as a way of being, deeply interwoven with values such as compassion, non-attachment, and interconnectedness⁴. Integrating these principles into art education can transform learning spaces from mere sites of skill acquisition to environments of creative exploration, moral growth, and empathetic community building. This paper, therefore, investigates how Buddhist-inspired mindfulness can enrich art education, thereby contributing to the holistic well-being and ethical development of contemporary youth. Although Buddhist philosophy has a rich legacy in Southeast Asia, including Vietnam, structured applications within art education are only beginning to emerge as a formalized practice making this exploration particularly timely.

1.2. Significance and aims

This study contributes to the literature on art education, contemplative pedagogy, and social-emotional learning (SEL) by highlighting how integrative mindfulness-based frameworks can shape educational policies and classroom practices. In doing so, it aims to:

- (i) Articulate Core Buddhist Principles focusing on Right Mindfulness, Non-Attachment, and Compassion and their immediate relevance to art-making and visual expression;
- (ii) Present expanded empirical evidence and policy reviews, demonstrating the growing uptake and impact of mindfulness-based interventions on student well-being, academic engagement, and moral awareness;
- (iii) Provide detailed case studies and implementation strategies that

map out both theoretical and practical dimensions, reinforcing the feasibility of mindfulness-infused art curricula in diverse contexts including Vietnam;

(iv) Emphasize the humanizing dimension of education, with real-life anecdotes illustrating how contemplative artistic experiences can bolster students' sense of identity, purpose, and cultural belonging.

Ultimately, the paper aims to encourage policymakers, educators, and scholars, especially in places like Vietnam, where Buddhist heritage profoundly shapes cultural values to explore how a Buddhist-informed approach to mindfulness can enhance the creative and ethical horizon of art education worldwide.

1.3. Scope and structure

While this investigation centers on Buddhist moral and philosophical concepts, it does not advocate religious indoctrination. Instead, it posits that the universal aspects of mindfulness, heightened attention, compassion, and ethical reflection, can be adapted to secular contexts, resonating with global educational objectives related to mental health, cultural literacy, and SEL. The paper is arranged into ten sections:

- (i) Section 2 surveys relevant literature on mindfulness, Buddhist perspectives, and art education.
- (ii) Section 3 clarifies the methodology, including research design, data sources, and analytical approaches.
- (iii) Section 4 explores the integration of specific Buddhist concepts into art education, presenting examples and theoretical arguments.
- (iv) Section 5 overviews global policy developments, referencing UNESCO, WHO, and national guidelines.
- (v) Section 6 offers a rich, comparative look at case studies from the USA, Thailand, South Africa, and Vietnam.
- (vi) Section 7 outlines best practices in curriculum development, teacher training, and inclusive approaches.
- (vii) Sections 8 and 9 address challenges (cultural, ethical, and resource-related) and highlight the humanizing potential of mindfulness-infused art education.
- (viii) Section 10 concludes with key findings, policy/practice implications, and recommendations for future research.

II. LITERATURE REVIEW

2.1. Conceptualizing mindfulness in education

The concept of mindfulness dates back over two millennia, finding its roots in Buddhist traditions. However, in the West and in many secular institutions worldwide, it has been reinterpreted primarily as a set of techniques for stress reduction, focus, and emotional regulation⁵. Kabat-Zinn's pioneering

⁵ Kabat-Zinn (1979). What is Mindfulness-Based Stress Reduction? [Accessed November

Mindfulness-Based Stress Reduction (MBSR) in the late 1970s introduced mindfulness to clinical populations, subsequently influencing educational environments keen on adopting methods to mitigate student stress and burnout (Brown, Ryan, & Creswell, 2007)⁶.

Research on mindfulness in education has grown exponentially. A notable meta-analysis (Mindful Education Initiative, 2022) covering 160 studies emphasizes improvements in student well-being, academic motivation, and empathic understanding⁷. Moreover, social-emotional learning (SEL) frameworks by organizations like the Collaborative for Academic, Social, and Emotional Learning (CASEL) increasingly incorporate mindfulness-based competencies (CASEL, 2021). Yet, most secular models rarely delve into the ethical and spiritual underpinnings found in Buddhism, often focusing on attention-training divorced from moral or philosophical contexts (Analayo, 2003)⁸.

2.2. Buddhist perspectives on mindfulness

In Buddhism, mindfulness (Pali: *sati*) is not simply an attentional skill but a gateway to ethical transformation and wisdom (Bhikkhu Bodhi, 2011)⁹. This perspective posits that being fully present allows individuals to observe internal phenomena, thoughts, emotions, and bodily sensations with clarity and non-judgment, thus fostering compassion and moral responsibility (Thera, 1962)¹⁰. Key concepts intimately linked to mindfulness include:

- (i) Right Mindfulness (*Sammā-sati*) involves objectively observing thoughts and actions, which in an educational context translates to heightened focus and self-awareness.
- (ii) Non-Attachment (*Upekkhā*): Maintains equanimity in the face of pleasure, pain, success, or failure (Gethin, 1998)¹¹.
- (iii) Compassion (*Mettā/Karuṇā*): Cultivates empathy and benevolence toward oneself and others (Salzberg, 1995)¹².

¹² Salzberg, S. (1995). *Loving-Kindness: The Revolutionary Art of Happiness*. Boston, MA: Shambhala, 193 pages.

While these principles derive from Buddhist teachings, they hold universal value and can be embraced by students of diverse cultural and religious backgrounds. Scholars like Thich Nhat Hanh, a Vietnamese Zen Master (1975), have long advocated for the application of mindfulness in everyday activities, including education, as a means to foster peace, understanding, and social harmony¹³.

2.3. Art education: Historical and contemporary views

Traditionally, art education has been viewed as a vehicle for aesthetic development and creative skill-building. However, theorists such as John Dewey (1934) highlighted the integrative power of artistic experiences to connect emotion, intellect, and community engagement. Elliot Eisner (2002) further articulated how art education fosters critical thinking, imagination, and cultural awareness, encouraging students to perceive the world in nuanced, multifaceted ways.

Contemporary discourses place art education at the nexus of identity formation, emotional intelligence, and community-building (Huss, 2015). For instance, educators increasingly see the arts as therapeutic outlets for students facing psychological stress, social alienation, or cultural marginalization. Emerging frameworks highlight how art-making, whether through painting, sculpting, dance, or digital media, can serve as a dynamic platform for self-expression and social commentary (Kraehe & Brown, 2019). Yet, many art curricula still lack intentional contemplative strategies that systematically cultivate mindfulness and moral reflection (Eisner, 2002).

2.4. Theoretical and empirical foundations of mindfulness-based art education

Combining mindfulness and art education is rooted in a growing body of empirical research affirming positive outcomes in focus, emotional regulation, and social well-being. Langer (1989) posits that mindful engagement in creative endeavors expands cognitive flexibility, and Csikszentmihalyi (1996) famously documented the phenomenon of “flow,” wherein an intense concentration merges with intrinsic motivation, often during artistic tasks. When framed in a Buddhist ethical context, such mindful “flow” can be directed toward cultivating empathy, appreciating impermanence, and releasing attachment to rigid standards of success or external validation (Analayo, 2003).

In parallel, studies on trauma-informed art therapy and mindfulness-based interventions suggest synergistic effects in promoting healing and resilience (Huss, 2015). This synergy is particularly critical for adolescents who might be grappling with developmental stress, identity conflicts, or academic pressures. Mindful art programs help young learners slow down, observe their emotional landscapes, and express these inner experiences creatively without the fear of judgment (Brown, Ryan, & Creswell, 2007). In short, the theoretical and empirical underpinnings set the stage for an intentional fusion of mindfulness

¹³ Nhat Hanh T. (1975). *The Miracle of Mindfulness: An Introduction to the Practice of Meditation*, Beacon Press, Massachusetts 02108-2892, pp. 11 - 44.

and art education as a holistic pedagogical practice a fusion also ripe for development in Vietnamese educational settings, where Buddhist traditions can offer invaluable cultural resonance.

III. METHODOLOGY

3.1. Research design

This paper employs a mixed-methods approach (Creswell & Plano Clark, 2017), integrating:

- (i) Literature analysis: Reviewing canonical Buddhist texts (e.g., Pali Canon, Thich Nhat Hanh's works), contemporary mindfulness literature, and scholarship on art education.
- (ii) Policy analysis: Examining international documents (UNESCO Arts Education Roadmap, WHO guidelines on mental health) and national curricula (USA, Thailand, South Korea, Vietnam) to map evolving policy stances toward mindful art education.
- (iii) Case Study Evaluations: Presenting four in-depth case studies in different socio-cultural contexts California (USA), Bangkok (Thailand), Johannesburg (South Africa), and Ho Chi Minh City (Vietnam).
- (iv) Supplementary Quantitative Data: Drawing on large-scale teacher surveys and meta-analyses (Mindful Education Initiative, 2022) to contextualize global adoption rates and perceived benefits.

3.2. Data sources and collection methods

- (i) Peer-Reviewed Journals and Books: Key databases (Scopus, Web of Science) were searched using keywords (e.g., "mindfulness," "Buddhist principles," "art education," "social-emotional learning," "Vietnam");
- (ii) Policy Documents: Publicly accessible reports from UNESCO, WHO, and national ministries on education and adolescent mental health, including emerging Vietnamese educational directives.
- (iii) Case Studies: Semi-structured interviews were conducted with educators, program coordinators, and students from each site. Additionally, program records, curricula, and observational notes provided qualitative insights.

3.3. Analytical framework

A thematic content analysis was used to interpret qualitative data from interviews and textual sources. Themes were coded around pedagogical design, cultural adaptability, moral and ethical outcomes, and student well-being. Statistical data from teacher surveys (N = 2,750) offered descriptive insights into the frequency of mindfulness-based activities in art classrooms, perceived benefits, and barriers.

3.4. Ethical considerations and limitations

Participants' confidentiality and voluntary consent were prioritized. Potential researcher bias, especially regarding Buddhist-informed interpretations, was mitigated through triangulation (i.e., comparing multiple

data sources and perspectives). Nonetheless, the case study method limits generalizability. While the findings illuminate various cultural contexts, further large-scale studies could provide more definitive, comparative data on the long-term impacts of mindfulness-infused art education, particularly in Vietnam, where systematic data is still emerging.

IV. FINDINGS AND ANALYSIS: INTEGRATING BUDDHIST MINDFULNESS WITH ART EDUCATION

This section elucidates how core Buddhist principles of Right Mindfulness, Non-Attachment, and Compassion function within art education, supplemented by additional ideas relevant to Vietnamese contexts, such as impermanence (*vô thường*) and interbeing (Thich Nhat Hanh's concept of mutual existence).

4.1. Right mindfulness (*sammā-sati*) in artistic practice

Right Mindfulness, in Buddhism, underscores a balanced attentional stance that is both focused and non-judgmental (Bhikkhu Bodhi, 2011). This translates to guiding learners to observe their thoughts, emotions, and physical sensations as they engage with artistic media in the art classroom. Consider painting exercise:

- (i) Sensory Awareness: Students might begin by centering on the texture of the paint, the smell of the materials, or the sensation of the brush pressing against the paper.
- (ii) Emotional Check-ins: A short mindful breathing session before painting invites students to notice internal states excitement, frustration, and curiosity without labeling them as "good" or "bad."
- (iii) Open-ended Exploration: Encouraging self-expression free from strict rubrics fosters a climate of creative authenticity (Csikszentmihalyi, 1996).

From an ethical standpoint, Right Mindfulness can cultivate interpersonal awareness: as students become more attuned to their own creative processes, they also become more empathetic and respectful of their peers' artistic journeys. Research suggests that mindful attention in group art projects leads to increased mutual support and reduced classroom conflicts (Langer, 1989).

4.2. Non-attachment (*upekkhā*) and creative autonomy

Art education often confronts learners with perfectionistic tendencies, fear of failure, and the pressure to conform to aesthetic standards. Non-attachment, or *Upekkhā*, encourages students to remain equanimous amid praise or criticism, focusing instead on the intrinsic satisfaction of the creative process (Gethin, 1998). In practical terms:

- (i) Process over product: Teachers might assign open-ended projects where the final piece is less critical than a reflective narrative documenting the student's emotional states, creative decisions, and moments of insight (Eisner, 2002).
- (ii) Failure as growth: When students approach a "mistake" in their artwork with curiosity rather than self-reproach, they unlock fresh

perspectives and innovative solutions (Brown, Ryan, & Creswell, 2007).

(iii) Authentic Self-Expression: Detaching from external validation can promote a more genuine voice, as students are less inhibited by peer comparison or societal norms (Deci & Ryan, 2000).

In Vietnam, where academic success is often tightly linked to societal expectations, emphasizing non-attachment in the arts can help alleviate some of the stress tied to performance metrics, thereby enhancing students' willingness to experiment and innovate.

4.3 Compassion (*mettā*) and social cohesion in classroom settings

Compassion, comprising loving-kindness (*mettā*) and empathy (*karuṇā*), underscores a deep care for oneself and others (Salzberg, 1995). In art education, compassion-driven activities might include:

- (i) Collaborative Projects: Students create communal murals or group installations, learning to respect each other's contributions and limitations.
- (ii) Peer Support Circles: After completing an artwork, participants gather in circles to constructively share feedback and celebrate each other's efforts.
- (iii) Community Outreach: Mindful art programs may invite students to engage in service, such as painting murals in local hospitals or community centers, reinforcing the altruistic dimension of creativity (Nhat Hanh, 1992).

This communal ethos resonates strongly in Vietnamese culture, which traditionally values collective harmony and social responsibility. By embedding compassion into art curricula, schools can deepen these cultural values while also nurturing creativity and emotional well-being.

4.4. Additional Buddhist tenets relevant to art education

While Right Mindfulness, Non-Attachment, and Compassion form the core triad, other Buddhist concepts also hold pedagogical resonance:

Right Effort (*Sammā vāyāma*): Encouraging persistence and diligence in creative tasks without slipping into over-striving or self-punishment.

Interdependence (*Pratītyasamutpāda*) or Thich Nhat Hanh's Interbeing: Emphasizing how all phenomena are mutually connected can inspire community-based art and ecological awareness especially relevant in Vietnam's ongoing environmental sustainability efforts.

Impermanence (*Anicca*): Recognizing that artistic outcomes and creative moods are ever-changing. Such insight can liberate students from the fear of "finishing" a project imperfectly, fostering ongoing reflection and creative flexibility (Wallace, 2006).

V. POLICY AND GLOBAL TRENDS

5.1. Statistical overview and uptake of mindfulness-based interventions

Recent data from the Mindful Education Initiative (2022) indicates that

approximately 30% of middle and high schools in North America and parts of Europe integrate mindfulness-based interventions (MBIs) to address issues such as student anxiety, conflict resolution, and low academic engagement. A global teacher survey (N = 2,750) across 15 countries reveals:

- (i) 62% of educators incorporate mindfulness techniques weekly (breath awareness, guided visualization);
- (ii) 78% notice improvements in creativity, emotional regulation, and classroom cohesion;
- (iii) 45% express interest in weaving mindfulness into art and music programs, spotlighting the potential synergy between contemplative practice and aesthetic learning.

Figure 1: illustrates global uptake of mindfulness-based interventions in education by region (2015-2022)

In Asia, particularly in Thailand, South Korea, and Vietnam, interest in mindful art education has grown, reflecting local Buddhist traditions and an increasing need to address mental health challenges among young people. However, data from Vietnam, while promising, remains less systematized, highlighting the need for more targeted research.

5.2. Policy developments and regulatory frameworks

UNESCO's Arts Education Roadmap (updated 2021) emphasizes holistic well-being and psychosocial support through the arts, identifying mindfulness as a core strategy to heighten empathy and intercultural dialogue. The WHO Guidelines on Adolescent Mental Health (2020) similarly recommend contemplative and arts-based interventions as part of comprehensive mental health promotive strategies.

At the national level, examples include:

- (i) United States: SEL components increasingly integrated at district and state levels, with mindfulness fulfilling stress-reduction and emotional regulation objectives (CASEL, 2021).
- (ii) South Korea: The Ministry of Education (2022) promotes "mindful

arts” within moral education syllabi, emphasizing harmony, compassion, and emotional balance.

(iii) Thailand: Policies encourage Buddhist moral integration with creative arts, aligning with a cultural emphasis on ethical and spiritual dimensions of learning (Office of the Basic Education Commission, 2021).

(iv) Vietnam: While no formal policy mandates the integration of mindfulness into art curricula, various educational institutions and NGOs have begun pilot programs to incorporate Buddhist-informed mindfulness, reflecting the legacy of Thich Nhat Hanh and other Vietnamese Zen traditions. Informal discussions within the Ministry of Education and Training (MOET) suggest a growing openness to social-emotional learning initiatives.

These policy shifts indicate a growing consensus that mindfulness-based approaches and arts education are interdisciplinary allies, shaping not only cognitive but also moral and social dimensions of youth development.

5.3. Synergy with Social-Emotional Learning (SEL) and Global Educational Goals

Social-emotional learning frameworks highlight self-awareness, self-management, social awareness, relationship skills, and responsible decision-making (CASEL, 2021). Mindful art education, emphasizing emotional expression, ethical reflection, and community engagement, synergizes well with these five core SEL competencies. Students who practice mindful art-making often show heightened:

- (i) Self-awareness: They develop clarity about their emotional states and personal narratives.
- (ii) Social awareness: Collaborative art fosters empathy and intercultural sensitivity.
- (iii) Responsible decision-making: Ethical dialogues surrounding creative content enhance moral discernment.

Such integrative approaches resonate with UN Sustainable Development Goal 4 (Quality Education), which stresses inclusive and equitable education promoting lifelong learning and well-being (United Nations, 2015). By bridging contemplative practice with artistic creativity, policymakers, and educators can contribute to a more empathetic and culturally responsive global citizenry, including Vietnam, where educational transformations increasingly recognize mental well-being and cultural identity as core priorities.

VI. EXPANDED CASE STUDIES

To illustrate the practical implications, this section provides expanded narratives of four mindfulness-infused art programs, each embedded within unique cultural and socio-economic contexts: the United States, Thailand, South Africa, and Vietnam.

6.1. Case study a: “compassionate creativity” in California, USA

6.1.1. Program overview

“Compassionate Creativity” began as a pilot initiative at a public middle school in Los Angeles, aiming to serve a student population from underserved communities experiencing heightened stress and limited access to enrichment programs. This region faces significant socio-economic challenges, including underfunded arts education, making integrating mindfulness practices particularly urgent.

6.1.2. Implementation strategies

Weekly Sessions (45 minutes each)

- Mindful Breathing
- Visualization Exercises
- Free-Form Painting

Reflective Journals to document challenges, breakthroughs, and emotional shifts.

6.1.3. Outcomes and data

- 18% reduction in student-reported anxiety.
- 12% improvement in classroom participation.
- Qualitative interviews indicated increased self-awareness and empathy among peers.

6.1.4. Human stories

Students like DeShawn and Maria found emotional relief and self-expression through mindful art exercises, demonstrating how contemplative approaches to creativity can offer a safe haven in contexts of socio-economic adversity.

6.2. Case Study B: “Lotus Art Circle” in Bangkok, Thailand

6.2.1. Context and rationale

A pilot program in a Buddhist temple school, bridging spiritual mindfulness with artistic expression to cultivate moral and spiritual growth.

6.2.2. Daily Implementation

- Morning Meditation (10 minutes)
- Art Assignments (mandala creation, communal mural painting)
- Integration with Buddhist Ethics (talks by temple monks)

6.2.3. Outcomes and Observations

- Enhanced empathy and peer cooperation.
- Students reported stronger spiritual connection and cultural pride.

6.2.4. Personal Anecdotes

Stories of Ploy’s grief processing and Niran’s deepened respect for Thai heritage highlight how artistic rituals informed by Buddhist values can nurture emotional healing and social cohesion.

6.3. Case Study C: “Ubuntu Mindful Art” in Johannesburg, South Africa

6.3.1. Socio-economic background

An NGO-led project in a township school, addressing issues of limited resources, high unemployment, and community tensions.

6.3.2. Program details

- Weekly Sessions with guided mindfulness and Afrocentric art forms (beadwork, mural creation).
- Reflection Circles to share personal stories and build communal support.
- Collaboration with Mental Health Professionals for traumatized students.

6.3.3. Observed Impact

- 91% of participants felt better equipped to cope with crises.
- Communal art-making fostered social cohesion and local pride.

6.3.4. Illustrative Vignettes

Ayanda and Mandla’s experiences reflect the healing potential of mindful art, reinforcing cultural identity and instilling a sense of collective empowerment.

6.4. Case study D: “Zen Brushstrokes” in Ho Chi Minh City, Vietnam

6.4.1. Vietnamese context and rationale

Vietnam’s educational system is currently undergoing significant reforms to cultivate critical thinking, creativity, and life skills. Although deeply influenced by Confucian and Buddhist traditions, mainstream classrooms often prioritize rote learning over contemplative or expressive practices. “Zen Brushstrokes” originated in Ho Chi Minh City as a collaboration among a local university’s art faculty, a Zen Buddhist organization inspired by the teachings of Thich Nhat Hanh, and a private secondary school interested in innovative pedagogy.

6.4.2. Program structure

Bi-weekly workshops (60 minutes each)

- Seated Mindfulness: A short 5 – 10 minute session of breath-focused meditation or a guided awareness of body posture (in some sessions, reciting a line from Thich Nhat Hanh’s works, such as “Breathing in, I calm my body and mind...”);
- Calligraphy and Ink Painting: Drawing on Vietnamese Zen aesthetics, the teacher introduces single-stroke bamboo brush techniques, emphasizing flow, presence, and impermanence;
- Poetry Reflection: Students reflect on or create short verses (inspired by Vietnamese poetry traditions), connecting emotional states to visual motifs;
- Group Exhibitions: At the end of each quarter, students collectively curate an exhibit open to families and community members, fostering

dialogue on the importance of inner awareness and cultural heritage in the creative process.

6.4.3. Implementation highlights

- **Cultural Authenticity:** Instructors incorporate local proverbs, Vietnamese folk tales, and references to Zen traditions relevant to Vietnam's historical narrative.
- **Community Engagement:** Periodically, the group visits a nearby pagoda, painting traditional ornaments or participating in charitable art auctions, the proceeds of which support disadvantaged children.

6.4.4. Measured and observed outcomes

- **Student Engagement:** Informal surveys showed a marked increase in enthusiasm for art classes, with over 80% reporting they found the sessions “enjoyable and calming.”
- **Emotional Regulation and Self-Confidence:** Teachers noted fewer conflicts among students who practiced mindful calligraphy; they appeared more patient and open to constructive feedback.
- **Cultural Appreciation:** Learners expressed renewed interest in Vietnamese heritage, especially Zen philosophy, and found a sense of pride in combining traditional brush painting with mindful awareness.

6.4.5. Anecdotal reflections

- Lan, a 10th grader who struggled with anxiety around high-stakes exams, shared that focusing on the “rhythm of the brush” helped her calm racing thoughts and regain confidence in other subjects.
- Minh, previously uninterested in art, became fascinated by the interplay between Vietnamese poems and ink painting, feeling that “these lines carry my heart onto paper.” He described the experience as “like practicing meditation without having to sit still,” underlining how creativity can be an active form of mindfulness.

Overall, “Zen Brushstrokes” exemplifies how a Buddhist-informed, mindful art program can thrive in Vietnam, resonating with local customs and cultural heritage while aligning with the country’s evolving educational priorities. The initiative’s success has prompted other schools in Ho Chi Minh City and neighboring provinces to consider piloting similar programs or workshops, reflecting a grassroots momentum for integrating mindfulness and arts in Vietnamese education.

6.5. Additional reflections and comparative insights

Examining these four case studies spanning the USA, Thailand, South Africa, and Vietnam reveals how mindfulness-infused art education adapts to diverse cultural frameworks:

- (i) **Holistic Benefits:** Across contexts, students reported improved emotional regulation, enhanced creativity, and a greater sense of belonging.

(ii) **Buddhist Mindfulness Principles:** Emphasizing compassion, non-attachment, and present-moment awareness resonates widely when introduced with cultural sensitivity.

(iii) **Inclusivity and Equity:** Programs effectively serve students in underserved or marginalized areas by offering a safe and expressive outlet for stress and trauma.

(iv) **Community and Cultural Heritage:** This is especially evident in Thailand and Vietnam, where Buddhist ethics and local art traditions reinforce collective identity and spiritual grounding.

As Vietnam continues modernizing its educational landscape, mindful art programs demonstrate the potential to enrich cultural identity, reduce academic stress, and develop social-emotional competencies relevant to the nation's vision for global integration.

VII. IMPLEMENTATION STRATEGIES AND BEST PRACTICES

7.1. Curriculum design

Short Mindfulness Exercises (3 – 5 minutes) integrated at the start of each art class can shift the classroom atmosphere from hurried to calm. Techniques might include:

(i) **Breath Counting:** Students count each inhalation up to five, then repeat, gradually extending the pause between breaths.

(ii) **Body Scan:** A quick mental check-in, guiding students to notice tension or relaxation in different muscle groups, correlating with expressive lines or shapes in their art.

Process-Focused Assignments: Encourage students to maintain creative journals, capturing not just sketches but also emotional reflections and notes about inspirations, frustrations, and personal growth.

7.2. Teacher training and professional development

Teachers serving as facilitators require foundational skills in mindfulness practices and in adapting Buddhist-informed principles for secular or interfaith classroom environments. Recommended steps include:

(i) **Professional Workshops:** Focused on basic mindfulness practices, Buddhist ethics (i.e., empathy, non-harm), and inclusive pedagogical methods.

(ii) **Peer Collaboration:** Art educators can pair with school psychologists or mindfulness coaches to design integrative lesson plans, ensuring both creative and emotional objectives are met (Davidson & Kaszniak, 2015).

(iii) **Ongoing Mentoring:** Intra-departmental or cross-disciplinary “mindful teaching circles” provide a forum for educators to share strategies, troubleshoot challenges, and reflect on their own journeys with mindfulness.

In Vietnam, partnering with local temples or Zen practitioners familiar

with Thich Nhat Hanh's works can offer culturally anchored guidance and a reservoir of traditional insights.

7.3. Creating inclusive, culturally sensitive frameworks

While Buddhist ethics undergird many mindfulness approaches, teachers should ensure cultural and religious inclusivity by:

- (i) Presenting mindfulness as a universal skill set (e.g., for focus, relaxation, empathy) rather than a strictly religious practice.
- (ii) Adapting exercises or references to local traditions, such as using Vietnamese proverbs or folk imagery in art projects.
- (iii) Emphasizing values such as compassion, tolerance, and interconnectedness recognized by numerous faiths and humanistic traditions to foster respect for diverse backgrounds (Nhat Hanh, 1975).

7.4. Assessment and evaluation approaches

Conventional grading may not fully capture the holistic changes in creativity, emotional growth, and ethical awareness. Alternative assessment includes:

- (i) Portfolios: Collecting sketches, reflective writings, and photo documentation of works-in-progress, measuring growth over time (Eisner, 2002).
- (ii) Self-Assessment and Peer Reviews: Inviting students to articulate personal goals (e.g., overcoming perfectionism) and offer constructive feedback in ways that reflect mindful listening.
- (iii) Observational Rubrics: Tracking behaviors like persistence, collaboration, empathy, or stress management, gleaned from teacher and peer observations.

For Vietnamese schools, pilot studies or "action research" projects can help refine local metrics, capturing subtle shifts in cultural pride, spiritual exploration, and resilience.

VIII. CHALLENGES AND CONSIDERATIONS

8.1. Cultural adaptation and inclusivity

Though many educators endorse mindfulness, certain communities may misinterpret its Buddhist roots as a form of proselytization. In Vietnam, a predominantly Buddhist yet constitutionally secular society, some educators worry about conflating religious instruction with academic learning. To navigate this:

- (i) Frame mindfulness in secular, humanistic terms.
- (ii) Provide opt-out provisions or alternative reflective exercises (e.g., silent reading, journaling) for students or families uncomfortable with the practice.
- (iii) Emphasize alignment with universal ethical principles like kindness, respect, and self-awareness.

8.2. Resource allocation and funding

Art supplies, teacher training, and specialized facilitators can strain budgets. Potential solutions include:

- (i) Community Partnerships: Engage local artists, Buddhist organizations, philanthropic groups, and mental health agencies to co-sponsor or donate materials and expertise (World Economic Forum, 2016).
- (ii) Digital Resources: Free or low-cost mindfulness apps, online tutorials, and virtual art platforms can supplement face-to-face instruction.
- (iii) Grant Applications: Advocate for the integration of mindful art education under SEL, mental health, or innovation grants, highlighting evidence-based outcomes (CASEL, 2021).

In Vietnam, new government initiatives focusing on innovation in education and youth mental health may offer pathways to secure public or private funding.

8.3. Ethical implications and secular vs. religious contexts

Buddhist mindfulness underscores ethical commitments that some schools may find challenging to integrate without crossing boundaries between church and state, particularly in countries with strict secular policies (Analayo, 2003). Best practices include:

- (i) Presenting mindfulness as voluntary and skills-based, focusing on mental health and emotional well-being.
- (ii) Collaborating with interfaith or secular mindfulness experts to create materials that align with local educational guidelines.
- (iii) Maintaining transparency with stakeholders (parents, administrators, community members) about program objectives and expected outcomes.

IX. TOWARD A HUMAN-CENTERED EDUCATION

9.1. Humanizing the learning experience

A “humanized” approach to mindful art education underscores individual student narratives, personal transformations, and empathetic teacher-student relationships. By contextualizing creative tasks within real-life experiences, learners find tangible meaning in both the artistic and mindful dimensions. For example: (i) Storytelling: Incorporate personal testimonies of growth or challenge, allowing students to see how mindfulness fosters resilience in peers or role models; (ii) Listening Circles: Encourage open dialogue about emotional struggles, dreams, and cultural identities, thereby celebrating diversity and affirming shared humanity (Nhat Hanh, 1992).

In Vietnam, where the tradition of collective storytelling and ancestral remembrance is strong, mindful art can offer powerful intergenerational connections, enabling young people to link their creative expression to familial and cultural legacies.

9.2 Fostering a sense of belonging and collective well-being

From a Buddhist viewpoint, interconnection (*Pratītyasamutpāda*) suggests that individual flourishing is inseparable from collective well-being. In mindful art programs, a sense of belonging arises through:

- (i) Cooperative creativity: Students working on a large canvas or sculpture develop group identity, each contribution reinforcing a shared vision.
- (ii) Ethical reflections: Discussing how personal acts even artistic ones impact others fosters moral accountability and civic consciousness.
- (iii) Community engagement: Initiatives like painting public murals in marginalized neighborhoods link students with local social issues, bridging school-based learning and community development.

For Vietnamese schools, bridging mindfulness, art, and communal welfare aligns with cultural values around collective harmony and mutual support, reinforcing students' sense of agency and social responsibility.

X. CONCLUSIONS AND FUTURE DIRECTIONS

Summary of Key Findings

This paper has detailed how Buddhist-informed mindfulness, woven into art education, can simultaneously bolster creative expression, emotional resilience, and ethical awareness among youth:

- (i) Core Buddhist Concepts: Right Mindfulness, Non-Attachment, and Compassion resonate across diverse educational settings, offering students a holistic toolkit for navigating creative and personal challenges;
- (ii) Empirical Evidence and Policy Trends suggest that mindfulness-based interventions in art education substantially improve student engagement, stress reduction, and social harmony;
- (iii) Case Studies from the USA, Thailand, South Africa, and Vietnam illustrate both cultural adaptability and universal relevance. In the Vietnamese context, mindful calligraphy and Zen-inspired projects demonstrate how local traditions can ground contemplative pedagogy in a culturally resonant framework;
- (iv) Best Practices in curriculum design, teacher training, and inclusive assessment underscore the importance of process-oriented creative tasks, professional development, and community partnerships.

Policy and Practical Implications

- (i) Education Policy: Decision-makers – especially within Vietnam's evolving educational landscape – may consider formalizing mindful art education within broader SEL frameworks, providing resources for teacher training and curricular integration.
- (ii) School Administrations: Administrators can pilot mindful art programs and community outreach initiatives, measuring not just academic gains but also emotional well-being and ethical maturity

among students.

(iii) Teacher Capacity Building: Institutions of teacher education can embed mindfulness modules in art pedagogy courses, preparing future educators to navigate culturally sensitive and ethically rich classroom experiences.

Recommendations for Future Research

While promising, the field requires deeper investigations:

(i) Longitudinal Studies: Tracking cohorts over multiple years to discern long-term impacts of mindfulness-based art education on social skills, academic success, and moral development;

(ii) Comparative Cross-Cultural Analyses: Exploring how local beliefs, traditions, and art forms modulate the effectiveness of Buddhist-informed mindfulness in different regions, including more sites in Vietnam;

(iii) Neuroscientific Approaches: Employing neuroimaging or psychophysiological methods to understand how mindful creativity shapes cognitive and emotional processes;

(iv) Scalability and Funding Models: Examining ways to sustain programs in low-resource settings, analyzing cost-benefit outcomes, and identifying avenues for philanthropic or governmental support.

In conclusion, a Buddhist-inspired, mindful approach to art education emerges as a vital, human-centered strategy to equip today's youth across diverse cultural landscapes, especially in Vietnam, with the creative, emotional, and ethical resources necessary for thriving in an ever-changing world. As educators and policymakers increasingly recognize the synergy between mindfulness and the arts, the vision of a generation that is both imaginative and morally grounded becomes not merely an aspiration but a tangible reality.

MINDFULNESS PRACTICE IN BUDDHIST SCHOOLS IN INDONESIA

Purnomo Ratna Paramita*

Abstract:

This paper explores the role of mindfulness in education in Indonesia and its contribution to fostering compassion and a sustainable future. Grounded in the Buddhist teachings of the *Satipatthana Sutta*, mindfulness practices in schools focus on four foundations: observation of the body, feelings, thoughts, and mental objects. The practice of meditation implemented in schools has various names, including mindfulness, morning meditation, silent sitting, and morning reflection. The research examines how these practices transform student behaviors and promote environmentally and socially responsible actions. Case studies from schools in Indonesia demonstrate how mindfulness encourages sustainability efforts, such as using reusable cutlery, waste separation, and participation in free vaccination programs. Furthermore, mindfulness enhances students' learning outcomes and emotional regulation, fostering a compassionate school environment. The findings suggest that mindfulness practice develops a deep understanding of *interbeing* – the interconnectedness of all life – leading to greater environmental stewardship and social harmony. By integrating mindfulness into education, students gain the awareness and responsibility necessary to contribute to a more compassionate and sustainable future. All the effort from mindful education can hopefully reduce the state-based armed conflict and extreme weather events, which are the two most urgent material threats in 2025.

Keywords: *Mindfulness, education, Indonesia, compassion, sustainability, interbeing, Buddhist teachings.*

I. INTRODUCTION

In this year's World Economic Forum Global Risks Report, based on the annual Global Risks Perception Survey (GRPS), the answer is particularly sobering. "Bleak" is the umbrella adjective describing the overall state of things

* STABN Sriwijaya, Indonesia.

in its current, 2-year and 10-year outlook prediction ranges.”¹ State-based armed conflict and extreme weather events are the top 2 of the top 10 risks chosen by respondents as the most urgent material threats in 2025. State-based armed conflict received 23% of the overall geopolitical risk category. Extreme weather events account for 14% of the environmental risk category.² The two highest risks should be minimized so that they do not develop and have a negative impact on the global community. Efforts have been made by the United Nations to reduce the impact of these two risks. The United Nations has launched 17 goals for a sustainable future. The 17 goals include: no poverty, no hunger, healthy and prosperous lives, quality education, gender equality, clean water and proper sanitation, clean and affordable energy, decent work and economic growth, industry, innovation and infrastructure, reduced inequality, sustainable cities and settlements, responsible consumption and production, tackling climate change, marine ecosystems, terrestrial ecosystems, peace, justice and resilient institutions, and strengthening the means of implementation and revitalizing the global partnership for sustainable development.³ Some goals, such as quality education, clean water and proper sanitation, clean and affordable energy, sustainable cities and settlements, responsible consumption and production, tackling climate change, peace, justice, and resilient institutions, can prevent and minimize the growth of the two risks above.

State-based armed conflicts can be minimized through international humanitarian law. International humanitarian law is one of the tools and methods that can be used by any peaceful or neutral State to engage in the reduction of the suffering experienced by communities as a result of armed conflicts that occur in various States.⁴ This approach to international humanitarian law tends to be curative, where war conflicts are or have occurred and then resolved. Such curative methods help, but not for long-term benefits and the prevention of war. Buddhism encourages preventive measures through its teachings on love, mindfulness, compassion, and nonviolence so that wars or fights are less likely to occur. The fight begins when someone says something unkind to you, and you may want to retaliate right away.⁵ This attempt to retaliate was the beginning of the war. The habit of retaliating for bad things creates a well-worn pathway in the brain. Habit energy is called *vasana* in

Sanskrit. Habit energy may have been transmitted to us by many generations of ancestors, and we continue to cultivate it.⁶ Mindfulness gives the capacity to recognize the habit energy every time it manifests. Bad habits can be transformed into good habits through mindfulness so that good character can be formed. The mind and brain are like plastic in nature, whose shape can be changed. Through mindfulness and insight exercises, new neural pathways that lead to understanding, compassion, love, and forgiveness can be created.⁷ Good habits such as mindfulness practice, if done continuously, will become a character that is carried over from childhood to adulthood. Students' character can be grown through educational activities in the classroom and outside the classroom, both with habituation, example, and teaching approaches.⁸ Education in Indonesia leads to character education, one of which is through meditation. Meditation activities can develop students' good character.⁹ The practice of meditation, if done correctly, can be effective in developing healthy habits and increasing adaptive social interaction behaviors.¹⁰ Wars and fights can be prevented through mindfulness exercises in school, from children to adults.

Extreme weather events occur because of human actions that are less grateful for what has been obtained from this universe. Human activities such as forest burning, greenhouse gas emissions, and air pollution can drastically affect the climate and cause extreme weather.¹¹ Humans tend to be interested in using natural products without thinking and trying to preserve them for the future of the next generation. Every individual must have mindfulness to preserve this earth. Efforts to raise mindfulness can be made from an early age through education. Mindfulness exercises can be applied in the world of education. From an early age, students should be taught about mindfulness so that understanding, compassion, love, and forgiveness can be created. Quality education, as proclaimed in the 17 goals of the United Nations, can be achieved by applying mindfulness in schools. The practice of mindfulness in education is an urgent need to achieve world peace because we need compassion to

maintain future sustainability.

Compassion in Pali means *karuṇā*. Dalai Lama defines compassion as “An openness to the suffering of others with a commitment to relieve it.”¹² Compassion has the characteristic of developing the quality of eliminating suffering (*Dukkḥāpanayanāṅkārapavattilakkhaṇa*). The function of *karuṇā* is to not bear to see the suffering of other beings (*paradukkhāsahanarasa*). The manifestation of *karuṇā* is the absence of cruelty (*avihiṃsāpaccupaṭṭhāna*), and its proximate cause is seeing the unsheltered state of beings (*anāthabhāvadassanapadaṭṭhāna*).¹³ A sustainable future means moving towards an efficient, resource-consistent circular economy and turning away from a linear economy that produces waste.¹⁴ Based on this explanation, global threats related to armed conflict and extreme weather can be minimized by applying the practice of compassion. Compassion and a sustainable future can be brought about by an educational approach through the practice of mindfulness. There is evidence that mindfulness and other stress management skills can produce positive effects on educators’ sleep and skills such as self-regulation and compassion, as well as on their overall job satisfaction.¹⁵ This

evidence is one of the bases for writing this paper that mindfulness in the scope of education can give rise to compassion that is beneficial for future sustainability and contributes to world peace.

The Compassionate Education Foundation presents 21 characteristics to describe the characteristics of a compassionate school, one of which is awareness and action in the 20th characteristic.¹⁶ The school strives to build awareness and action among all students and adults to protect the planet. Sustainability is an overt priority through school work routines and in planned curriculum experiences so that students are helped to learn about how to advance humanity while not jeopardizing fragile global ecosystems.¹⁷ Based on these characteristics, schools that implement awareness and action practices to foster compassion and a sustainable future can be identified. The majority of Buddhism-based schools in Indonesia have the characteristics of awareness and action because the schools apply mindfulness and action to protect the environment for students and school residents. The application of mindfulness in the school produces positive activities that can be identified to be able to generate compassion and maintain future sustainability. This paper will describe the practice of mindfulness in schools, especially in Indonesia, which leads to the development of compassion and maintaining future sustainability through activities carried out with mindfulness.

II. MINDFULNESS PRACTICE IN INDONESIAN EDUCATION

In Indonesia, the practice of mindfulness has been widely practiced in the world of education, one of which is in schools. Based on the research, it was found that the practice of meditation implemented in schools has various names, including mindfulness, morning meditation, silent sitting, and morning reflection. Schools that name their meditation practice as mindfulness include Dharma Putra Junior High School, Atisa Dipamkara Junior High School, Ehipassiko Junior High School, Narada Elementary School, and Tri Ratna Elementary School. The word mindfulness is the same as the word *Sati* in Pali and can be found in the Sutta Pitaka section of *Majjhima Nikaya 10: Satipatthana Sutta*. The *Satipatthana Sutta* explains the four foundations of mindfulness, including observation of the body (*kaya nupassana*), feelings (*vedana nupassana*), thoughts (*citta nupassana*), and mental objects (*dhamma nupassana*).¹⁸ In addition, the word mindfulness also appears in *Milinda Panha* 3.1.13 about the characteristics of mindfulness. Nagasena explained to King Milinda the characteristics of mindfulness. Nagasena explained, "The

characteristic mark of mindfulness is repetition and keeping up.”¹⁹ Meaning that the characteristic mark of mindfulness is repetition and keeping up. In this case, the word keeping up refers to good things or keeping attention on good things. This process of keeping up is also done repeatedly and continuously every moment. That is how keeping up is the mark of mindfulness.

The practice of mindfulness at Dharma Putra School is done during Buddhist subjects located in the classroom and cetiya. Meditation practices are done in sitting, standing, and walking positions. Through the practice of mindfulness, students become more attentive in learning, calmer, and able to control themselves. The results of the meditation support the achievement of the goal of a compassionate and sustainable future in the field of quality education. In Atisa Dipamkara School, mindfulness practice is done only at special times and schedules. Meditation is done outdoors or in the hall in a sitting position. Based on the interview results, it was found that students who practice mindfulness well are able to control their emotions better. At Narada School, a mindfulness program has been implemented to help students improve concentration and develop emotion regulation skills. The program usually involves a short meditation session guided by a trained teacher and integrated into the school’s daily schedule before lessons start for approximately 5 minutes. In Tri Ratna’s school, meditation practice is integrated into the mindfulness curriculum, which is usually done in the morning habituation before the children learn to prepare themselves for the lessons at school. At Ehipassiko School, mindfulness is practiced by all school members. It is done at the beginning of learning, during learning every 30 minutes, and at the end of learning before going home. Meditation practice is done throughout the school area in standing, walking, lying, and sitting positions. In addition, Ehipassiko School has its routine meditation program for students and all school members, namely: *Mindful Listening*, *Walking Meditation*, and *Total Relaxation*. As a result, students look disciplined and calm when facing all activities in the school environment.

Jaya Manggala Junior High School, Punna Karya Elementary School, and Ariya Metta Junior High School named their meditation practice silent sitting. Silent sitting here means sitting with a silent/ quiet mind that does not chatter. *Samatha Bhavana* consists of the words *Samatha* and *Bhavana*. *Samatha* in the Pali Text Society (PTS) Pali English Dictionary is calm; quietude of heart and *Bhavana* is dwelling, sphere, world, and realm.²⁰ From this definition, it can be interpreted to be a calm residence, atmosphere, world realm, or tranquility. Silent sitting, in this case, is under the purpose of *samatha bhavana*, which is inner calm and quiet mind.

¹⁹ Sutta Central, “*The Questions of King Milinda Book 2: The Distinguishing Characteristics of Ethical Qualities: Chapter 1: 3.1.13. Mindfulness*,” accessed February 17, 2025, <https://dhammatalks.net/suttacentral/sc2016/sc/en/mil3.1.13.html>. 1

²⁰ The Pali Text Society, *Pali-English Dictionary*, ed. T. W. RHYS DAVIDS and WILLIAM STEDE, 1925.

Silent Sitting, practiced at SMP Jaya Manggala, is done every day at the beginning of learning. Located in the classroom and field in a sitting position. As a result, students are more concentrated, conducive to learning, and able to control their thoughts, speech, and actions. In Punna Karya School, the practice of silent sitting is done at the beginning and end of learning every day. Located in the classroom and *dharmasala* with a sitting position. The result is that students can easily concentrate, and student behavior and the learning atmosphere in the classroom become good. At Ariya Metta School, the practice of silent sitting is done at the beginning of Buddhism class in the classroom in a sitting position.

Perguruan Buddhi Elementary School calls its meditation practice a morning meditation. This name refers to the practice of meditation done in the morning. In the book, *Riwayat Hidup Buddha Gotama* explains that Buddha, in his daily routine, starts meditation in the morning. After waking up at 04.00, then take a shower and start to meditate at 05.00 until 06.00.²¹ In addition, Trungram Gyalwa, a meditation expert, wrote in his blog, "Doing a short meditation practice in the morning has the opportunity to encourage someone to meditate regularly. The positive benefits of meditation in the morning will also stay with the individual throughout the day."²² Looking at the Buddha's daily life and the benefits mentioned above, it is natural that the phrase morning meditation is used to name meditation in schools while emphasizing that meditation in schools is done in the morning. *Morning Meditation* at Perguruan Buddhi Elementary School is practiced every morning after the *Morning Prayer* activity is completed. Located in the field facing the monastery or Bodhi tree with a standing position. As a result, students are more able to focus during teaching and learning activities, and the classroom atmosphere gradually becomes calmer.

Bodhisatta Junior High School named its meditation practice as Morning Meditation. The researcher identified the text of the meditation guide used by the school to understand the meaning of the morning devotional. It was found that the meditation guide contains words that represent loving-kindness meditation or *metta bhavana*. In KBBI, the word devotional means the fruit of thought, so morning devotional means the fruit of thought that is raised in the morning.²³ Similarly, loving-kindness meditation in practice is an effort to generate thoughts or contemplations of loving-kindness. The first object in loving-kindness meditation is yourself, then the object you love, a neutral object, and finally the object/ person you are hostile to.²⁴ This is consistent

with the content of the Bodhisatta Junior High School morning devotional text, although there are no words of loving-kindness meditation for hostile objects.

The practice of Morning Meditation is done at the beginning of each day's learning. Located in the *dharmasala* with a cross-legged sitting position. As a result, students find it easier to concentrate while learning, increase their understanding of how to meditate, recite *paritta*, *namakara*, and chant, help process emotions, and increase their faith in *Tiratana*.

III. MINDFULNESS IN EDUCATION FOR A COMPASSIONATE AND SUSTAINABLE FUTURE

The various names of meditation refer to the practice of mindfulness. Through the practice of mindfulness implemented in schools, activities that refer to the development of compassion and future sustainability can be carried out better. The real future is made only of one substance, and that is the present.²⁵ The realization of a sustainable future is highly dependent on efforts here and now through mindfulness practices. Based on the interview results, the mindfulness practices implemented at school have direct implications for activities related to maintaining future sustainability and compassion, such as Students using their reusable cutlery, Separating recyclable and non-recyclable waste, The school collaborates with health institutions to hold a mandatory vaccine program at school for students for free; The implementation of mindfulness practices at school helps students to improve their learning outcomes and emotional abilities.

The first activity is for students to use their reusable cutlery. This effort is done with full awareness of its benefits in the future and out of compassion for the next generation. The use of reusable cutlery is very supportive in reducing plastic waste. Studies reveal that there are 24 - 34 million metric tons of plastic pollution entering the marine environment every year. This is about 11% of the total plastic waste in the world.²⁶ The situation is likely to get worse in the next decade. It is estimated that the amount will increase to 53 - 90 million tons by 2030.²⁷ Efforts to reduce the adverse effects of plastic waste need to be done together by the entire school community. Students, since childhood, need to be educated not to produce plastic waste by using their cutlery at school. The world of education is the main place for individuals to learn to be mindful of minimizing plastic waste for the sustainability of the future. This mindfulness practice illustrates the characteristics of a compassionate school according to The Compassionate Education Foundation.²⁸ In the practice of mindfulness, students are invited to realize that life is here and now. Realizing

²⁸ Diamond, "21 Propositions to Describe the Characteristics of a Compassionate School."

that we are made up of components that are not us (*interbeing*).²⁹ *Interbeing* is the understanding that nothing exists separately from anything else.³⁰ We are all interconnected in this universe. We exist because of various conditions that arise to manifest as us. Through the understanding of the law of interdependent causality, students can bring compassion to other components that make up themselves, such as the sun, clouds, plants, soil, water, animals, and various other components. Thanks to these components, students can live with compassion today. Mindfulness practice is able to transform hatred into compassion, which is the main cause of war and acts of destruction of the environment.

The next activity carried out at school with regard to future sustainability and the practice of compassion is separating recyclable and non-recyclable waste. This activity requires collective awareness to be done properly. Zen master Thich Nhat Hanh said that to protect the earth, we must have a collective awakening. Individual awareness is not enough, which is why one Buddha is not enough.³¹ All individuals in the school need to be aware of the importance of processing recyclable waste so that waste does not accumulate and become unused dirt that becomes a source of disease. In Indonesia, there are 10,460,140.77 tons/year of unmanaged waste.³² The data shows the importance of collective awareness in waste management efforts. Recycled waste can be beneficially used as plant fertilizer and as valuable products. The school has provided waste bins with several different types of containers for each type of waste, such as organic and inorganic waste. Students and all school members are trained to be aware of sorting waste and disposing of it in the correct place according to the container. The practice of contemplation can be done by reflecting that the waste comes from oneself and should not be an item that can harm others. One benefits from the item, so others should also benefit by recycling the waste.

The school collaborates with health institutions to conduct a mandatory in-school vaccine program for students free of charge. This activity supports students who are economically disadvantaged to reach health facilities. This activity arises from the awareness to help others to be free from the suffering of illness. Compassion has 5 basic elements: recognizing suffering, understanding the universality of human suffering, feeling sympathy for people who suffer, tolerating uncomfortable feelings, and motivation to act to alleviate suffering.³³ In the *Dhammacakkapavattana Sutta*, the Buddha said that pain is

²⁹ Thich Nhat Hanh, "Interbeing, the Four Noble Truths, and Right View," *The Mindfulness Bell*, no. 72 (2016), <https://www.parallax.org/mindfulnessbell/article/interbeing-the-four-noble-truths-and-right-view/>.

part of the first noble truth of the Buddha's teaching of the four noble truths, as follows: "Now these, monks, are the noble truths of suffering: birth is suffering, aging is suffering, sickness is suffering, and death is suffering."³⁴ The element of recognizing suffering in the five elements of compassion is in line with the Buddha's teaching on the first noble truth of recognizing pain as suffering. Through this understanding, students can practice recognizing pain as suffering in its true meaning, that pain is pain, not pain as me, and there is an entity who is sick so that there is an understanding that pain is the universality of human suffering. The realization of this truth will lead to the emergence of compassion and sympathy for suffering beings. The activity of providing free vaccines to students departs from the 5 elements of compassion. Schools that implement mindfulness are more sensitive to suffering, especially that experienced by their students. Suffering, in this case, is in the form of physical pain caused by diseases that arise due to students' limitations in obtaining vaccines at cost. Mindfulness applied at school provides an understanding of the universality of human suffering. Not all students at school have direct access to health facilities to get vaccines. Certain vaccines are expensive. The school's efforts to collaborate with health institutions greatly help students get free vaccines that are beneficial. The more students who get vaccinated, the stronger the community in the school will be to stop the spread of disease".

The implementation of mindfulness practices in schools helps students to improve their learning outcomes and emotional abilities. Partially, Compassion Meditation has an effect and is significant on student learning outcomes.³⁵ *Anapanasati* meditation, when done daily for 6 months, can show a decrease in verbal aggression for the practitioner.³⁶ The data supports that meditation can improve students' learning outcomes and emotional abilities. Informants from SD Narada said that meditation, especially the practice of mindfulness, trains a person to be more present and aware in every action. When students or individuals practice meditation regularly, they become more sensitive to their surroundings, including the impact of littering. With this increased awareness, they are more careful in sorting waste, understand the ecological consequences of their actions, and act responsibly. In addition, meditation develops an attitude of compassion (*karuṇā*), which strengthens the urge to protect the environment for the good of all beings. Meditation helps improve students'

³⁶ B. Sivaramappa et al., "Effect of Anapanasati Meditation on Verbal Aggression: A Randomized Controlled Trial," *Complementary Therapies in Clinical Practice*, 2019, <https://doi.org/10.1016/j.ctcp.2019.06.004>.

focus and concentration so they can learn more effectively. In mindfulness practice, students are taught to bring their full attention to what they are doing, for example, when reading, writing, or listening to the teacher. This reduces distractions and increases the absorption of the subject matter. In addition, meditation helps students manage their emotions. By being aware of thoughts and feelings that arise without reacting impulsively, they can deal with academic pressure, social conflicts, and other challenges more calmly and thoughtfully. This ability to regulate emotions better also contributes to more harmonious social relationships in the school environment. Ehipassiko School applies *Mindful Listening*, *Walking Meditation*, and *Total Relaxation*. Mindful listening will transform into compassionate listening. When compassionate listening is practiced, it is important to remember that listening has only one goal, and that is to alleviate the suffering of others.³⁷ Listening deeply to another is a form of meditation. We can understand their pain and difficulties when we can listen to others with deep compassion. If this practice becomes a habit and character for students, then fights and wars will not occur because students can listen attentively and compassionately. Through compassionate listening, students realize that your suffering is my suffering and your happiness is my happiness; this is the practice of *interbeing*. Walking is an important form of Buddhist meditation.³⁸ Students who practice walking meditation correctly can come into contact with all the amazing things of life that exist within themselves and around them. Walking meditation means stepping with full awareness and being fully present in the here and now. The correct practice of walking meditation will free us from all plans, all worries, and all wishful thinking because we are fully present and fully alive with our minds touching the earth.³⁹ Finally, mindfulness practice at the Ehipassiko School is total relaxation. Total relaxation is a way to help the mind and body rest consciously. This practice will be beneficial if done regularly, helping the mind become clearer and the body becomes fresher, as written in the following total relaxation guide text.

Ehipassiko Junior High Total Relaxation Guide

If you fall asleep, let sleep happen naturally; do not resist it. This type of sleep is very good sleep. This kind of sleep does not produce dreams.

First of all, you lie down comfortably.

If you want to use a pillow, it should not be too high.

Your head, your neck, and your spine are on the same surface.

Put your arms by your side, close your eyes, and let go of all thoughts.

Pay full attention to the in-breath and out-breath

(Clapper)

³⁷ Hanh, *How to Fight*. 1 – 128.

³⁸ Thích Nhất Hạnh, *Buddha Mind, Buddha Body - Walking Toward Enlightenment* (USA: Unified Buddhist Church, Inc., 2007).

³⁹ Nhất Hạnh.

In-breath, I realize this is the in-breath.

Out-breath, I realize this is my out-breath.

In-breath - Out-breath.

On the in-breath, I feel a stream of cold water washing me from head to toe, relieving, soothing, and calming the entire physical body.

The whole body feels relaxed.

In-breath, allow the whole body to rest.

Out-breath, allow the whole body to relax.

Now, I place one hand on my abdomen.

Breathe in gently, breathing out gently.

I try to feel the rise and fall of my abdomen while breathing in and out.

Abdominal wall up, abdominal wall down.

Up and down, up and down. (2x)

Breathing in, I allow all the cells all over my shoulders and both hands to rest.

Breathing out, I allow my entire shoulder and both hands to rest.

Allow all the cells, shoulders, and hands to rest.

Breathing in, I send loving energy to both feet, allowing all the cells throughout my feet up to the fingertips to rest.

When breathing out, the entire foot feels relaxed.

Send loving energy, allowing the feet to relax.

Now, I send loving energy to my heart.

Breathing in, I feel my heart beating.

Breathing out, I allow my heart to rest.

Feel the heartbeat; allow the heart to rest.

My heart works 24 hours a day for my health, but I pay little attention to it.

Every time I get upset, my heart suffers.

When I am angry, afraid, or anxious, my heart suffers greatly.

I am determined to practice less anger, less fear, and less anxiety so that my heart can function properly and be healthy again.

Now, I want to say thank you to my heart.

Breathing in, I smile at my heart with love and gratitude.

Breathing out, I am determined to let go of all worries and anxieties.

Calming my heart, smiling to my heart.

Now, I send loving energy to my liver.

Breathing in, I calm my liver.

Breathing out, I smile at my liver with gratitude.

My liver works day and night for my health, but I don't eat mindfully.

I ate a lot of food, which made it difficult for my liver.

I ate unconsciously, I often didn't follow the doctor's advice.
 Driven by negative thoughts, I often forgot to take care of my liver.
 I am determined to pay attention to and keep my liver healthy.
 I thank my liver.

I promise to take care of you by being mindful when eating and drinking.
 Now, I send loving energy to my intestines.
 Breathing in, I calm and relax my intestines.
 Breathing out, I smile at my intestines with love and care.

I realize that I sometimes get carried away by good taste, and I eat without understanding.

I ate everything that was unhealthy: spicy food, sweet food, all of which made my intestines sore.

I am determined to take care of my intestines, I will eat and drink mindfully.
 Soothing my intestines, smiling to my intestines, with loving kindness.
 Now, I send loving energy to my lungs.
 Breathing in, I calm my lungs.

Breathing out, I smile at my lungs with gratitude.
 My lungs are working very well for my health.
 I have seen many people who have difficulty breathing.

I am one of the lucky ones because my lungs are healthy and functioning well.

I want to say thank you to my lungs.
 I will do my best to give you fresh air.
 Breathing in, I calm all the nerves in my brain.
 Breathing out, I feel very refreshed and relaxed in my brain.
 I am not worried about anything.

I let go of everything.
 I allow my brain to relax.
 My brain is working very hard, I relax all the nerves in my brain.
 And I feel very peaceful right now.

Breathe in. I release all the tension in my facial muscles.
 Breathing out, I feel very relaxed and refreshed in all my facial muscles.
 My eyes are my treasure.

I just need to open my eyes, and I can see a heaven of shapes and colors.
 My ears, which are functioning properly, are also my treasures.
 My nose, which is functioning properly, is also my treasure.
 My kidneys are my treasure.

My two legs, which can still walk well, are my treasures.

My hand, my arm, is a treasure.

Thank you for being there.

The universe is full of treasures.

I want to give you so many treasures

Your eyes are treasures.

Your heart is a treasure.

(Song)

The universe is full of treasures, within us and around us.

We just need to realize it. And all these treasures will be visible to us.

(Song)

The fact that we can still hear the birds singing, the voices of our loved ones.

That is a treasure.

The fact that we can still see the flowers blooming, the beautiful faces of our loved ones.

That is a treasure.

You, the richest person in the world, don't behave like a poor beggar of happiness.

All those treasures are there for you.

(Songs)

(Clapper)

Dear friend, this is the end of total relaxation.

You can lie down on your right side, and after a few minutes, if you feel ready, you can slowly get up to sit.

Overall, meditation practice not only provides individual benefits in the form of inner calm and clarity of mind but also shapes more environmentally responsible behavior and healthier social relationships.

IV. CONCLUSION

Compassion and a sustainable future can be realized with an educational approach through the practice of mindfulness. Schools in Indonesia, especially those based on Buddhism, apply mindfulness to students and all school members. Mindfulness that is applied, conditions the activities at school that lead to the emergence of compassion and a sustainable future, such as Students using their reusable cutlery, Separating recyclable and non-recyclable waste, The school collaborating with health institutions to hold a mandatory free vaccine program at school for students, The implementation of mindfulness practices at school helps students to improve their learning outcomes and emotional abilities. These activities help to sustain the future and generate compassion. All the effort from mindful education hopefully can reduce the State-based armed conflict and extreme weather events, which become the two top most urgent material threats in 2025.

A CASE FOR CULTURAL CONTEXT OF MINDFULNESS AS A PEDAGOGICAL TOOL - WITH SPECIAL REFERENCE TO SOCIAL AND EMOTIONAL LEARNING (SEL)

Dr. Neekee Chaturvedi*

Abstract:

This paper explores the integration of Buddhist mindfulness into Social and Emotional Learning (SEL) as a culturally rooted pedagogical tool. While mindfulness has been widely adopted in modern educational psychology for enhancing emotional regulation, attention, and prosocial behaviour, its Buddhist origins are often overlooked. This study argues that incorporating the philosophical and cultural context of Buddhist mindfulness enriches SEL frameworks, promoting holistic development in learners. Drawing from Buddhist teachings such as *sati* (mindful awareness) and *karuṇā* (compassion), the paper emphasizes the significance of ethical grounding and spiritual introspection for meaningful SEL outcomes. Through practical applications in Indian schools and universities, the study demonstrates how culturally informed mindfulness cultivates self-awareness, empathy, and ethical reasoning. It further highlights the need for cross-cultural adaptations to maximize SEL's global impact and calls for a mindful shift in educational paradigms to foster compassionate, sustainable societies.

Keywords: *mindfulness, SEL, Buddhist pedagogy, compassion, cultural context.*

* Associate Professor and Head, Department of History and Indian Culture, University of Rajasthan, Jaipur, India.

I. INTRODUCTION

1.1. On mindfulness

“The richness of present-moment experience is the richness of life itself. Too often we let our thinking and our beliefs about what we ‘know’ prevent us from seeing things as they are.”¹

1.2. On compassion

“Like a mother who protects her child, her only child, with her own life, one should cultivate a heart of unlimited love and compassion towards all living beings.”²

1.3. On Social and Emotional Learning (SEL)

“SEL is the process through which all young people and adults acquire and apply the knowledge, skills, and attitudes to develop healthy identities, manage emotions and achieve personal and collective goals, feel and show empathy for others, establish and maintain supportive relationships, and make responsible and caring decisions.”³

This paper explores the integration of mindfulness as a pedagogical tool for Social and Emotional Learning (SEL) in educational settings for facilitating the cultivation of compassion in learners. Drawing on Buddhist traditions of mindful awareness (*sati*) and contemporary psychological research, the study examines how mindfulness fosters self-awareness, emotional regulation, and prosocial behaviour among students. The paper agrees that mindfulness enhances student well-being, reduces stress, and cultivates ethical awareness, making it a crucial component of 21st-century education, but argues that adding the cultural context of Buddhist philosophy is crucial to its efficacy and cross-cultural implementation.

Social and Emotional Learning (SEL) has become an accepted framework for fostering emotional intelligence, empathy, and responsible behaviour in students. Mindfulness, a core practice in Buddhism, has emerged as a powerful pedagogical tool to enhance SEL by cultivating present-moment awareness, emotional regulation, and ethical decision-making. Mindfulness implies that one is widely awake to the present moment and enables an individual to function well. According to *Lohicca Sutta*, *Sarīyutta Nikāya*⁴, mindfulness enhances the ‘breadth’ of one’s mind, even making it boundless. Thus, one is enabled to grasp various elements and facets of situations and events. This research paper explores the integration of mindfulness techniques in SEL frameworks, drawing on both Buddhist teachings and contemporary educational theories. It explores the integration of Buddhist mindfulness through contextual philosophical framing to suggest how mindfulness practices can be more effectively used to promote emotional and social competence, improve student

¹ Kabat-Zinn (2005): 35.

² *Suttanipāta* 1.8.

⁴ *Sarīyutta Nikāya*, IV, 119 - 120.

well-being, and build a compassionate, sustainable learning environment.

The concept of Social and Emotional Learning (SEL) has been widely adopted in modern educational systems. It focuses on five key competencies: self-awareness, self-regulation, social awareness, relationship skills, and responsible decision-making⁵. SEL has been shown to improve academic performance, mental health, and interpersonal skills. However, traditional SEL programs often emphasize cognitive strategies, sometimes overlooking the role of mindfulness in fostering deep emotional and social awareness.

Mindfulness, rooted in Buddhist philosophy, refers to the practice of focusing attention on the present moment without judgment. It encourages non-reactivity to thoughts and emotions, promoting self-awareness and compassion. Mindfulness practices such as mindful breathing, examining the body, focusing on postures, and meditation are recommended to be integrated into educational settings as tools to support emotional and social development. "Most of the time our perception is limited by our attention span; fragmented by continuous distractions; distorted by our biases, assumptions, and expectations; and regularly hijacked by our emotional reactivity"⁶ The emotional reactivity is what clouds compassion and thus, creates hostility for the well-being of both the individual and the while hindering the positivity in the environment or the world at large.

Merriam-Webster Dictionary defines compassion as "sympathetic consciousness of others" or "distress together with a desire to alleviate it." The Buddhist texts define *Karuna* along the same lines as "*par dukkhe sati sadhunam hadayakampanam karotiti karuna*."⁷ Cultivation of compassion shall be crucial in shaping the emotional and cultural roots to create a more harmonious environment. The attempt to create an axis of compassion and mindfulness within the SEL framework has great educational potential. Several Pali verses acknowledge the interdependence of mindfulness with the eightfold path, making it erroneous to assume that mindfulness in isolation can lead to awakening. The potential of mindfulness is aligned with good moral conduct and a philosophy that embraces welfare for all.⁸

II. MINDFULNESS IN BUDDHIST AND PSYCHOLOGICAL TRADITIONS

"The moment one gives close attention to anything, even a blade of grass, it becomes a mysterious, awesome, indescribably magnificent world in itself."
- Henry Miller.

The practice of mindfulness is based upon the method of giving 'close attention' or 'bare attention' to experience mental purity. It may be called undistracted observation of the present moment. Mindful attention to

⁵ CASEL 2020, <https://casel.org/casel-sel-framework-11-2020/>

⁶ Hyland et al. (2015): 578.

⁷ *Majjhima Nikāya Commentary* 1.1.

⁸ *Samyutta Nikāya* vv. 143; 167, 188.

enhancing the experience of beauty is a path of self-compassion. In the wake of challenging vicissitudes of life, one needs the positive reinforcement of beauty. Devoid of joy, any amount of material progress fails to contribute meaningfully to an individual's life. The basic premise on which the entire Buddhist philosophical discourse rests is summed up as "*Sabbe saṃkhārā dukkha*" (The world is full of sorrow). The Buddhist path aims to traverse the worldly life while remaining untrammelled by its sorrows. Thus, it is wise to tap into the well of Buddhist wisdom in pursuit of a joyful existence.

The way of mindfulness is so central to Buddhism that it is called the heart of the doctrine – *dharmā hadaya*. It has not only been recommended by popular Dharma teachers and Buddhist scholars like Pema Chodron⁹ Nayanopika Thera¹⁰ Thich Nhat Hanh¹¹, B. Allan Wallace¹² but has also found favour with scientists like Kabat-Zinn¹³ and Steven A Alper¹⁴.

2.1. Mindfulness (*sati*) in Buddhist philosophy

"Walk as if you are kissing the Earth with your feet." - Thich Nhat Hanh.

The Pali word for mindfulness, *satipaṭṭhāna*, literally translates as "keeping awareness of the present". In Buddhist psychology mindfulness expands the attention to any physical or mental activity to each moment and thus, the attention leads to detachment and acceptance. "Feelings, whether of compassion or irritation, should be welcomed, recognized, and treated on an absolutely equal basis, because both are us. The tangerine I am eating is me. The mustard greens I am planting are me. I plant with all my heart and mind. I clean this teapot with the kind of attention I would have been I giving the baby Buddha or Jesus a bath. Nothing should be treated more carefully than anything else. In mindfulness, compassion, irritation, mustard green plant, and teapot are all sacred."¹⁵

Gaṇḍavyūha Sūtra states "Thus it is our own mind that should be established in all the roots of the good; it is our own mind that should be soaked by the rain of truth; it is our own mind that should be purified from all obstructive qualities; it is our own mind that should be made vigorous by energy."¹⁶ Mindfulness meditation is a way to mental purification through 'bare attention' and 'clear comprehension'. It is the "clear and single-minded awareness of what actually happens to us and in us, at the successive moments of perception."¹⁷ Mindfulness is a way of exploring and training the mind to get in touch with

¹⁷ Nyanaponika, T. (1996): 30.

a deeper awareness and tap inner resources of consciousness. Thus, the mind sharpened through mindfulness meditation can bring clarity, richness and beauty in daily routine.

“The Buddha-Message, as a Doctrine of the Mind, teaches three things:

- To know the mind, - that is so near to us, and yet it is so unknown;
- To shape the mind, - that is so unwieldy and obstinate, and yet may turn so pliant;
- To free the mind, - that is in bondage all over, and yet may win freedom here and now.¹⁸”

Buddhist practice of mindfulness meditation describes four applications of contemplating – the body, feelings, mind and phenomena.¹⁹ First and foremost, the practitioner contemplates upon the body and proceeds to mindfully observe the breathing, followed by meditation upon postures and various activities, and moves on to contemplate the body as its anatomical parts to a corpse in decay as final destination. Mindfulness of breathing is the foundation of mental calm which enables the practitioner to achieve inward attention. Breathing is taken for granted and is a continuous process, thus, it is a very stable and easily available anchor for our thoughts and inner peace. The contemplation on death and decay brings about the impermanence of being as an antidote to conceit and avarice.

The second contemplation is concerned with feelings. “Awareness about feelings is enhanced by training oneself to distinguish between their pleasant (*sukkhā*), unpleasant (*dukkhā*), and neutral (*adukkamsukkhā*) affective qualities²⁰.” They are to be further distinguished between worldly (*sāmisa*) feelings arising out of carnal experiences and unworldly (*nirāmisa*) feelings arising out of a deeper spiritual experience. Mindfulness of the mind focuses on identifying its various states, such as desire, anger, confusion, and distraction. These mental states influence the direction of one’s thoughts. By becoming aware of them, a practitioner gains insight into how unwholesome states arise and can progress toward deeper tranquillity. This practice helps eliminate hindrances (*nivāraṇa*) that interfere with the mind’s optimal functioning. The culmination of mindfulness practice is reached with the contemplation of the four noble truths which can be undertaken “by either contemplating *dukkhā* and its arising or be directing mindfulness to the cessation of *dukkhā* and the path leading thereto.²¹”

In the Buddhist tradition, mindfulness and its four contemplations form the direct and only path – *ekayaṇo maggo* – for crossing the flood in past, present and

future times²². It is the path of purification of beings²³ and is indeed a necessary requirement for awakening²⁴. To realise the potential of mindfulness, it also must be founded on an understanding of Buddhist notion of impermanence and Buddhist practice of ethical conduct.²⁵ From the Buddhist perspective of the nature of mind compassion and wisdom are the associative attributes of its inner beauty. The resolute turning away from disastrous paths, that have led to the environmental crisis, the bitter political rhetoric, the chaotic social milieu, the stressed-out individuals, must be a turn to introspection, an inward turn to one's mind and its processes.

"Whatsoever there is of evil, connected with evil, belonging to evil – all issues from mind.

Whatsoever there is of good, connected with good – all issues from mind."²⁶

2.2. Psychological perspectives on mindfulness in education

Jon Kabat-Zinn's Mindfulness-Based Stress Reduction (MBSR), Daniel Goleman's Emotional Intelligence²⁷ are some of the well-known interventions that have aligned Buddhist mindfulness meditation with psychological well-being. On the relationship of scientific inquiry with Buddhism, His Holiness Dalai Lama remarked, "From the methodological perspective, both traditions emphasise the role of empiricism. For example, in the Buddhist investigative tradition; between the three recognised sources of knowledge – experience, reason, and testimony, it is the evidence of experience that takes precedence with reason coming second and testimony last."²⁸ With growing interaction and cross-cultural research, the initial hesitancy and scepticism towards Buddhist mindfulness in clinical psychology has subsided. "Certain changes are currently underway within the basic sciences that presage not only further evolution of the scientific method but also change in the way science is viewed in modern culture."²⁹ This is the time when eastern psychologies, especially Buddhist, inform and illuminate psychotherapy.

A major programme of scientific study of Buddhist mindfulness meditation continues under the supervision of Kabat-Zinn.³⁰ He and his colleagues developed a replicable curriculum in health education and stress reduction called 'Mindfulness Based Stress Reduction' or MBSR, as it is popularly known. MBSR had gained repute and considerable success and gave rise to subsequent works. One of his studies reported that ninety chronic patients showed significant improvement in pain and related symptoms after being

³⁰ Kabat-Zinn (1985;1994).

trained in mindfulness meditation³¹. In the case of pain perception, cultivating detached observation of the pain experience can be achieved by paying careful attention and distinguishing, as separate events, the actual primary sensations as they occur from moment to moment, along with any accompanying thoughts about pain. This technique has been designed as a tool for managing pain, improving sleep quality, reducing stress, and promoting psychological well-being. Research indicates that mindfulness meditation holds significant value in clinical applications. Therefore, regular practice and contemporary psychotherapy should not overlook its connection to traditional knowledge.

With the acceptance by scientists, it becomes easier to acknowledge the role of mindfulness in cognitive, emotional, and ethical development. Mindfulness plays a crucial role in cognitive, emotional, and ethical development, making it a powerful tool in Social and Emotional Learning (SEL). Cognitively, mindfulness enhances attention, memory, and critical thinking, helping students stay focused, process information effectively, and develop metacognitive awareness. By reducing distractions and stress-related cognitive overload, mindfulness-based practices, such as meditation and reflective learning, improve academic performance and decision-making skills. Traditional Buddhist educational models, like those at Nalanda University, incorporated mindfulness into learning through debates and textual reflection, reinforcing deep understanding and analytical reasoning.

Emotionally, mindfulness fosters self-awareness, emotional regulation, and resilience by helping students recognize and manage their emotions without impulsivity. Techniques such as mindful breathing and loving-kindness meditation (*Mettā Bhāvanā*) cultivate empathy and stress reduction, leading to better peer relationships and emotional intelligence. Ethically, mindfulness strengthens moral reasoning and compassionate action by promoting non-judgmental awareness and ethical decision-making. By integrating mindfulness-based ethical training—such as Jātaka tales in moral education or Vipassana practices in schools—students develop a strong foundation for prosocial behaviour, empathy, and sustainability ethics, making education a holistic and transformative experience.

2.3. Understanding Social and Emotional Learning (SEL)

CASEL (Collaborative for Academic, Social, and Emotional Learning) has introduced the Social and Emotional Learning (SEL) for fostering a more equitable learning environment. It is a holistic approach that aligns schools, classrooms, communities and families to coordinate for achieving equitable learning practices and environments. “Social and emotional learning (SEL) is the process through which all young people and adults acquire and apply the knowledge, skills, and attitudes to develop healthy identities, manage emotions and achieve personal and collective goals, feel and show empathy for others, establish and maintain supportive relationships, and make responsible

³¹ Kabat-Zinn, Lipworth and Burney (1985).

and caring decisions.³²”

“There is a consensus among educators, parents, and policymakers that education should focus on supporting essential capacities to help children navigate the world successfully.³³” To nurture these capacities, education should not only support equitable pathways but nurture human beings who shall create a just and equitable for others. Social and emotional learning (SEL) is critical for the development of these capacities. The five core SEL competencies can be defined as follows:

- 1. Self-awareness: To recognize emotions, thoughts, and values
- 2. Self-regulation: To manage emotions, stress, and impulses
- 3. Social awareness: To develop empathy, ethical behaviour
- 4. Relationship skills: To be equipped for communication, cooperation
- 5. Responsible decision-making: To make decisions based on ethical reasoning, mindful action

CASEL’s well-known “wheel” is a framework for helping young people learn and practice these skills. It sorts social and emotional skills into five key areas, or competencies:

Figure 1. CASEL: SEL Wheel

Source: <https://casel.org/fundamentals-of-sel/>

A study assessing the effectiveness of Social and Emotional Learning (SEL) found that programs, typically led by classroom teachers, help develop social and emotional skills. The research also indicated that strengthening these skills encourages prosocial behaviour and fosters positive relationships. Additionally, SEL programs were shown to decrease disruptive behaviours and emotional distress. By emphasizing SEL, student engagement in learning improves, ultimately enhancing cognitive and academic performance³⁴. Many suggestions to improve the effectiveness of SEL have been given based on research. “Research indicates that they are more effective when they are:

³⁴ <https://files.eric.ed.gov/fulltext/ED630375.pdf>

- Sequenced: They involve a developmentally coordinated set of activities.
- Active: Active learning helps students master new skills.
- Focused: Programs intentionally develop personal and social skills.
- Explicit: The specific skills taught are clearly identified, taught, and practiced.³⁵

Mindfulness in contemporary usage is generally viewed as an isolated technique separated from the larger body of Buddhist ideas. Such isolated utilization to the benefit of people is not exactly in opposition to Buddhism, which may not always demand a sectarian adherence. Recent empirical investigations by trained psychotherapists and individual experiences corroborate its benefits. Yet, the lack of studies integrating both traditional and modern interpretations of mindfulness is a gap that needs to be addressed, if only to enhance its therapeutic potential. The Buddhist tenets of Four Noble Truths, Dependent Origination, Impermanence, and Compassion etc. are the very foundations of the practice of mindfulness.

“Not so long ago the benefits of meditation techniques were regarded as mere placebo effect in the western medical traditions³⁶” Significant efforts were made to secularize these techniques to present them as more scientific. However, this raises the question of whether stripping Buddhist meditation of its historical and philosophical context has diminished its true impact. More recently, there has been a shift in scientific perspectives – though still limited – with growing support for interdisciplinary, multidimensional, and cross-cultural approaches³⁷. The kind of focus that is required for mastering skill is achievable through mindfulness as a pedagogical tool, while a compassionate attitude is aligned with the goals of the equitable learning environment. Therefore, the aim of sustainable societies is achievable through education that aligns SEL with Buddhist compassion and mindfulness.

Figure 2. A Mindfulness-SEL integrated model of education

³⁷ Loizzo (2014).

Aligning SEL with Buddhist ethical principles and Compassion (*Karuṇā*)

In the words of His Holiness the Dalai Lama, “The key to a happier and more successful world is the growth of compassion.” Martha Nussbaum, in her philosophical treatise, *Political Emotions*, emphasises the pertinent need “to foster commitment to shared goals and keep at bay forces of disgust and envy.”³⁸ The cultivation of compassion is not only necessary in oppressed societies but all societies. Mahatma Gandhi and Martin Luther King are two beacons who sought compassionate action to overcome unacceptable inequalities. Through personal examples³⁹, riveting speeches⁴⁰ and indomitable courage⁴¹, they evoked compassion in their supporters and many adversaries. Cultivating compassion is no longer merely a desirable emotion but a necessity. Regrettably, there is a political tendency to focus on respect as the only critical public emotion necessary for a “good” society. Nussbaum convincingly demonstrates that respect alone is insufficient, because it is cold and too inactive to overcome what she sees as humanity’s tendency towards exploitation⁴².

Karuṇā or compassion has a technical connotation in the Buddhist scriptures. They prescribe it as a prerequisite for training. Although compassion is portrayed as essential nature, yet it remains shrouded. Buddhist teachings recommend certain pathways to attain it. *Karuṇā* is one of the four qualities of character of a human being who has attained enfranchisement of heart (*cetovimutti*). The liberation occurs through perfection in four sentiments, viz. *Mettā*, *Karuṇā*, *Muditā*, and *Upekkhā*. *Cetovimutti* refers to the emancipation of mind, in the highest sense, when it attains perfect freedom. This is elaborated further as freedom from all passions – *āsavehi cittāni vimocimsu*. The passions to be cast off are *kāmāsava* (passions of sense-pleasures), *bhavāsava* (passions for continued existence), *diṭṭhāsava* (passions of views), and *avijjāsava* (passions of ignorance). The rise of such passions leads to lack of compassion, social disharmony and individual unhappiness-kindness meditation (*mettā bhāvanā*) foster social awareness and empathy, encouraging students to relate to others with compassion.

All religions aim for happiness by fostering harmony through ethics and compassion. Compassion is fundamental to human nature. Human-beings experience motherly compassion right from infancy, but the tendency is defiled by selfishness and lack of understanding. The lack of compassion creates narrowness and fosters sectarian strife. The lofty place of compassion and methods for its cultivation in Buddhism are not inimical to religious

³⁸ Nussbaum (2013).

³⁹ Gandhi’s stay in the *Harijan Basti* or perilous fasting to restrain communal violence are few of such examples.

⁴⁰ Martin Luther King’s famous speech *I Have a Dream* continues to remain iconic for all struggles for equality.

⁴¹ Both of them lost their lives to assassins in the course of their tireless struggle.

⁴² Nussbaum (2013).

diversity. Since each person has the potential to become a Buddha, he or she is worthy of our respect. His Holiness Dalai Lama says “The only true religion is compassion. It is no longer a luxury but a necessity.” Buddhism deals with it in detail and creates a deeper understanding, which has immense potential to serve the cause of religious harmony. In contemporary world, the integration of mindfulness as a pedagogical tool in education models, particularly SEL, seems the right way.

“Social and emotional learning (SEL) programs are a low-cost educational intervention that can create substantial returns on investment. Evidence from hundreds of studies indicates a consistent, reliable effect of SEL programs on students’ social, emotional, behavioural, and academic outcomes at all grade levels and across gender, ethnicity and race, income, and other demographic variables.⁴³” It is therefore, an important programme which can integrate Buddhist mindfulness and compassion to achieve its goals. “Mindfulness is a state of consciousness that involves the direction of attention that incorporates self-awareness with a core characteristic of being open, receptive, and nonjudgmental. Both SEL and mindfulness-based initiatives in education emphasize the development of positive self, moral, social, and emotional understanding.⁴⁴” While SEL is an effective platform to cultivate compassion and mindfulness in young learners, the pedagogical tools can also be adopted by any educator in a creative and informed manner.

IV. MINDFULNESS AS A PEDAGOGICAL TOOL: A HOLISTIC VIEW

“Any successful reform effort needs to involve administrators, teachers, and students together in creating a high quality and respectful educational environment in which they feel motivated and supported.⁴⁵” To use mindfulness as a pedagogical tool, the cultural context cannot be ignored. SEL, as framed by CASEL, has been criticised for not taking into account the outcome on different groups⁴⁶. “As SEL arrives at a crossroads of practice, policy, and politics, a flexible, adaptable, responsive, and co-constructed model of culturally sustaining SEL in the classroom offers a path forward that honours and sustains the diversity of our classrooms and deepens our commitment to equity in practice⁴⁷.”

As SEL model is adopted widely in the schools of USA, many studies have emerged from non-Buddhist scholars, who accept this limitation. “As authors of this paper, we, too, acknowledge our own limitations and viewpoints as White scholars working in the United States context, which has contributed to an individualistic worldview of mindfulness in schools. Now, we hope to motivate a shift in the aim of mindfulness training for teachers toward one that recognizes the complex systems teachers are working within and equipping

⁴⁷ Meland and Brion-Meisels (2024).

and empowering them to collectively build more caring and compassionate school systems.⁴⁸ As is mentioned, significant research has been outpouring from these regions despite the admission of the limitations. The merit of the researchers is that they can observe the implementation of SEL and mindfulness first hand and focus on the problems and their solutions.

“Not so long ago the benefits of meditation techniques were regarded as mere placebo effect in the western medical traditions⁴⁹.” There was an intense effort to secularize the techniques to make them appear more scientific, but the question arises whether the true impact of Buddhist meditation has been shortchanged in the process of robbing it of the historical and philosophical context. In more recent times there has been a paradigm shift in scientific circles, though still inadequate, with the rise of some advocates of interdisciplinary, multidimensional and cross-cultural approach⁵⁰. “Those who are wise, meditative, and strenuous and advancing ever-steadily attain supreme happiness and the freedom from fear.⁵¹” Chaturvedi has suggested “a better interaction with its spiritual roots” to make mindfulness practice effective and enduring⁵².

This paper is not entering into the field where SEL and mindfulness have been integrated into educational models. Instead, it attempts to enhance the current knowledge through Buddhist cultural context to inform and guide further reforms and interventions through a culturally informed lens. With a general introduction to Buddhist mindfulness, it delves into examples and illustrations in ways in which to use mindfulness as a pedagogical tool integrated with the larger philosophical view of Buddhism.

V. BUDDHIST TEACHINGS AND SOCIAL-EMOTIONAL LEARNING COMPETENCIES

Buddhist texts such as the *Satipaṭṭhāna Sutta* and *Dhammapada* emphasize mindfulness as a tool for ethical living and emotional balance. These teachings encourage individuals to cultivate qualities like equanimity, compassion, and wisdom – central to SEL competencies. In the journal titled *Social and Emotional Learning: Research, Practice, and Policy* dedicated to SEL, if we search for Buddhism, it yields zero results mindfulness yields 35 results⁵³. This anomaly highlights that mindfulness is being used and researched in isolation divorced from the general orientation and specific tenor of the Buddhist philosophy from which it originates.

Though it is necessary to erase sectarian affiliations, the cultural and philosophical contexts would make mindfulness a more effective tool.

⁴⁸ Romano, Colaianne, and Baelen (2025).

⁵¹ *Dhammapada* v. 23.

⁵² Chaturvedi (2016).

⁵³ <https://www.sciencedirect.com/journal/social-and-emotional-learning-research-practice-and-policy>

It has been observed that different cultures need modifications in the SEL model to be effective⁵⁴. If one has no idea about Buddhist ideas of causation (*Pratītyasamutpāda*) or no-self (*anatta*), mindfulness meditation (*satipatthana*), the use of mindfulness in pedagogy can have limited impact. Practitioners should have a basic knowledge of how Buddhism envisages mindfulness and how the original formulation aligns with the goals of SEL, and also any form of compassionate education.

“What is right mindfulness?

There is the case where a monk remains focused on the body in and of itself — ardent, alert, and mindful — putting aside greed & distress with reference to the world.

He remains focused on feelings in and of themselves... the mind in and of itself... mental qualities in & of themselves — ardent, alert, and mindful — putting aside greed and distress with reference to the world.

This is called right mindfulness...⁵⁵”

Right Mindfulness (*samma sati*) is the seventh component of the eight paths of the Noble Eightfold Path, but it is not seventh in importance. The word ‘*sati*’, in general parlance, means memory, but in philosophical discourse implies a sense of mental awareness. In the Buddhist context, its role has been explained with the similes of a ploughshare and a goad.

“Faith is my seed, and rains the discipline

Wisdom for me is a plough fitted with a yoke

My pole is conscience and thought to strap the yoke

And mindfulness is my ploughshare and goad.⁵⁶”

Mindfulness cultivates a mental state that is conducive to spiritual growth. It achieves this by enabling the mind to guard itself against evil and to propel its focus towards good. Thus, there are two crucial aspects of mindfulness: negating the harmful factors and affirming the spiritually sustaining environment. The Pali term for mindfulness meditation, *satipaṭṭhāna*, means ‘awareness in the present. It can be described as first being in the present moment without reacting and, thus, developing equanimity. The focus of the mind is expanded to include any physical or mental activity from moment to moment with an attitude of detachment and acceptance. Though in classical Buddhist soteriology, the ultimate aim of mindfulness meditation was to attain final liberation (*Nibbāna*), its general application in normal life activities can also be very beneficial. “It has been observed that this ancient way called mindfulness meditation is as practicable today as it was 2500 years ago. It is applicable in the lands of the west as in the east; in the midst of life of turmoil

⁵⁴ Wigelsworth et al. (2016).

⁵⁵ *Dīgha Nikāya*, 22.

⁵⁶ *Suttanipāta* I.4.77.

as well as in the peace of a monk's cell.⁵⁷

The Four Immeasurables (*Brahmavihāras*) – loving-kindness (*Mettā*), compassion (*Karunā*), empathetic joy (*Muditā*), and equanimity (*Upekkhā*) – are deeply aligned with SEL's focus on empathy, emotional regulation, and interpersonal relationships.

Mindfulness and Self-Awareness: By focusing on the present moment, mindfulness cultivates self-awareness and helps individuals better understand their emotions and thought patterns.

Mindfulness and Emotional Regulation: Mindfulness practices help students manage impulsive reactions, promoting self-regulation.

Mindfulness and Compassion: Buddhist practices like loving kindness

Mindfulness and Ethical Decision-Making: Through mindful reflection, students develop an understanding of their actions and their broader consequences, aiding responsible decision-making.

Buddhist education has historically emphasized mindfulness (*sati*) as a foundational practice to cultivate wisdom, ethical discipline, and mental clarity. At the ancient Nalanda University, one of the world's greatest centres of learning, mindfulness was deeply integrated into monastic education⁵⁸. Students engaged in self-reflection, dialectical debates, and meditative study, which not only reinforced textual knowledge but also sharpened their cognitive and ethical reasoning. The Socratic-style discussions at Nalanda trained students to mindfully examine philosophical and ethical dilemmas, fostering a deep awareness of logic, compassion, and self-discipline. In modern education, these practices find application in critical thinking exercises, dialogical learning, and mindful classroom interactions, encouraging students to approach complex issues with attentiveness and ethical consideration.

Beyond textual study, Buddhist storytelling and visual art also served as tools for mindfulness-based ethical education. The Ajanta cave paintings, which depict scenes from the Jātaka tales, were designed to inspire contemplation on moral virtues such as patience, compassion, and selflessness. These narratives were not just religious stories but pedagogical tools that encouraged students to reflect on real-world ethical choices through visual and narrative engagement. Today, similar methods are applied in visual learning, ethical storytelling, and digital media education, where students analyse narratives to develop emotional intelligence and ethical awareness. Such mindful storytelling can enhance SEL (Social and Emotional Learning) by fostering deeper engagement with moral reasoning and empathetic understanding.

In contemporary education, Vipassana meditation, popularized by S.N. Goenka, has been successfully integrated into Indian schools to improve emotional regulation and academic focus. Vipassana, a technique rooted in mindfulness (*sati*), teaches students to observe their thoughts and emotions

⁵⁷ Nyanaponika (1996).

⁵⁸ Singh (2024).

without reaction, leading to reduced exam anxiety, increased concentration, and improved classroom behaviour. Studies show that students who practice daily mindfulness meditation exhibit lower stress levels and better emotional resilience, making mindfulness an effective intervention for student well-being. The success of Vipassana in schools highlights the practical applications of ancient Buddhist mindfulness techniques in modern pedagogical frameworks, ensuring a holistic and sustainable approach to education.

VI. DIVERSE WAYS OF INTEGRATING MINDFULNESS IN EDUCATION

Mindfulness has been successfully incorporated into education through various approaches, including Mindfulness-Based Stress Reduction (MBSR), university initiatives, and teacher training programs. MBSR, developed by Jon Kabat-Zinn, has shown significant benefits in reducing student stress, improving cognitive performance, and enhancing emotional resilience. Research indicates that mindfulness practices help students regulate anxiety, boost concentration, and foster a more positive learning environment. Schools and universities worldwide are increasingly adopting MBSR techniques to create a balanced, mindful approach to education that supports both academic and personal growth.

In India, universities such as Nalanda University,⁵⁹ JNU,⁶⁰ and Delhi University⁶¹ have integrated mindfulness in different ways, using meditative practices to deepen students' understanding of texts and philosophy. The University of Rajasthan takes a unique approach by offering mindfulness as a practical exercise alongside theoretical coursework,⁶² where students practice bare-attention meditation and document their experiences. Additionally, initiatives like heartfulness meditation sessions provide undergraduate and graduate students, especially those whose curriculum does not formally include mindfulness, with an opportunity to engage in mindful practices. At the school level, programs such as named SEEKHO (Social Emotional Ethical Knowledge for Holistic Outlook) can be culturally aligned to use mindfulness to develop emotional intelligence and ethical awareness among students. Seekho is a Hindi word for learn and can be used to merge SEL with mindfulness and the Buddhist philosophy.

Teacher training programs also emphasize mindfulness as a tool for enhancing classroom management, student engagement, and emotional intelligence. Educators trained in mindfulness techniques are better equipped to handle classroom challenges, foster empathetic communication, and create a stress-free learning environment. By integrating mindfulness into teacher

⁵⁹ <https://nalandauniv.edu.in/short-term-courses/international-winter-school/winter-school-program/>

⁶⁰ <https://www.jnu.ac.in/content/epistemology-mindfulness-some-preliminary-reflections>

education, institutions ensure that mindfulness becomes a sustainable and impactful component of modern pedagogy, benefiting both educators and students alike.

VII. CONCLUSION

Mindfulness has emerged as a transformative pedagogical tool within the Social and Emotional Learning (SEL) framework, offering a holistic approach to cognitive, emotional, and ethical development. Rooted in Buddhist traditions and reinforced by contemporary educational psychology, mindfulness enhances attention, emotional regulation, and ethical decision-making among students. Historical case studies demonstrate how mindfulness-based education has long been a foundation for deep learning, self-awareness, and compassion. Modern applications, including Mindfulness-Based Stress Reduction (MBSR) programs, mindfulness in Indian universities, and teacher training initiatives, further establish its effectiveness in reducing stress, fostering resilience, and promoting prosocial behaviour in educational settings.

However, integrating mindfulness into mainstream education faces challenges, such as resistance from traditional education models that emphasize rote learning and a lack of culturally sensitive mindfulness programs tailored to specific educational contexts. To fully realize its potential, mindfulness must be integrated at policy levels, with cross-cultural research and collaboration ensuring its adaptability across diverse learning environments. Given its profound impact on student well-being, ethical consciousness, and sustainable learning, there is a pressing need for greater incorporation of mindfulness-based education in schools and universities. By embracing mindfulness as a core educational philosophy with its cultural and philosophical context, we can cultivate a compassionate attitude toward life in learners. Thus, mindfulness as a pedagogical tool needs to be integrated with its philosophical and cultural context to foster a compassionate society

BUDDHIST MEDITATION CAN BENEFIT ADOLESCENCE: A MIXED METHODS RESEARCH IN VIETNAMESE CONTEXT

Thich Truc Thanh Minh*

Abstract:

Buddhist meditation is popular in the world today, and it has been adopted to deal with social issues raised in healthcare, education, business, and even security. Particularly, it has been used widely in education to enhance students' morality. It can also help them to overcome mental health problems. In spite of that, it has still not been widely adopted in Vietnam. As a result, this paper examines what benefits the meditation can offer Vietnamese teenagers by surveying 160 adolescents attending weekly retreats in four Truc Lam Buddhist Zen monasteries with questionnaires, conducting 16 in-depth interviews, and the participant observation of the teens' performance at the retreats. The results revealed that meditation could help them relax and develop moral behavior. This could provide educators empirical evidence to design the school curricula.

Keywords: *Meditation, adolescence, moral education, mental health.*

I. INTRODUCTION

Buddhist meditation, including mindfulness, is highly favored in the world today. It is considered as "a technique which enables us to relax our body and our mind and, besides, to free our mind of unnecessary thoughts and brain activity".¹ It has been practiced not only by Buddhists but also by non-Buddhists.² *The Princeton dictionary of Buddhism* defines it in different languages: Sanskrit (*Dhyāna*), Pali (*Jhāna*), Chinese (*Chan*), Japanese (*Zen*), Korean (*Seon*), English (*Meditation*), and Vietnamese (*Thiền*).³ Thanissaro (2013) explicitly stated that it was secular rather than religious.⁴ This reveals the popularity of meditation all over the world, even in countries where

³ Buswell & Lopez (2014): 174.

⁴ Thanissaro (2013).

Buddhism is not a traditional religion.

In Western countries, although Buddhism appeared much later than in some Eastern ones, the Buddhist meditation has likely been adopted more widely. It has been done for different purposes: to improve school students' mental well-being and moral behavior⁵, to enhance police officers' performance⁶, to improve the effectiveness in educating prisoners⁷, etc.

In Vietnam, *Thiền* (Vietnamese meditation) has a long and rich history. Some historical documents showed its very early appearance, in about the first century.⁸ Until the thirteenth century, it was strongly developed under the Tran Dynasty (1225 – 1400). Practitioners who achieved enormous success were not only Buddhist monks but also lay-people who were very busy in their lives. The enlightenment of kings like Tran Thai Tong, Tran Thanh Tong, Tran Nhan Tong, Tran Anh Tong, and Tran Minh Tong was a typical example.⁹ King Tran Nhan Tong, known as the Buddha-King of Vietnam, had formed a Buddhist Zen sect named Truc Lam (Bamboo Forest), marking the golden age of *Thiền*.

In spite of that, it has still been considered religious so far. It mostly exists in Buddhist temples. Unlike what many Western countries have done, Vietnam has not adopted *Thiền* widely to solve social issues. One of the most burning issues in Vietnam is the moral education of adolescents.¹⁰ A variety of articles revealed the moral decay in a considerable proportion of both school and university students, which has certainly challenged both parents and educators.¹¹

In addition, mental health problems in adolescents have concerned parents and educators greatly. In theory, young people must pass through a stage of 'storm and stress' because of their biological, cognitive, psychological, and social changes.¹² Many studies warned that the rate of school students

(2024); Dong Mao (2024).

¹² (Hashmi, 2013).

facing stress, anxiety, and depression was alarming.¹³ These likely affect their academic performance.

Notably, the findings by Le Thi Thu Ha & Nguyen Thi Tam (2015), Do Thi Le Hang (2015), and Do Ngoc Khanh (2018) demonstrated a positive correlation between mental health problems and risky behavior in adolescents. Many international experts also found this relation. Piko et al. (2017), Heinze et al. (2017), Mestre et al. (2017), Peltzer & Pengpid (2017), Estevez et al. (2018), Martín-Rodríguez et al. (2021), Marthoenis, Dahlia & Nassimbwa (2022) claimed that risky behavior in young people such as aggression, fighting, bullying, using addictive substances, etc. was due to their stress, anxiety or depression. Maybe that is why the Ministry of Education and Training (MET) promulgated the plan for mental health education for children and school students¹⁴ to deal with that.

In terms of the family's roles, a number of Vietnamese parents have tended to send their children to Buddhist temples to learn and practice Buddhism, including *Thiền*, with the hope of developing their moral behavior. The data collected from observing the retreats at some Zen monasteries belonging to the Truc Lam Buddhist Zen sect showed that many school and university students voluntarily went there to learn and practice *Thiền* to improve themselves. To the best of our knowledge, however, the question of to what extent *Thiền* can benefit Vietnamese young people has not been appropriately unanswerable by empirical studies.

Meanwhile, many papers conducted outside the Vietnamese context showed the advantages of meditation to young people. It can reduce stress, anxiety, and depression in adolescents.¹⁵ Besides, it also helps to develop their prosocial behaviors.¹⁶

However, the investigation of those papers showed two huge gaps. Firstly, most of them (except for Carreres-Ponsoda et al., 2017) adopted only quantitative methods, failing to answer the research questions satisfactorily. As Abuhamda et al. (2021) warned, both quantitative and qualitative ones have their flaws. As a result, employing both of them can minimize their weaknesses. The experience of meditative practice is inside people, which needs to be explored by conducting interviews.¹⁷ Secondly, they did not properly examine elements influencing teenagers' practices.

As a result of those, this paper employed both qualitative and quantitative

methods to examine what benefits *Thiền* can bring to Vietnamese adolescents. Hopefully it can provide more reliable evidence for educators to plan the curricula. Additionally, it has been able to be a base for further researches on the applications of meditation in education.

1.1. The research objectives

The study addressed three main questions as follows: (1) Does *Thiền* really benefit adolescents? (2) What are the benefits? (3) What factors can affect young people's *Thiền* practice?

1.2. Methodology

1.2.1. Participants

Adolescence is identified as the phase of 10-19 years of age.¹⁸ Investigating the stages of moral development by Piaget, Crain (1985, 118) informed that children after 11 years were able to be fully conscious. Hence, this paper covered the voluntary participation of 160 adolescents aged 12-19 years participating in every-week retreats at four Truc Lam Buddhist Zen monasteries (mean age = 14.94, SD = 2.15; male = 84 [52.5%] and female = 76 [47.5%]).

1.2.2. Setting

Zen Master Thich Thanh Tu, who revised the spirit of the Truc Lam Buddhist Zen sect established by the Buddha-King Tran Nhan Tong¹⁹, used to teach his disciples to help people to improve their morality in the context that science moves faster than ethics.²⁰ Following his teachings, some monasteries run by his disciples organised retreats for young people. This study was carried out at the time when there were only four of them offering retreats to adolescents every week. During the retreats, adolescents learned moral values from Buddhist sutras, practiced *Thiền*, and took part in other entertaining activities. They were also advised to practice *Thiền* at home regularly.

In terms of *Thiền*, it can be practiced not just by sitting but also by standing, walking and lying and it can be practiced anytime and anywhere. At the retreats, adolescents were taught how to keep mindful while having lunch and do self-reflection. During the lunch, they kept quiet to be grateful to people who made food for them. The self-reflection can help them to manage their emotions. It is considered as the motto of the Vietnamese Buddhist Zen sect, which was taken from what Tue Trung Thuong Sy (1230 - 1291), an enlightened layman, taught his student, King Tran Nhan Tong (1258 - 1308): "Reflect inwardly to see the essence of yourself. Don't follow other ways."²¹

1.2.3. Measurements

Besides investigating the participants' gender and age, this study examined their *Thiền* practice by these items: (1) You can follow the method of sitting

¹⁸ Sacks (2003); United Nations Children's Fund (2011): 2.

¹⁹ Thich Giac Toan (2019): 36; Mac Khai Tuan (2019): 81; Nguyen (2021): 1

²⁰ Thich Thanh Tu (2009): 204

²¹ Thich Thanh Tu (2016): 61

meditation, (2) You feel comfortable during your sitting meditation, (3) You feel relaxed after sitting meditation, and (4) You can learn useful lessons from the mindful lunch. Their responses were recorded using a Likert-type scale ranging from 1 (completely disagree) to 5 (completely agree). Furthermore, their practice at home was also surveyed by the question that “How often do you sit meditation at home”. A five point Likert scale also recorded the responses (1: Never; 5: Every day).

1.2.4. Procedure

As described, the study adopted both quantitative and qualitative methods to collect data. First, the retreat programme was examined to get information for designing questionnaires. After that, all adolescents in aged of 12 - 19 were surveyed with anonymous questionnaires on the days they came to the monasteries to attend the retreats. During these days, their meditation sitting sections were observed to record their attitude to the practice.

To examine adolescents' experience of practicing *Thiền*, 16 in-depth interviews were conducted (eight males and eight females). The participants who were informed to have problems with their behaviors before attending the retreats were invited to join the interviews. They were interviewed in person at the monasteries without their teachers' participation.

1.3. Data analysis

The resulting dataset was analyzed using a Student's t-test and Spearman test, using SPSS 20 software.

II. RESULTS

The findings showed that *Thiền* could help the participants relax ($M = 4.10$, $SD = .86$, $Min = 2$, $Max = 5$). Most interviewees stated they liked sitting meditation because it could calm them down. A male adolescent aged 17 explained in detail as follows:

Sometimes, I suffered from stress because of overloading in class. When going home, I had to do a lot of homework and set my time appropriately. Therefore, I got more and more stressful. At that time, only sitting meditation could work well with me. After meditation sections, I felt very comfortable and my head was less heavy. As a result, my studying got better.

A female aged 17 also shared the same point of view:

Thiền, in fact, helps me to calm down and to be more concentrated. Every time I have a headache due to overloading with studying, I meditate. It can remove my stress.

Another female aged 15 clearly reported: “I love sitting meditation because it calms me down and I can stop my negative thoughts”.

I find my legs painful while sitting meditation, but I feel peaceful after finishing it. I find easy to remember difficult poems that need to be memorised because *Thiền*, in my experience, can help me to be out of unnecessary thoughts; as a result, I can be more concentrated. (14-year-old male)

What cited above also showed that the teens suffered from academic stress. Luckily, *Thiền* could help them to release it, improving their school performance.

Significantly, *Thiền* was able to develop the adolescents' moral behaviors. Over a half of respondents said that practicing it helped them to change their negative emotions that could lead to anti-social behavior. A female aged 18 reported:

Previously, I loved living fast. Now I do not do that. I have lived slowly to recognise how this world goes. In addition, I used to be brutal. When someone made me mad, I wanted to revile or fight him immediately. *Thiền* changed my aggressive manner. When I sat meditation, I did self-reflection and I was aware that it was not good.

She not only stated what benefits *Thiền* could bring to her but also explained adequately how it helped to change her anti-social behavior. Her responses also revealed that *Thiền* could help to improve the teens' social relationship. The following responses convincingly demonstrated that.

When my friends teased me, I got angry and I could recognise it. Before that, I could not because my anger "swallowed" me. After learning how to practise *Thiền*, I only kept quiet when teased. Thanks to this, I could see that my mind was fired up, so it went down. (14-year-old male)

Sometimes I remembered being bullied by my classmates when I was in my lower secondary school, and the feeling of deep hatred for them ran high. Meditation sitting helped me let it go. Before coming to *Thiền*, I was nearly autistic. I did not like making friends. Now I have changed a lot. I have communicated more and more with my classmates. (17-year-old male)

Thiền also helped the teens to develop their love for everyone. Thanks to that, they stopped their anti-social behavior.

Being a boy, I used to act up. I usually bullied my friends. When meditating, I did self-reflection and felt regret for that. Hence, I have never done that. (18-year-old male)

I have treated with my teachers better. Previously, when they scolded me, I thought that they wanted to defame me. Then I recognised that they wanted to make me better. I used to play truant to go out with my friends, but now I have also studied harder to please my grandparents [she lives with her grandparents]. (15-year-old female)

Unexpectedly, keeping mindful at lunch could develop the participants' moral behavior. They liked the mindful lunch at the retreats because it taught them useful lessons ($M = 4.02$, $SD = .93$) and one of which is gratitude. A male aged 14 reported:

Before that [before joining the retreats], I only ate without feeling grateful to anyone because I thought that my family had paid for things. Now, when I have meals, I feel grateful to ones who have contributed to producing materials at first. Then I thank food for nourishing me.

Besides, the quantitative and qualitative data analyses demonstrated some factors that likely affected adolescents' *Thiền* practice. While the gender did not have any impacts on the teenagers' *Thiền* practice, their age had a significant influence. The Spearman tests demonstrated that the older teenagers were the better they could follow the method of sitting meditation ($r_s = .20, p < .05$). The data based on the participant observation of 31 teens at one of the four Zen monasteries indicated that older teenagers could meditate longer than their younger peers could. Their face also looked calmer. In terms of meditative practice at home, the older ones sat meditation more often ($r_s = .20, p < .05$).

Expectedly, the adolescents' ability to follow the method of meditating was a fundamental element. The results from the Spearman tests (Figure 1) illustrated that it correlated to the teens' feeling comfortable while sitting meditation and their feeling of relaxation (respectively, $r_s = .34, p < .001$ and $r_s = .23, p < .01$). The more the teenagers felt comfortable while sitting meditation, the more relaxed they were ($r_s = .60, p < .001$).

Figure 1. Correlation between the teens' following the method of sitting *Thiền* (A), their feeling comfortable while sitting meditation (B) and their feeling of relaxation (C). Note. * $p < .01$ and ** $p < .001$

Furthermore, learning environment could also affect the teenagers' practice. The quantitative data analysis showed they rarely meditate at home ($M = 2.25, SD = 1.06$). Most respondents claimed that they found difficult to do at home due to their family members' interruption, being busy with their homework or a lack of motivation. They preferred to practise it at the monasteries.

Meditating at the monastery, I feel more comfortable and concentrated. I find difficult to do at home because of being disturbed by my parents, brothers, sisters, and nieces; therefore, I only sit when I feel very tired. (18-year-old female).

I love meditating at the monastery. My older peers could do it for 90 minutes or more, and I tried to do for 60 minutes. My family has a Buddhist shrine, so my mum meditates almost every day (she is a Buddhist). I sometimes meditate with her. I could not follow her fully

because I was sometimes busy with my studying. (14-year-old male).

Another male aged 14 said, "At home, I sit meditation with my dad (he is a Buddhist)".

What reported above also indicated that family likely motivates the teens to meditate.

III. DISCUSSION

This mixed methods research revealed the advantages of *Thiền* to the teenagers. First, it could relax them, so it was able to help them to face with mental health problems. Interestingly, it could develop their moral behavior, improving their social relationship. Moreover, the study also demonstrated some elements affecting the teenagers' *Thiền* practice including their age, their ability to follow the method of meditation and the practice environment.

Thiền was found to be able to relax the participants, helping them to overcome stress. This is consistent with what were explored by Deplus et al. (2016), Bluth & Eisenlohr-Moul (2017), Carreres-Ponsoda et al. (2017), Diaz-Gonzalez et al. (2018), Sharma et al. (2020), Roux & Philippot (2020), Blum et al. (2021), Saarinen et al. (2022), Szeghy & Szeghy (2023) on the one hand. On the other hand, that can also supplement their findings. They mainly focused on examining the associations between meditation including mindfulness and mental health problems in adolescence like stress, anxiety, or depression, but did not properly investigate the factors affecting teenagers' practice. Some of them tried to report the differences in meditative practice outcomes based on demographics, but their results were not unified. For example, Bluth & Eisenlohr-Moul (2017) and Carreres-Ponsoda et al. (2017) concluded that the gender and the age did not have any impacts; meanwhile, Saarinen et al. (2022) found that girls did better. The current study showed the age but not the gender had a considerable influence on the teens' practice.

Additionally, this paper observed two other factors, which were not included in those researches: the participants' ability to follow the method of meditation and the practice environment. In fact, the former likely reveals the essential role of trainers' performance as Malik & Khudai (2022) explored in their paper. The later may shows the impact of family. The responses from the interviews demonstrated that parents' and children's practice likely had a close correlation, which is in line with what was explored by Chamratrithirong et al. (2010), Yeung & Chow (2010) and Thanissaro (2018). Nevertheless, those two factors need studying further. Generally, considering the factors influencing adolescents' meditative practice is useful for educators in designing the curricula.

Remarkably, the finding that *Thiền* was able to remove stress in adolescence can provide solutions for the programme for the mental health education for children and school students planned by MET, aiming to ensuring and promoting school students' mental well-being. However, *Thiền* may not come to all school students because it has been considered religious. To lift that barrier, *Thiền*, as suggested by Thanissaro (2013), needs to be accepted as a secular intervention.

Significantly, the results from the current study also demonstrated that *Thiền* could improve the participants' moral behavior. According to the reports by Wongtongkam et al. (2014), Zare et al. (2016), Ditrich (2017) and Rawlett (2017), meditative practice can reduce the anger, impulsiveness, and aggression in adolescence that can lead to personal conflicts. This is in good agreement with this research outcome. The result also confirms the findings by Wisner & Starzec (2016) and Lv (2021) that teenagers can develop their prosocial behavior under the impact of meditation.

Expectedly, the mixed methods adopted in this report were very useful. The quantitative data mostly helped to answer "what" questions. Whereas, the qualitative data could answer "what", "how" and "why" questions as argued by Abuhamda et al. (2021). Shakyamuni Buddha taught in the *Dharmapada*: "Mind precedes all mental states. Mind in their chief; they are all mind-wrought. If with an impure mind a person speaks or acts suffering follows him like the wheel that follows the foot of the ox. Mind precedes all mental states. Mind is their chief; they are all mind-wrought. If with a pure mind a person speaks or acts happiness follows him like his never-departing shadow".²²

What was found in this paper was in line with the teachings above. By the in-depth interviews, *Thiền* was conclusively proved to be able to change the adolescents' "impure mind", enhancing their moral behavior.

Inevitably, some limitations could have influenced the results. Firstly, a control group was not included to make the results more convincing. Secondly, the research scope was narrow. It was limited in Truc Lam Buddhist Zen monasteries. Lastly, the number of samples investigated was small.

IV. CONCLUSION

The evidence from this study indicates that *Thiền* can foster teenagers' mental health and help to develop their moral behavior. These findings provide more evidence for educators in designing the curricula. In the context of Vietnam where the education industry has paid special attention to improving school students' morality and mental well-being, these research outcomes may encourage educational administrators to consider *Thiền* as an intervention and adopt it for the students.

Due to some limitations related to using a control group, the scope research and the number of samples, further work on how *Thiền* work on teenagers should investigate teenagers attending retreats not only in Truc Lam Buddhist Zen monasteries but also in other Buddhist temples to expand the scope and increase sample size. The control group may include school students not attending any retreats organised by Buddhist temples.

In addition, the current paper examined some elements influencing the teens' *Thiền* practice including the demographics of age and gender, the teachers' training and the practice environment. However, those should be investigated further. Moreover, how the factor of family can influence adolescents' practice

²² Translated from the Pali by Acharya Buddharakkhita (1985): 23.

also needs to evaluate.

Acknowledgments

We would like to thank the retreat organizers and the monks and nuns at the Truc Lam Zen monasteries of Chinh Phap, Ham Rong, Phuong Hoang and Vien Chieu for supporting our research. We also thank the teenagers attending the retreats there for their participation.

MINDFULNESS IN EDUCATION ON PATH OF DHAMMA FOR A COMPASSIONATE AND SUSTAINABLE FUTURE

Ms. Deepa Ahirwar*

Abstract:

Mindfulness, as a component of Buddhist meditation practice, was re-contextualized and popularized in the twentieth century and eventually, through the process of secularization, entered a range of new settings, especially in therapeutic contexts. This abstract aims to discuss the conceptualization and practice of mindfulness from two different perspectives, i.e., Buddhist and secular. Firstly, it situates mindfulness within Buddhist discourse, outlines its definition, main roles, and functions. Mindfulness in education involves integration practices that promote awareness, focus, and emotional regulation among students and educators. When paired with a focus on compassion, mindfulness can help create a supportive and empathetic learning environment. Mindfulness helps students and teachers manage stress, anxiety, and emotional challenges. Mindfulness encourages present-moment awareness, which can enhance learning. It fosters an understanding of others' emotions and perspectives, reducing conflict and increasing kindness. Mindfulness has been defined as "maintaining a moment-by-moment awareness of our thoughts, emotions, bodily sensations, and surrounding environment with openness and curiosity. Mindfulness practices essentially cultivate attention, including self-awareness and self-knowledge of thoughts, feelings, and sensations and how they affect one's actions. Mindfulness is a promising approach to teaching educators and students self-awareness and self-regulation skills associated with success in school and through adulthood.

Keywords: *Meditation, compassion, empathetic, environment, self-awareness, adulthood.*

I. INTRODUCTION

“The goal of life is living in agreement with nature” Buddha.

“We are destined to share this planet, and as the world grows smaller, we need each other more than in the past. But, whether we are trying to reduce the nuclear threat, defend human rights, or preserve the natural environment, it is difficult to achieve a spirit of genuine cooperation as long as people remain indifferent to the feelings and happiness of others. What is required is a kind heart and a sense of community, which I call universal responsibility.” (His Holiness the Dalai Lama. In an address to ‘Seeking the True Meaning of Peace’, San Jose, Costa Rica. June 25 - 30 1989)

Education for sustainable development is an increasingly relevant area of research as the need to educate individuals who can deal with sustainable development challenges has become more urgent. Socio emotional competencies are those skills required to effectively self-regulate one’s emotions, solve problems effectively, and cultivate interpersonal relations, taking both personal and other’s needs into consideration in particular, this study examines whether mindfulness programs may be effective in nurturing aspects associated with socio emotional competencies, and identifies under which conditions these programs are more effective. Practice trains the mind to “attend to the contents of consciousness, moment by moment” without judging or reacting to such contents.

Decanting has also been found to mediate the relationship between mindfulness as a trait and pro-environmental behavior. Disinterring brings about three components of socio-emotional competencies. First, by disinterring, an individual learns to disengage from deeply wired emotional responses so that he or she is more able to choose how to react to internal or external stimuli. Moreover, the emotional regulation facilitated by mindfulness practice has been found to accrue empathy and compassion, probably because, as the individual is more able to accept her/ his own emotions, she is also more capable of accompanying others in their emotional experiences. The research on mindfulness shows that enhanced emotional regulation leads to reduced aggressive behavior and improved interpersonal relations. Disinteracting also facilitates perspective-taking and value clarification, which, in turn, enhances social connectedness. Finally, awareness and disinterring nurture self-compassion. More self-compassionate individuals are more resilient, meaning that they are better prepared to face situations of social conflict or rejection, show more positive thinking, and recover more easily and rapidly from past negative events. Moreover, a relationship between self-compassion and compassion towards others has been evidenced by Hofmann. In summary, the research on the effects of mindfulness practices suggest that they may be an effective learning strategy for socio-emotional competencies in ESD since they facilitate emotional regulation, cultivate empathy towards others, and make learners more resilient, which are three fundamental aspects of socio-emotional competencies. These outcomes are all grounded in the growing awareness and acceptance nurtured by mindfulness practices. However,

an assessment of the particular effect that mindfulness may have on these socio-emotional competencies is missing. Decisions, and handle challenges effectively”. Being in an environment for the first time, meeting strange people is not easy or simple for everyone. Some people need help in controlling their own emotions or others’ emotions and feelings. This help can come from the parents at home, teachers and classmates at school, or colleagues at working workplace.¹

1.1. The timeless wisdom of Buddha’s Dhamma

In an era marked by chaos, confusion, and conflict, the teachings of Siddhartha Gautama, known to the world as the Buddha, offer a beacon of hope, guidance, and wisdom. The Buddha’s *Dhamma*, or teachings, provide a comprehensive framework for understanding the nature of reality, the human condition, and the path to liberation from suffering. This article delves into the essence of Buddha’s *Dhamma*, exploring its core principles, practices, and relevance in modern times.

Source: Google

1.2. The historical context

Born in ancient India around 563 BCE, Siddhartha Gautama was a prince from the Shakya kingdom. Sheltered from the outside world, he was confronted with the realities of suffering, disease, and death, which profoundly impacted his perspective. Renouncing his royal life, he embarked on a spiritual quest, seeking answers to the fundamental questions of existence. After years of intense meditation and practice, he attained enlightenment under the Bodhi Tree, becoming the Buddha, the Awakened One.² Society at the time of the Buddha showed the same sort of contrasts and discrepancies as in modern days. The rich rode on elephants, horses, and in chariots and lived with lordly ease, whereas the poor struggled to eke out a meagre livelihood from the capricious powers of nature.²

II. THE FOUR NOBLE TRUTHS

The Buddha’s teachings are rooted in the Four Noble Truths, which

¹ Shqipe Husaj 2016. Social Emotional Learning (SEL) European Journal of Multidisciplinary Studies Jan-Apr 2016 Vol.1 Nr. 3.

² C. A. F. Rhys Davids, Outlines of Buddhism: A Historical Sketch, 1 Indian print, Delhi, 1978: 4. 1.

he delivered in his first sermon after enlightenment. These truths form the foundation of the *Dhamma*:

i. The Truth of Suffering (*Dukkha*): Life is marked by suffering, dissatisfaction, and impermanence. This truth acknowledges the inherent difficulties and challenges we face.

ii. The Truth of the Origin of Suffering (*Samudaya*): Suffering arises from craving, aversion, and ignorance. These three roots of suffering are the primary causes of our distress.

iii. The Truth of the Cessation of Suffering (*Nirodha*): Suffering can be overcome by eliminating its causes. This truth offers hope for liberation from suffering.

iv. The Truth of the Path to the Cessation of Suffering (*Magga*): The path to the end of suffering is the Noble Eightfold Path, a comprehensive guide for developing wisdom, ethics, and mental discipline.

2.1. The Noble Eightfold Path

The Noble Eightfold Path is a practical and systematic approach to spiritual growth and self-transformation. It consists of three main sections: wisdom, ethics, and mental discipline.

i. Wisdom (*Prajna*): Developing wisdom through understanding the Four Noble Truths, cultivating mindfulness, and recognizing the impermanent and interconnected nature of reality.

ii. Ethics (*Sila*): Cultivating ethics through right speech, right action, and right livelihood, which involves living a life of compassion, kindness, and respect for all beings.

iii. Mental Discipline (*Samadhi*): Developing mental discipline through concentration, mindfulness, and meditation, which enables the cultivation of a calm, clear, and focused mind.

2.2. Mindfulness and meditation

Mindfulness and meditation are essential components of the Buddha's *Dhamma*. Mindfulness involves cultivating awareness of the present moment, observing thoughts, feelings, and sensations without judgment or attachment.³⁴ Meditation is a systematic practice for developing concentration, clarity, and insight. Regular mindfulness and meditation practice can lead to numerous benefits, including reduced stress, improved focus, and enhanced emotional well-being.

2.3. Relevance in modern times

"Mindfulness brings wisdom; Lack of meditation leaves ignorance"
(Buddha)

³ G. C. Pande, *Studies in the Origins of Buddhism*, Allahabad: University of Allahabad, 1957: 314.

The Buddha's Dhamma is timeless and universal, offering wisdom and guidance that is just as relevant today as it was 2,614 years ago. In an era marked by rapid change, uncertainty, and conflict, the Dhamma provides a powerful framework for:

- i. Cultivating resilience and well-being: The *Dhamma* offers practical strategies for managing stress, anxiety, and adversity, promoting emotional well-being and resilience.
- ii. Developing compassion and empathy: The *Dhamma* emphasizes the importance of cultivating compassion, kindness, and understanding towards all beings, fostering a more harmonious and inclusive society.
- iii. Fostering critical thinking and wisdom: The *Dhamma* encourages critical thinking, inquiry, and exploration, helping individuals develop wisdom, discernment, and a deeper understanding of the world.

2.4. Mindfulness

“Whatever precious jewel there is in this heavenly world, there is nothing comparable to one who is awakened” (Buddha)

Mindfulness can be trained and enhanced by practicing mindfulness meditation. It aims to evoke positive emotions more directly, and is used to increase feelings of warmth and caring for self and others. In brief, the technique involves focusing on one self; people both likes and dislikes, and strangers, and dwelling on and cultivating an attitude of care, acceptance, well-wishing, and compassion about them.

2.5. Mindfulness, well-being, values, empathy, and sustainability

This summarizes the main elements of interest in this paper, highlighting the usefulness of seeing them as an interrelated whole when discussing sustainability. Beyond environmental principles, sustainability in education also includes social justice and overall well-being. Sustainability depends on ethical stewardship and an innate connection to nature, both of which are fostered by mindfulness (Wamsler et al., 2019).⁴

It might be an example of what O'Brien (2008: 290)⁵⁶ calls “sustainable

⁴ Thich Nhat Hanh, 2013 <https://www.parallax.org/mindfulnessbell/article/dharma-talk-to-make-reconciliation-possible/>

⁵ Wamsler, C. (2019). Contemplative Sustainable Futures: The Role of Individual Inner Dimensions and Transformation in Sustainability Research and Education. In:

happiness”, “...the pursuit of happiness that does not exploit other people, the environment or future generations”. Interestingly, as prosocial behavior may increase subjective well-being, subjective well-being may, in turn, encourage more prosocial behavior, suggesting the possibility of a positive feedback loop. Sustainable policies are more attractive and engaging. Among different, albeit interrelated, representations and models of the Buddhist teachings, cognitive processes are most comprehensively analyzed and discussed in the *Abhidhamma*, a collection of texts traditionally dated in the third century BCE, in which the main structural foundations of Buddhist discourse are systematically defined and analyzed. This is analyzed at a deeper, non-conceptual level. These basic components, elements, or events, called *dhammas*, surmised to be involved in, or condition the mental and physical phenomena arising moment to moment, are listed, defined, and discussed. The entire structure is presented under four main categories: cognition (*citta*), mental constituents (*cetasika*), materiality (*rūpa*), and *nibbāna*.⁶

III. THE ROLE OF MINDFULNESS IN EDUCATION

“Mindfulness must be engaged. Once there is seeing, there must be acting... We must become aware of the real problems of the world. Then, with mindfulness, we will know what to do, and what not to do, to be of help.” (Thich Nhat Hanh, Zen master, poet, activist and author. *Peace is every Step*, p. 91)

The Education Department handles challenges effectively. Social and emotional learning is a critical aspect in a child’s development, and teaching these skills positively impacts both personal well-being and school performance, enhanced mental health. The Hawn Foundation behind the MindUP™ movement states, “MindUP™ nurtures optimism and happiness in the classroom- showing that students who participated in MindUP™ demonstrated. Such as observation, non-judgment, and the ability to be nonreactive. Teachers whose behaviors are “calm, clear, and kind” might yield more compassionate environments for students. Educators can read educator-focused books by experts, such as *Mindfulness for Teachers: Simple Skills for Peace and Productivity in the Classroom*; *The Way of Mindful Education: Cultivating Well-Being in Teachers and Students*. Meditation as an alternative mind-body therapy. It is a popular intervention to improve mental and physical health.⁷

3.1. Benefits for teachers and students

- increased happiness
- Improvements in math achievement
- gain in executive function and improved planning and organization

Leal Filho, W., Consorte McCrea, A. (eds) *Sustainability and the Humanities*. Springer, Cham. https://doi.org/10.1007/978-3-31995336-6_20

⁶ Barrett, B., Grabow, M., Middlecamp, C., Mooney, M., Checovich, M. M., Converse, A. K., et al. (2016). Mindful climate action: Health and environmental co-benefits from mindfulness-based behavioral training. *Sustainability* (Switzerland), 8 (10), 1 – 20. <https://doi.org/10.3390/su8101040>.

- improved self-control and self-regulation skills
- Strengthened resilience and decision-making
- increased enthusiasm for learning
- increased academic success
- reduced peer-to-peer conflict
- A joyful and optimistic classroom

Quick Wins: What Teachers and Other Adults Can Do Right Now.

Supporting students facing additional challenges Effects on “emotional regulation” Though all students may benefit from school-wide mindfulness efforts, specific mindfulness strategies may be particularly effective for individuals or student groups at higher risk for health and/ or educational challenges.

According to the systematic review and the meta-analysis results, mindfulness moderately enhances the emotional regulation of negative and positive emotions. Concerning positive emotions, mindfulness practice has been shown to facilitate a better expression of individual emotions in tune with the emotions of others in a number of studies. The majority of the studies reported significant improvements from baseline conditions. The only two negative results attribute their findings to high levels of emotional control at the baseline or to the need for more customized programs to achieve further improvements.

3.2. Effects on “empathy and social connectedness”

“He who, seeking his happiness, punishes or kills beings who also long for happiness, will not find happiness after death” (*Dhammapada*)

Mindfulness has been demonstrated to effectively drive prosocial behavior through the enhancement of empathy or social connectedness, even after brief programs of only one hour. However, the effect size is small. These low effect sizes are attributed by authors to misguided programs or the limited length or intensity of the program. Higher effect sizes were reported in programs with the components of affect or programs adapted to the sample compositions and with intense daily meditation practices. This latter study offers a clear connection between daily meditation and value-related behavior since participation in an ongoing mindfulness practice showed significant improvements in value clarification, which is used as a measure to assess a values-oriented life, mediated by the disinterring ability.⁷

3.3. Sustainable behavior

Instead, it is our habits, i.e., automated response dispositions cued by the environment or preceding actions, that constitute much of our everyday lives.

⁷ Jacobs, panel Kathleen Lars Petersen, Jacob Hörisch , Dirk Battenfeld 2018. Green thinking but thoughtless buying? An empirical extension of the value-attitude-behaviour hierarchy in sustainable clothing. *Journal of Cleaner Production*. Volume 203, 1 December 2018, P. 1155 - 1169.

However, mindfulness and increased awareness of one's mental life can reduce emotional and cognitive habits, hence promoting a non-habitual/non-automatic mode of being that is more flexible and objectively informed. According to Bishop et al. role in fostering self-regulation. Some research supports this contention.

That is related to this kind of simpler lifestyle. simultaneously benefit both individual and ecological well-being." Amel et al. would be most relevant to sustainable behavior. They found that acting with awareness was correlated with sustainable behavior (Jacob et al., 2009). Resource-strenuous existence of users has been recognized as the major reason for ecological dilapidation. It is thus essential to involve people in making behavioral shifts that may enable them to lead a sustainable way of life. Specifically, we propose that students should be exposed to various activities to make them understand the concept of sustainability.

"Let him not destroy or cause to be destroyed, any life at all nor sanction the acts of those who do so. Let him refrain from even hurting any creature, both those that are strong and those that tremble in the world" (*Sutta-Nipata*).

The natural balance of the environment is under substantial stress because of the immeasurable use of resources. Demands for food, fresh water, timber, fiber, and fuel. This voluminous use of resources has been attributed as the major reason for environmental dilapidation. It is thus essential to involve people in making behavioral shifts that may enable them to lead a sustainable way of life. This can be initiated through an increase in demand for various sustainable goods and, decrease in the reckless behavior of consumption, helping enable people to have more sustainable lifestyles. The motivation and aim of the complex investigations of cognitive processes is to develop a deep understanding (in theory and practice) of the nature of physical and mental phenomena to the extent that is necessary for liberation from suffering; this is the rationale for all Buddhist teachings. Diminishes or even temporarily extinguishes the five hindrances (*nīvaraṇa*), unwholesome mental states rooted in greed (*lobha*), aversion (*dosa*), and delusion (*moha*). These encompass: prompts the development of wholesomeness; for example, it encourages the development of loving kindness, compassion, wisdom, while it discourages or prevents the negative components of cognition, either through understanding their harmfulness or by prompting wholesome states to develop instead. As frequently stated in Buddhist texts, well-established mindfulness

(i) sensory desires (*kāmacchanda*), seeking, craving, and delighting in pleasures derived through the senses

(ii) ill-will (*vyāpāda*), encompassing hatred, annoyance, resentment, hostility, irritation, and anger;

(iii) sloth and torpor (*thīna-middha*), referring to dullness, rigidity, stolidity, and unwieldiness of the mind and body

(iv) restlessness and worry (*uddhacca-kukkucca*), explained as agitation, unrest, distraction, remorse, and anxiety; and

(v) doubt (*vicikicchā*), referring to perplexity, hesitation, uncertainty, the lack of trust.

IV. BUDDHA: THE GREAT TEACHER

“May all beings have happy minds” Buddha

Siddhartha Gautama, known to the world as Buddha, was a spiritual teacher from ancient India who founded Buddhism. Born in Lumbini, Nepal, around 563 BCE, Buddha’s teachings have had a profound impact on the world, shaping the lives of millions of people across the globe.

4.1. The early life of Buddha

Buddha was born into a royal family, the son of King Suddhodana and Queen Maya. His early life was one of luxury and comfort, shielded from the outside world. However, as he grew older, Buddha encountered the “Four Sights” – an old man, a sick man, a corpse, and a wandering ascetic – which profoundly impacted his perspective on life. He realized that suffering and impermanence were inherent in life and that he too would face these challenges.⁸

4.2. The quest for enlightenment

“Work out your salvation. Do not depend on others.” Buddha.

At the age of 29, Buddha renounced his royal life and embarked on a spiritual quest to find the answer to suffering. He studied with various teachers, practiced intense meditation, and engaged in extreme asceticism. However, he eventually realized that these practices were not leading him to the truth he sought.⁹

4.3. The enlightenment

“To conquer oneself is a greater task than conquering others.” Buddha.

After six years of intense spiritual practice, Buddha sat under the Bodhi Tree in Bodh Gaya, India, and vowed not to rise until he had attained enlightenment. It was here that he experienced the profound insight that would change the course of his life and the lives of countless others. He realized the Four Noble Truths.

4.4. Buddha’s teachings emphasized the importance of:

- i. Mindfulness: Being present in the moment, observing thoughts, feelings, and sensations without judgment.
- ii. Compassion: Cultivating kindness, understanding, and patience towards oneself and others.
- iii. Wisdom: Developing a deep understanding of the nature of reality, recognizing the impermanence and interconnectedness of all things.
- iv. Ethics: Living a life of moral integrity, avoiding harm to oneself and others.

⁸ R. H. Robinson, 1976. *The Buddhist Religion: A Historical Introduction*, 2 edition, California, 1976: 12.

⁹ Rhys Davids T. W. 1903, *Buddhist India*, New York: G. P. Putnam’s Sons, 1903: 49ff.

4.5. The legacy of Buddha

Buddha's teachings have had a profound impact on the world. His message of peace, compassion, and wisdom has inspired countless individuals, from ordinary people to philosophers, artists, and leaders. Buddhism has spread across the globe, with various traditions and interpretations emerging over time.

V. MINDFULNESS AND MODERN BUDDHISM

As Buddhism expanded over centuries across Asia, new interpretations, schools of thought, and practices evolved, but as far as the roles and interpretations of mindfulness are concerned, the most significant changes seem to have occurred only in the last hundred years, initiated by the historical events in the late nineteenth century. The main parameters reflected and involved in the formation of modern Buddhism were encounters with Christianity, European science and rationalism, and European Romanticism, which particularly influenced the positioning of meditative experience at the forefront and, more recently, psychology, significantly impacting the interpretation of meditation through a psychological lens. In addition, particular historical developments during the colonial period in Burma (current day Myanmar) greatly contributed to situating mindfulness at the center of Buddhist teachings.

“Teach this triple truth to all: A generous heart, kind speech and a life of service and compassion are the things which renew humanity” (Buddha)

In this shift, mindfulness came to be the most appropriate element of meditation to be practiced by the laity in everyday life and consequently, the methods had to be simplified; With growing population of mindfulness in Burma, the first meditation center for laity were established, and several noted teachers, among them Mahasi Sayadaw (1904 – 1982) and U Ba Khin (1899 – 1971) and, later on, his disciple Goenka (1924 – 2015),¹⁰ were subsequently instrumental in popularizing mindfulness meditation worldwide; their methods constitute a large part of today's contemporary mindfulness applications in secular contexts. In the twentieth century, revitalized and simplified mindfulness meditation was spreading rapidly among the laity, firstly in Burma, then in other Asian Buddhist countries, and in the postcolonial period, becoming one of the most popular Buddhist meditation training models. Already, early on in the late 1970s, and more so in the 1980s, mindfulness programmers in the West, especially in the US, started to draw from and integrate different meditation methods from other Buddhist and non-Buddhist traditions as well as include psychotherapeutic approaches. Subsequently, mindfulness practice started to be increasingly viewed as training in attention, with the aim to improve psychological well-being, and

¹⁰ Sonja M. Geiger, Daniel Fischer Ulf Schrader, and Paul Grossman 2020. Meditating for the Planet: Effects of a Mindfulness-Based Intervention on Sustainable Consumption Behaviors. *Environment and Behavior* 2020, Vol. 52 (9) 1012 – 1042.

thus prepared the grounds for its secularization.¹¹

Modern psychology defines mindfulness as “bringing one’s complete attention to the present experience on a moment-to-moment basis.” The role of mindfulness in education benefits the teachers and students. In the classroom, teachers can use mindfulness-based techniques to increase responsiveness to students’ needs, support stress management, and enhance classroom climate. Introducing mindfulness to the students helps to strengthen attention and concentration and reduces anxiety before testing. Additional benefits for students practicing mindfulness techniques are an improvement in classroom participation and enhancement of social and emotional learning.¹² Implementing mindfulness-based programs that teach social and emotional skills result in better academic performance, significantly improved social and emotional skills, attitudes, and behaviors, fewer negative behaviors, and enhanced mental health. The question of how to implement mindfulness-based programs more widely in the curriculum needs further study. Initial research data supports that mindfulness-based programs are cost-effective and can be executed by training teachers in the schools. The first potential effect of mindfulness is the reduction of the attitude–behavior gap or the intention–behavior gap. These terms describe the discrepancy between attitudes (or intentions) toward sustainable consumption and the actual consumption behaviors. Although in many surveys, a majority of respondents tend to report favorable attitudes toward the environment and sustainable consumption options. Mindfulness can be summarized as a form of awareness and attention in the present that is characterized by an open-minded and non-judgemental perspective, and meditation as a group of practices that engage many of the same processes and may involve mindfulness. There is evidence that both mindfulness and mindfulness meditation are associated with activity in brain regions relating to, for example, attention, emotion-regulation, and bodily awareness.^{13, 14}

¹⁴ Bhikkhu Bodhi 1994. The Noble Eightfold Path. The Way to the End of Suffering. Buddhist Publication Society P.O. Box 61 54, Sangharaja Mawatha Kandy, Sri Lanka http://www.beyondthenet.net/bps/bps_main.htm

- i. Increased awareness
- ii. Improved personal health and subjective well-being
- iii. Higher levels of connectedness with nature
- iv. Stronger intrinsic values and ethical decision-making

Nowadays, people’s economies have been significantly growing, resulting in our needs and wants becoming unlimited. Therefore, beauty salons and the food industries have mushroomed. Due to this reason, a series of severe health problems have occurred. Here, we are going to discuss the issue of eating disorders that are harmful to our health and lives. When a person has an idea of the need to live for beauty, one is going to get a diet to have a slim body such as eating fewer calories.

The Greeks took moderation into consideration as a method that led to balanced physical health and a good life, and one needs to moderate and stabilize everything in every situation regarding moderation and self-awareness. In the *Donapākasutta*, the primary objective is to emphasize the significance of being mindful and practicing moderation in all aspects of actions. The *sutta* teaches that by cultivating mindfulness in six areas- eating, drinking, speaking, seeing, hearing, and thinking- one can achieve a state of equilibrium and avoid falling into extremes in life. It highlights the potential dangers of overindulgence and the negative consequences that arise from mindless behavior.

By adopting an attitude of mindfulness and moderation, individuals can lead lives that are more tranquil, purposeful, and free from the suffering and burdens associated with excess. Ultimately, the *sutta* serves as a gentle reminder for individuals to continuously cultivate awareness in every facet of their daily lives, enabling them to consciously make choices that promote

well-being and harmony. It could be understood that the Buddha cautioned the Pasenadi king that he should be mindful and considerate when consuming food, knowing when he has eaten enough and when he needs to stop. One needs to take a diet with an awareness of the danger of falling into obesity and other diseases. Besides, it also helps one's mind to be more peaceful and less afflicted, as well as protecting one's health and life. Balance in the Four Great Elements - The Buddha said that a human body is formed by the four elements: earth, water, fire, and wind. The *Satipaṭṭhāna Sutta* says, "There are in this body the earth-element, the water-element, the fire-element, the air-element." Thus, the Buddhist teaching proposes four types of food, which are essential requirements for the growth and the maintenance of humans, viz., edible foods (*kabalimkārahāra*), sense impressions (*phassāhāra*), volition (*manosañcetanāhāra*), and consciousness (*viññāṇāhāra*). The teachings of the Buddha emphasize the interconnectedness of the body and mind, highlighting the importance of nurturing both aspects. In terms of physical health, Buddhism encourages practitioners to cultivate body awareness and mindfulness. This involves maintaining moderation in food consumption, understanding the environmental impact on the body, engaging in regular exercise, and practicing relaxation techniques.

VI. BUDDHA'S DHAMMA RELATED TO MINDFULNESS AND EDUCATION

"Give only if you have little." Buddha

The teachings of Buddha, known as Dhamma, offer a profound framework for cultivating mindfulness and integrating it into educational practices. At its core, Dhamma emphasizes the development of wisdom, ethics, and mental discipline to attain a state of enlightenment, or Nirvana.

Mindfulness, a key aspect of Dhamma, involves being present in the moment, observing thoughts, feelings, and sensations without judgment or attachment. This practice enables individuals to develop awareness, clarity, and insight into their experiences. In the context of education, mindfulness can be applied in various ways:

- i. Improved focus and concentration: Mindfulness practices, such as meditation and deep breathing, can help students develop attention and reduce distractions, leading to better academic performance.
- ii. Enhanced emotional regulation: By cultivating mindfulness, students can better manage stress, anxiety, and emotions, creating a more conducive learning environment.
- iii. Increased self-awareness: Mindfulness helps students develop a greater understanding of themselves, including their strengths, weaknesses, and values, leading to more informed decision-making and personal growth.

6.1. In terms of education, Buddha's Dhamma offers valuable insights into the learning process:

- i. Experiential learning: Dhamma encourages direct experience and personal exploration rather than mere intellectual understanding. This

approach can be applied in educational settings through hands-on activities, experiments, and project-based learning.

ii. Critical thinking and inquiry: Buddha's teachings emphasize the importance of critical thinking, questioning assumptions, and seeking wisdom. These skills are essential in education, where students should be encouraged to think critically, analyze information, and evaluate evidence.

iii. Holistic development: Dhamma recognizes the interconnectedness of physical, emotional, mental, and spiritual well-being. Education should similarly aim to foster holistic development, addressing the diverse needs and aspects of students' lives.

6.2. To integrate Buddha's Dhamma into educational practices, teachers and educators can:

i. Incorporate mindfulness practices: Regular mindfulness exercises, such as meditation or yoga, can help students develop greater awareness and calmness.

ii. Encourage critical thinking and inquiry: Educators should create opportunities for students to engage in critical thinking, questioning, and exploration, helping them develop essential skills for lifelong learning.

iii. Foster a supportive and inclusive environment: Teachers should strive to create a safe, empathetic, and inclusive classroom environment, reflecting the principles of compassion, kindness, and understanding embodied in Buddha's Dhamma.

In conclusion, Buddha's Dhamma offers a rich and relevant framework for cultivating mindfulness and informing educational practices. By integrating these principles, educators can help students develop greater awareness, critical thinking, and emotional intelligence, ultimately leading to a more compassionate, wise, and enlightened society.

6.3. Finding peace: The timeless wisdom of Buddha's dhamma²³

"Those who are free of resentful thoughts surely find peace." Buddha

In today's fast-paced, often chaotic world, finding peace and tranquility can seem like an elusive dream. We're constantly bombarded with stressors, from the demands of work and family to the relentless stream of news and social media. It's easy to feel overwhelmed, anxious, and disconnected from ourselves and others.

But what if there was a way to find peace, no matter what challenges you're facing? A way to cultivate a sense of calm, clarity, and inner strength that would allow you to navigate even the most turbulent of times?

Enter Buddha's Dhamma, the timeless teachings of the Buddha that offer a profound and practical path to peace. For over 2,614 years, the Dhamma has been guiding individuals on a journey of self-discovery, transformation, and liberation from suffering.

6.4. The root of suffering

So, where does suffering come from? According to the Buddha, it arises from our minds. We create suffering when we cling to things that are

impermanent, unreliable, and ultimately, unsatisfying. We suffer when we're trapped in cycles of craving, aversion, and ignorance.

But the good news is that we have the power to break free from these cycles. We can learn to recognize and release the patterns of thought and behavior that lead to suffering. We can cultivate a mind that is clear, calm, and compassionate.

6.5. The path to peace

The Buddha's Dhamma offers a clear and practical path to peace. This path is rooted in the Four Noble Truths:

- i. The Truth of Suffering: Recognize that suffering is an inherent part of life.
- ii. The Truth of the Origin of Suffering: Understand that suffering arises from our minds.
- iii. The Truth of the Cessation of Suffering: Know that suffering can be overcome.
- iv. The Truth of the Path to the Cessation of Suffering: Follow the Noble Eightfold Path to cultivate wisdom, ethics, and mental discipline.

6.6. Practical steps to peace

So, how can you start cultivating peace in your life? Here are some practical steps:

- i. Practice Mindfulness: Pay attention to your thoughts, feelings, and sensations in the present moment. Recognize when your mind is wandering and gently bring it back.
- ii. Cultivate Compassion: Treat yourself and others with kindness, understanding, and patience. Recognize that we're all in this together.
- iii. Let Go of Cravings: Recognize when you're clinging to things that are impermanent and unreliable. Let go of cravings and cultivate a sense of contentment.
- iv. Develop Wisdom: Cultivate a deep understanding of the nature of reality. Recognize that everything is impermanent, unreliable, and ultimately, empty of inherent meaning.

VII. CONCLUSION

The integration of mindfulness in education has the potential to revolutionize the way we learn and interact with the world around us. By cultivating mindfulness in students, we can foster a compassionate and sustainable future. Mindfulness education helps students develop emotional regulation, empathy, and self-awareness, leading to improved academic performance, mental well-being, and social relationships.

The Buddha's Dhamma is a profound and timeless teachings that offer a comprehensive framework for understanding the human condition, the nature of reality, and the path to liberation from suffering. Through its emphasis on mindfulness, meditation, wisdom, ethics, and mental discipline, the Dhamma provides a powerful guide for personal growth, transformation, and self-realization. As we navigate the complexities and challenges of modern life, the

Buddha's Dhamma offers a beacon of hope, wisdom, and guidance, inspiring us to cultivate compassion, wisdom, and peace in our lives and the world.

Finding peace in a chaotic world is not an impossible dream. The Buddha's Dhamma offers a timeless and practical path to peace, one that's rooted in wisdom, compassion, and mindfulness. By following this path, you can cultivate a sense of calm, clarity, and inner strength that will allow you to navigate even the most turbulent of times.

Remember, peace is not something that's found outside of ourselves. It's a state of mind that can be cultivated through practice, patience, and persistence. So, take the first step today. Start cultivating peace in your life, and discover the profound sense of freedom and happiness that awaits.

Moreover, mindfulness education encourages students to adopt a growth mindset, become more resilient, and develop a sense of responsibility towards themselves, others, and the environment. By incorporating mindfulness into the curriculum, we can empower students to become active contributors to creating a more compassionate and sustainable world.

As we move forward, we must prioritize mindfulness in education, recognizing its transformative potential. By doing so, we can shape a future where individuals are equipped to navigate life's challenges with clarity, kindness, and wisdom. Ultimately, mindfulness education holds the key to unlocking a brighter, more compassionate, and sustainable future for all.

Therefore, Buddha, the great teacher, has left an indelible mark on human history. His teachings continue to inspire and guide people from all walks of life, offering a profound and timeless wisdom that transcends cultures, borders, and generations. As we navigate the complexities of our modern world, Buddha's message of peace, compassion, and wisdom remains a beacon of hope, illuminating the path to a more harmonious and enlightened world.

Modern society can learn numerous valuable lessons from the teachings of Lord Buddha, which remain relevant and timeless. Here are some key takeaways:

i. Mindfulness and presence: Lord Buddha emphasized the importance of living in the present moment, letting go of distractions, and cultivating mindfulness. This practice can help individuals reduce stress, increase focus, and enhance overall well-being.

ii. Compassion and empathy: Buddha's teachings stress the value of treating all beings with kindness, understanding, and compassion. This principle can foster a more harmonious and inclusive society.

iii. Interconnectedness and interdependence: Buddhism highlights the interconnectedness of all phenomena, encouraging individuals to recognize their place within the larger web of life. This understanding can promote environmental sustainability, social responsibility, and global cooperation.

iv. Impermanence and adaptability: Lord Buddha taught that everything is impermanent, including ourselves, our relationships, and our surroundings.

This insight can help individuals cultivate adaptability, resilience, and a willingness to evolve and grow.

v. The dangers of craving and attachment: Buddha's teachings warn against the dangers of excessive craving and attachment, which can lead to suffering, conflict, and environmental degradation. By recognizing and managing these tendencies, individuals can develop greater contentment, peace, and sustainability.

vi. The power of self-reflection and personal growth: Buddhism encourages individuals to engage in introspection, self-reflection, and personal growth. This process can help individuals develop greater self-awareness, wisdom, and emotional intelligence.

vii. The importance of ethics and morality: Lord Buddha emphasized the significance of living a morally upright life, adhering to principles such as non-harming, honesty, and fairness. These ethics can foster a more just, compassionate, and harmonious society.

viii. The value of simplicity and contentment: Buddha's teachings promote the value of living simply, being content with what one has, and cultivating a sense of gratitude. This approach can help individuals develop greater happiness, peace, and fulfillment.

ix. The need for critical thinking and discernment: Buddhism encourages individuals to question assumptions, challenge prevailing views, and cultivate critical thinking. This approach can foster greater wisdom, creativity, and innovation.

x. The importance of community and cooperation: Lord Buddha emphasized the value of building strong, supportive communities and working together for the greater good. This principle can promote greater social cohesion, cooperation, and collective well-being.

By embracing these timeless teachings, modern society can cultivate greater wisdom, compassion, and peace, ultimately creating a more harmonious and enlightened world.

CROSS-CULTURAL PERSPECTIVES ON EDUCATIONAL IMPROVEMENTS A COMPARATIVE CASE STUDY OF MYANMAR, HONG KONG (CHINA), AND THE UNITED STATES

U Kusala Dhamma*

Abstract:

This paper examines the impact of Buddhist values on education through three case studies in Myanmar, Hong Kong, and the United States, highlighting diverse applications of Buddhist principles in contemporary learning contexts. In Myanmar, Theravāda monastic schools preserve traditional values and address educational gaps by promoting social responsibility and moral development among disadvantaged students. In Hong Kong, within a multicultural and Mahāyāna-influenced society, Buddhist ethics are integrated into moral and value education via curated teaching materials for primary and secondary schools, aiming to cultivate compassion and ethical awareness. In the United States, mindfulness is introduced as a secular practice to counteract digital-age distractions and enhance attention, emotional regulation, and holistic thinking in students. Across all cases, the study reveals how Buddhist teachings – whether through structured ethical curricula or contemplative practices – contribute to educational transformation, promoting not only academic development but also personal and societal well-being. This exploration underscores the potential of Buddhist-inspired education to meet 21st-century challenges by fostering wisdom, compassion, and resilience in diverse cultural contexts.

Keywords: *Buddhist education, mindfulness, values, ethics, reform.*

* Director of the Office of International Relations, Business Relations, and Student Services at Long An University of Economics and Industry, Vietnam.

I. INTRODUCTION

In an era characterized by increasing globalization and diverse educational systems, the intersection of Buddhist values and modern educational quality has emerged as a topic of profound significance. This paper, titled “Cross-Cultural Perspectives on Educational Improvements: A Comparative Case Study of Myanmar, Hong Kong (China), and the United States,” seeks to contribute valuable insights to the theme of the conference on “Unity and Inclusivity for Human Dignity: Buddhist Insights for World Peace and Sustainable Development.” It explores the dynamic landscape of education by delving into three key areas. First, we investigate the preservation and enhancement of traditional values in monastic schools in Myanmar, shedding light on their unique approaches to aligning global educational standards with the ethos of Buddhism. Next, we delve into integrating Buddhism into Moral and Value Education in Hong Kong, examining the ideas and practices involved in developing Buddhist teaching materials for primary and secondary students. Finally, we explore the introduction of mindfulness in education in America, bridging theory and research to demonstrate how mindfulness practices can be seamlessly integrated into the educational fabric. Through this comprehensive analysis, we aim to contribute to the ongoing discourse on the harmonious coexistence of Buddhist values and contemporary education on a global scale.

II. MONASTIC SCHOOLS IN MYANMAR: A COMMITMENT TO PRESERVE AND ENHANCE TRADITIONAL VALUES.

Monastic education has been integral to Myanmar’s cultural and educational heritage since the 11th century, long before establishing a formal state education system.^{1, 2} Rooted in Buddhist traditions, monastic schools have played a pivotal role in shaping the moral and intellectual development of the country’s people by teaching pupils, as explained in *Āmagandha Sutta* (*Snp* 2. 2): “One should go about guarded with regard to those things, one’s faculties understood, standing firm in the Dhamma.”³ Despite facing various challenges, including constrained resources,⁴ financial sustainability concerns,⁵ and irregular quality assurance processes,⁶ monastic schools have historical significance and continue contributing to Myanmar’s present-day, highlighting their role in promoting social responsibility, fostering community engagement, and pioneering educational reforms. These schools provide invaluable educational opportunities, especially for children from underprivileged backgrounds and those in remote areas with limited access

⁶ Tin and Stenning (2016): 41.

to government schools.^{7,8} By offering free and inclusive education, monastic schools address critical gaps in the state education system and serve as vital community institutions. Ultimately, monastic schools remain a cornerstone of Myanmar's education landscape, with the potential to contribute to a more inclusive and equitable education system.

2.1. Filling the gaps in the state education system

Monastic schools play a vital role in Myanmar's education system, especially for disadvantaged children who might otherwise be left without access to learning opportunities.^{9, 10} By offering free education,^{11, 12} these schools help bridge gaps in the government's education system¹³ and serve as a lifeline for children from poor families, orphans, and those in remote areas.^{14, 15} Monastic schools are often more accessible than government schools, particularly in rural regions where distance and travel costs can make attending school challenging.^{16, 17} Their flexible enrollment policies also allow them to welcome pupils from all religions,¹⁸ pupils without official documents, or those who have missed traditional schooling timelines,¹⁹ making them a valuable option for migrant families.

2.1.1. Promoting Buddhist values and social responsibility

Monastic schools in Myanmar are vital in promoting Buddhist values and social responsibility, reflecting the deep-rooted connection between Buddhism and education.²⁰ In Myanmar, "school" and "monastery" are synonymous, symbolizing this long-standing relationship. Historically, monasteries have been key centers for educating most Buddhist males, guided by community service principles.²¹ These schools teach Buddhist doctrine to instill moral values,²² foster discipline and respect for traditions,²³ and encourage generosity through the practice of *parahita* (giving for the benefit

of others),²⁴ as the major teaching of the Buddha in *Serī Sutta* (SN 2:23 (3)): “having removed stinginess, The conqueror of the stain should give a gift. Deeds of merit are the support for living beings.”²⁵ Monastic schools also strengthen social cohesion^{26,27} by uniting pupils from diverse backgrounds and providing essential social services,²⁸ particularly in times of need.²⁹ By teaching life skills such as simplicity, self-sufficiency, and mutual respect, they help shape responsible and compassionate individuals.³⁰ Despite challenges like limited resources and untrained staff, monastic schools continue to make a meaningful impact by offering education and nurturing essential values, especially for vulnerable children in Myanmar.³¹

2.1.2. Pioneering educational reforms

Monastic schools in Myanmar have a rich history and continue to play a vital role in the country’s education system by adapting to changing times. For centuries, monastic schools were the primary providers of education, forming the foundation of Myanmar’s educational traditions.^{32,33} However, their influence diminished during British colonization when a new education system was introduced.³⁴ Despite efforts by the British to reform them, monastic schools retained their importance due to their deep cultural and religious roots.³⁵ After Myanmar gained independence, monastic schools experienced a revival. The government encouraged them to incorporate modern and worldly education to complement traditional teachings.^{36,37} In 1952, the Pyidawthar Conference led to a plan to further develop monastic education, with the Public Education Council overseeing its implementation.³⁸ However, monastic schools faced a setback when they were officially banned from 1962 to 1988 under General Ne Win’s regime.³⁹ Fortunately, they were allowed to reopen in 1992, and since then, registered monastic schools have followed the national curriculum prescribed by the Ministry of Education.⁴⁰

In recent decades, monastic schools have embraced educational reforms, particularly child-centered teaching approaches (CCA) introduced by international organizations in the late 1990s and early 2000s.⁴¹ Notably, Phaung Daw Oo, the country's largest monastic school, adopted these methods even before government schools implemented them.⁴² Today, monastic schools are recognized as a complementary part of Myanmar's education system and are officially included in the National Education Law.⁴³ The government now supports monastic schools, including funding for teacher salaries and textbooks.^{44,45,46} While they may not have been the first to implement all reforms, monastic schools have shown remarkable adaptability and continue to provide quality education to children, particularly those from vulnerable communities. Their enduring presence highlights their significant contribution to Myanmar's modern education landscape.

2.2. Overcome challenges and limitations of monastic schools for a better future

Addressing key challenges and limitations will help ensure a brighter future for monastic schools in Myanmar, allowing them to continue providing essential education to disadvantaged children. One important focus is improving the quality of education and ensuring greater accountability⁴⁷ following the teaching of *Ratana Sutta* (Khp 6): "Whatever bad deed one may do – in body, speech, or in mind – one cannot hide it: an incapability ascribed to one who has seen the Way."⁴⁸ Teacher training remains a critical need, as many teachers in monastic schools lack the necessary qualifications and ongoing support to adapt to curriculum reforms,^{49,50} such as child-centered approaches (CCA).⁵¹ Developing minimum standards for teacher recruitment, qualifications, and training can enhance teaching quality.⁵² Additionally, establishing a quality assurance body to monitor teaching practices, administration, and school management would promote transparency and accountability within the monastic school system.⁵³

Financial sustainability is another crucial area. Monastic schools often rely heavily on community donations and government support, which

⁵³ Tin and Stenning (2016): 46.

can be inconsistent.⁵⁴ To address this, schools should explore sustainable income-generating activities, such as developing products or services to fund school operations.⁵⁵ They can also seek partnerships with non-governmental organizations, international donors, and corporate sponsors to diversify their funding sources.^{56,57} Effective financial management practices will help ensure these funds are used efficiently.

Infrastructure and resource constraints also pose significant challenges. Many monastic schools lack proper classrooms, reliable electricity, and sufficient teaching materials.^{58, 59} Addressing these issues will require investment in infrastructure, which could be supported through partnerships with organizations specializing in education and development.⁶⁰ Even with improved funding, schools need efficient resource allocation strategies to ensure transparency and accountability in managing their resources.⁶¹

Strengthening collaboration and partnerships is essential for the long-term sustainability of monastic schools. Government support is crucial, particularly in financial assistance, teacher training, and infrastructure development.^{62, 63} Partnerships with NGOs, international organizations, and other educational institutions can bring additional resources, expertise, and innovative teaching practices to monastic schools.⁶⁴

Finally, promoting the value of monastic education is key to attracting further support. Public awareness campaigns can highlight these schools' critical role in educating vulnerable children.⁶⁵ Advocating for greater policy recognition will help ensure monastic education is included in national education planning and reforms, reinforcing its legitimacy within the broader education system.⁶⁶ By addressing these challenges, monastic schools can continue to provide quality education, foster positive values, and contribute to a more equitable future for Myanmar's children.

III. INCORPORATION OF BUDDHIST PRINCIPLES IN MORAL AND VALUE EDUCATION FOR PRIMARY AND SECONDARY STUDENTS IN HONG KONG

3.1. Hong Kong education system and its development strategy

⁵⁴ Tin and Stenning (2016): 44.

⁵⁵ Lall (2020): 127.

⁵⁶ Khaing (2020): 55.

⁶⁴ Khaing (2020): 55, 68.

⁶⁵ Khaing (2020): 68.

⁶⁶ Tin and Stenning (2016): 46.

Hong Kong stands out as a special and valuable hub for religious education, with the government actively supporting diverse cultural education services offered by religious communities. These include institutions representing Protestant Christianity, Roman Catholicism, Buddhism, Daoism, Islam, and Confucianism. The rich tapestry of these religious communities contributes significantly to the educational landscape, with a notable presence of Christian and Catholic schools, surpassing the number of Buddhist, Daoist, Islamic, and Confucian schools in the region.⁶⁷

The Hong Kong Curriculum Development Council has established a comprehensive framework of qualities crucial for holistic development, equipping students to navigate the challenges of the 21st century. This framework aims to foster positive values, attitudes, and a lifelong commitment to learning, while also honing generic skills necessary for knowledge acquisition and construction.⁶⁸ Emphasizing key learning goals, students are encouraged to recognize their roles and responsibilities within the family, society, and the nation. The curriculum places importance on their well-being, understanding of national identity, and dedication to contributing meaningfully to both the nation and society. Additionally, it encourages independent reading habits, active and confident participation in discussions in both English and Chinese (Cantonese or Putonghua), the cultivation of creative thinking, and mastery of independent learning skills such as critical thinking, information technology, numeracy, and self-management. Students are also guided to build a solid foundation of knowledge across the eight Key Learning Areas (KLA) and to lead a healthy lifestyle, fostering an appreciation for aesthetic and physical activities.⁶⁹

3.2. Integrate Buddhist moral education and values into the curriculum of Hong Kong's schools

One of the vibrant components within the Eight Key Learning Areas,⁷⁰ according to the school's curriculum guide, "Personal, Social and Humanities Education" (PSHE) encompasses religious studies. In this inclusive educational environment, Buddhist education, broadly defined as religious and moral education, falls under the umbrella of PSHE. A noteworthy initiative within this realm involves the creation of teaching materials that delve into "Buddhist moral education and values" for schools, showcasing a distinctive facet of PSHE. Educators and curriculum developers aspire to cultivate students' essential skills, values, and attitudes by incorporating education on Buddhist moral principles and values within the PSHE framework.⁷¹ This proactive approach underscores the contemporary focus of religious education, leveraging the power of belief to enhance the effectiveness of moral and life

⁶⁷ Committee on Home-School Co-operation (2016).

⁶⁸ Hong Kong Curriculum Development Council (2002).

⁶⁹ Hong Kong Yearbook (2004).

⁷⁰ Hong Kong Curriculum Development Council (2001): Appendix II.

⁷¹ Hung (2017): 63.

education. Essentially, the aim is to expand the role of religious education beyond imparting religious content, guiding students to reflect on the profound significance of religious philosophy in shaping one's personality and morality,⁷² following the Buddha's teachings in *Titthāyatana Sutta* (AN 3.61): "...this, *bhikkhus*, is the Dhamma taught by me that is unrefuted, undefiled, irreproachable, and uncensored by wise ascetics and brahmins."⁷³

In alignment with the guidelines and overall goals of the secondary school religious education curriculum set forth by the CDC and the Education Department Bureau (EDB) of Hong Kong, the Hong Kong Buddhist Association (HKBA) which runs 13 secondary schools and 7 primary schools⁷⁴ has tailored its curriculum to suit these standards, with religious community schools offering corresponding courses. The curriculum encompasses a range of enriching topics, including defining religion, understanding the language of the religion, exploring the founder, delving into the beliefs and practices of believers, examining religious communities, exploring worship, delving into beliefs, addressing social action, and considering morals.⁷⁵ Although initially crafted in 1999, some aspects, such as the aim of religious education, curriculum content, teaching strategies, and student exercises, may benefit from updates to better align with the current needs of religious education. The curriculum predominantly emphasizes fundamental Buddhist doctrines and philosophy, with a comparatively smaller focus on social action and morals. To enhance Buddhist education, there is room for development in integrating Buddhist teachings into modern moral and value education. This harmonious fusion of Buddhism with contemporary values aims to equip students with the tools to overcome life's challenges, all within the overarching framework of curriculum reform.⁷⁶

3.3. Introduction of new Buddhism curriculum syllabus and its outcomes

Between 2008 and 2015, the Center of Buddhist Studies at the University of Hong Kong wholeheartedly embraced the Life Education Based on the Concept of Dependent Origination (LEDO) curriculum project in 2010. It enthusiastically embarked on the "Buddhist Moral Education and Values" for primary and secondary schools (BMEV) curriculum initiative in 2015. The dedicated team worked diligently to create a comprehensive set of electronic teaching materials for upper primary and lower secondary forms, including a user-friendly electronic teacher's manual and an engaging electronic student handbook. They are not only teaching materials for teachers but also self-directed learning materials. The overarching goals of this inspiring initiative were to elevate the quality of learning and teaching in the Buddhist curriculum, empowering students to integrate Buddhist teachings into their daily lives seamlessly. The project also aimed to foster personal growth among students,

⁷² Ng (2004): 129.

⁷³ Bodhi (2012): 270.

⁷⁴ Hong Kong Buddhist Association (2000).

⁷⁵ Hong Kong Curriculum Development Council (1999).

⁷⁶ Hung (2017): 67.

instilling positive attitudes and values and fostering a deeper and more accurate understanding of the Buddhist faith,⁷⁷ employing the progress learning of the Dhamma follower in *Kiṭṭāgiri Sutta* (MN 70): “he pays respect to him (the Buddha); when he pays respect to him, he gives ear; one who gives ear hears the Dhamma; having heard the Dhamma, he memorizes it; he examines the meaning of the teachings he has memorized; when he examines their meaning, he gains a reflective acceptance of those teachings.”⁷⁸

The project’s primary objective is to underscore the significance of incorporating Buddhist teachings into everyday life, fostering positive and commendable attitudes and values. Notably, the aim of “understanding the Buddhist faith” is considered the final and least prioritized goal. This deliberate choice suggests a shift in focus within the teaching materials, moving from the Buddhist faith to a greater emphasis on moral education. Consequently, the revised curriculum highlights the potential enhancement and development of an individual’s wisdom and intelligence through extensive learning, frequent reflection, and diligent mindfulness practice – reflecting the essence of Buddha’s teachings on “three kinds of knowing.”^{79, 80} In 2015, a comprehensive set of teaching materials for Upper Primary and Lower Secondary students was successfully developed. These materials aim to augment students’ capacity to comprehend and understand life and self, effectively manage daily challenges, cope with life stressors, and cultivate positive attitudes and values through the teachings of Buddhism,⁸¹ well-versed in the *Mahāparinibbāna Sutta* (DN 16): “Morality, samadhi, wisdom, and final release, these glorious things Gotama came to know.”⁸²

The new curriculum stands out for its positive features, emphasizing the profound relevance of Buddhist teachings in our day-to-day existence. Firstly, the educational materials illustrate religious education’s seamless integration into a contemporary curriculum framework, particularly Buddhism. Secondly, the curriculum vividly showcases the practical application of Buddhist principles in everyday life. Thirdly, by incorporating stories from modern times, the curriculum ensures that its content remains pertinent to real-life experiences in today’s society. Notably, as a pioneering initiative in applying Buddhist teachings, the curriculum introduces new elements, such as “the environment and I,” aligning with contemporary guidelines for the interconnectedness of one’s life with the broader society and environment.⁸³

In conclusion, this study highlights the successful integration of traditional Buddhist ethics into the moral and value education of a modern school system

⁷⁷ Hung (2005).

within the open, diverse, and multicultural setting of Hong Kong. Crafting teaching and reading materials and adopting a pedagogical methodology emerges as a highly effective strategy in harmonizing conventional Buddhist ethics with contemporary educational practices. This pioneering approach bridges the gap between tradition and modernity and contributes to developing morality and essential skills among primary and secondary school students. It is celebrated as a groundbreaking effort to make Buddhist teachings pertinent and practical in today's daily life.⁸⁴

IV. PROMOTING MINDFULNESS IN EDUCATION: BRIDGING THEORY AND RESEARCH WITH PRACTICAL IMPLEMENTATION IN AMERICA

4.1. Exploring the aims and potential of incorporating mindfulness into education

The growing enthusiasm for mindfulness in education is evident through the increasing number of studies on mindfulness in teacher education, teacher professional development, educational leadership development, organizational change,^{85,86} and mindfulness training for students in early childhood and elementary and secondary school settings.^{87, 88} "Mindfulness in Education" primarily aims to achieve the following objectives: (1) comprehend the definitions of mindfulness and the potential positive impacts it can have on education from diverse perspectives; (2) present evolving theories on mindfulness in education and their implications for enhancing educational outcomes and fostering positive human relationships in school settings; (3) bring attention to emerging methods, measures, and robust research designs employed in this field; (4) highlight developing programs and research involving children, adolescents, and emerging adults; (5) emphasize developing programs and research involving educators and educational leaders; and (6) chart out future directions for the advancement of theory, research, and program development in this exciting area.⁸⁹

4.2. Cultivating mindfulness in education: exploring the science and practical applications with educators

Numerous studies are currently delving into the positive outcomes associated with incorporating mindfulness training into the daily routines of educators.⁹⁰ These investigations suggest that the advantages are broad and impactful, as mindfulness training fosters three interconnected pathways of enrichment in teachers' lives: (1) cultivating mindfulness as a valuable self-care resource, which is usually presented in *Dhammapada*, for example, *Citta*

⁸⁴ Bing (2017): 192.

⁸⁵ Tobin (2018): 5.

⁸⁶ Schonert-Reichl and Roeser (2016b): 4.

⁸⁷ Coss (2012): 2.

⁸⁹ Schonert-Reichl and Roeser (2016b): 5.

⁹⁰ Tobin (2018): 6.

Vagga (*Dph* ver. 37): “They who will restrain the mind, Far-ranging, roaming alone, Incorporeal, lying ahiding - They are released from Māra’s bonds,”⁹¹ (2) embracing mindfulness as a tool for developing reflective teaching practices as described in *Avakujja Sutta* (*AN* 3.30 (10)): “This person of the best intentions, his mind undivided, retains [what he hears]. Practicing in accordance with the Dhamma,”⁹² and (3) utilizing mindfulness as a catalyst for enhancing the learning experience for students in the classroom,⁹³ because it’s all good according to the Path of Purification, *Visuddhimagga* (*Vism* VII.70) “is good in the beginning with virtue as one’s own well-being. It is good in the middle with serenity and insight and with path and fruition. It is good in the end with Nibbāna.”⁹⁴

Self-Care. Teachers today face growing demands, which, unfortunately, can lead to increased stress and burnout.⁹⁵ This can notably impact their mental and physical well-being, ultimately affecting the quality of care they provide to students.⁹⁶ To address this, integrating mindfulness into teacher training can prove beneficial, with a particular emphasis on self-care. By prioritizing their own well-being, teachers can ensure they are better equipped to offer competent, empathetic care to their students based on the teaching described in *Kassapasamyutta Sutta* (*SN* 16.3): “Thus he teaches the Dhamma to others because of the intrinsic excellence of the Dhamma; he teaches the Dhamma to others from compassion and sympathy, out of tender concern.”⁹⁷ Managing stress is crucial for sustaining professional effectiveness, as it directly influences teachers’ attention and concentration.⁹⁸ Through cultivating self-awareness, teachers can better navigate their own physical and psychological experiences, allowing them to respond more effectively to the needs of their students.⁹⁹

Becoming a More Mindful Teacher. Engaging in mindfulness practice is linked to valuable qualities that greatly contribute to effective teaching. These include heightened attention, increased empathy, improved emotion regulation, and enhanced affect tolerance. Numerous studies indicate that mindfulness training plays a pivotal role in developing specific professional skills crucial for teaching success.¹⁰⁰ The mindful teacher embodies qualities that positively impact student outcomes, fostering sustained attention, the ability to regulate attention effectively, attunement, and self-regulation¹⁰¹ under the teaching of

Satipaṭṭhāna Sutta (MN 10): “(He) ... ardent, fully aware, and mindful, having put away covetousness and grief for the world.”¹⁰² Furthermore, mindfulness elevates compassion, a fundamental aspect of effective teaching.¹⁰³ A teacher’s focused attention not only strengthens the connection between the teacher and the student but also establishes a nurturing learning environment, ultimately enhancing the overall learning experience.¹⁰⁴

Providing Mindfulness in the Classroom. Numerous schools and organizations embrace the integration of mindfulness into their physical environments, recognizing the substantial impact that the setting can have on student engagement and learning.¹⁰⁵ Teachers play a pivotal role in fostering mindfulness within schools, primarily through the practice of mindful communication. By doing so, educators create an atmosphere where they can connect with students in more tuned-in and empathetic ways, thereby serving as models for emotional intelligence. Some innovative schools have adopted practices such as a brief moment of silent breathing broadcasted over the loudspeaker each morning, while certain teachers choose to commence and conclude their classes with the soothing sound of a bell, incorporating mindful movements, or engaging in mindful sharing.¹⁰⁶ These thoughtful initiatives contribute to a positive and harmonious educational experience for both teachers and students alike.

4.3. Promoting mindfulness in education: bridging science and training for student well-being

An expanding body of research suggests that even brief mindfulness training can positively influence brain functioning and neuroanatomy.¹⁰⁷ This includes enhancing the functional connectivity between different brain regions, ultimately boosting the brain’s efficiency in processing information.¹⁰⁸ Mindfulness training has proven effective in refining the ability to focus attention, which is particularly beneficial for students selectively, as the Buddha stated in the *Uruvelā Sutta* (AN 4.22): “that (concentration) constitute the higher mind and are pleasant dwellings in this very life.”¹⁰⁹ The promising outcomes from studies conducted primarily with adults have generated a growing interest in introducing mindfulness training into school environments to enhance academic achievement.¹¹⁰ Furthermore, there is a focus on exploring the impact of mindfulness training on children and adolescents from a cognitive neuroscience perspective. Engaging in mindfulness practices may empower

students to enhance (1) Self-care and Compassion, and (2) Self-regulation, thereby augmenting their capacity to learn and excel academically.¹¹¹

Self-care and Compassion. In the realm of education, it is imperative to foster the growth of students' abilities for self-care and compassion through meditation. This not only contributes to their overall well-being but also cultivates ethical sensibilities and encourages civic engagement.¹¹² Extensive research indicates that the capacity for self-care and compassion emerges early in development¹¹³ and can be nurtured throughout adolescence and adulthood.¹¹⁴ Dedicated teams of educators and researchers are actively collaborating to design and implement contemplative-based programs tailored for both teachers and students. Recent studies highlight the potential benefits of specific forms of meditation training, indicating that it has the power to positively impact health, well-being, and prosocial behavior. This encompasses qualities such as kindness, cooperation,¹¹⁵ and altruistic action¹¹⁶ benefiting both educators and learners alike.

Self-regulation. Enhancing self-regulation is a significant opportunity to address key public health concerns, as it plays a crucial role in mitigating issues related to addiction, as well as physical and mental well-being.¹¹⁷ Mindfulness training emerges as a valuable strategy to foster self-regulation, which is exerted in the *Soṇavaggo Sutta (Ud 5)*: "Who is confident, inspiring confidence, with (sense) faculties at peace, mind at peace, having attained supreme self-control and calm, controlled, guarded, with restrained faculties, a (true) *nāga* (dragon),"¹¹⁸ especially when longitudinal studies indicate that children with stronger self-regulation exhibit enhanced readiness for kindergarten,¹¹⁹ achieve higher grades throughout their educational journey,¹²⁰ have an increased likelihood of high school graduation,¹²¹ and are more likely to earn a college degree by age 25.¹²² Furthermore, children adept at regulating their attention, emotions, and behavior not only experience improved social functioning¹²³ and physical health¹²⁴ but also encounter fewer mental health challenges.¹²⁵

¹²⁵ Eisenberg, Hofer, and Vaughan (2007).

The positive outcomes extend into adulthood, where individuals with higher self-regulation tend to earn higher incomes, save more for retirement, and are less likely to have a history of incarceration during their early adult years.¹²⁶ Emphasizing and nurturing self-regulation in children thus holds promise for fostering overall well-being and future success.

V. CONCLUSION

In conclusion, this empirical investigation into the intersection of Buddhist values and modern educational quality across Myanmar, Hong Kong (China), and America illuminates promising avenues for positive transformations in global education. Monastic schools in Myanmar showcase the potential for holistic development, emphasizing academic ability and ethical and moral grounding. Hong Kong's incorporation of Buddhist principles in moral and value education for primary and secondary students reflects a commitment to nurturing well-rounded individuals with a strong ethical foundation. The introduction of mindfulness in American education exemplifies the bridging of theory and research with practical implementation. These comparative studies encourage a nuanced understanding of how diverse educational systems can integrate the Buddhist timeless values to foster comprehensive and quality learning experiences. Embracing these insights could pave the way for a more harmonious, compassionate, and effective global education landscape.

MINDFULNESS IN EDUCATION FOR COMPASSION AND A SUSTAINABLE FUTURE

Pham Thi Thao Khanh*

Abstract:

Mindfulness in education has gained increasing attention as a powerful for improving students' well-being, focus, and academic performance. This abstract explores the benefits of incorporating mindfulness practices, such as meditation and deep breathing exercises, into educational settings. By incorporating mindfulness practices into curriculum, schools can nurture self-awareness, empathy, and emotional regulation, which are the foundational for cultivating compassion. Practices such as meditation, mindful breathing, and mindfulness meditation can increase concentration, reduce stress, and create a supportive learning environment. Research highlights that mindfulness not only improves academic outcomes but also promotes prosocial behavior and resilience, addressing challenges like bullying and emotional distress. Mindfulness educators exhibit compassionate behaviors that create impact throughout the school. These points highlight the importance of integrating mindfulness into education to create greater understanding and compassion.

Keywords: *mindfulness, well-being, positive psychology, practices, happiness, awareness, compassion.*

I. INTRODUCTION

In today's fast-paced world, students in higher education are experiencing stress and anxiety, such that it impedes their academic success and personal well-being. Mindfulness in education equips students to manage stress, focus on learning, and grow emotionally. Teachers, too, are struggling to keep up with demands, often burning out under the weight of their responsibilities. What if there were a way to create calmer classrooms, reduce stress, and foster a deeper connection to learning for both students and educators? Mindfulness

* University of Economics and Law, Ho Chi Minh City.

may be the answer. The idea of teaching mindfulness to students might seem counterintuitive, but it is well suited to many educational settings. The environments where mindfulness is hardest to implement are often the ones that stand to benefit from it the most.

By integrating mindfulness into our curriculum, we nurture emotionally intelligent and compassionate individuals while fostering a cohesive community built on empathy, gratitude, and social responsibility. Together, let's embrace the path of mindfulness in education and create a brighter, more compassionate future for all.

II. THE CURRENT SITUATION

All students experience learning pressure at various stages. The pressures of academic performance, social dynamics, and personal circumstances can significantly impact students' mental health and overall well-being.

By prioritizing these non-academic aspects of education, institutions can create a more holistic approach to learning that not only enhances academic outcomes but also nurtures the mental and emotional well-being of students. This comprehensive approach can lead to a more positive school culture, reducing instances of bullying and violence while promoting a sense of belonging and engagement among all students. Some programs focus on teaching students how to practice mindfulness, while others aim to equip teachers with the skills to guide their students in mindfulness practices. There are also initiatives directed at administrators, parents, or the general public. Despite the diverse audiences, the ultimate goal remains the same: to achieve positive outcomes.

Educators must focus on academic outcomes and classroom material but can also promote new non-academic curricula to create a better learning environment. Mindfulness training can be valuable for helping students be more successful learners and more connected members of an educational community. Given the challenges students face, mindfulness instruction should be integrated into all levels of formal education to enhance academic success and well-being.

Mindfulness training not only fosters a positive learning environment but also equips students with essential tools for coping with challenges outside the classroom. As students face increasing pressures, embedding mindfulness in the educational curriculum could serve as a proactive approach to support mental health and enhance the overall learning experience. Therefore, implementing mindfulness instruction across all educational levels is a promising strategy that can help students navigate their academic pursuits and cultivate a more connected and balanced educational community.

III. MINDFULNESS IN EDUCATION FOR COMPASSION AND A SUSTAINABLE FUTURE

3.1. Understanding of mindfulness

Mindfulness in Pali is referred to as "*Samāsati*" (P) or "*Samyaksmr̥ti*" (Skt), which translates to right awareness, similar to the English terms "Correct

Thinking,” “Right Mindfulness,” or “Right Awareness.” In Buddhism, the term “*Sati*” encompasses various meanings and interpretations that can vary based on its usage in Vietnamese. For instance, it can refer to thinking about something mentally, contemplating, paying attention, or focusing on a specific object. It also involves remembering positive aspects or dismissing negative ones. Essentially, mindfulness signifies a state of being “Aware” at all times.

Mindfulness, a concept rooted in Buddhist philosophy, is gaining recognition as a powerful tool in education. By fostering focus, emotional regulation, and self-awareness, mindfulness helps students grow both intellectually and spiritually, promoting their holistic development.

Thich Nhat Hanh, the renowned Vietnamese Buddhist teacher and advocate for world peace and justice, describes mindfulness as being at the heart of the Buddha’s teachings. He defines it as ‘attention to the present moment’ that is ‘inclusive and loving’ and ‘accepts everything without judging or reacting’ (Thich Nhat Hanh, 1999, p. 64). Jon Kabat-Zinn (1990; 1994) and his colleagues have played a key role in transforming this spiritual concept into a widely used therapeutic tool, integrating meditation and mindful practices into modern psychology.” Mindfulness simply means ‘paying attention in a particular way: on purpose, in the present moment and non-judgmentally. This kind of attention nurtures greater awareness, clarity, and acceptance of present-moment reality’ (Kabat-Zinn, 1994, p. 4 – 5). Such practice whether this involves breathing or walking meditation or giving full non-judgmental attention to everyday activities can offer a ‘*powerful route for getting ourselves unstuck, back in touch with our wisdom and vitality.*’ (Kabat-Zinn, 1994, p. 4 – 5).

Mindfulness can be defined in various ways. It involves intentionally focusing on the present moment with a non-judgmental, compassionate awareness. It is a way of being and relating to our inner and outer experiences, as well as a reconnection with our senses, both literal and metaphorical. Mindfulness is also a rediscovery, a recognition of our innate ability to be fully present in our lives, engaging directly with the world without the influence of preconceived notions, past events, or personal biases.

Mindfulness as a word has been around for centuries. In short, mindfulness is to be present in the moment with all our senses, non-judgmentally, and not worrying about the past or the future. Presence comes when we are attentive when we are aware of our experience. Mindfulness is about “attention and awareness that arises from paying attention on purpose, in the present moment and non-judgmentally” (Kabat-Zinn, 2005, p. 4).

By cultivating mindfulness, the Dalai Lama (2005) reminds us, ‘we learn first to become aware of this process of dissipation so that we can gently fine-tune the mind to follow a more directed path towards the objects on which we wish to focus’ (Dalai Lama, 2005, p.160).¹ It is important to note that such attention has ‘a deliberate intention that helps us select a specific aspect or a

¹ Dalai Lama, 2005, p. 160.

characteristic of an object. The continued, voluntary application of attention is what helps us maintain a sustained focus on the chosen object. Attention training is intricately linked with learning how to control our mental processes (p. 161). This control, which is fundamental to therapeutic mindfulness practices, is associated with the Buddhist objective of eliminating erroneous self-conceptions.

No matter the challenges or hardships we face, we must embrace them and strive to rise above. Rising above these challenges allows us to live a fulfilling life, where we find happiness, health, wisdom, and make positive contributions to ourselves and our community. To achieve this kind of life, we need to take control of our own path. Taking control of our own path is essential to achieving this kind of life. When our lives are organized, stable, healthy, and joyful, we are better able to fulfill our responsibilities to our families and society. If we aim to cultivate a naturally peaceful and orderly existence, it is crucial to break the habit of chasing trends and shift that restless mindset into adopting a more tranquil one through exploring mindfulness practices.

3.2. What is mindfulness education?

The term “mindfulness” is often associated with relaxation and mental clarity. However, mindfulness is much more than that. As Jon Kabat-Zinn (1994) explains, it is “being aware of things in a specific, intentional, moment-to-moment, nonjudgmental way.” This means bringing full attention to what is happening right now – not clinging to thoughts of the past or rushing ahead to future worries.

Mindfulness can serve various roles in both education and clinical practice. Clinical practice functions range from implicit to explicit (Germer, 2005). At the more implicit end of the continuum are the potential benefits for the practitioner, such as enhancing one’s humanity, sensitivity, kindness, and presence. Subsequently, mindfulness-informed therapy is implemented, incorporating diverse mindfulness-based perspectives, dialogues, inquiries, and practices into the therapeutic sessions. At the specialized end of the spectrum, principles and practices are tailored to the individual patient, with personalized guidance on their application in daily life (Germer, 2005). Context is always important, and so too is the contingency that contributes to students’ feelings of being unsafe in their learning environments (Jones, 2017; Jones & Kahn, 2017). Understanding and identifying feelings can help students behave in a helpful, socially responsible, friendly, cooperative, and academically successful manner. Research suggests that students with higher levels of empathy tend to exhibit less aggressive behavior, possess better social skills, are more well-liked by peers, and achieve greater academic success (Arsenio, Cooperman, & Lover, 2000; Denham, 2006; Izard, 2002).

3.3. The benefits of mindfulness in the classroom

The concept of mindfulness which religious and philosophical groups have employed for centuries has become increasingly popular in recent years particularly within Western culture thanks to Buddhist and Hindu teachings.

Mindfulness represents a universal state of awareness that people from all walks of life can experience without religious associations. Educators can develop lessons that use mindfulness exercises to help students build self-awareness while learning to care for their bodies and handle their emotions. Mindfulness transforms into an everyday student routine through proper curriculum integration instead of becoming a mere supplemental activity.

Mindfulness practices are intentional activities that cultivate a state of mindfulness in the moment. When practiced regularly over time, mindfulness has measurable positive effects on attention, concentration, creativity, and compassion, as well as overall health in the form of reduced stress, reduced depression, lower blood pressure, and increased emotional self-regulation (Didonna, 2009).

The practice of mindfulness originates from age-old contemplative traditions and involves observing thoughts, feelings, bodily sensations, and the environment without judgment while remaining fully present in the moment. Through its practice, individuals develop self-awareness which leads to improved emotional control and strengthened resilience. Teachers use mindfulness in classrooms through activities like breathing exercises and guided meditations which along with mindful movements including yoga enable students to improve their focus and self-awareness.

Mindfulness is expected to benefit teaching and student learning. Initially, as described by Jon Kabat-Zinn (2013), mindfulness emphasizes bringing attention to the present moment, encouraging individuals to engage fully with their immediate experiences. Over time, researchers have expanded this definition to view mindfulness as a metacognitive skill. Bishop et al. (2004) further elaborate on this concept by indicating that mindfulness involves a state of alertness and awareness, facilitating the inhibition of elaborative processing. This allows individuals to orient themselves to their present experience, thereby enhancing their ability to focus or concentrate on specific tasks or sensations. Whether we are teaching in an elementary school, middle school, high school, or even at a higher education institution, teaching mindfulness can help to advance students' emotional learning and overall well-being.

Dr. Jon Kabat-Zinn's work on mindfulness highlights its profound impact on students' overall well-being and development. By incorporating mindfulness practices into educational settings, students can cultivate an inner sense of balance that enhances their ability to manage stress and navigate challenges. This inner strength not only bolsters academic performance but also fosters personal growth. He cites.

"Mindfulness isn't about silencing the mind; it's about becoming the observer of its noise, finding peace amidst the chaos."

However, the integration of mindfulness practices in schools not only benefits students but also plays a crucial role in enhancing educators' well-being. When teachers engage in mindfulness, they develop skills that help them manage stress, enhance focus, and cultivate a positive classroom atmosphere.

i. Improved emotional regulation: Mindfulness helps teachers recognize and manage their emotions more effectively. This leads to better responses to classroom challenges, reducing instances of frustration or burnout.

ii. Enhanced focus and attention: Practicing mindfulness can improve concentration, allowing teachers to be more present in their teaching and interactions with students. This heightened awareness can enhance lesson delivery and engagement.

iii. Reduced stress and anxiety: Mindfulness techniques, such as meditation and deep breathing, can significantly lower stress levels. Teachers who manage their stress effectively are more likely to maintain a positive outlook and promote a supportive learning environment.

iv. Better relationships with students: Mindfulness encourages empathetic listening and improves communication skills. As teachers become more attuned to their students' needs and emotions, they can foster stronger relationships, creating a more inclusive classroom.

v. Increased job satisfaction: By experiencing reduced stress and improved classroom dynamics, teachers may find greater fulfillment in their roles, leading to longer retention rates and a more stable teaching workforce.

vi. Role modeling for students: When teachers practice mindfulness, they set an example for their students. This can encourage students to adopt similar practices, promoting a culture of mindfulness and emotional intelligence throughout the school.

Supportive professional environment: Schools that prioritize mindfulness create a culture of well-being and support among staff, fostering collaboration and reducing feelings of isolation.

Mindfulness, which involves being present and aware of the current moment, has numerous benefits for students of all ages. When incorporated into the classroom, it can significantly enhance students' academic performance, social-emotional skills, and overall well-being. Here are some of the key benefits:

* Improved academic performance:

Enhanced focus and attention: Mindfulness techniques help students develop greater focus and concentration, allowing them to stay on task and absorb information more effectively.

Boosted memory and cognitive function: Regular mindfulness practice can improve memory, problem-solving skills, and critical thinking abilities.

Increased creativity: Mindfulness can stimulate creativity and innovative thinking by encouraging open-mindedness and divergent thinking.

* Enhanced social-emotional skills:

Improved emotional regulation: Mindfulness helps students identify and manage their emotions, reducing stress, anxiety, and impulsive behavior.

Enhanced empathy and compassion: By practicing mindfulness, students

develop a deeper understanding of their own emotions and the emotions of others, fostering empathy and compassion.

Improved social skills: Mindfulness can help students develop better communication skills, conflict resolution abilities, and social relationships.

* Enhanced Well-being:

Reduced stress and anxiety: Mindfulness techniques can help students reduce stress and anxiety, leading to a calmer and more focused learning environment.

Improved self-awareness: Mindfulness encourages students to pay attention to their thoughts and feelings, leading to greater self-understanding and self-acceptance.

Increased resilience: By developing mindfulness skills, students can build resilience and better cope with challenges and setbacks.

By incorporating mindfulness practices into the classroom, educators can create a more positive, supportive, and effective learning environment for all students.

- Enhanced focus and concentration: Guiding students to stay present can boost their concentration, leading to improved academic performance and comprehension.

- Stress reduction: Techniques such as deep breathing and progressive muscle relaxation help students manage stress and anxiety, promoting their emotional well-being.

- Improved self-regulation: Mindfulness fosters better self-awareness and emotional control, helping students maintain calm and balance in challenging situations.

- Enhanced social and emotional learning: Mindfulness supports the development of key social and emotional skills, such as empathy, compassion, and conflict resolution, contributing to a positive classroom environment.

- Increased mind-body awareness: Activities like yoga help students develop a deeper connection between their mind and body, promoting overall physical health and well-being.

3.4. Benefits of mindfulness practice for teachers

Over the past few years, teachers in the challenging and fast-paced field of education have faced many challenges and obstacles due to the effects of the COVID-19 pandemic, the evolution of educational technology, changing societal expectations, mental health issues, workload and burnout, social and emotional learning, changes and gaps in curriculum, classroom management, parental involvement, policy adjustments and accountability, professional development, advocacy and funding, and the diverse needs of students in today's diverse classrooms. Goddard et al. (2000) pointed out that this combination of teacher turnover and stress affects the quality of education students receive because there are fewer experienced teachers in the classroom and those who

do remain feel less certain about their effectiveness, which in turn impacts student achievement. These challenges underscore the importance of systemic support, comprehensive training, and adequate resources to enable teachers to meet the challenges of their essential role in educating the next generation. Therefore, mindfulness is a great tool for personal and professional well-being. Mindfulness is generally believed to improve teaching and student learning. It explores and shares examples of how stress and the occupational hazards of teaching can be reduced through mindfulness, and it provides a compelling picture of how one can employ mindfulness to transform their teaching and the learning environment of their classroom.

By integrating mindfulness practices into their daily lives, teachers can experience transformative benefits that ripple out to their classrooms and beyond. These benefits fall into three areas: mental health, professional effectiveness, and classroom dynamics.

** Better mental health and resilience*

Teaching is an emotionally taxing profession, and many educators face elevated levels of stress, burnout, and fatigue. Mindfulness equips teachers with strategies to manage these challenges.

- *Stress Reduction:* Practicing mindfulness reduces stress by helping teachers become aware of their thoughts and emotions without judgment. Techniques like mindful breathing or body scans lower cortisol levels and promote a sense of calm.

- *Increased Resilience:* Mindfulness fosters emotional resilience, enabling teachers to navigate inconvenient situations, such as managing conflict or adapting to changes, with greater ease.

** Better Work-Life Balance:* Mindfulness encourages teachers to live in the present, helping them draw boundaries between their professional responsibilities and personal lives.

3.4.1. Enhanced professional effectiveness

Mindfulness sharpens focus and creativity, two essential qualities for educators seeking to inspire and engage students.

- *Improved attention and focus:* Regular mindfulness practice trains the brain to concentrate on the task at hand, reducing the effects of multitasking and improving productivity. This translates to better lesson planning and more meaningful interactions with students.

- *Creative problem-solving:* By fostering a nonjudgmental attitude, mindfulness encourages innovative thinking and helps teachers approach challenges with fresh perspectives.

- *Time management:* Mindful awareness allows teachers to prioritize tasks and manage their workload effectively, thereby minimizing stress.

3.4.2. Positive classroom dynamics

Teachers who practice mindfulness set the tone for a more peaceful and focused learning environment. Their calm presence can inspire the same

qualities in their students.

* *Emotional regulation*: Mindfulness helps teachers model self-control and emotional regulation, showing students how to manage challenges with poise.

* *Improved relationships with students*: Teachers who practice mindfulness tend to develop greater empathy and patience, which strengthens their rapport with students and helps them address individual needs effectively.

* *A calmer, focused classroom*: Mindful teachers bring a sense of calm to their classrooms, creating a learning space where students feel safe, supported, and ready to engage.

3.4.3. Broader impact on the school community

When teachers embody mindfulness, their positive energy often influences colleagues, parents, and the school culture.

* *Peer support and collaboration*: Mindful teachers are more present and empathetic in interactions with colleagues, fostering teamwork and support within the faculty.

* *Role-modeling for students and families*: By practicing and teaching mindfulness, educators can inspire students and their families to incorporate these practices into their own lives, promoting a culture of wellness beyond the classroom.

Mindfulness is a crucial tool for educators, not just a passing trend. By promoting inner calm, improving focus, and enhancing relationships, mindfulness helps teachers thrive personally and professionally. Prioritizing mindfulness in their routine can boost teachers' resilience and positively impact their students' learning experiences.

3.5. Benefits of mindfulness practice for students

The increasing popularity of mindfulness interventions among college students over the past decade can be attributed to a growing recognition of the mental health challenges faced by this demographic. Research has shown that mindfulness practices can effectively reduce psychological distress, enhance emotional regulation, and improve overall (Burrows, 2016; Duarte & Pinto-Gouveia, 2015; Koszycki et al., 2016; Schwind et al., 2017; Van Gordon et al., 2014).

In today's fast-paced and often stressful academic environment, students face increasing challenges that can affect their mental health, focus, and overall well-being. Mindfulness practice has emerged as a powerful tool to help students navigate these pressures effectively. In higher education, mindfulness practices have been demonstrated to assist students with their mental health (Gray et al., 2018; Lynch et al., 2018) and with their learning. Research indicates that meditation and mindfulness practices can significantly enhance students' connection to their internal processes, fostering self-compassion and facilitating better interpersonal relationships within the classroom environment (Martin, 2018). For instance, a semester-long mindfulness course allowed students to engage in mindfulness techniques both in and out

of the classroom, leading to reported reductions in stress and anxiety levels. Specifically, Gray (2021) found that undergraduate students who participated in this course experienced a significant decrease in perceived stress and procrastination, alongside improvements in self-compassion and sleep quality.

Although studies show mindfulness can benefit classrooms, there is limited research on its effects on learning and memory in college students. Mindfulness can improve students' academic, emotional, and social well-being.

** Improved focus and concentration*

Mindfulness helps students train their minds to stay in the present moment. This increased awareness can enhance focus and reduce distractions during study sessions or lectures, leading to better academic performance.

** Stress and anxiety reduction*

With exams, deadlines, and peer pressure, students often experience prominent levels of stress and anxiety. Mindfulness practices such as meditation and breathing exercises activate the body's relaxation response, helping to calm the mind and regulate emotions.

** Enhanced emotional regulation.*

Mindfulness teaches students to observe their thoughts and feelings without judgment. This self-awareness helps them respond thoughtfully rather than react impulsively, leading to healthier ways of coping with challenges.

** Better sleep quality*

Academic and social pressures can disrupt sleep patterns. Mindfulness promotes relaxation and reduces racing thoughts, helping students fall asleep faster and enjoy more restful sleep.

** Increased resilience*

By fostering a sense of inner calm and self-compassion, mindfulness strengthens students' ability to manage setbacks, manage frustration, and bounce back from failures with a positive outlook.

** Improved interpersonal relationships.*

Mindfulness enhances empathy and active listening skills, which can improve communication and foster deeper connections with peers, teachers, and family members.

** Boosted creativity and critical thinking skills.*

A calm, focused mind is better equipped to think freely. Mindfulness encourages open-mindedness and flexibility, allowing students to approach academic and personal challenges with innovative solutions.

** Support for mental health*

Mindfulness involves being present in the moment, cultivating awareness of thoughts and feelings without judgment, and developing a greater sense of self-compassion. Sustained attention is essential for learning and academic achievement (Spira & Fischel, 2005) and this could lead to a positive impact on academic achievement.

The connection to academic achievement is well-documented:

Sustained attention: As you mentioned, sustained attention is essential for learning and academic achievement. Mindfulness practices, such as meditation and focused attention exercises, can help improve working memory, attentional control, and cognitive flexibility (Mrazek et al., 2013).

Reducing stress and anxiety: Mindfulness has been shown to reduce stress and anxiety, which are common obstacles to academic achievement (Kabat-Zinn, 2003). By managing stress and anxiety, individuals can better focus on their studies and perform at their best.

Improving emotional regulation: Mindfulness helps individuals develop better emotional regulation skills, which enables them to manage emotions in a more adaptive way. This can lead to improved relationships with peers and educators, as well as better academic outcomes (Grossman et al., 2013).

In summary, mindfulness has the potential to positively impact academic achievement by improving sustained attention, reducing stress and anxiety, and developing self-compassion and emotional regulation skills.

IV. MINDFULNESS IN GENERAL SUSTAINABILITY TEACHING

Understanding mindfulness in education is the first step toward creating a nurturing and supportive educational environment. By recognizing its benefits and relevance, educators can begin to implement practices that foster a culture of awareness, empathy, and resilience among young learners. Integrating mindfulness into higher education can cultivate well-rounded individuals who navigate the world with grace and compassion.

Mindfulness is increasingly recognized and integrated into pedagogical practices, gaining mainstream acceptance as a valuable tool for enhancing the well-being of both students and educators. Research has demonstrated the positive effects of mindfulness on a variety of cognitive and emotional processes, including memory retention, learning efficiency, emotional regulation, and overall well-being. Moreover, mindfulness plays a crucial role in fostering interpersonal relationships and emotional intelligence within the classroom, which are essential components of effective teaching and learning. Educators can create a more supportive and empathetic learning environment by promoting a mindful approach. As mindfulness continues to be embraced in educational contexts, institutions need to provide training and resources for teachers to effectively implement these practices, ensuring that both students and educators can reap the full benefits of mindfulness in their academic journeys.

First, we need to understand sustainability. Understanding sustainability involves considering the long-term impact of our actions on the environment, society, and economy. The fundamental goal of sustainability is to make sure that we can satisfy our demands today without endangering the capacity of future generations to satisfy their own needs.

Sustainability is urgently needed today. The Earth's resources are finite, and human overconsumption and pollution are increasingly impacting the planet's

natural systems. Sustainability should guide us to ensure a habitable earth for future generations. Sustainability involves social and environmental aspects. In addition to being crucial for the long-term survival of human civilization, sustainability has impacts on global security, health, and economic stability.

Sustainability in education is a wide-ranging concept encompassing all the practices and principles that aim to engage learners at different levels of the education system to promote environmentally friendly practices. This approach encourages learners to think critically about the world by incorporating environmental, social, and economic issues into the teaching-learning process. Further, sustainability education enables learners to consider and evaluate contemporary issues from the perspective of sustainability. Gaining an appreciation for the linkages between society and the environment enables learners to devise novel remedies to the problems of climate change, resource depletion, and social inequality.

Sustainability teaching aims to educate individuals about the interconnectedness of social, economic, and environmental systems and to inspire them to make informed decisions that contribute to a more sustainable future.

By incorporating mindfulness into the instructional techniques related to sustainability, students will have a more developed mastery of intricacies associated with sustainability issues. Mindfulness practices, which involve being fully present and aware of one's thoughts, feelings, and surroundings, can help students develop a deeper appreciation for the natural world and a greater sense of interconnectedness with all living beings.

By incorporating mindfulness exercises into sustainability education, educators can create a learning environment that encourages reflection, critical thinking, and ethical decision-making. Mindfulness can help students cultivate a sense of empathy and compassion towards the environment, motivating them to take positive action to protect and preserve the planet.

Future trends in mindfulness and sustainability education are increasingly intertwined as educators and researchers recognize the potential of mindfulness practices to foster sustainable behaviors and enhance environmental awareness.

Here are key emerging trends in mindfulness and sustainability education:

Mindfulness integration:

- Incorporation of mindfulness practices into the standard curriculum
- Focus on emotional intelligence and stress management skills.
- Use of technology-assisted meditation and breathing exercises
- Growing emphasis on mindful learning environments

Sustainability education:

- Learning through projects that target critical problems in the environment.
- Interdisciplinary teaching of climate science
- Initiatives undertaken by pupils for campus sustainability and green programs

- Focus on systems thinking and relationships to ecology.

Emerging approaches:

- Outdoor and nature-based learning experiences
- Digital tools for tracking individual environmental impact.
- Cross-cultural environmental justice perspectives
- Community partnerships for local sustainability projects

Mental health, sustainability, and mindfulness are interrelated concepts that affect each other in distinct ways. Various research has shown that practicing mindfulness can benefit mental health by decreasing stress, anxiety, and depression. Before long, this high mental health can promote greater engagement in environmentally friendly behaviors; for example, recycling, conserving energy, and minimizing waste. The more baseline healthy and grounded we can be the more connected we can be to our health and sense of purpose, and the more we act in ways that ultimately benefit the world.

Individuals can undertake various initiatives to promote sustainability and raise awareness. This could involve engaging in sustainable practices like energy conservation and mindfulness meditation, as well as supporting laws that support sustainability and mental health. It also necessitates a dedication to creating strong, resilient communities that place a high value on the health and happiness of all their residents as well as the health of the environment.

The future of mindfulness and sustainability education is promising, with a focus on integrating mindfulness practices into educational frameworks, fostering environmental mindfulness among students, and supporting research that links these concepts. As schools continue to evolve their curricula and infrastructure, they play a crucial role in shaping environmentally conscious future generations.

V. CHALLENGES IN IMPLEMENTING MINDFULNESS AND SUSTAINABILITY EDUCATION

Indeed, the study of mindful teaching and the creation of theoretical frameworks have become increasingly popular in educational research. Scholars are now acknowledging the wide-ranging advantages of mindfulness for both students and teachers. Here, I have highlighted some important aspects of theoretical models of mindful teaching and how they can impact teaching practices.

- *Creating a mindful classroom:* Educators can implement mindfulness practices such as meditation, breathing exercises, or mindful pauses to enhance focus and emotional regulation among students. Establishing a culture of mindfulness in the classroom helps create a safe environment where students feel valued and understood.

- *Integrating mindfulness into the curriculum:* Mindful teaching encourages the integration of mindfulness practices into the existing curriculum, incorporating activities that promote reflection, empathy, and self-awareness across subjects. Lessons can include discussions on emotional experiences,

fostering a culture where students learn to articulate their feelings and reactions.

- *Professional development for educators:* Training programs focusing on mindfulness can support teachers in developing their practice. Such training may cover stress management, emotional resilience, and effective communication, contributing to their overall well-being and effectiveness in the classroom.

- *Assessment and evaluation:* Evaluation methods can be designed to assess the impact of mindfulness practices on both student outcomes and teacher well-being, providing a metric for refining and reshaping teaching strategies.

- *Fostering relationships:* Mindfulness encourages strong teacher-student relationships characterized by empathy and support, which can significantly affect student motivation and engagement.

Mindfulness is increasingly becoming more prominent in education, but it has not been widely explored in the realm of sustainability education. Recently, there has been a push to incorporate contemplative teaching practices to tackle socio-ecological issues and foster a more equitable, empathetic, thoughtful, and sustainable community. This is seen in the recent increase in organizations and institutions that offer workshops, seminars, professional networks, and training on the subject.

Implementing mindfulness and sustainability education in schools faces several challenges that can hinder its effectiveness. Institutional barriers often create obstacles, such as rigid curricula that prioritize standardized testing over holistic learning. This lack of flexibility can limit opportunities for incorporating mindfulness practices and sustainability topics into daily lessons.

5.1. Classroom distractions: External distractions can hinder mindfulness practices. Teachers must create a conducive environment by minimizing noise and interruptions, which may involve turning off electronic devices and establishing a quiet space for mindfulness activities.

- *Lack of awareness:* Many people do not fully understand mindfulness and sustainability, making it hard to involve them in educational programs.

- *Resistance to change:* Introducing new educational initiatives can face opposition from those who prefer established habits and routines.

5.2. Limited resources: Schools and organizations may face constraints in terms of time, funding, and expertise needed to develop and implement effective mindfulness and sustainability programs.

5.3. Curriculum integration: Integrating mindfulness and sustainability education into existing curricula can be challenging, as educators may struggle to find the time and space to incorporate these new topics. In addition, educators often face the challenge of integrating sustainability education into an already packed curriculum. This can lead to resistance from teachers who feel they lack the time or resources to add updated content.

5.4. Community engagement: Successful sustainability education often requires involvement from the broader community, including parents and

local organizations. Building these partnerships can be challenging, especially in areas where community interest or support is lacking.

5.5. Finding qualified instructors: Teaching mindfulness and sustainability effectively requires knowledgeable and skilled instructors who may be in short supply. Professional development opportunities are essential to equip teachers with the knowledge and skills needed to effectively teach sustainability.

Meiklejohn et al. (2012), in their summary of the field of mindfulness in education, cite many advances gained in schools that were significantly beneficial for both teachers and students. This is a great illustration demonstrating that the integration of mindfulness in education can be rewarding for teachers, students, school authorities, and parents. Schools design student engagement programs to provide and support transformative student experiences, enabling practical opportunities for students to explore, experiment, create, lead, and reflect, inside or outside their set classrooms. Integrating mindfulness into activities in school programs offers numerous benefits.

VI. UNDERSTANDING COMPASSION IN BUDDHISM

Compassion, derived from the Latin words ‘co’ meaning together and ‘passion’ meaning strong emotion, goes beyond understanding someone’s suffering to feel their pain as our own. This shared empathy motivates us to alleviate their suffering, embodying qualities like empathy, kindness, generosity, and genuine concern for others’ well-being. Compassion drives the act of sharing, comforting, and caring, reflecting the best of human nature.

Compassion in Buddhism, known as “*Karuṇā*” in Pali and Sanskrit, is a fundamental aspect of the Buddhist path. It is the desire for all beings to be freed from suffering. This concept surpasses sympathy or empathy; it involves a profound desire to alleviate others’ suffering. In Buddhist teachings, it is one of the four divine abodes (*brahma viharas*), along with loving-kindness (*Metta*), empathetic joy (*Mudita*), and equanimity (*Upekkha*).

Karuṇā is important in all schools of Buddhism. For Theravada Buddhists, dwelling in *karuṇā* is a means for attaining a happy present life and heavenly rebirth. For Mahāyāna Buddhists, *karuṇā* is a co-requisite for becoming a Bodhisattva.

Compassion, as understood across the three main Buddhist traditions – *Theravada*, *Mahayana*, and *Vajrayana* – offers rich insights that can enhance contemporary psychological practices and therapeutic approaches. Each tradition emphasizes different aspects of compassion, thus providing a multifaceted understanding that can aid in both clinical settings and personal development.

6.1. Theravada tradition

Theravada Buddhism, often referred to as the “Teaching of the Elders,” places a strong emphasis on individual attainment of enlightenment (*Nirvana*) through ethical conduct, meditation, and wisdom. Compassion, or “*Karuṇā*” is a fundamental aspect of the *Theravada* path and is closely associated with:

Metta: This tradition emphasizes the development of loving-kindness (*metta*) and compassion as foundational practices. Practitioners engage in loving-kindness meditation (*metta bhavana*), which is designed to cultivate unconditional love towards oneself and others.

Interconnectedness: Theravada teachings also emphasize the interconnectedness of all beings, leading to a compassionate response to suffering. Central to the teaching is the understanding of suffering (*dukkha*) and its causes, encouraging practitioners to recognize this universal experience.

6.2. Mahayana tradition

Mahayana Buddhism, the “Great Vehicle,” expands the concept of compassion to a more communal and inclusive perspective, focusing on the well-being of all sentient beings. Key aspects include:

Bodhisattva Ideal: In this tradition, the Bodhisattva – a being committed to attaining enlightenment not just for themselves but for all beings – embodies compassion. Practitioners aspire to cultivate bodhicitta, the mind of compassion, which motivates them to help others achieve liberation from suffering.

The principles, virtues, and commitments of a Bodhisattva, along with the practice of the Bodhisattva path, are clearly outlined in the Mahayana sutras and various literary works. A Bodhisattva is usually seen as a role model for good character, and the Bodhisattva precepts provide important guidelines for living ethically and making the world a better place. Ultimately, this guidance leads practitioners toward liberation. It becomes clear that by following the standards and vows they have embraced, Bodhisattvas serve as a source of inspiration in life. They interact with the world, nurturing and refining themselves while working to improve life for everyone. Even though the ideals might seem high, they can definitely be reached with regular practice and dedication. The Avatamsaka Sūtra states that the Bodhisattva acts as a lamp, illuminating the world.

Emphasis on relative and ultimate truth: Mahayana philosophy distinguishes between the ultimate nature of reality and the conventional understanding of existence. This dual perspective fosters a compassionate engagement with the world while acknowledging the deeper interconnectedness and emptiness of all phenomena.

6.3. Vajrayana tradition

Vajrayana Buddhism, commonly known as Tibetan Buddhism, combines elements from earlier traditions while introducing its distinct rituals and symbols. Its interpretation of compassion encompasses:

Deity Yoga and Visualization: Practitioners often engage in complex visualizations of compassion deities, such as Avalokiteshvara (the embodiment of compassion). This practice is believed to help cultivate a deep, experiential understanding of compassion.

Transformative practices: Vajrayana emphasizes the transformative power of compassion through specific practices that involve ritual, mantra recitation,

and meditation, aiming to integrate compassion into every aspect of life.

In Buddhist meditation, the cultivation of compassion (*karuna*) is integral to the development of a wholesome mind and heart. It is one of the “four immeasurables” or “divine abodes,” which also include loving-kindness (*metta*), sympathetic joy (*mudita*), and equanimity (*upekkha*). Together, these qualities foster a balanced and compassionate approach to life.

The life of the Buddha is a revelation in wisdom and compassion, one that can be appreciated from every angle. Wisdom is the horizon from which compassion can pour. It is hard for us to see the entire heavens of the wisdom of the Buddha, yet everyone easily sees his compassion. To think of the Buddha is to think of the compassion that he embodied in his life.

Whether to know the light of wisdom possible only by liberation or the darkness of suffering in ignorance, Buddha’s knowledge cannot be completely understood, much like the great expanse of the sky. The insight enables one to see through to the nature of reality and to act benevolently, which flows spontaneously when we understand what it is to suffer and rejoice, as all sentient beings do.

Compassion, on the other hand, is more tangible and readily accessible. Through the stories of the Buddha’s life, his refusal to turn away from suffering, his teachings on loving-kindness (*metta*), and his encouragement for others to cultivate compassion, we see a powerful model for how wisdom can manifest in everyday actions. Whether it is the moment he offered solace to the suffering or shared his insights with those seeking enlightenment, his life exemplifies how wisdom and compassion can guide us in alleviating the suffering of others.

Reflecting on the Buddha encourages us to embody these qualities in our own lives. It inspires us to cultivate compassion, not only for ourselves but for others, recognizing that everyone grapples with their challenges. As we strive to emulate the Buddha’s compassionate heart, we begin to weave together wisdom and action, creating a more harmonious existence for ourselves and those around us. By doing so, we honor the essence of the Buddha’s teachings and contribute to a world in need of kindness and understanding.

G. C. Pande asserts that the greatness of the Buddha’s personality is evident in the unparalleled impact he left on India’s cultural history. According to him, Wisdom (Bodhi) and Compassion (*Karunā*) are the very essence of the Buddha’s being. (G. C. Pande, *Origins of Buddhism*, p. 393.)

In Buddhism, compassion is seen in two phases: the ordinary and the higher spiritual.

Compassion can be observed in leaders and individuals in positions of authority; for instance, King Asoka experienced it. He experienced profound compassion after becoming aware of the devastation caused by the Kalinga War. According to Buddha’s teachings, if a ruler treats their subjects cruelly and against Buddhist ethics, the state will decline. The Cakkavatti sāhanāda sutta illustrates the idea of a righteous monarch in vivid detail. This kind of mundane aspect of compassion is a common thing. We are driven by compassion to

assist those in need. It may be either material assistance or any other form of help. In contrast, Buddhas and Arahants embody a higher form of compassion, fully realizing it independently before extending it to others. They have no more attachment to world life. This is why the Buddha begins his teachings on compassion with its more accessible, worldly expressions to the higher-level compassion which is known as *Mahā Karuṇā*.

This thinking has triggered an arms race a cache of ever-deadly weapons, nuclear arms included. Had our hearts not turned to stone, we would have said “NO” to such ideas, which want to kill and if we will, kill with pleasure, not only human beings but the environment they spend time on. That greed has produced the curse of global warming, cyclones destructive floods, and drought.

Compassion affects a lot of different domains in today’s society, for example, social structures, the economy, the environment, politics, and international relations. In the social realm, compassion helps give rise to a well-functioning family unit, abnormal sexual practices (e.g. domestic violence), etc. Compassionate societies are less likely to experience serious crimes like drug abuse, rape, murder, and theft. It will create a society with guaranteed basic rights. It will be a step closer to a society that respects basic rights. Great social evils – violence, drug abuse, family fragmentation, predatory lending, and the killing of female children – stem from ignorance and greed. Compassion aims to address the root causes of these issues, paving the way for a society free of crime. Halifax (2012) defines compassion as ‘the emotion of concern for another’s suffering, coupled with the desire to enhance their welfare’ (p. 1751), and compassion often creates a balance between connection and distance. It allows us to help others while also stepping back to assess situations and determine the best way to address challenges (MacBeth & Gumley, 2012).

A more compassionate world is possible when every person – man, woman, and child – treats others with the same dignity, fairness, and respect they wish for themselves. Every human being is born with the capacity for compassion, but it must be nurtured for people to truly flourish. Research suggests that compassion not only makes us happier but also creates a greater sense of security. Acknowledging others’ pain and making an effort to help them can strengthen our inner resolve and boost self-confidence. When we actively cultivate compassion, it becomes a powerful source of well-being that enriches both our lives and those around us. The 14th Dalai Lama explains how the Buddhist teachings of mindfulness and com-ardors lead unavoidably to emotions of self-belief and kindness. “Love and comfort are necessities, no longer luxuries. Without them, humanity can’t survive.”

Active engagement: Compassion is not just about feeling for others; it is about taking action to help alleviate their suffering. This initiative-taking stance distinguishes compassion from empathy, which can sometimes lead to emotional burnout if not coupled with action.

Interconnectedness: Practicing compassion helps individuals recognize the interconnectedness of all beings. This understanding fosters a sense of community and shared experience, which is essential for developing genuine compassion.

Self-compassion: Buddhism emphasizes the importance of extending compassion to oneself. Self-compassion allows individuals to acknowledge their suffering and treat themselves with kindness, which in turn enhances their ability to be compassionate towards others.

Meditative practices: Various meditation techniques, such as loving-kindness meditation (*Metta Bhavana*) and tonglen (sending and taking), are used to cultivate compassion. These practices help individuals develop a compassionate mindset and expand their capacity for empathy toward all sentient beings.

Compassion is an endless well of strength that breathes life into every living being. It's the heart of what makes life truly meaningful. Without compassion, even the most beautifully decorated home can feel cold and lifeless. Without compassion, a company may struggle to retain employees even with high salaries. And without compassion, even the closest family members may feel distant and disconnected. In families, compassion forms the bedrock of strong, loving relationships, encouraging open communication, empathy, and mutual support. Without it, those ties can fray, and a sense of separation can take root. Compassion enriches our lives by fostering connection, understanding, and support, constantly reminding us of our shared humanity. When we nurture compassion in both our thoughts and actions, we have the power to build a world that's not only more harmonious but also more fulfilling for everyone.

6.4. Cultivate daily compassion

Today, violence and cruelty, are prevalent issues that need to be addressed with compassion. A Buddhist saying highlights the suffering caused by weapons by comparing it to the sounds of abattoirs at night. This cruelty stems from human nature and can overshadow our inherent compassion. When society becomes desensitized to acts of killing, such as in the case of animal slaughter, it can lead to a normalization of violence, even in the context of war.

The twenty-first century is an era of technological and cultural advancement, but perhaps its most transformative force is communication. How can we ensure meaningful and effective communication? One of the most essential foundations of strong personal relationships is compassion.

Cultivating everyday compassion involves deliberately practicing kindness, empathy, and understanding toward ourselves and others. Every situation we encounter presents an opportunity to practice compassion. We begin with the people around us – our family, friends, colleagues, and classmates, as well as strangers in the grocery store and on the street – gradually extending our care and concern to all. We can learn to extend the love we feel for our family and friends to others. We want our children and loved ones to be happy. Others may not be our family, but they are someone's parents and children. They, too, deserve love and compassion.

o *Practicing mindfulness:* Mindfulness helps us live fully in each moment. When we focus on what is happening around us, we will easily notice the pain and difficulties that others are experiencing. Take the time to

observe and feel, thereby nurturing empathy for those around us.

- o *Listening and understanding:* Listening is an art. When communicating, I truly listen to what others say, not just with our ears but also with our hearts. When we understand their feelings, compassion naturally arises. Take time for friends, family, and those in need of support and encouragement.

- o *Practicing love through actions:* Compassion is more than just a sentiment; it is also demonstrated through deeds. Engaging in small yet significant acts such as assisting the elderly, supporting children's education, or offering a smile to strangers, these actions will promote possibility and foster compassion within the community.

- o *Self-Reflection:* At times, it is important to show compassion towards ourselves. Reflect on our actions and grant ourselves forgiveness for any past errors. By being gentle with us, we can extend that kindness to others more easily. Practicing self-care is another way to demonstrate love and compassion.

- o *Reading books and learning about compassion:* There are numerous resources, books, and courses available on the topics of compassion and empathy. Engaging in research and study can assist us in acquiring the knowledge and abilities necessary to cultivate compassion. We also consider exploring the writings of renowned authors like Thich Nhat Hanh or The Dalai Lama.

- o *Expressing gratitude:* Gratitude plays a crucial role in developing compassion. We should appreciate the positive aspects of our lives, no matter how small they are. By embracing gratitude, we become more attuned to the struggles of others and foster the growth of compassion.

We aim to cultivate compassion in the same way that Buddhas and Bodhisattvas do. Compassion should be added to our hands, eyes, voice, facial expressions, smiles, words, and thoughts, becoming an intrinsic part of our being. We should also strive to spread compassion throughout the world. Just as clouds provide relief from the intense sunlight and nature's beauty surrounds us with blooming flowers and thriving trees, we can discover compassion in everything around us. Even inanimate objects like roads, bridges, mountains, and water can offer their form of compassion. This serves as a beautiful reminder of our interconnectedness and the lessons we can learn from the presence and actions of the world.

Compassion, as taught in Buddhist philosophy, can be expressed through acts of generosity, praise, good behavior, and fellowship. It is a practice that benefits both others and one. True compassion involves treating everyone equally, regardless of their relationship with us. Cultivating qualities like joy, gentleness, kindness, and generosity help us embody the pinnacle of compassion, as shown by the Buddha. By practicing these virtues, we can contribute to a more compassionate world, where love and empathy prevail. Mindful compassion, as emphasized by the Buddha, offers profound insights

into our minds and serves as a guiding principle for thoughts and actions.

According to S. Radhakrishnan, “The Buddha embodied boundless tolerance. He saw life as darker than sin, consumed by desire even more than by violence. He met adversity with unshakable calm and confidence. His conduct perfectly embodied gentleness and compassion, tempered with quiet strength” (S. Radhakrishnan, *The Dhammapada*, p. 12 - 13.)

Ariyacariya is the term used to describe the compassionate mind of the Buddha. It is the result of long-term cultivation by a Bodhisattva across multiple lifetimes, dedicated to achieving enlightenment for themselves and others. This concept emphasizes a selfless way of living based on empathy, kindness, and altruism. Ariyacariya embodies a state where compassion flows naturally, free from selfish intentions, and is characterized by unconditional love and a sincere commitment to alleviating the suffering of others.

Indeed, we will also find that a person with compassion, concern and love for others arises from concern and love for oneself. We can really understand others when we really understand ourselves. We will know what is good for others when we know what is good for ourselves. We can feel for others when we feel for ourselves. So in Buddhism, one’s spiritual growth happens naturally when one is concerned for others. The life of the Buddha is a good example of this. He struggled for six years for himself and then was able to benefit all humanity.

Cultivating daily compassion for students

Training people in compassion can have a wide range of physiological and psychological benefits (Desbordes et al., 2013; Jazaieri et al., 2013; Weng et al., 2013) and many therapeutic benefits (Hoffmann, Grossman, & Hinton, 2011), including people with severe mental health difficulties (e.g., Buehler et al., 2013).

By ‘cultivating mindfulness’, the Dalai Lama reminds us, “We learn first to become aware of this process of dissipation so that we can gently fine-tune the mind to follow a more directed path towards the objects on which we wish to focus” (Dalai Lama, 2005, p. 160). It is important to note that such attention has ‘a deliberate intention that helps us select a specific aspect or a characteristic of an object. The continued, voluntary application of attention is what helps us maintain a sustained focus on the chosen object. Attention training is closely linked with learning how to control our mental processes’ (p. 161). This control, which can be an end in itself in the therapeutic uses of mindfulness, is linked to the central Buddhist enterprise in the process of eliminating unhelpful and misleading conceptions of the self.

Cultivating daily compassion for students is a powerful way to create a positive and supportive learning environment. There are some practical steps to help teachers create a compassionate classroom culture:

- *Build relationships:* Teachers need to take the time to get to know our students as individuals and show how genuine interest in their lives, experiences, and perspectives. Building strong relationships based on trust and

mutual respect is key to creating a compassionate classroom.

- *Listen actively:* they should listen to our students when they speak. They need to validate their feelings and opinions without judgment, and tell them their views matter.

- *Be kind:* They need to create opportunities for kindness and generosity in the classroom, and celebrate kindness and empathy between students, and encourage a culture of support and encouragement

- *Encourage compassionate action:* They also create spaces where students feel safe expressing their thoughts and worries without fear of judgment. They should organize service projects that benefit the community.

By implementing these strategies, we can create a classroom where students feel valued, respected, and supported. We clearly remember that compassion is a skill that can be learned and practiced. We can help students become kind, empathetic, and compassionate by modeling compassion and giving them opportunities to practice it.

- *Demonstrate empathy:* The teachers should help students learn to recognize and empathize with the emotions and experiences of others. They also encourage them to step into different perspectives and to show kindness and understanding toward their peers. By fostering this awareness, they can guide them to develop deeper connections and a sense of shared humanity.

- *Positive language:* The teachers should use positive, encouraging words and kind gestures when interacting with students, even during difficult situations.

- *Teach conflict resolution:* They provide students with the tools and skills needed to resolve conflicts peacefully and respectfully and encourage open communication, active listening, and empathy in handling disagreements.

- *Practice mindfulness:* Teachers can weave mindfulness practices into the classroom routine to help students build awareness, self-regulation, and emotional well-being. These practices can also encourage students to develop empathy and compassion, not only towards others but also towards themselves. By incorporating moments of mindfulness, they create an environment where students can better manage their emotions and connect more deeply with those around them.

- *Address bullying and harassment:* They can create a zero-tolerance policy for bullying and harassment in the classroom and establish clear expectations for respectful behavior and intervene promptly when conflicts arise.

We learn to practice compassion like the Buddhas and Bodhisattvas. Not only should compassion be radiated through our hands, eyes, voice, facial expressions, smiles, words, and minds, so that compassion is a part of us, but we should also take one step further and make this world full of compassion. If we further consider the benefits brought by non-sentient beings, every road, bridge, mountain, and water can be compassionate to us. There are four ways to practice compassion: generosity, praise and encouragement, good behavior, and fellowship. Furthermore, it is a practice carried out with the hope of benefiting both oneself and others. Compassion is exhibited by treating others

with equality and regarding friends and foes with impartiality. To attain the highest state of Buddhahood, one of boundless compassion we must commit to cultivating a mind filled with joy, gentleness, and resilience. True peace is found in kindness, compassion, joy, and generosity. Let us strive to embody compassion in our daily lives, spreading it within our families, communities, and nations. If compassion becomes the foundation of human interactions, the world will be filled with love, and the universe will radiate with harmony. Lama Yeshe advised “It is important to understand that true practice is something we do from moment to moment, from day to day. We do whatever we can, with whatever wisdom we have, and dedicate it all to the benefit of others. We just live our lives simply, to the best of our ability. This in itself will be of enormous benefit to others; we don’t need to wait until we become Buddhas before we can begin to act.”

Developing compassion every day may be challenging, but it is achievable with dedication and hard work. Through these valuable lessons, we can introduce kindness and affection into their own lives and those around them so that they can begin now to contribute to a more positive world.

VII. CONCLUSION

Mindfulness interventions can be used in general classrooms and may benefit behavior, social skills, and attention. Mindfulness practices can transform people’s lives. Students can further get themselves engaged in multiple mindfulness strategies and can investigate the results. Teaching mindfulness is particularly important. Many people lead busy lives and often spend a significant amount of time thinking about the future. Mindfulness helps us to live in the present moment without worrying about the past or the future.

Providing mindfulness training to interested teachers is a method for teachers to develop their practices and learn ways to prepare students for learning while being mindful. Schools and institutions should consider mindfulness. To underpin its imp mindfulness with research, it is advisable to establish a mindfulness community or governing body. This community must agree to key features that are essential to mindfulness practice, and researchers should be clear about how their measures and practices include these features. Furthermore, mental health policies should include mindfulness for students’ educational benefits and mental health.

THE ROLE OF BUDDHIST LIBRARIES IN INTEGRATING MINDFULNESS INTO EDUCATION FOR AN EMPATHETIC AND SUSTAINABLE FUTURE

Sandaresee Sudusinghe*

Abstract:

Buddhist libraries have played a crucial role in promoting world peace and harmony, from ancient kingdoms to the modern digital age. These institutions have served as hubs for learning, cultural exchange, and spiritual growth, disseminating values of compassion, tolerance, and non-violence. By preserving sacred texts and fostering intercultural understanding, Buddhist libraries have significantly shaped a peaceful global community. This research discovers how ancient Buddhist texts, preserved in libraries, emphasize mindfulness and ethical values essential for sustainable living. It also examines specific Buddhist libraries and their influence on integrating teachings of compassion and non-violence into global educational curricula. Furthermore, it highlights the transformative potential of digital Buddhist libraries in making mindfulness resources accessible for contemporary educational efforts worldwide.

Keywords: *Buddhist libraries, education, mindfulness, sustainable future.*

I. INTRODUCTION TO WORLD LIBRARIES AND UN GOALS ON EDUCATION

Throughout history, libraries have been essential for the distribution and preservation of knowledge, promoting cross-cultural intellectual development. Libraries have been crucial in empowering people and communities throughout history, from the ancient Alexandrian and Nalanda libraries to the contemporary digital repositories. They are hubs for innovation, social engagement, and lifelong learning in addition to being bookstores. Libraries give everyone access to information, closing educational disparities,

* Librarian, University Collage of Matara, Sri Lanka.

encouraging critical thinking, and strengthening underserved communities. Libraries became a force for equality, personal growth, economic progress, and social change by facilitating access to education, which helped people and communities expand their capacity. These components are necessary for harmony and peace. Buddhism can solve many social conflicts¹ and Buddhist libraries can help for this reformation.

Not just the government, but every person on the planet, values national peace and security. The protection of each citizen's life and property is crucial to the development of any nation or community. Libraries have played a crucial role in providing the government and civic society with news, information, and feedback to help them map out meaningful life paths and improve decision-making. Information that can foster harmony, peace, progress, peaceful cohabitation, and unity among all communities must be made available in libraries. Librarians should play a key role in fostering peace and interfaith harmony by making such material accessible. Reading rooms also offer the public and individuals a range of printed and digital information on topics that are significant to society. Among other things, communities, citizens, and leaders can gather and obtain helpful information for a peaceful resolution during periods of political violence, religious extremism, community violence, and transnational crime.²

Notably, libraries and a peaceful world are deeply interconnected. Libraries thrive in peaceful societies. They originated in settled, harmonious communities, but when peace is disrupted, libraries face threats. In recent years, this has been sadly evident. On the other hand, librarians have historically been linked to peace movements and organizations dedicated to fostering peace. This raises an important question: can librarians play a role in preserving and promoting peace?³

The United Nations understands these preconditions, these aspirations, which are set out in the UN Charter. According to the UN, libraries – whether they are public libraries libraries in schools and universities, or libraries in corporations and institutions – can contribute to all of these aspirations. The United Nations, through its Sustainable Development Goals (SDGs), particularly Goal 4 on Quality Education, underscores the importance of inclusive and equitable education for all. This goal seeks to ensure lifelong learning opportunities, emphasizing universal literacy and numeracy while addressing educational inequalities. Libraries are pivotal in achieving these objectives, serving as enablers of SDG 4 by offering resources, technologies,

and programs that support education at all levels.⁴

The United Nations Educational, Scientific and Cultural Organisation (UNESCO), founded with the primary motive of promoting peace, embraced libraries as a means to this end. The belief that libraries can contribute significantly to peace underlies the intensive involvement in libraries by UNESCO in its first decade. In UNESCO's first major statement on libraries, the UNESCO Public Library Manifesto iii the role of libraries in constructing "the defenses of peace" emphasized UNESCO's aims to promote peace and social and spiritual welfare by working through the minds of men.⁵ The creative power of UNESCO is the force of knowledge and international understanding. This manifesto, by describing the potentialities of the public library, proclaims UNESCO's belief in the public library as a living force for popular education and the growth of international understanding, and thereby for the promotion of peace.⁶

Moreover, libraries embody values central to the UN's broader vision for peace, equality, and sustainability. By providing free access to information and fostering intellectual freedom, they promote social inclusion, bridge digital divides, and empower communities to address global challenges. Public, school, university, and digital libraries contribute to the UN's goals by fostering understanding, promoting cross-cultural dialogue, and enabling informed participation in civic life.

In the context of a rapidly evolving digital age, libraries continue to adapt, harnessing technology to make knowledge more accessible and inclusive. Through initiatives such as digital literacy programs, open educational resources, and partnerships with global organizations, libraries play a critical role in building a more informed, equitable, and harmonious world, aligning with the UN's vision of education as a cornerstone for sustainable development and global peace. In the modern world, the individuals who are in the librarianship profession are working to promote the role of libraries in seeking to create a more inclusive society. That society addresses the problems that cause people to feel excluded and alienated. Problems like the lack of access to good educational opportunities and lack of access to meaningful employment; problems like poverty, illiteracy, poor health, and poor standards of living will be in focus when the development of education and libraries.

In the ancient Buddhist world, spanning regions such as China, the Silk Road, India, Sri Lanka, and Southeast Asia, libraries played a pivotal role in fostering understanding and unity among diverse cultures, traditions, and philosophies. These repositories of knowledge became hubs for cross-cultural exchange, offering not just access to sacred Buddhist texts but also a space for dialogue and intellectual growth. The interconnectedness of these regions,

facilitated by trade routes like the Silk Road, allowed for the transmission of Buddhist scriptures, ideas, and art.⁷ Libraries, stored in monasteries and scholarly centers, served as protectors of this shared heritage. They were instrumental in translating and preserving texts, enabling scholars to access diverse perspectives and fostering a sense of unity among people of different origins and beliefs. Whether in the monasteries of Nalanda in India, the sacred caves of Dunhuang along the Silk Road, or the repositories in Southeast Asian temple complexes, libraries served as symbols of intellectual freedom and correlation.

II. MINDFUL EDUCATION AND LIBRARIES IN THE THERAVADA BUDDHIST TRADITION

In the *Theravāda* Buddhist tradition, education and libraries are very important because they encourage the focus on self-cultivation, knowledge, and mindfulness. Buddhist teachings emphasize the value of knowledge, learning, and preserving repositories of wisdom for both individual and collective growth, especially in the *Pāli* Canon. References to pertinent suttas and their ideas on mindful teaching and knowledge preservation that are comparable to libraries are provided below.

To understand how the Gautam Buddha explains the importance of Education and learning *Tevijja Sutta* (DN 13) can be useful. The *Tevijja Sutta* discusses three types of knowledge (*tevijja*), which include: (1) Knowledge of past lives. (2) Knowledge of the workings of *karma*. (3) The direct knowledge leading to liberation.⁸

In line with the *Theravāda* tradition's emphasis on mindful education, this sutta highlights the pursuit of knowledge and higher learning as a path to emancipation. Another important sutta is *Cūla-vyūha Sutta* (SN 35.245) which emphasizes mindful education and the role of right understanding. It discusses the importance of investigating and understanding phenomena with wisdom. It encourages mindfulness as a foundation for true knowledge, making education an inward, reflective process. Mindfulness-based education thus becomes a means to develop wisdom and overcome ignorance.⁹

The Buddha gave the highest value on mindful listening in *Kalama Sutta* (AN 3.65) as a form of education. This sutta encourages inquiry and personal understanding rather than blind faith. The *Kalama Sutta* underscores mindful engagement with teachings and careful reflection, akin to how libraries serve as spaces for exploration and critical thinking. To understand the education and cultivation of wisdom, *Sīgālovāda Sutta* (DN 31) is significant. This sutta, often called the "householder's code of discipline," advocates for education and the cultivation of wisdom as a fundamental duty of laypersons. It emphasizes

⁷ UNESCO- Silk Road Programmes Dunhuang (2024) <https://en.unesco.org/silkroad/content/dunhuang>

⁸ *Tevijja Sutta* (DN 13).

⁹ *Cūla-Vyūha Sutta* (SN 35.245).

learning, respect for teachers, and the diligent practice of wisdom.¹⁰

The *Tiṭṭaka* was carried out orally during the Buddha's lifetime rather than being written down, yet the Buddha valued the preservation of knowledge in this regard. The preservation of the *Dhamma* could be highlighted as the key event in Buddhism that the teaching can remain for thousands of years. The *Sanḅīti Sutta* (DN 33) is one example of this discourse. In Sri Lanka, the tradition of preserving the *Dhamma* orally developed into written records in the second century B. C. Thus, the *Sanḅīti Sutta's* emphasis is a wise observation. The *Sanḅīti Sutta* highlights the need for collective recitation and preservation of the Buddha's teachings. Although libraries in the modern sense are not explicitly mentioned, this sutta points to the oral tradition's significance in safeguarding knowledge – paralleling the modern role of libraries in preserving texts and learning resources.

There are teachings grouped by one that have been rightly explained by the Blessed One, who knows and sees, the perfected one, the fully awakened Buddha. You should all recite these in concert, without disputing, so that this spiritual path may last for a long time. That would be for the welfare and happiness of the people, out of sympathy for the world, for the benefit, welfare, and happiness of gods and humans.¹¹

In *Mahāparinibbāna Sutta* (DN 16), the Buddha emphasizes the importance of preserving the *Dhamma* after his passing. The *sutta* discusses how the *Dhamma* and *Vinaya* (discipline) will serve as the teacher in his absence, underscoring the need to maintain and protect these teachings – conceptually similar to the function of libraries.¹² While the *Pāli* Canon does not mention libraries explicitly, the monastic tradition of meticulously copying and preserving texts aligns with the concept of libraries. As an example, monastic rules in the *Vinaya Piṭaka* outline the care of books and manuscripts as part of monastic discipline. Commentaries (e.g., *Visuddhimagga*) and later chronicles (e.g., *Mahāvamsa*) discuss the establishment of repositories for sacred texts, mirroring the function of libraries in preserving knowledge.¹³

In summary, *Theravāda* Buddhism values education and mindfulness as integral to personal growth and liberation, with *suttas* emphasizing wisdom, inquiry, and preservation of knowledge. The cultural practices of manuscript preservation and recitation echo the function of libraries as centers of learning and mindfulness.

III. SOME FAMOUS BUDDHIST LIBRARIES IN THE ANCIENT BUDDHIST WORLD

3.1. In India and Sri Lanka

Ancient India, the birthplace of Buddhism, had several notable libraries that were essential to the preservation and spread of Buddhist doctrines and materials. These libraries, which were frequently found in monasteries, developed into hubs of knowledge and research that drew academics and students from all across Asia. Nalanda University (present-day Bihar), a significant Buddhist monastic university from the fifth to the twelfth centuries CE, had one of the most famous libraries. Ratnasagara (Ocean of Jewels), Ratnadadhi (Sea of Jewels), and Ratnaranjaka (Jewel-Adorned) were the three divisions of Nalanda's library, Dharmaganja. It had an extensive library of Buddhist treatises, sutras, and commentaries in Sanskrit, Pāli, and Prakrit, among other languages.¹⁴

Vikramashila University, founded under the Pala Dynasty and renowned for its emphasis on Vajrayana Buddhism, was another important resource center. Texts on philosophy, tantra, and esoteric practices were kept in its collection. Buddhist manuscripts on philosophy, logic, and medicine were found at one of the first educational institutions the Taxila University (present-day Pakistan). Buddhist texts were also kept alive in monastic libraries in places like Valabhi, Sarnath, and Ajanta. The *Tiṭṭaka*, Mahayana scriptures, and other Buddhist writings were preserved in large amounts thanks to these ancient libraries. These books were then distributed to places like China, Tibet, and Southeast Asia, influencing Buddhist traditions all over the world.¹⁵

Buddhist libraries in Sri Lanka, including those in *Mahāvihāra* and *Abhayagiri* monasteries, were essential to the preservation of Buddhist sacred teachings during the Anuradhapura period. The *Pāli* Canon, which upholds the values of non-violence, compassion, and peace, was preserved in these repositories. Scholars and monks from all across Asia were drawn to monastic libraries, which promoted peaceful cooperation via common spiritual and ethical principles and enabled the interchange of knowledge. Additionally, the libraries served as cultural centers, fostering diplomatic relations between Buddhist countries and creating the framework for respectful international cooperation.

Buddhist libraries in Sri Lanka and other South Asian nations carried on their goal of conserving and sharing texts that prioritized compassion, mindfulness, and non-violence during the ancient and Middle Ages. The accessibility of Buddhist teachings was increased through the translation of *Pāli* and Sanskrit scriptures into local languages. These libraries produced new interpretations and commentary that aided the intellectual and spiritual

¹⁴ Rakesh Kumar Bhatt (1995) *History and Development of Libraries in India*, Delhi: Mittal Publications, p. 22.

¹⁵ *ibid.* P. 65.

development of the Buddhist communities. Through cultural and religious interactions, the libraries became essential for preserving ties between Buddhist countries and advancing peace and understanding.

3.2. In the Silk Road and China

One of the fascinating examples of ancient libraries on the Silk Road is the Dunhuang caves. These manuscripts are a huge collection of both religious and secular papers that were mostly found between 1906 and 1909 by explorers Paul Pelliot and Aurel Stein in the Mogao Caves of Dunhuang, Gansu, China. The bulk of these manuscripts, which were written in Tibetan, Chinese, and other languages, came from the “Library Cave” (Cave 17), which was sealed in the early 11th century. They were created between the late 4th and early 11th centuries. In the eighth and ninth centuries, the location functioned as Tibet’s imperial printing house and a historic printing center.¹⁶ A Daoist monk named Wang Yuanlu made the initial discovery of the Library Cave in 1900. Wang began selling the manuscripts to Western explorers. Stein got 7,000 full manuscripts and 6,000 pieces and Pelliot got 10,000 texts as a more diverse collection. Pelliot was a qualified sinologist and included administrative, financial, and repurposed Pālimpsests. Additional caverns yielded manuscripts, particularly caverns 464 and 465, which included Yuan period (1271 – 1368) records in Tibetan, Old Uyghur, and Tangut languages.¹⁷

A sizable amount of the Dunhuang manuscripts are Buddhist texts, which demonstrate the importance of Buddhism in the area from the late 4th to the early 11th century. Among these are important sutras such as the Lotus Sutra, which is among the earliest known printed texts, and the Diamond Sutra. Academic analyses of Buddhist teachings and sutras shed light on doctrinal interpretations and the ritual world. Buddhist monasteries’ administrative and spiritual traditions are demonstrated by their ritual books, meditation aids, and monastic rules. The devotional life of Buddhist communities is shown through liturgical materials like hymns, prayers, and ceremonial instructions. The Buddhist cosmology, gods, and events from the life of the Buddha are depicted in certain illustrated texts.

The collection also includes tantric and esoteric books related to Vajrayana Buddhism, which provide symbolic diagrams, rituals, and mantras. Buddhism expanded throughout the Silk Road, as evidenced by the translations of Buddhist writings into languages including Chinese, Tibetan, and Sanskrit. Moral and spiritual lessons were also imparted through the use of Jataka stories, which recounted the Buddha’s past incarnations. When taken as a whole, these records provide a thorough picture of Buddhist doctrine, practice, and cultural fusion, which makes them indispensable for comprehending the evolution of

¹⁶ UNESCO - *Silk Road Programmes Dunhuang* (2024) <https://en.unesco.org/silkroad/content/dunhuang>

¹⁷ Phra Kiattisak Ponampon (2019). *Dunhuang Manuscript S.2585: a Textual and Interdisciplinary Study on Early Medieval Chinese Buddhist Meditative Techniques and Visionary Experiences*, Cambridge: University of Cambridge, p. 14.

Buddhism and its impact throughout Asia.

Chinese Monks and scholars have translated texts into various languages, making them accessible to a broader audience. For instance, the Chinese *Tipiṭaka*, or *Taishō Tripitaka*, is a comprehensive collection of Mahayana texts that has been instrumental in spreading Mahayana teachings. Mahayana texts, such as the Lotus Sutra and the Heart Sutra, have been translated into various languages and are studied across countries like China, Japan, and Vietnam. The Mahayana *Tipiṭaka*, or *Taishō Tripitaka*, is a comprehensive collection of Mahayana texts that has been instrumental in spreading Mahayana teachings. Monks have undertaken pilgrimages to sacred sites and centers of learning to study and collect texts. Xuanzang, a Chinese monk, traveled to India in the 7th century to obtain original Sanskrit texts, which he later translated into Chinese.¹⁸

Buddhist books were preserved in a number of famous libraries and archives in ancient China, underscoring the religious and cultural importance of Buddhism. The Tang Dynasty's Imperial Library in Chang'an (present-day Xi'an) was a significant repository for Buddhist teachings, enhanced by the translation of Sanskrit texts into Chinese by translators such as Xuanzang and Yijing.¹⁹ The Chinese Buddhist canon (Dazangjing), was extensively reproduced in monastery libraries throughout China and kept at the Dazangjing Pavilion, which was built during the Tang and Song Dynasties. Copies of the Chinese *Tipiṭaka* were among the significant texts saved by Beijing's Fayuan Temple Library, one of the oldest Buddhist temples.

3.3. In South East Asia and Japan

In order to preserve and spread Buddhist teachings, many Buddhist libraries were established inside monasteries and temple complexes throughout ancient Southeast Asia. As Buddhism expanded through trade and cross-cultural interactions, these libraries, which were influenced by Indian Buddhist centers such as Nalanda, protected texts. In Bagan (Myanmar), during the Pagan Kingdom (9th – 13th centuries), monasteries housed Pāli scriptures of the *Theravāda* Buddhist canon (Tipitaka), often inscribed on palm leaves, copper plates, and stone inscriptions.²⁰ Similarly, Angkor Wat and Preah Khan (Cambodia), under the Khmer Empire (9th – 15th centuries), served as repositories for Buddhist texts, particularly Mahayana and Vajrayana works, reflecting the empire's syncretic religious traditions. In Thailand, during the Sukhothai and Ayutthaya periods, monasteries maintained libraries with palm-leaf manuscripts of Pāli Buddhist texts.²¹ Monks played a central role in copying and preserving these scriptures. Meanwhile, in Java (Indonesia),

²⁰ Priyanka Joshi (2024) *Heritage Studies - A Compendium*, Delhi: Nyra Publishers, p. 98 - 99.

²¹ Ian Nathaniel Lowman (2011) *The Descendants of Kambu: The Political Imagination of Angkorian Cambodia*, UC Berkeley Electronic Theses and Dissertations.

during the Srivijaya and Sailendra periods (7th – 11th centuries), Mahayana Buddhist texts were stored in monasteries near Borobudur, including sutras and esoteric teachings. These libraries ensured the survival of *Theravāda* and Mahayana traditions in Southeast Asia.

Buddhist libraries played a crucial role in the preservation and spread of religious knowledge and writings in ancient Japan, demonstrating the deep cultural impact of Buddhism in that country. Many of these Japanese libraries also served as centers for academic and religious pursuits and were located inside temples and monastic complexes. One of Japan's earliest Buddhist temples, Hōryū-ji Temple was founded in the seventh century and has significant sutras that were imported from China and Korea. Tōdai-ji Temple in Nara developed as a center of Buddhist scholarship in the eighth century. The Daizōkyō (Japanese Buddhist canon) and other important materials were kept in its library to aid in the study of various Buddhist schools. As part of Tōdai-ji, the Shōsō-in Repository protected priceless Buddhist manuscripts, antiquities, and imported texts including Chinese sutras in Vajrayana Buddhist traditions.²² They also fostered a vibrant scholarly tradition, preserving and transmitting Buddhist philosophy and practices to future generations, shaping the region's religious and cultural identity.

During the Heian period, the Enryaku-ji Temple on top of Mount Hiei served as the center of the Tendai school, which produced a large number of sutras and other esoteric writings that influenced Japanese Buddhism. Kōyasan, or Mount Kōya, was established in the ninth century by Kūkai and developed into a hub for Shingon Buddhism by conserving Chinese-imported tantric texts and esoteric teachings. The Japanese Buddhist practices like the Tendai, Shingon, and Zen traditions and the establishment of Japanese heritage benefited greatly from these libraries.²³

Those Buddhist libraries in different regions served two purposes throughout the colonial era. They revived Buddhist history and resisted cultural persecution. By preserving indigenous knowledge and values, these organizations established a basis for cultural resistance to colonial intrusions. Buddhist libraries also made it easier for Buddhist teachings to spread throughout the world, with texts being transferred to Japan, Sri Lanka, Burma, and other countries. Despite the difficulties posed by colonial control, these initiatives contributed to the globalization of Buddhism and its peace-promoting ideals.

From ancient India to the digital age, Buddhist libraries have been integral to promoting world peace. By preserving and disseminating teachings that encourage compassion, tolerance, and understanding, these institutions have served as inspirations of hope and harmony. They continue to inspire individuals and nations to work together for a peaceful and inclusive world, making their

²² Miyeko Murase et.al (1993) *Jewel Rivers Japanese Art from the Burke Collection*, Virginia: Virginia Museum of Fine Arts, p. 150 - 159.

²³ M. Brindhamani, K. Marisamy (2016) *Comparative Education*, NC: Lulu, p. 89 - 92.

contributions invaluable across centuries and into the future. Buddhist scholars and monks from countries such as China, Japan, Korea, Thailand, Myanmar, Laos, and Vietnam have historically engaged in the exchange of knowledge and texts by visiting Buddhist libraries across various nations. This cross-cultural interaction has facilitated the sharing of the Buddhist *Tipiṭaka* and Mahayana texts, enriching the global Buddhist tradition.

3.4. Libraries in the modern world and intellectual exchange between Buddhist Nations

In the modern era, the globalization of Buddhism has been supported significantly by Buddhist libraries. Modern institutions like the Buddhist Library in Singapore and the *Dhammakaya* Foundation in Thailand have expanded access to sacred texts, spreading teachings of mindfulness and peace to a global audience. Buddhist libraries now support academic research, interfaith dialogues, and initiatives addressing global challenges such as conflict resolution, environmental sustainability, and mental health.

The advent of digital technology has revolutionized Buddhist libraries, allowing the creation of online archives and databases that make ancient teachings widely accessible. For instance, digital repositories have enabled researchers and practitioners worldwide to engage with Buddhist texts that advocate non-violence and compassionate action. UNESCO's recognition of Buddhist monastic libraries and sites as cultural heritage underscores their enduring importance in fostering peace through education and preservation.

Buddhism has been studied and preserved in many Buddhist nations, with Thailand, Sri Lanka, and Myanmar being important hubs for its spread. The teachings ascribed to the Buddha and recorded in Pāli Canon, which is essential to Theravada practice. For centuries, the Pāli Canon has been painstakingly maintained in Sri Lankan libraries and monasteries. The Sri Lanka *Tipiṭaka* Foundation, based on the island, is in charge of conserving, digitizing, and disseminating Theravada Pāli manuscripts. Scholars from all over the world come to study the Pāli Canon in its original form at the University of Peradeniya and other academic institutions in Sri Lanka, which also have sizable holdings of the text. A sizable collection of Buddhist writings and artifacts can be seen at the National Museum in Colombo. Furthermore, the University of Peradeniya attracts researchers from all over the world with its large library of Buddhist resources. The *Tipiṭaka* was declared a national heritage in Sri Lanka in 2019.²⁴

Studying and conserving the Pāli Canon has a long history in Myanmar, another important Theravada Buddhist center. Pāli manuscripts are kept in substantial collections by the nation's modern monastic establishments, including Yangon's Maha *Dhamma* Kitti Vihara. Monks from Burma have made substantial contributions to the Canon's translation and textual transmission. Additionally, Myanmar hosted the Sixth Buddhist Council (1954 – 1956),

²⁴ *The Sunday Times*, 06 Jan 2019, "*Tipiṭaka* declared a national heritage; history is made again at Aluvihare Temple".

which printed and read an authorized edition of the Pāli Canon. This *Sanagayana* became a large event among the international Buddhist community that preserved the Buddha's word for another 2500 years.²⁵

The *Tipiṭaka* is a key component of Buddhist education in modern Thailand, where monks study and instruct students using the writings in both Thai and Pāli. Large libraries of the Pāli Canon are kept up to date by the Wat Phra Dhammakaya and other sizable monasteries. Thai monks have helped to preserve and interpret these scriptures through their study and meditation. A complete version of the Pāli *Tipiṭaka* was also donated to the British Library in 2000 by Thailand's World *Tipiṭaka* Foundation, which made a significant contribution. In addition to aiding with the Canon's preservation, this action made it easier for scholars and spiritual seekers to access it worldwide.²⁶ The Pāli Canon is among the many Buddhist materials that are kept in Bangkok's National Library of Thailand. Thai academics frequently travel to Sri Lanka to examine the original Pāli Canon.

Through intellectual interactions, digitization, and pilgrimages, the Pāli Canon has been shared around nations, guaranteeing that the writings will continue to be available to future generations. Many academics have worked on translation initiatives to make the Canon available in many languages, and monks from nations like Thailand and Sri Lanka frequently travel to India to study more Buddhist literature. This international endeavor to conserve and disseminate the Pāli Canon emphasizes how crucial these writings are for comprehending the Buddha's teachings and their applicability to modern society. A significant collection of Buddhist texts, including Mahayana sutras, can be found at the Vietnam National Library in Hanoi. In the past, Vietnamese monks have studied and gathered Buddhist texts in China and India.

In conclusion, a key factor in the preservation and spread of Buddhist teachings has been the sharing of Buddhist literature among academics and monks from other nations. The rich tapestry of Buddhist literature is still flourishing around the world thanks to library visits, translation projects, and scholarly partnerships. Conferences, collaborative research projects, and the sharing of digital resources are some of the ways that contemporary academic institutions promote knowledge exchange. The Buddhist exhibition in the British Library, for instance, demonstrates the widespread interest in Buddhist texts.

3.5. The transformative potential of digital Buddhist libraries

The potential for digital Buddhist libraries to preserve, spread, and enhance Buddhist information is enormous. Sacred texts, commentaries, historical documents, and cultural items that are otherwise dispersed throughout the world or restricted to physical archives are made accessible through these

²⁵ Khammai Dhammasami (2018) *Buddhism, Education and Politics in Burma and Thailand from the Seventeenth Century to the Present*, London: Bloomsbury Publishing, p. 158 - 59.

²⁶ "World Tipitaka at British library", <https://www.worldtipitaka.net/world-tip-i%E1%B9%ADaka-at-british-library/>

repositories. The accessibility of digital libraries is one of its main benefits. For instance, scholars, practitioners, and the general public across the world can access thousands of Tibetan, Chinese, and *Pāli* manuscripts through the Buddhist Digital Resource Center (BDRC). It mostly contains numerous Mahayana Sutras and is intended for anyone who is interested in Tibetan Buddhism.²⁷ It is a sizable digital library of Tibetan ancient manuscripts and literature. Similar to this, the Chinese Buddhist canon is being digitized by Japan's SAT Daizōkyō Text Database, which gives users access to advanced tools for text analysis, cross-referencing, and search.²⁸

Digital libraries are essential for preservation as well. The palm-leaf manuscripts of Southeast Asia and Sri Lanka are among the many old manuscripts that are prone to deterioration. Their survival for upcoming generations is guaranteed by digitization. For example, the *Tipiṭaka* Project in Thailand, run by the *Dhammakaya* Foundation, has digitized *Pāli* canonical texts and offered translation resources to promote a deeper understanding. Its motto is world peace through inner peace.²⁹ Scholars and practitioners throughout the world can more easily study Buddhist teachings thanks to a number of different online resources that provide access to the Buddhist *Tipiṭaka* and other significant Buddhist texts. An important resource for anyone interested in Theravada Buddhism is Access to Insight, which offers a large selection of texts from the *Pāli* Canon, including translations of *suttas* and commentaries.

With translations available in several languages, SuttaCentral is another useful website that provides access to the *Pāli* Canon, Chinese Agama, and Mahayana Sutras.³⁰ As such, it is perfect for scholars of all skill levels. It promotes cross-cultural comparative research. *Tipiṭaka.net* offers translations and commentary for in-depth study with a particular concentration on the Chinese *Tipiṭaka* and the *Pāli* Canon.³¹ Last but not least, the Kangyur and Tengyur collections are available in digital form via the Digital Library of Tibetan Studies (DLTS), which focuses on Tibetan Buddhist literature. These internet resources are essential to the study and global distribution of Buddhist literature, helping to preserve and comprehend the foundational writings of Buddhism.

Moreover, digital Buddhist libraries promote inclusivity by offering resources for free or at low cost. Mobile apps and websites make teachings accessible to individuals in remote regions or those with disabilities, enhancing global engagement with Buddhist philosophy and practice. These platforms enable collaborative research and dialogue. Researchers can annotate, compare, and share insights on texts in real time, fostering interdisciplinary and

³¹ *Tipiṭaka.net*, <http://Tipiṭaka.net/>

cross-cultural studies. In essence, digital Buddhist libraries are revolutionizing how Buddhist teachings and history are preserved, studied, and shared. They bridge the gap between tradition and modernity, ensuring that the wisdom of Buddhism continues to thrive in a digital era.

3.6. The value of libraries as catalysts for social cohesion

Buddhism places a strong emphasis on empathy, comprehension, and harmony. In the Buddhist world, libraries exemplified these ideals by encouraging discourse and the free exchange of knowledge. They provided access to knowledge that might spur societal advancement and personal development, bridging gaps between the privileged and the underprivileged. As an illustration of the cooperative nature of these institutions, Nalanda University's extensive translation efforts featured works by Chinese, Tibetan, and Central Asian intellectuals. The problems of poverty, ignorance, and social isolation can also be addressed by contemporary libraries, whether they are institutional, public, or virtual. They build the foundation for equity and social change by providing resources for empowerment and promoting respect and understanding between people.

The Buddhist ideals of compassion and truth-seeking resonate deeply with the ethical standards of librarianship like independence, impartiality, and honesty. Similar to what the Dag Hammarskjöld Library and the International Federation of Library Associations and Institutions (IFLA) do today,³² the distribution of complete and impartial knowledge was a top priority for ancient Buddhist libraries. Free information access and the promotion of intellectual freedom are still essential tactics for overcoming desperation, poverty, and inequality as obstacles to world peace and understanding.

Libraries can be recognized as shared spaces of interdependence. In the Buddhist world, libraries were much more than mere repositories of texts. They functioned as communal spaces that embodied the principles of interdependence and collective wisdom. These libraries served as centers of learning where monks, travelers, and scholars came together to study, exchange ideas, and engage in dialogue, fostering intellectual and spiritual growth. The sharing of texts, whether Buddhist scriptures, commentaries, or philosophical treatises, transcended geographical and cultural boundaries, promoting a sense of unity across diverse communities. This spirit of collaboration allowed for the transmission of knowledge and wisdom, making it possible for Buddhism to spread far and wide. Scholars and monks not only engaged with the texts but also contributed their insights, creating a dynamic and inclusive environment of mutual learning.³³

In the modern context, libraries continue to reflect these same principles of mutuality and equality. They are communal spaces where resources, such as books, digital materials, and educational programs, are shared for the

³² Dag Hammarskjöld Library, https://www.un.org/zh/library/IFLA_informed_societies

³³ Kewon, *Op.cit*, p. 1 - 31.

benefit of all members of society. Libraries today foster an environment where individuals from all walks of life can access information, engage in dialogue, and contribute to collective knowledge. By serving as inclusive spaces for intellectual exchange, libraries maintain their role as pillars of interconnectedness and mutual support in the modern world, just as they did in ancient Buddhist communities.

IV. PROMOTING PEACE THROUGH KNOWLEDGE

By conserving teachings that foster intercultural tolerance and understanding, Buddhist libraries have significantly contributed to global peace. In order to promote peaceful societies, they first highlight the significance of non-violence through concepts like metta (loving-kindness) and ahimsa (non-harm). By encouraging people to treat others with understanding, respect, and compassion, these lessons lessen conflict and foster collaboration. These libraries also work as cultural bridges, facilitating cross-cultural interactions that promote harmony and respect across various populations. They help people comprehend Buddhism's worldwide message of peace and coexistence on a deeper level by giving them access to sacred writings. Furthermore, by making these writings available to the general public, Buddhist libraries contribute significantly to universal education by encouraging moral growth and ethical education that leads people to live in harmony. Last but not least, Buddhist teachings kept in these libraries have played a significant role in efforts at reconciliation in post-conflict environments, providing knowledge that aids in community healing, trust restoration, and societal peace. These donations enable Buddhist libraries to act as potent instruments for fostering peace and understanding around the globe in addition to conserving significant literature.

In this analysis of libraries, we also need to distinguish between “negative” and “positive” peace. Negative peace is the absence of war and direct physical violence. Positive peace refers to a situation where conditions conducive to lasting peace, such as social justice and harmony, are cultivated.³⁴ A further useful distinction is that between a static concept of peace as a state (a condition) and a dynamic concept of peace as a process, or processes. Here we think of the processes of cultivating peace (preventing the emergence of destructive conflicts), making peace (de-escalating and resolving conflicts), and keeping and restoring peace (after conflict has ended). If we want to work for positive and sustainable peace, we need to see peace as a work in progress. Peace is not limited to the absence of war but concerns itself with such matters as justice, human dignity and well-being, environmental justice, and sustainability. These transcend the boundaries of the nation-state. In a time of globalisation peace-building cannot be confined to national boundaries. There can be no lasting international peace if peace is absent from individual states or regions and localities within states. Local to global conditions form a continuum; perturbations at the local level can and do ripple across national

³⁴ L. Kriesberg, (2006) “Peace”. in *Encyclopedia of sociology*, New York: Macmillan Reference, 2nd ed., Vol. 3, p. 2044 – 2051.

boundaries, with global repercussions.

All this leads to the realization that peace-building is not simply about preventing and ending the conflict, but about creating conditions that are conducive to peace. This has important implications for the role of librarians. It can be suggested that there are seven roles for librarians: informing, promoting, educating, creating resources, empowering, healing and advocating. One important fact is the selection of library materials calls for cultural sensitivity and efforts are made to find materials that emphasize our shared humanity rather than our differences. The topic of multicultural librarianship is too vast to broach here, but it is highly relevant at this time when large numbers of dispossessed and traumatized people are on the move.³⁵

Healing may be an unusual word to use in the context of library services, although bibliotherapy is by no means unknown in our profession. Many victims of war and violence have experienced horrific suffering, deprivation, and loss. Many children spend years in refugee camps. Others, after a long and dangerous journey, find themselves in a strange country where everything is different, including their home, school, the weather, and the languages they hear spoken around them. There is great scope for libraries in affected areas to go beyond the conventional provision of books and media, for example by hosting or offering programs of storytelling and group activities, with opportunities for self-expression through drawing, music, dance, and acting. This is not limited to services to people coming from somewhere else, as illustrated by the work of the Lubuto Library Partnership with street children in Zambia.³⁶

The lessons from ancient Buddhist libraries highlight the importance of investing in knowledge and understanding to promote peace. In the aftermath of global challenges – whether ancient conflicts or modern crises like terrorism – libraries stand as symbols of resilience and hope. They remind us that building bridges of understanding through the free flow of information is far more effective in fostering peace than erecting barriers of power and domination. As we honor the enduring values of ancient Buddhist institutions, we are reminded of the critical role libraries play in creating a more inclusive, just, and harmonious world. By committing to intellectual freedom, mutual respect, and the dissemination of knowledge, libraries continue to make a significant contribution to the preconditions for peace in our interconnected global society.

EMPOWERING YOUTH THROUGH BUDDHIST DHAMMA EDUCATION: CULTIVATING UNITY, PEACE, AND SUSTAINABLE DEVELOPMENT FOR A HARMONIOUS SOCIETY

Er. Bidhya Maharjan*

Abstract:

This research paper aims to describe the natural potential of Buddhist *Dhamma* education propagation in peaceful societies for coexistence, peace, and sustainable development. As such, this research demonstrates how *Dhamma* education can reconcile the inherent gaps between the different objectives of intellectual achievements in formal education systems by bringing to the fore the ethical and moral dimensions enshrined in Buddhist *Dhamma*. Empirical studies show that *Dhamma* education is the most important way of developing empathy, loving-kindness, and moral awareness in youths and children - values that are deemed necessary for the construction of peaceful and harmonious societies. A comparative survey of students from normal schools and schools where moral education is a part of the curriculum shows fundamental differences in behavior and attitude. Students who had received moral education were more compassionate, had better moral reasoning, and had stronger interpersonal relationships. Testimony from parents, teachers, and community leaders also stands as evidence of the pivotal role that *Dhamma* education plays in character formation and in shaping the worldview of the young. The research also highlights the need to incorporate moral education into general education systems to address the rising social crises caused by the decline of human values. The future generations of leaders in society, namely the youth, need to be empowered with both intellectual and moral strength to attain sustainable development and universal harmony. The study establishes that Buddhist *Dhamma* education is an effective agent in developing amicability-based minds and fostering a culture of friendship. By

* Registrar Biomedical Engineer.

placing moral development on an equal footing with academic success, nations can cultivate populations that are not only educated but also morally capable of responding to societal challenges. Finally, the study reiterates that a calm mind is the foundation of a peaceful society - something that can be attained through the principles and practice of *Dhamma* teaching.

Keywords: *Dhamma education, sustainable development, harmonious society, peace.*

I. INTRODUCTION

"Eating, sleeping, sex, and defense - these four principles are common to both human beings and animals. The distinction between human life and animal life is that a man can understand what is good and what is bad, but an animal cannot. That is the difference. Therefore, a man without that *Dhamma* is equal to an animal."¹ In today's modern era, education is among the greatest tools for addressing complex psychological, environmental, and social issues. Among all forms of education, *Buddhist Dhamma* education is a system that represents an ideal integration of intellectual, ethical, and spirit-based learning. *Buddhist Dhamma* education shapes human beings in a way that nurtures their moral character, psychological resilience, and intellectual growth, making them capable of facing all aspects of life. Studies have shown that students in *Buddhist Dhamma* schools possess a greater sense of morality, self-control, and psychological well-being compared to students in conventional schools. This is due to the unique emphasis on integrating intellectual learning with ethics and spirituality, a practice seldom followed in standard education systems. The modern era presents new dilemmas for young people, such as mental distress, environmental degradation, financial instability, and societal fragmentation. These are issues for which a conventional book-based education system alone is insufficient. *Buddhist Dhamma* education, when combined with mindfulness, becomes a transformative approach. Through compassion, unity, and an understanding of interdependence, this system, when integrated with mindfulness, can empower young people to address both personal and collective challenges effectively. This research paper seeks to explore the potential for harmonizing *Buddhist Dhamma* studies and mindfulness practices in fostering personal growth among young people. It investigates how such integration can contribute to the development of a more compassionate, cohesive, and sustainable community. Drawing on past studies, interviews, and assessments, the paper identifies primary barriers to achieving a harmonized society and examines how mindfulness-enabled *Buddhist Dhamma* education can offer concrete solutions. Ultimately, this paper aims to provide actionable steps toward cultivating a generation of young individuals who can make a meaningful impact on the world by bridging traditional and modern learning paradigms.

¹ Wilkins, Charles. *The Bhagavat-Geeta or Dialogues of Kreeshna and Arjoon*. London: N. Briggs, 1785, "Āhāra-nidrā-bhaya-maithunaṃ ca sāmānyaṃ etat paśubhir narāṇāṃ, dharmo hi teṣāṃ adhiko viśeṣaḥ, dharmeṇa hīnāḥ paśubhiḥ samānāḥ."

II. RESEARCH AIM AND OBJECTIVES

This research aims to explore the integration of mindfulness practices and Buddhist *Dhamma* education. It is a transformative approach that helps in youth development intending to foster compassion, unity, and sustainable futures. This research seeks to develop a moral and spiritual education framework that can address contemporary challenges such as social fragmentation, environmental degradation, and mental breakdowns by integrating Buddhist ideals and ethical principles. Ultimately, this research aims to contribute to the creation of a harmonious society where youths are empowered to become ethical, compassionate, and proactive individuals.

2.1. Research objectives

To achieve the above-mentioned aims, this research mainly focused on the following main objectives: (1) To study and evaluate the importance and foundational principles of Buddhist *Dhamma* education in Buddhist-specific countries, highlighting its major role in shaping moral and ethical development. (2) To analyze the significance and relevance of integrating Buddhist *Dhamma* education and mindfulness practices into contemporary education systems, particularly to address social, mental, and environmental issues faced by youths. (3) To explore canonical teachings from Buddhist scriptures that promote moral development, with a focus on *Dhamma* education to cultivate virtues through compassion, non-violence (*ahimsa*), and mindfulness (*sati*).

2.2. Research methods

This research paper employs a mixed-method approach. It combines both qualitative and quantitative research methods, which ensures a comprehensive and balanced analysis of mindfulness and Buddhist *Dhamma* education in youth development. This combines methods of qualitative and quantitative analysis to assist in a deeper understanding of the research topic. It captures both the subjective experiences of participants and measurable data trends.

2.3. Qualitative method

This method of research focuses on investigating the philosophical, ethical, and practical dimensions of mindfulness and Buddhist *Dhamma* education. The following aspects were undertaken: (1) Primary resources: It primarily investigates related Theravāda Buddhist *Suttas* and commentaries on moral development, mindfulness, and youth education systems. The major texts include the *Mangala Sutta*, the *Sigalovada Sutta*, and *Dhammapada*, which provide foundational teachings on ethical conduct and mental training. (2) Secondary resources: The role of *Dhamma* education in modern societies is contextualized through a review of relevant books, academic articles, magazines, newspapers, social media content, historical records, and online resources. (3) Data Collection: The implementation of mindfulness and *Dhamma* education in education systems was analyzed using existing research documents, and case studies were also carried out.

2.4. Quantitative method

The quantitative aspect of the research focuses on gathering and analyzing

empirical data to identify trends and measurable patterns related to the outcomes of mindfulness and *Dhamma* education on youth development. The following steps were undertaken: (1) Data Collection Tools: Questionnaires: Distributed for surveys to students (from government, private, religious, and non-religious schools), teachers, parents, and members of organizations such as the Young Men’s Buddhist Association (YMBA). Interviews: Conducted with government officers from the Department of Buddhist Affairs and teachers of *Dhamma* education programs. Case Studies: Examined specific examples of successful integration of mindfulness and *Dhamma* education in youth life. (2) Data Analysis: Non-participant direct observation Statistical Analysis: Quantitative data from questionnaires and interviews were analyzed using mathematical calculations and demonstrated. (3) Data Handling: Gathered data through questionnaires, interviews, and case studies. All collected materials were recorded by photocopying and digitization. Data was entered into computer systems for future reference, systematic arrangement, and analysis. This research method description provides a clear and detailed explanation of how the research was conducted. It also ensures transparency and provides rigor in the research process. It highlights the complementary nature of qualitative and quantitative methods in addressing the research’s aims and objectives.

2.5. Results

This result includes the presentation, analysis, and interpretation of data drawn from one hundred and fifty (150) participants. The results of the study are presented in tabular form and interpreted. The questionnaire consisted of several statements based on the findings of the previous discussion group, and respondents were asked to agree or disagree with each given statement, providing their reasons. A random sample of 50 participants from each group was generated through the questionnaire. They were in the age range of 20-60 years. The participants responded to the question, “Is the current education system a proper way of developing the moral characteristics of students?” as follows.

Table 01: Demographic Profile of Respondents

Participants	Agree	Disagree
Teachers	21	29
Parents	26	24
Students	33	17

Figure 01: Demographic Profile of Respondents

The above-mentioned Table No. 01 and Figure No. 01 indicate that parents and students believe that the current education system provides an opportunity to develop moral conduct, while teachers do not fully agree with the concept. When considering the overall response of the participants about the necessity of moral development in education, Table No. 01 shows the results in the following manner.

Table 02: Necessity of Moral Development in Education

Response	Teachers	Parents	Students	Total	% of Responses
Strongly Agree	35	38	26	99	66%
Agree	15	12	21	48	32%
Neutral	0	0	03	03	02%
Disagree	0	0	0	0	0
Total	50	50	50	150	100%

Figure 02: Necessity of Moral Development in Education

With reference to Table No. 02 and Figure No. 02, 98% (66% + 32%) of the participants confirmed the necessity of moral development in the current education system. In tracing the recent development of moral education, we begin to see that in the past, it had been an integral part of education at all times and in all cultures. Every culture regards moral development as a noble ideal to attain. However, with the advent of Western secularism at the beginning of the 20th century, through the guise of a positivist scientific outlook on education, moral and human values, including peace, were slowly removed from school curricula. Another important question raised in the questionnaire was whether the participants had to suggest a subject between *Dhamma* Education and Information Technology, which one would they prefer? The findings below show the tendency of participants’ suggestions.

Table 03: Suggestions on *Dhamma* education and Information technology

PARTICIPANTS	Students	Parents	Teachers	Total
Dhamma Education	23	19	28	70
Information Tech- nology	27	12	22	61
Not Responded	-	19	-	19

Figure 03: Suggestions on *Dhamma* Education and Information Technology

Almost half of the respondents to the questionnaire cited the role of moral development in society or the workplace as the main reason for supporting a new subject: ‘No matter whether you are a student, professional, housewife or other, everybody should have a basic understanding of moral values. Many participants in this study considered *Dhamma* education as an essential part of general education and believed this issue should be dealt with as a matter of urgency: *Dhamma* education is a must, an absolute. According to figure no. 03 and column 1 of table no. 03, students’ priority is shown for the subject Information Technology, but overall tendency is to select the subject *Dhamma* Education.

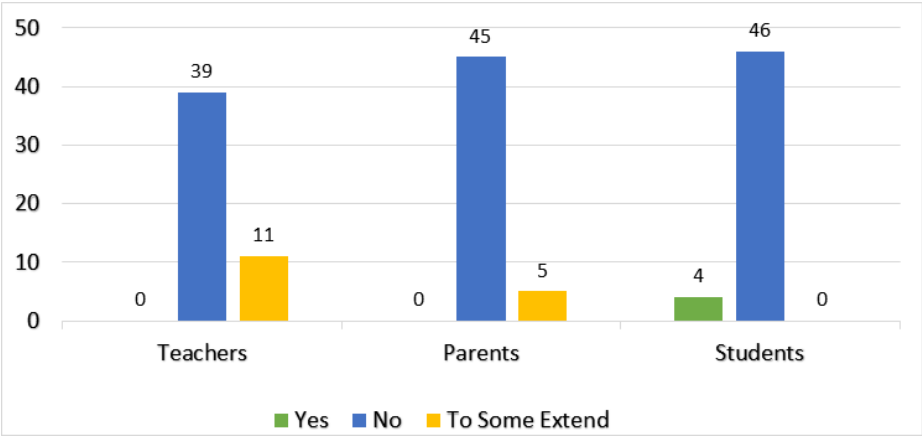

Figure 04: The good effects of extra (tuition) classes for Moral Development

Table 04: The good effect of extra (tuition) classes for moral development

	Response of Teach- ers	Response of Parents	Response of Students	Total	%
Yes	0	0	04	04	3%
No	39	45	46	130	87%
To some extent	11	05	0	16	10%
Total	50	50	50	150	100%

87% of the participants stated that extra classes do not affect developing moral values. 10% responded, saying that there is some tendency, to some extent, in developing moral values in extra classes. Only 3% of participants mentioned that extra classes are concerned with moral development during class times. Unlike academic subjects, moral development is as dependent on individuals as it is on parents, teachers, and other social groups. Children learn moral behavior more from the ways teachers and parents speak, respond to challenges, and view issues than from what they teach. A morally poor parent or teacher cannot teach moral values because their behavior contradicts what they teach. Young people must receive age-appropriate sexual health information to maintain good health. Educators can help families by providing culturally meaningful learning opportunities in safe and nonjudgmental environments so that young people can learn about sexuality in a healthy and positive context. To explore the participants’ views in this regard, the questionnaire consisted of one question: “Do you think sex education is a requirement in the secondary level education system? Give reasons.” The responses were collected from a total of 100 participants (50 parents and 50 teachers). 92% of the respondents recognized that the introduction of such a subject would have an impact on moral development.

2.6. Research findings

Some parents commented on their future ambitions for their children, as education is seen only as a means to obtain a higher-demand occupation, but not much concern is given to the development of moral qualities. One parent suggested punishment as a method to develop moral education, which she uses in her domestic life. 52% of parents do not identify a formal way or organization that helps develop their children’s morality. 8% of parents disagree with including sex education in the curriculum in order to reduce crimes. 78% of teachers, 90% of parents, and 92% of students are disappointed with the current trend of tuition classes, which do not encourage students to develop morality. Friends can help build a person’s good qualities, but they can

also lead to the destruction of those qualities. In this regard, 18% of students commented that friends do not help develop their soft skills. 22% of teachers and 48% of parents expect no more than one hour in the school timetable to teach moral education. The current media system is spoiling students' minds in various ways, such as encouraging the watching of pornography and using inappropriate language. However, we can still see the positive side of media, which helpfully maintains its responsibility by developing knowledge and critical thinking among people. The research findings emphasize the need for active involvement from teachers and parents to develop moral qualities in students. At the same time, the necessity of the next two chapters, which focus on the importance of social relationships in promoting moral education and the Buddhist approach to moral development in education in light of early Buddhist doctrine, will be discussed.

III. DISCUSSION

In today's highly competitive environment, the role of *Dhamma* education within the broader education system has been overshadowed. The rapid growth of the economy has led to an increase in business studies, which in turn draws students away from learning about *Dhamma*. This shift in priorities has been a key factor contributing to the rising levels of crime, as students prioritize earning material wealth over cultivating human virtues and ethics. In this context, students need to focus not only on material success but also on ethics and virtues. Buddhist *Dhamma* education serves as an effective tool in fostering a change in attitude among young minds. By integrating *Dhamma* education into school syllabi, it is possible to nurture a generation of individuals who value both material success and ethical principles, thereby contributing to the creation of a harmonious community and a peaceful nation. Buddhist countries have *Dhamma* schools, though they use different terms, all with the same objective. In Sri Lanka, they are called *Daham Pasala* or *Dharma School*; in Uganda, they are referred to as "Peace School"; in Burma, they are known as *Yin Kye Hmu/Thin tan*; and in Nepal, they are called *Pariyatti Śikṣā*. Though the terminology varies, the common aim is to impart *Dhamma* knowledge and produce ethically developed individuals for society. Due to the overwhelming focus on economic development, *Dhamma* education often takes a backseat compared to other forms of formal education. Most parents wish for their children to become doctors, engineers, or lecturers, rather than individuals with spiritual qualities. Consequently, people in contemporary society often view *Dhamma* education as an insignificant subject for their children.

3.1. Brief historical background of Buddhist *Dhamma* schools

Buddhist *Dhamma* schools, traditionally known as Sunday schools or *Dhamma* classes, are educational institutions aimed at teaching both younger and lay practitioners the basics, practices, and principles of Buddhism. These schools play an essential role in preserving and propagating Buddhism among younger and lay practitioners. The historical development of these Buddhist schools is inextricably linked with the spread of Buddhism, which parallels the socio-cultural and religious processes of the regions it reached.

This section provides a critical study of the historical evolution of *Dhamma* schools, examining their origins, growth, and roles across different Buddhist philosophical traditions. The origins of Buddhist education date back to the time of the Buddha. During his 45 years of teaching following his enlightenment, the Buddha shared his teachings with a diverse group of listeners, including monks, nuns, and both male and female lay practitioners. His teachings were initially spread verbally. The Buddha's discourses (*suttas*) and monastic codes of conduct (*Vinaya*) were memorized by his students and later became part of the *Pāli Canon*, now recognized as the earliest Buddhist scriptures. In its early centuries, the monastic community, known as the *Sangha*, served as the primary institution for Buddhist learning. In this system, both nunneries and monasteries were focal points for the study of sutras, meditation, and philosophical debates. Laypeople also participated, often attending lectures during religious festivals or when monks visited towns for alms-giving. As Buddhism spread beyond India to regions like Sri Lanka, Southeast Asia, Central Asia, China, and Tibet, the demand for education tailored to laypeople became more evident. These regions presented unique cultural and linguistic contexts, which required adaptations in Buddhist pedagogy to meet local needs. Laypeople, often bound by familial and community obligations, sought ways to integrate the Dhamma into their daily lives. Similarly, the spread of Theravada Buddhism throughout Southeast Asia during the first millennium of the Common Era led to the establishment of monastic schools that served both lay practitioners and monastics. In Myanmar and Thailand, Buddhist monasteries became centers for literacy, scriptural interpretation, and general Buddhist education. In particular, these educational programs build a foundation in Buddhist ethics and morals. The modern concept of *Dhamma* schools as distinct institutions for lay education emerged during the colonial period in Asia. The 19th and early 20th centuries saw significant social and political changes, including the impact of Western colonialism, the rise of nationalist movements, and the revival of Buddhism in response to external challenges. During this period, Buddhist leaders and reformers recognized the need to preserve and promote Buddhist teachings in the face of Western secular education and Christian missionary activities. In Sri Lanka, the Buddhist revival movement of the late 19th century, led by figures like Anagarika Dharmapala and Henry Steel Olcott, played a pivotal role in the establishment of Buddhist schools. Olcott, an American theosophist, collaborated with local Buddhist leaders to create a network of Buddhist schools that offered modern education while emphasizing Buddhist values. These schools, known as Buddhist English Schools, integrated secular subjects with *Dhamma* classes, ensuring that students maintained a connection to their religious heritage. Other regions of Asia also made similar efforts to establish schools dedicated to the Buddhist doctrine. In Thailand, for example, government approval allowed Buddhist studies to be included in national school curricula, ensuring that students received education in Buddhist ethics and meditation. In Myanmar, Buddhist monasteries have continued to serve as important learning centers, educating both monastics and laypeople. The global spread

of Buddhism in the 20th and 21st centuries, particularly to Western countries such as the United States, Canada, Australia, and Western European states, has been substantial. Immigrants from countries like Sri Lanka, Thailand, Vietnam, and Tibet established *Dhamma* schools to teach children about their cultural practices, languages, and Buddhist heritage. These schools have also attracted non-Asian practitioners of Buddhism, providing instruction in Buddhist thought, meditation, and ethics to a diverse array of learners. In Western societies, *Dhamma* schools often cater to a broad audience. They provide teachings on meditation, Buddhist philosophy, and ethics, with the curricula reflecting various Buddhist traditions such as Theravada, Mahayana, and Vajrayana. These schools typically incorporate experiential learning practices such as meditation, chanting, and rituals, in addition to more formal theoretical study of key Buddhist texts like the *Dhammapada*, the *Jataka Tales*, and the *Pāli Canon*. Pedagogical approaches have varied based on the learners' cultural backgrounds and developmental stages. In traditional schools, teaching methods were centered on memorization and verbal repetition, reflecting the oral transmission of teachings. Modern *Dhamma* schools, however, emphasize participatory and experiential learning, focusing on face-to-face interactions and relating the material to learners' personal experiences. Curricula often include group discussions, storytelling, creative arts, and community service projects. Despite their prominence, *Dhamma* schools face several challenges in modern settings. In many countries, science and technology education takes precedence, leaving little room for the study of religion and ethics. As a result, *Dhamma* schools experience lower enrollment numbers. Additionally, the influences of globalization and modern media have altered the interests of younger generations, making it difficult for *Dhamma* schools to retain students. Nevertheless, there are significant opportunities for growth and creativity. The increasing interest in mindfulness and meditation in Western cultures has led to a growing demand for Buddhist practices and teachings. *Dhamma* societies can capitalize on this trend by offering programs that focus on applying Buddhist principles in daily life, such as stress reduction, psychological resilience, and moral reasoning. Furthermore, digital technologies, including online learning platforms and mobile apps, offer new ways to reach a global audience. The historical development of *Dhamma* schools illustrates Buddhism's adaptability and its resilience as it spread across different cultures and eras. From their origins in Indian monastic communities, these schools have evolved in both traditional settings and Western contexts, continuing to play a vital role in preserving and transmitting the teachings of the Buddha. As Buddhism continues to adapt to modern circumstances, *Dhamma* schools are well-positioned to remain essential institutions for the intellectual and spiritual growth of practitioners. By embracing new methods of instruction and being open to modern learners, *Dhamma* schools can continue to fulfill their primary mission of promoting wisdom, compassion, and peace throughout society.

3.2. The requirement of providing *dhamma* education to youngsters

In various countries, weekend *Dhamma* schools, often organized within

Buddhist temples, play a crucial role in instilling ethics and spirituality in the younger generation. The primary goal of these schools is to teach children how to perform righteous deeds, avoid unrighteous actions, and cultivate spiritual growth. As children transition into adolescence, they experience significant physical and psychological changes, which can lead to rebellious behavior and nonconformity. While these changes are a normal part of growing up, they can present challenges for parents, especially if adolescents lack a strong ethical foundation. *Dhamma* education serves as an effective tool in addressing these challenges, offering moral guidance, and fostering self-control as adolescents face life's difficulties. Parents often hope their children will grow up disciplined, obedient, and on the righteous path. Participation in weekend *Dhamma* schools is seen as a means to develop a solid ethical system, just as a structure is built on a firm foundation.² Educators in *Dhamma* schools, many of whom volunteer their time, are motivated by a deep sense of duty and responsibility toward the Dhamma. They play a critical role in guiding young learners, teaching not only doctrinal aspects of Buddhism but also its application in everyday life. Many temples have dedicated spaces for *Dhamma* studies, with organized class sessions that focus on instilling virtues such as effort, compassion, balance, purity, wisdom, and compassion. The five major virtues, often referred to as the "flowers of Buddhism," form an integral part of the curriculum and help shape students into well-rounded individuals who contribute positively to society.³ The aim of *Dhamma* education is also to cultivate respect for relationships within the family, particularly a deep respect for elders. This education teaches children to love and care for not just their elders but also their younger siblings and other members of the community. It instills a sense of obligation, especially in caring for the elderly. The ethical teachings in *Dhamma* education positively impact individual families and contribute to society as a whole, fostering a culture based on compassion and respect. The Buddha's statement, "*Dhamma* protects those who live by the *Dhamma*", emphasizes the significance of *Dhamma* education in maintaining well-being and moral integrity and preventing the breakdown of ethical values.⁴ In Sri Lanka, *Dhamma* schools play an essential role in instilling virtues and cultivating spiritual awareness in young minds. Through teachings on compassion, honesty, and wisdom, these schools help create a generation of Buddhists who not only identify as Buddhists but live according to Buddhist principles. The unwavering dedication of educators, supported by temple authorities, is a collective effort to preserve and propagate the Buddha's teachings. In a society marked by constant change, *Dhamma* education remains vital as it continues to nurture virtues like kindness, respect, and discipline. Ultimately, this education contributes to creating a harmonious and virtuous society.

3.3. Canonical teachings on moral development through *dhamma* education

This discussion mainly focuses on early Buddhist teachings regarding the profile of a good student, the practical way of reducing defilements that act as obstacles to cultivating moral qualities, and emphasizes the Buddhist approach to inculcating moral qualities while learning about the Noble Eightfold Path. It finally concludes the discussion by highlighting the outcome of Buddhist *Dhamma* education. The *Caṅkīsutta* mentions a specific path to gaining knowledge through investigation of the truth, which includes the responsibility of a teacher to cultivate trust in his students regarding his teachings by refraining from unwholesome behavior.⁵ The sutta describes twelve steps to acquiring knowledge as follows: Find a teacher and investigate him with states based on greed, hatred, and delusion; Place conviction; Visit and grow close; Hear the *Dhamma*; Remembers it; Penetrates the meaning; Agree to ponder; Desire Arises; Becomes willing; Contemplates; Makes an exertion; Realizes the ultimate meaning of the truth with his body.⁶ Finally, to arrive at the truth, one goes on to develop and pursue all those same qualities. For all these attainments, the trust that the teacher cultivates in the student's mind regarding his teachings and character becomes the foundation or first step. Once a student is comfortable with his/her teacher, it is not a difficult task for the teacher to teach him/ her to cultivate what is good and remove what is bad. On the other hand, students also need to cultivate the ten methods mentioned in the *Caṅkīsutta* for mutual understanding to build confidence, faith, and the discovery of truth. Thus, maintaining a good profile of a student is not a solo responsibility but a teamwork effort of both the teacher and the student.

In Buddhism, the middle path is the “Noble Eightfold Path,” which develops morality (*Sīla*), concentration (*Samādhi*), and wisdom (*Paññā*). It is one of the major principles of Buddhism. Wisdom is required to overcome greed, hatred, and delusion. *Sīla* leads to moral conduct, *Samādhi* leads to the quietude of the mind, and *Paññā* leads to the dispelling of ignorance or the attainment of true knowledge.⁷ It explains a significant structure for understanding the value of practicing Buddhist ethics. According to Ven. Dr. Walpola Rahula, the Noble Eightfold Path is interconnected, with one noble path helping to cultivate another noble path. In the text *What the Buddha Taught*, he mentioned, “The Noble Eightfold Path is to be developed more or less simultaneously, as far as possible according to the capacity of each individual. They are all linked together, and each helps the cultivation

of the others.”⁸ According to the *Saccavibhaṅgasutta* of the *Majjhimanikāya*, the Noble Eightfold Path is elaborated as “Right Understanding, Right Thought, Right Speech, Right Action, Right Livelihood, Right Effort, Right Mindfulness, and Right Concentration.”⁹ It not only helps to achieve a super-mundane life but also develops the mundane life by fostering the right attitude, the right knowledge, and developing soft skills. Before analyzing the applicability of the Noble Eightfold Path to moral development in education, it is essential to understand its significance as a Buddhist teaching on the path of *Sekhapatipadā*¹⁰ and *Asekhapatipadā*,¹¹ which are practiced with the Eightfold Path leading to *Sekhapatipadā* and to an Arahant. It includes ten factors known as *Asekhapatipadā*.

Table 05: The Two Practices of Sekha and Asekha: Noble Eight-Fold Path

¹¹ *Asekha*: in other words refers to an Arahant who is known as an *asekha puggala* - one who has completed the higher trainings.

ment. as well as it is not only related to overcoming educational crises but also most of the burning crises in the current world.

Table 06: The systematic way of the Noble Eight-Fold Path from morality to wisdom

First Step as Morality (<i>Sīla</i>)	Secound Step as Concentration (<i>Samādhi</i>)	Final step as Wisdom (<i>Paññā</i>)
<ul style="list-style-type: none"> • Right speech (<i>Sammā Vācā</i>) • Right actions (<i>Sammā Kammanta</i>) • Right livelihood (<i>Sammā Ajīva</i>) 	<ul style="list-style-type: none"> • Right efforts (<i>Sammā Vāyāma</i>) • Right consciousness (<i>Sammā Sati</i>) • Right concentration (<i>Sammā Samādhi</i>) 	<ul style="list-style-type: none"> • Right view (<i>Sammā dīṭṭhi</i>) • Right thoughts (<i>Sammā Saṅkappa</i>)

The Buddha introduced a gradual system of training and a gradual system of practices called the middle path, “*Majjimā Paṭipadā*,” to achieve peace of mind that directly helps moral development in education. *Nibbāna* is the final goal in Buddhism, which can endow with permanent calm and tranquillity of mind and body.

3.3.1. Wisdom (*Paññā*)

The Noble Eightfold Path starts with the Right View, or in other words, the first element according to conventional enumeration is *Sammā dīṭṭhi* (Right View), also referred to as Right Vision or Right Knowledge. In his text *The Book of Kindred Sayings*, Woodward quoted the right views in Buddhist teachings as follows: “And what, monks, is right view? It is the knowledge of the ill; the knowledge of the arising of the ill; the knowledge of the cessation of the ill; and the knowledge of the practice leading to the cessation of the ill. This is called *Sammā dīṭṭhi* or right view.”¹² Between the two categories of Right Views, the first one is Views with taints, and the second is Views without taints. According to Paul Fuller, “Right-view is a way of seeing which transcends all views. It is a detached way of seeing, different from the attitudes of holding to any view, wrong or right.”¹³ There are many wrong views in this society, which are the opposite of *Sammā dīṭṭhi* (Right View). Due to wrong interpretations of religious teachings, stress can arise, as mentioned earlier in the *Kālāmasutta*. The Buddha emphasized that views should not be accepted until you realize them. Prof. Daya Edirisinghe, in his book *Manovidya Vimarsana*, quoted and mentioned this as follows:

Kālāmas do not go by reports, by legends, by traditions, by scriptures, by logical conjecture, by inference, by analogies, by agreements through

¹² Woodward (1930), p. 7 - 8.

¹³ Fuller (2005), p. 146 - 147.

pondering views, by probability, or by thought, ‘This contemplative is our teacher.’ When you know for yourselves that, ‘this quality is unskilful; these qualities are blameworthy; these qualities are cited by the wise; these qualities, when adopted and carried out, lead to harm and suffering,’ then you should abandon them.¹⁴

The Buddha further explains what kinds of things pertain to long-term suffering and harm for oneself and others. A person who is greedy harms living beings, steals, has more and more desires, cheats others, and takes alcohol - all these actions are causes of long-term harm as well as suffering. In contrast, if someone is free of greed and observes the five precepts, this will be the cause of welfare and happiness and help to be free from trouble and impurity. These psychological attitudes pertain to ensuring assurance and acquiring inner peace. Likewise, the Buddha always demonstrated his attitude as a great teacher to guide students toward discovering the correct knowledge through free will. Therefore, the *Kālāmasutta* is very significant for having clear ideas, and it helps in selecting the right view. Developing the right views in the educational field that are related to acquiring tranquillity in the mind directly affects moral development in education. In the *Ambalatthikārāhulovādasutta* and the *Bāhitikasutta*, the Buddha taught how to identify right and wrong. If the action or views do not harm oneself (*Attabyābādha*), do not harm others (*Parabyābādha*), or harm both (*Ubhayabyābādha*), then that action or view must be understood as right. If the actions, words, and thoughts are harmful to oneself or others, those actions are wrong.¹⁵ Secondly, *Sammā Saṅkappa* (Right Thought) is essential to practice for moral development. It is the right thought or right aspiration. In his text, *The Dialogue of the Buddha*, T.W. Rhys Davids quoted the Buddhist teachings on right thoughts as follows: “And what, Bhikkhus, is right aspiration? The aspiration towards renunciation, the aspiration towards benevolence, the right aspiration towards kindness. This is what is called right aspiration.”¹⁶ There are three kinds of Right intentions, such as renunciation, loving-kindness, and non-violence: (1) *Avihiṃsā Saṅkappa*: The thought not to harm all. (2) *Avyāpāda Saṅkappa*: The thought of Loving-kindness or eradicating the anger. (3) *Nekkhamma Saṅkappa*: The thoughts of Renunciation. Mostly, people suffer from stress because of their uncontrollable desires. The intention of renunciation is about refraining from luxury possessions and only expecting the necessities of life. Many people fill their minds with strong stress by expecting a luxurious life, which is sometimes hard to achieve. In education, students develop big dreams and plans from the beginning of their lives for better achievements in the future. Unfortunately, if they fail to achieve those dreams, some students destroy their lives by committing suicide. In this situation, if they could develop the right thoughts and understand the reality of life as well as their moral qualities,

¹⁴ AN 3. 65.

¹⁵ Ibid. 3. 99.

¹⁶ Davids, T. W. Rhys. *The Dialogue of the Buddha*, Part I, p. 343 - 344.

rather than dreaming about an uncertain future and worrying about it, it would be beneficial. The wise person knows that the greed of a person never ceases. Therefore, the right determination helps to understand the reality of nature and assists in living in the moment rather than dreaming about an uncertain future and worrying about it. *Dosa* (anger) is another obstacle to the achievement of moral development in education, and it is also a cause of growing stress in the human mind. When anger enters the human mind, a person cannot distinguish between good and bad, right and wrong, or what ought and ought not to be done. Therefore, the intention of loving-kindness and non-violence is very significant in eliminating stress and the arising of right thoughts. Often, students and teachers try to find solutions through their angry minds, which results in harming others and forcing others to kill and torture. Therefore, to overcome these situations, cultivating the right thoughts is essential for moral development in education. These two aspects of *Sammā Ditt̥hi* (Right View) and *Sammā Saṅkappa* (Right Thought) are considered primary wisdom, or *Prārambha Paññā*. To gain the right knowledge, it is essential to have the right views on what you are examining, as well as to cultivate the right thoughts and realize your desires.

3.3.2. Morality (*Sīla*)

Thirdly, *Sammā Vācā* (Right Speech) is essential to demonstrate the honesty of both teachers and students. By becoming exemplary members of society, both teachers and students can develop their morality. Right speech consists of four aspects, which are: *Musāvādā*: Restrain from telling lies; *Pisunāvacā*: Restrain from backbiting; *Pharusā Vācā*: Restrain from harsh words; *Samphappalāpā*: Restrain from vain or idle talk. Therefore, Ms. I.B. Horner, in her text *The Collections of the Middle Length Sayings*, quoted and mentioned the facts of right speech in Buddhist teachings as follows:

Whatever speech the Tathāgata knows to be not facts, not true, not connected with the goal, and what is not liked by others, disagreeable to them, that speech the Tathāgata does not utter. And whatever speech the Tathāgata knows to be facts, true, but not connected with the goal, and not liked by others, disagreeable to them, neither does the Tathāgata utter that speech. And whatever speech the Tathāgata knows to be facts, true, connected with the goal, but not liked by others, disagreeable to them, the Tathāgata is aware of the right time to explain that speech. Whatever speech the Tathāgata knows to be not facts, not true, not connected with the goal, but is liked by others, agreeable to them, that speech, the Tathāgata does not utter. And whatever speech the Tathāgata knows to be facts, true, but not connected with the goal, yet liked by others, agreeable to them, neither does the Tathāgata utter that speech. And whatever speech the Tathāgata knows to be facts, true, connected with the goal, and liked by them, agreeable to them, the Tathāgata is aware of the right time for explaining that speech.¹⁷

¹⁷ Horner. I. B (1948), p. 62 - 63.

Mostly, problems arise due to people's speech. If someone talks with harsh words, it can cause anger and stress. To avoid these situations, the right speech is one of the most significant qualities that need to be developed by both teachers and students. Therefore, the *Dhammapada* mentions, "Restrain from five faculties as well as restraint in body, speech, and mind, and good is restraint in all the senses."¹⁸ The fourth aspect of the Eightfold Path is Right Action. Horner, in *The Collections of the Middle Length Sayings*, quoted and mentioned the facts of right action in Buddhist teachings as follows: "And what, your reverences, is right action? Refraining from onslaught on creatures; refraining from taking what is not given; refraining from going wrongly among the sense pleasures. This, your reverences, is called right action."¹⁹

It consists of three kinds of action. (1) *Pāṇātipātā veramanī*: Restrain from killing, (2) *Adinnādānā Veramanī*: Restrain from stealing, (3) *Kāmesumicchācārā Veramanī*: Restrain from sexual misconduct. Moral development through the practice of right speech and right action is significant to live peacefully in society. Through practicing moral practices, people can eradicate their stress and overcome most of the social problems. People must be aware of what they are saying and doing because if someone is performing bad actions, the results will be painful, making them unhappy, stressed, and suffering. The *Dhammapada* says: "If someone is doing bad actions here, he grieves; hereafter he grieves, and the evil-doer grieves in both existences. He grieves and suffers anguish when he sees the depravity of his deeds."²⁰ Moral development through practicing right speech and right action is significant to living peacefully in society. By practicing these moral qualities, people can eradicate their stress and overcome most social problems.

The fifth aspect of the Eightfold Path is the Right Livelihood. It is an honest livelihood that does not cause harm or injustice to anyone. After receiving an education, students often seek occupations to continue their lives independently. At this stage, they search for the most profitable business. Unfortunately, many people engage in illegal businesses that harm human beings as well as nature. Therefore, a person's occupation must be righteous. In the *Vaṇijjāsutta*, five types of trades are rejected, such as selling weapons, selling living beings for meat or slavery, selling meat, selling liquor, and selling poison: "Monks, a lay follower should not engage in five types of business. Which five? Business in weapons, business in human beings, business in meat, business in intoxicants, and business in poison. These are the five types of business that a lay follower should not engage in."²¹ When a person's life is clean from unethical

¹⁸ *Dhp* 101: "Cakkhunā saṃvaro sādhu, sādhu sotena saṃvaro; Ghānena saṃvaro sādhu, sadhu jivhāya saṃvaro. Kāyena saṃvaro sādhu, sādhu vācāya saṃvaro; Manasā saṃvaro sādhu, sādhu sabbattha saṃvaro; Sabbattha saṃvuto bhikkhu, sabbadukkhā pamuccati."

¹⁹ Horner. *LB* (1948), p. 298.

²⁰ *Dhp* 4: "Idha socati pecca socati; pāpakārī ubhayattha socati; So socati so vihaṇṇati; disvā kammakiliṭṭhamattano."

²¹ *AN* 3.25: "Pañcimā, bhikkhave, vaṇijjā upāsakena akaraṇīyā. Katamā pañca?"

professions, they can live happily, knowing their profession is pure. Illegal and guilty professions always create stress and worry in the mind. Likewise, if a person is well-educated and develops moral values, it is an outcome of moral education in their life. These three aspects (right speech, action, and livelihood) of the Noble Eightfold Path are considered morality or *Sīla*. By practicing the right speech, both students and teachers build trust with each other, and through the right action and livelihood, they reduce most social crises. Further details on morality or *Sīla* are discussed in the *Brahmajālasutta*. According to this sutta, it is elaborated through the Ten Precepts (*Cūlasīla*), the Middle Precepts (*Majjhimasīla*), and the Great Precepts (*Mahāsīla*). Furthermore, in Buddhism, *Sīla* is explained as five precepts as well.

3.3.3. Concentration (*Samādhi*)

The sixth aspect of the Eightfold Path is *Sammā Vāyāma* (Right Effort), which is used to cultivate righteousness and decrease the evil characteristics of individuals. There is no controversy about the evil characteristics of the mind as they directly pertain to suffering. Therefore, every person should strive to eradicate evil actions that have already been done, as well as prevent evil from arising in the future. According to the *Saccavibhaṅgasutta*, it is illuminated that one should make an effort to prevent bad thoughts from arising, as well as put effort into developing good thoughts. The text states:

“Herein, a monk puts forth will, strives, stirs up energy, strengthens his mind, exerts himself to prevent the arising of evil, unwholesome thoughts that have not yet arisen; puts forth will... (as before) to banish the evil, unwholesome thoughts that have already arisen; puts forth will... to develop wholesome thoughts that have not yet arisen; and puts forth will, strives, stirs up energy, strengthens his mind, exerts himself to maintain, preserve, increase, bring them to maturity, development, and to complete the wholesome thoughts that have arisen.”²²

In the *Ālavakasutta*, the Buddha also says, “By having effort, suffering should be eradicated.” Problems in daily life arise due to people’s attachments and desires, which should be eradicated through the right effort. The seventh aspect of the Eightfold Path is *Sammā Samādhi* (Right Mindfulness). There are two kinds of mindfulness mentioned in the *Visuddhimagga*: Access Concentration (*Upacāra Samādhi*) and Absorption Concentration (*Appanā*

Satthavaṇṇijjā, sattavaṇṇijjā, maṃsavaṇṇijjā, majjavaṇṇijjā, visavaṇṇijjā – imā kho, bhikkhave, pañca vaṇṇijjā upāsakena akaraṇīyā”ti. *Sattamaṃ.*”

²² MN 141: “*Katamo cāvuso, sammāvāyāmo? Idhāvuso, bhikkhu anuppannānaṃ pāpakānaṃ akusalānaṃ dhammānaṃ anuppādāya chandaṃ janeti vāyamati vīriyaṃ ārabhati cittaṃ paggaṇhāti padahati, uppannānaṃ pāpakānaṃ akusalānaṃ dhammānaṃ pahānāya chandaṃ janeti vāyamati vīriyaṃ ārabhati cittaṃ paggaṇhāti padahati, anuppannānaṃ kusālānaṃ dhammānaṃ uppādāya chandaṃ janeti vāyamati vīriyaṃ ārabhati cittaṃ paggaṇhāti padahati, uppannānaṃ kusālānaṃ dhammānaṃ tṭhiyā asammosaṃ bhiyyobhāvāya vepullāya bhāvanāya pāripūriyā chandaṃ janeti vāyamati vīriyaṃ ārabhati cittaṃ paggaṇhāti padahati, ayaṃ vuccatāvuso ‘sammāvāyāmo.’*”

Samādhi).²³

In access concentration, the mind is drawing close to absorption. It enters the 'neighborhood' (a possible meaning of *upacāra*) of absorption, but more work is still needed for it to become fully immersed in the object, which is the defining mark of absorption. With further practice, the factors of concentration gain strength and bring the mind to absorption (*Appanā Samādhi*). Like access concentration, absorption takes the counterpart sign as its object. The two stages of concentration are differentiated neither by the absence of the hindrances nor by the counterpart sign as an object; these are common to both.²⁴

To develop the right mindfulness, three kinds of values are required: Knowing the mind, shaping the mind, and liberating the mind. Living with clear attention in every moment and every thought (bare attention) is the basic foundation of knowing the mind. Clear attention (bare attention) is like a clear mirror, reflecting things as they truly are. Shaping the mind means focusing our attention only on the present, living with full awareness in the here and now. Therefore, to develop mindfulness, meditation should be practiced, as I have explained in detail under the topic of "Mindfulness and Moral Education." In the *Visuddhimagga*, Ven. Buddhaghosa has introduced forty kinds of meditation. Right mindfulness is extremely useful for overcoming stress and controlling desires in the mind.

IV. MINDFULNESS AND MORAL EDUCATION

Cultivating mindfulness and loving-kindness meditation has a significant effect on how we behave in our day-to-day lives. Mindfulness helps prevent unpleasant thoughts from arising in the mind, and it also aids in dealing with stress and anger. In the *Cittavagga* of the *Dhammapada*, it is said: "The mind is excitable and unsteady, and it is difficult to control and restrain. The wise one trains his mind to be upright as a fletcher straightens an arrow."²⁵ This highlights the nature of the mind, which is difficult to control because it is swift, restless, and moves wherever it pleases. Therefore, controlling the mind is essential for happiness. By cultivating mindfulness and loving-kindness meditation, one can tame the mind. In daily life, everyone can practice a few minutes of meditation, from morning to night. In the morning, taking a few minutes to close your eyes and think good thoughts about others and yourself with a pleasant mind helps to cultivate loving-kindness toward all beings. According to the *Mettāsutta*, the unique nature of cultivating loving-kindness meditation is as follows:

²³ *Vism* 85.

²⁴ Vipassana Research Institute. (2016) *The 8-Fold Path*. Vipassana, www.vipassana.com/resources/8fp7.php.

²⁵ *Dhp* 33: "Phandanaṃ capalaṃ cittaṃ, dūrakkhaṃ [durakkhaṃ (sabbattha)] dunnivārayaṃ; Ujūṃ karoti medhāvī, usukārova tejanaṃ. Vārijova thale khitto, okamokataubbhato; Pariphandatidaṃ cittaṃ, mārادهyyaṃ pahātave."

By cultivating mindfulness on loving-kindness, one can develop an unlimited heart of friendliness for the entire universe, sending *Mettā* above, below, and all around, beyond all narrowness, all rivalry, all hatred. Whether you are staying in one place or traveling, sitting down or in bed, in all your waking hours, rest in this mindfulness.²⁶

In the context of education, teachers can apply this by spending five minutes in meditation before starting their lessons. This practice helps students focus on the lesson and also nurtures their moral development. Unpleasant thoughts often arise in both teachers' and students' minds, and in such situations, mindfulness meditation can help overcome them. Loving-kindness meditation, or the development of loving-kindness, is one of the four sublime states that promote moral growth because they are emotionally fulfilling states that bring beneficial effects to our lives. As discussed earlier, the practice of these qualities contributes to moral development.

4.1. The outcome of moral education

The outcome of modern education, filled with knowledge, attitude change, and skills, needs to be upgraded to include appropriate knowledge, right attitude change, and soft skills. This is because knowledge without the right understanding can be a threat to the future of mankind. Today, people live in the Nuclear Age with fear and worry because of misused knowledge, such as in the innovation of nuclear weapons. Therefore, appropriate knowledge with the right attitude changes, and the development of soft skills need to be upgraded as the outcome of education. According to the Native American saying, "When the last tree is cut down, the last fish eaten, and the last stream poisoned, you will realize that you cannot eat money."²⁷ The misuse of knowledge is criticized. In this situation, moral education plays an extraordinary role in the educational scheme to bring out the following outcomes: (1) Appropriate knowledge, (2) Right attitude change, and (3) Soft skills.

4.2. Appropriate knowledge

The theoretical or practical understanding of a subject can be referred to as knowledge, or in other words, the understanding of something and the grasping of certain facts can be defined as knowledge. Knowledge is a collection of thoughts and experiences from ancient people. People gain knowledge through reading books and newspapers, having experiences, etc. Grasping knowledge is never tiring, as human beings never get tired of acquiring knowledge. Grasping knowledge is never satisfying because it is considered a power or a weapon for humankind. The power of knowledge should not be misused to destroy mankind. Unfortunately, the power of knowledge has been used for destructive purposes. Therefore, the application of moral education in the educational scheme can bring about the outcome of appropriate knowledge for the safeguarding of mankind.

²⁶ *Snp* 1.8.

²⁷ In the United States, Native Americans are considered to be people whose pre-Columbian ancestors were indigenous to the lands within the nation's modern boundaries.

4.3. Right attitude change

Attitude change refers to the way we think and behave in day-to-day life. There are different levels and categories of attitudes. A positive attitude helps one face all difficult moments in social life. All successful people in the world have a positive attitude in their behavior and thinking patterns; in other words, successful people see all problematic matters in a positive light. Therefore, positive attitude change is one key to leading a successful life. By giving a proper example, A. P. J. Abdul Kalam has said, "All birds find shelter during a rain. But the eagle avoids rain by flying above the clouds. Problems are common, but attitude makes the difference."²⁸ Therefore, to face problems, the right or positive attitudes are essential to be developed in the educational scheme. In summary, Buddhist teachings are also completely optimistic and practical for making an attitude change for the better. They encourage maintaining moral behavior as the first step in pursuing the ultimate goal of Buddhism. As discussed in detail above, the mind needs to be cultivated with wholesomeness by analyzing the experiences and knowledge we gain throughout life as education, ultimately establishing a harmonious lifestyle that benefits both individuals and society as a whole.

4.4. Necessary skills

Skills are the ability to do something well. People have different skills for doing both good and bad things, but as an outcome of moral education, good skills need to be improved. There are a few categories of skills, such as labor, life, social, soft, and hard skills. Labor skills help to work with material things, such as carpenters, electricians, masons, etc. Life skills help to develop the ability to solve problems. Social skills refer to the ability to have proper communication in society with everyone. Soft skills are a sociological term relating to a person's EQ (Emotional Intelligence Quotient). Dr. Daniel Goleman and many psychologists have mentioned five basic components of emotional intelligence: self-awareness, self-regulation, internal motivation, empathy, and social skills in recent times in the Western world. Skills relating to specific tasks or situations are known as hard skills.²⁹ In summary, attention to the right knowledge, changing attitudes, and developing soft skills are more appropriate than the outcome of misused knowledge from education. Therefore, providing moral education by focusing on three areas - right knowledge, attitude, and skills - is useful for achieving a better outcome from moral education.

4.5. Techniques to give *dhamma* education to youngsters

Due to swift economic development, *Dhamma* education is less attractive in the current world. Therefore, youngsters are not paying attention to grasping *Dhamma* knowledge. Not only that, but Buddhist lessons are taught by teachers in *Dhamma* schools in the same manner, using traditional methods.

²⁸ Avul Pakir Jainulabdeen "A. P. J." Abdul Kalam, an Indian aerospace scientist and politician, served as the 11th President of India from 2002 to 2007, and he was born in Rameswaram, Tamil Nadu.

²⁹ Goleman, Daniel. *Emotional Intelligence: Why It Can Matter More Than IQ*. Bantam, 1995.

What is taught must be framed so that they can understand the spiritual side of the lessons, especially to practice good manners and avoid evil. A syllabus should be adopted that is practical and not entirely theoretical. Considering these weaknesses in providing Dhamma education for youngsters, we need new techniques with strategic management to capture the students' attention. These may include: (1) Dhamma schools must be restructured as institutions different from formal schools. (2) The knowledge of Dhamma must be applied to ethical development. (3) The lessons must be related to solving current social problems with practical knowledge and experiences. (4) The teacher should be a rationalist, not a traditionalist, drawing on the premises taught by the Buddha. Using these techniques and strategic management together can achieve the best results through *Dhamma* education. Furthermore, this is not a target that can be fulfilled in one day; it is a gradual process of development.

V. CONCLUSION

This study is centered on the immense potential of Buddhist *Dhamma* learning in helping youth build peace, harmony, and sustainable development, which in turn can lead to an evolving harmonious society. *Dhamma* learning, by maintaining the ethical and moral aspects of learning ahead of its other aspects, contributes a holistic approach that fills the gaps existing in conventional, academically dominant schooling paradigms. The research identifies that *Dhamma* learning is central to the development of empathy, loving-kindness, and moral consciousness in children, which are the major elements needed to construct peaceful and harmonious societies. A comparison of students in normal schools and those in schools incorporating moral development within their curriculum shows stark differences in behavior and attitudes. The children who learned moral values were more empathetic, had better moral reasoning, and exhibited better interpersonal relationships. These observations were also corroborated by parents, teachers, and community leaders, who testified to the character-forming and world-view-forming influence of *Dhamma* education on children. Apart from this, the study emphasizes incorporating moral education into global education systems in a bid to counteract the emerging social crises brought about by the erosion of human values. As the future leaders of society, young minds must be intellectually and morally empowered to lead sustainable development as well as global peace. Buddhist *Dhamma* education plays a strong motivating force in this regard, building up loving minds and cultivating a culture of friendship. In short, intellectual capacity and moral development must go hand in hand in the creation of a wisdom-and-virtue-based citizenry. Emphasizing education in *Dhamma* can assist countries in preparing their young people to combat the evils of society with wisdom, tolerance, and compassion for peace. The research categorically declares that the pillar of a peaceful world is a peaceful mind, attainable through the ethics and methods of *Dhamma* learning. Enabling the youth to do so through Buddhist *Dhamma* education, therefore, is less an issue of educational need than one of conversion towards a peaceful world and sustainability.

MINDFULNESS IN HIGHER EDUCATION: CULTIVATING COMPASSIONATE GENERATIONS FOR A BETTER WORLD

Tran Tuyen*

Abstract:

Higher education has traditionally concentrated on academic knowledge and technical skills. Lately, given the demands of modern society, it also significantly shapes students' values and character. People, especially young individuals, are becoming increasingly disconnected from fundamental human values like empathy and compassion in today's fast-changing environment. This paper investigates how mindfulness techniques can help students overcome these challenges through self-awareness, emotional regulation, and empathy. By reviewing current research and case studies, the paper emphasizes how mindfulness enhances student well-being, including improvements in emotional intelligence and stress reduction. It demonstrates how mindfulness can cultivate more globally conscious, compassionate, and socially responsible individuals. Aiming to create a learning environment that supports both academic excellence and well-being, the paper also suggests practical models and processes to integrate mindfulness into university curricula, faculty training, and campus-wide activities.

Keywords: *Mindfulness, higher education, student well-being, emotional intelligence, compassionate learning.*

I. INTRODUCTION

In the evolving landscape of higher education, universities are increasingly seen as institutions that must go beyond imparting academic knowledge and technical skills. They are now recognized as having a significant impact on students' values, character, and emotional intelligence.¹ Cultivating empathetic, compassionate, and socially responsible individuals is critical

* Baker & Karadjova-Kozhuharova (2023): 5285; Barker et al. (2021): 626.

¹ Baker & Karadjova-Kozhuharova (2023): 5285; Barker et al. (2021): 626.

for addressing the 21st century's complex social, environmental, and ethical challenges. However, in today's world of rapid technological advancements, social media addiction, and shifting values, younger generations risk losing touch with essential human values such as empathy, compassion, and a deep connection to nature.² From this perspective, higher education plays a crucial role in fostering student well-being.³ It provides students with the knowledge and skills needed to navigate societal challenges and live more harmoniously. This, in turn, directly contributes to the development of individuals who prioritize love and altruism, ultimately promoting social stability and global peace. As a result, higher education must embrace a new responsibility: beyond imparting knowledge and skills, it must foster an education that is both compassionate and sustainable for the future. Mindfulness is a concept that originates from religious traditions and is well-known in Buddhism. In recent years, due to various factors, mindfulness has gained increasing popularity.⁴ The COVID-19 pandemic and the growing need for individuals to find ways to address psychological issues have further accelerated this trend. Mindfulness practice allows individuals to return to the present moment, preventing them from being overwhelmed by worries and fears about the past or future. As a result, individuals become more aware of the beauty around them and experience genuine happiness. Practicing mindfulness fosters greater mental clarity, reduces stress from negative thoughts, and cultivates a more optimistic outlook.⁵ Initially regarded as a psychological therapy, mindfulness is now being considered an essential component of education for well-being. However, despite its growing presence in certain educational institutions, its implementation remains limited due to concerns about its religious associations. This paper examines the role of mindfulness practices in higher education in shaping a generation of students who are not only academically competent but also emotionally intelligent, compassionate, and socially responsible. By reviewing existing literature, analyzing case studies of successful implementations, and discussing the current state of mindfulness in education, this study aims to highlight mindfulness as a critical tool for fostering more empathetic and globally aware individuals. Furthermore, the paper proposes practical approaches for integrating mindfulness into university curricula, faculty training, and campus-wide initiatives, ultimately promoting a more compassionate and peaceful future. Additionally, this study provides a new perspective by exploring the integration of mindfulness practices in higher education in Vietnam and offering recommendations for their application in this context.

II. LITERATURE REVIEW

The field of research on mindfulness practices in higher education is highly

² Kinsella et al. (2024): 02.

³ Tzelepi et al. (2023): 209.

⁴ Aktan & Demirbağ Kaplan (2023): 66.

⁵ Bright & Pokorny (2013): 10.

diverse. However, this study focuses on several common topics, which are reviewed to provide a theoretical foundation for the research.

2.1. Mindfulness practices

Mindfulness, though often associated with Buddhist traditions, is not exclusive to one religion. Some believe the practice can be found in various spiritual teachings and may even have roots that stretch back beyond Buddhism.⁶ In its essence, mindfulness is about being fully engaged in the present moment, free from the distractions of past regrets or future anxieties.⁷ It's the ability to see things as they truly are, without the filter of judgment or preconceived notions. The original practice of mindfulness is rooted in Buddhism. In the Satipatthana Sutta, the Buddha introduced a method to help individuals live fully in the present moment, free from worries and mental afflictions, ultimately achieving clarity and freedom from suffering.⁸ The Sutta outlines four foundations of mindfulness: contemplation of the body, feelings, mind, and dharma.⁹ These practices guide individuals to reconnect with their mind, align it with the body, and avoid being consumed by regrets about the past or anxieties about the future.¹⁰ The ultimate aim is to cultivate peace, liberation, and joy in each moment, making mindfulness a way of life. A mindful person doesn't just go through the motions of life; they experience each moment with clarity and awareness.¹¹ This might mean noticing the warmth of the sun on your skin, the sound of birds in the distance, or the texture of a cup in your hand. It's about being attuned to the richness of the world around you, recognizing the beauty in the ordinary, and finding peace in the simplicity of life. The power of mindfulness lies in its ability to quiet the mind and remove the weight of worry. When you are truly mindful, you're not consumed by stress or fear, because you're not constantly looking backward or ahead. This brings a sense of calm and stability, allowing you to navigate the ups and downs of life with a sense of ease.¹² Mindfulness also has a profound effect on how we relate to others. By being fully present, we are able to listen more deeply, respond more thoughtfully, and connect more meaningfully with those around us. It encourages compassion, as we become more aware of our own emotions and the feelings of others. As a result, mindfulness isn't just an individual practice; it can transform the way we interact with the world and those we share it with. Ultimately, mindfulness is a way of living that brings us back to ourselves and the present moment. It invites us to appreciate the wonder of everyday life, to be grateful for what we have, and to find joy in the here and now. It's a practice that encourages us to slow down, to breathe, and to truly be.

2.1.1. Mindfulness and student well-being

Mindfulness and student well-being have become important areas of focus in recent research, highlighting the value of mindfulness not only for monks or individuals with psychological challenges but also for students.¹³ Mindfulness practices can significantly contribute to both hedonic and eudaimonic well-being in students, helping them cultivate a deeper sense of joy, happiness, and meaning in life. For students, university life should be a period of joy and growth, allowing them to develop true happiness. This, in turn, can lead to their personal development as compassionate individuals, equipped to build a better society.¹⁴ In the current fast-paced and demanding academic environment, many students face challenges such as value crises, existential doubts, academic stress, gender identity issues, behavioral concerns, and instances of school violence. These pressures can leave students feeling disconnected or overwhelmed. Mindfulness practices offer a much-needed solution to these issues. By fostering self-awareness and present-moment focus, mindfulness helps students reconnect with themselves, understand their emotions, and gain clarity on their values and life purpose.¹⁵ This sense of inner peace and understanding can lead to improved emotional regulation, greater resilience, and a more balanced approach to life, helping students navigate challenges with a sense of calm and focus. Ultimately, mindfulness supports students in living happier, more fulfilling lives. By embracing mindfulness, students not only enhance their well-being but also contribute to creating a more compassionate, peaceful society. The practice encourages emotional intelligence, empathy, and mindfulness in interactions, which are essential qualities for building a better, more harmonious world. In recent years, universities have increasingly recognized the value of incorporating mindfulness practices to support student well-being.¹⁶ Initially introduced as part of mental health education for medical students, mindfulness techniques have since expanded to benefit a wider range of students, helping them manage stress and approach their studies with greater focus and enjoyment. As awareness of the importance of mental health continues to grow, the movement to create happier, more supportive educational environments has gained momentum. Universities are now prioritizing initiatives that foster emotional resilience, reduce anxiety, and promote a balanced approach to academic and personal life. Mindfulness practices, such as meditation, breathing exercises, and mindful reflection, have become key tools in these efforts. By integrating mindfulness into the university experience, institutions aim to not only alleviate the pressures of academic life but also equip students with lifelong skills for managing challenges and enhancing their overall well-being. This holistic approach reflects a broader shift towards viewing education not just as a means of intellectual development

¹³ Baker & Karadjova-Kozhuharova (2023): 5285.

¹⁴ Barker et al (2021): 641.

¹⁵ Demarzo et al (2015): 167.

¹⁶ Barker et al (2021): 632.

but as a foundation for a healthy, fulfilling life.

2.1.2. Mindfulness practices in higher education

Because of the problems that have arisen in recent years, particularly in light of the COVID-19 epidemic, higher education institutions are being forced to give mindfulness techniques a higher priority. These problems include conflict, economic crises, and rising student stress. The development of a variety of mindfulness models in higher education has increased the amount of research conducted on the subject.¹⁷ The effectiveness of mindfulness techniques in assisting students in managing stress has been demonstrated more than once in the first studies. It has been demonstrated that these techniques can improve one's ability to control their emotions, sharpen their attention, and advance their mental health in general. Additionally, the practice of mindfulness helps students become more creative and increases their capacity to find solutions to problems that arise in their everyday lives as well as in their academic lives.¹⁸ In a society that is both technologically advanced and economically advanced, the ability is truly required of a student in addition to knowledge and skills. Higher education's common mindfulness practices include methods such as mindful listening, compassionate interactions, seated silence, journaling, creative expression via sketching, strolling consciously, and interacting with healing music.¹⁹ Outdoor activities and seminars have also grown in popularity since they give students chances to practice mindfulness in many environments. Crucially, religious aspects of these activities are either minimized or eliminated, therefore increasing their inclusiveness and accessibility to every student, irrespective of their religious background. Higher education's mindfulness practices are becoming more and more understood as spiritual support tools used to improve student well-being rather than as religious pursuits. These initiatives seek to equip students with methods for stress management and self-care, therefore promoting a more harmonic and healthy campus atmosphere.²⁰ Rather than advancing any one theological or spiritual philosophy, the emphasis is on providing useful and efficient techniques for emotional resilience and personal development. Even though mindfulness has been shown to have positive effects on the well-being of students, studies have also demonstrated that students may not always be mature enough to participate in mindfulness activities effectively.²¹ Furthermore, in certain situations, if it is not treated appropriately, it may potentially make their problems even worse. Additionally, it is of utmost importance to address concerns that have been raised by a number of parents, teachers, and students regarding the potential religious connotations associated with mindfulness techniques. Mindfulness is a practice that originated in Buddhist traditions;

¹⁷ Baker & Karadjova-Kozhuharova (2023): 5286.

¹⁸ Barker et al (2021): 634.

¹⁹ Galla et al (2016): 297; Gates & Gilbert (2016): 253.

²⁰ de Bruin et al (2015): 1139.

²¹ Kelly (2023): 492.

however, its application in modern contexts is typically secular and focuses more on mental health than it does on religious dogma. It is possible that schools could present mindfulness as a skill-building technique that aims to improve focus, emotional control, and general mental health rather than as a religious practice in order to alleviate these concerns. Another issue is that universities need to have appropriate types of mindfulness practices, not like those found in religion, but rather techniques that are applicable to students, such as the mindset of thinking, communication, and problem-solving that are not limited to meditation exclusively.

2.3. Method

The study adopts a qualitative research methodology, utilizing two key approaches: a literature review and a case study analysis. These methods were carefully selected for their ability to provide both theoretical understanding and practical insights into mindfulness practices in higher education. The literature review focuses on examining trends and essential aspects of mindfulness practices within higher education. This serves as a foundation for developing appropriate models for Vietnam. To ensure a high standard of academic rigor, the study relies on reputable international sources, including scientific articles indexed in Scopus and Google Scholar. However, it is noteworthy that domestic studies in this field are virtually non-existent, highlighting a significant research gap in Vietnam. In addition to the literature review, the study conducts case study research to analyze specific mindfulness practices implemented in higher education settings. These case studies are framed using the theoretical perspective on mindfulness practices in higher education introduced by Zen Master Thich Nhat Hanh. His approach provides a strong basis for proposing models tailored to the unique cultural and educational context of Vietnam. By combining these methods, the study aims to create a comprehensive and practical framework for integrating mindfulness practices into Vietnam's higher education system.

III. RESULTS AND DISCUSSION

3.1. The trend of mindfulness practices

The rising popularity of mindfulness practices in higher education is evident through several key characteristics. Firstly, the frequent appearance of the keyword "Mindfulness" in various media platforms underscores its widespread recognition and relevance.²² Additionally, there is a growing interest among young people in courses focused on mindfulness, healing, and the concept of slow living, reflecting a shift in priorities toward mental well-being and balanced lifestyles. Moreover, the increasing volume of scientific research on mindfulness practices within higher education highlights the academic community's focus on understanding and promoting its benefits. These trends collectively demonstrate the integration of mindfulness into educational and societal frameworks.

First, the meditation market is expected to experience significant growth in

²² Baker & Karadjova-Kozhuharova (2023): 5286.

the coming years. According to data from The Business Research Company, the market size is projected to reach \$9.7 billion in 2025, demonstrating substantial expansion from \$7.98 billion in 2024. This growth is driven by an impressive compound annual growth rate (CAGR) of 23.5%, reflecting the increasing global demand for meditation practices and related services. This trend highlights the growing recognition of meditation’s benefits for mental health, stress management, and overall well-being. By 2029, the market is forecasted to reach a remarkable \$22.56 billion, underscoring its robust growth trajectory.

Picture 1: Meditation market size in 2025 and growth rate
Source: The Business Research Company

Specifically, mindfulness practices in higher education have gained popularity as an effective strategy for addressing students growing mental health concerns.²³ This trend is visible not only in Western educational systems but also worldwide, as universities recognize the critical role mental health and emotional intelligence play in academic success. While universities provide opportunities for academic growth, they also present significant mental and emotional challenges for students. Among the most common are depression, anxiety, and stress. The World Health Organization reported a significant increase in mental health disorders among young people, with university students being especially vulnerable due to academic pressures, financial stress, and the transition to adulthood. Furthermore, students today face what has been described as a crisis of meaning and a distorted sense of purpose.²⁴ The overwhelming influx of information from digital and social media has resulted in a generation struggling with an unstable sense of identity. Gen Z students experience higher levels of existential uncertainty, frequently struggling

²³ Barker et al (2021): 632; Dobkin & Hutchinson (2013): 769.

²⁴ Galla et al (2016): 297; Kinsella et al (2024): 03.

to find meaning in both their academic and personal lives. This problem is exacerbated by the emergence of the VUCA (Volatile, Uncertain, Complex, and Ambiguous) world, a term used to describe the unpredictable nature of modern global challenges. Mindfulness practices can alleviate these existential concerns by increasing present-moment awareness and decreasing rumination. Mindfulness can help students cope with stress, reduce anxiety, and improve self-awareness, thereby mitigating some of the negative effects of an uncertain world. Mindfulness can help people manage emotional turbulence by instilling a stronger sense of purpose and meaning, which is critical in combating the disconnection and uncertainty that many students face today.

3.2. Mindfulness practices models in higher education

A variety of mindfulness practice models are emerging in higher education, both formally and informally, reflecting a growing recognition of their value in academic settings.²⁵ For instance, universities can establish dedicated mindfulness centers, providing faculty and students with a supportive space to explore and cultivate mindfulness through workshops, meditation sessions, and guided practices. Additionally, promoting mindfulness-related research within academic institutions is a vital way to deepen understanding and foster innovation in this field. By encouraging interdisciplinary studies, universities can explore the impact of mindfulness on learning outcomes, mental health, and overall well-being, creating a strong foundation for evidence-based practices. The first case is The Thich Nhat Hanh Center for Mindfulness in Public Health at Harvard's T. H. Chan School of Public Health. The Center's primary goal is to promote mindfulness as a tool for improving global well-being, with a particular emphasis on evidence-based approaches to improving health outcomes through mindfulness practices. The Center's primary goal is to investigate mindfulness as a means of cultivating purpose, equanimity, and joy in people all over the world. In addition, the Center is dedicated to furthering scientific research into the effects of mindfulness on health, particularly in nutrition and environmental health. The Center's goal with this research is to generate insights that will help develop effective, scalable public health interventions. The Center is named after Thich Nhat Hanh (1926 - 2022), a global spiritual leader, Zen master, and peace activist whose groundbreaking work on mindfulness, compassion, and peace has had a worldwide impact. Thich Nhat Hanh's mindfulness teachings, which emphasize being fully present in the moment and cultivating nonjudgmental awareness, serve as the philosophical foundation for the Center's work. The Center strives to honor its legacy by carrying on its mission of promoting mindfulness as a means of fostering individual and collective well-being. The Center's research initiatives will include projects that integrate mindfulness practices into daily life, such as mindful eating and public space design. Furthermore, the Center will investigate the role of mindfulness in aging, with a focus on developing evidence-based programs to help people live healthier lives as they age. These initiatives are

²⁵ Tzelepi et al (2023): 209.

consistent with a growing body of research indicating that mindfulness can help improve both physical and mental health. Inspired by the progress made in cardiovascular health, the University of Oxford Mindfulness Research Centre envisions a similar trajectory for mental health. Over the next fifty years, they aim for a future free from the burden of depression - one in which everyone has the chance to thrive, supported by effective tools and resources. Their vision extends beyond treatment and into prevention, ensuring people can develop resilience and manage challenges before they escalate. Through a combination of research, teaching, training, and public engagement, the Centre is working toward a world where mental health is nurtured at every stage of life. Building on the success of Mindfulness-Based Cognitive Therapy (MBCT) for individuals prone to depression, the team has expanded its focus to diverse groups and settings, including those affected by health anxiety, people with cardiovascular disease, adolescents, new parents, teachers, and even prisoners. Their goal is to make MBCT more widely accessible, delivering measurable benefits and fostering well-being across populations. With support from grants and foundations, the Centre's research explores fundamental questions: how does mindfulness ease distress, encourage resilience, and allow individuals not just to cope but to truly flourish? By addressing these areas and testing MBCT's effectiveness in real-world contexts, they aim to refine and scale up interventions that can have a transformative impact on mental health worldwide. The Mindfulness Center at Brown pursues a core goal: to advance scientific understanding of how mindfulness influences health and then translate those findings into accessible, high-quality education. Its primary activities revolve around research and teaching. On the research side, the Center conducts rigorous, evidence-based studies that examine the impact of mindfulness on physical, mental, and social well-being. These findings guide its educational endeavors, which include developing and delivering mindfulness courses for Brown students, as well as creating programs and resources for broader communities. In addition, the Center focuses on implementation science to ensure mindfulness programs reach diverse populations, particularly those historically underrepresented or facing barriers to access. Through partnerships, grants, and philanthropic support, the Mindfulness Center works to make mindfulness training more affordable, thus reflecting its commitment to equity and inclusion. By interweaving robust research with hands-on education, the Center aims to nurture individual flourishing and contribute to healthier communities overall. Since its founding in 2017, the Center has secured \$39.3 million in funding from the National Institutes of Health (NIH), with an additional \$3.7 million contributed by foundations and philanthropists. During this same period, its faculty produced 106 peer-reviewed publications and authored four mindfulness-related books. The Center was established by leading researchers and educators who recognized a critical need for rigorous, methodologically sound mindfulness research and comprehensive education in the field. Today, it continues to bridge knowledge gaps, expand access to mindfulness practices, and empower individuals and communities worldwide, upholding its commitment to a healthier, more equitable future.

3.3. Zen Master Thich Nhat Hanh and mindfulness practices

Zen Master Thich Nhat Hanh has been instrumental in popularizing mindfulness practices as a method for spiritual healing and happy living, presenting it as an accessible and practical tool rather than a strictly religious concept.²⁶ Through his impactful talks, internship programs at universities and businesses, and the establishment of Plum Villages, he has simplified and modernized mindfulness, making it relatable and suitable for young people, particularly students. His approach has resonated globally, encouraging the integration of mindfulness into everyday life and fostering a deeper connection to well-being and inner peace. Thich Nhat Hanh's philosophy revolves around the concept of "interbeing" - the interconnectedness of all things.²⁷ This principle emphasizes the idea that everything, including humans, is fundamentally interconnected. Mindfulness allows people to develop a deeper awareness of their interconnectedness, which promotes compassion and empathy. Thich Nhat Hanh also emphasizes mindfulness of breathing as a fundamental practice, encouraging people to concentrate on their breath to anchor their minds and cultivate present-moment awareness.²⁸ His teachings argue that mindfulness should not be limited to meditation or formal practice but should pervade all aspects of life, including how we interact with others, manage stress, and approach learning. In higher education, mindfulness practices based on Thich Nhat Hanh's teachings can have a significant impact. The academic environment frequently causes significant stress, anxiety, and mental health issues among students, particularly in the face of deadlines, exams, and social pressures. Thich Nhat Hanh's practices, such as mindful breathing and walking, provide students with simple but effective stress-management techniques and emotional resilience training. Even brief mindfulness practices have been shown in studies to significantly reduce anxiety and stress, making them an important tool for students dealing with academic and personal pressures. Mindfulness programs inspired by Thich Nhat Hanh's teachings can be implemented in universities in a variety of ways. Many universities in the United States and Europe have already implemented mindfulness-based courses and programs, particularly in psychology, health, and wellness departments. Brown University, for example, provides mindfulness courses and workshops for students and faculty alike, with the goal of incorporating mindfulness into daily life. At Oxford University, mindfulness-based programs are available to assist students and faculty in developing emotional resilience and improving their academic and personal outcomes.

3.4. Mindfulness practices model for higher education in Vietnam

There is a growing need for a mindfulness practice model for universities in Vietnam to address the increasing mental health challenges faced by students. Drawing from international research and the teachings of Zen Master Thich

²⁶ Ling (2022): 336.

²⁷ Thich Nhat Hanh (2011): 52.

²⁸ Thich Nhat Hanh (2022): 18.

Nhat Hanh, this article proposes a mindfulness model tailored to the unique cultural and academic context of Vietnamese universities.

Table 1: A model of mindfulness practices for Vietnamese higher education

Activities	Objective	Activities	Benefits
Mindful breathing workshops	Help students manage stress, improve focus, and promote emotional well-being.	Teach mindful breathing techniques; practice breathing exercises in sessions.	Reduces stress, enhances focus, and promotes emotional well-being.
Mindfulness-based Counseling Services	Provide students with support for mental health challenges.	Offer mindfulness counseling using meditation, mindful listening, and self-reflection.	Reduces anxiety, improves emotional health, and offers support.
Mindful learning and study groups	Improve academic performance and concentration.	Integrate mindful breathing and focus exercises before study sessions.	Enhances focus, and improves academic performance.
Mindful walking and meditation breaks	Promote physical activity and mental clarity.	Conduct mindful walking sessions around campus, focusing on the present moment.	Reduces stress, improves focus, and fosters relaxation.
Compassionate listening and communication workshops	Develop empathy and enhance communication skills.	Train students in mindful listening, non-judgmental speech, and fostering understanding in conversations.	Fosters empathy, improves communication and creates a supportive environment.

Mindful- ness in leadership and pro- fessional develop- ment	Integrate mindful- ness into leader- ship training and emotional intelli- gence.	Teach mind- fulness for decision-mak- ing, emotional regulation, and compassionate leadership.	Enhances leadership skills, promotes emotional intelligence, and improves deci- sion-making.
Mindful- ness re- treats and immersion programs	Deepen mindful- ness practices and provide students with time to disconnect from academic stress.	Organize medi- tation sessions, nature walks, and group discussions on mindfulness and interbeing.	Reduces stress, deepens mind- fulness practice, and strengthens community.
Mindful art and creativity sessions	Provide a creative outlet for emotion- al expression and mindfulness.	Engage in mind- ful drawing, painting, or craft- ing while focus- ing on the present moment.	Encourages emotional expression, and fosters relaxation and mindfulness.
Faculty mind- fulness training	Equip faculty with mindfulness tools to manage stress and create a mindful classroom environment.	Offer workshops on mindful teach- ing, emotional regulation, and reducing stress through mindful- ness practices.	Reduces stress, enhances teaching, and improves class- room atmo- sphere.
Collabora- tive mind- fulness initiatives	Extend mindful- ness practices to the local commu- nity, fostering so- cial responsibility.	Partner with local organizations to offer mindfulness workshops and events.	It Strengthens community bonds and promotes social well-being.

First, it is critical to introduce mindful breathing workshops. These workshops aim to help students manage stress, improve focus, and promote emotional well-being. Universities can implement this by hosting regular workshops on mindful breathing techniques inspired by Thich Nhat Hanh’s teachings. These workshops could be scheduled during midterms and finals, giving students tools to stay grounded during times of high stress. The sessions can be short (20 - 30 minutes) and held during lunch or before class.

Second, universities can set up mindfulness-based counseling and support

services. The goal of this initiative is to give students a safe space to discuss mental health issues like stress, anxiety, and depression. Implementing this would entail developing mindfulness counseling programs that include meditation, mindful listening, and self-reflection to help students' emotional health. Trained counselors would incorporate mindfulness techniques into their sessions. These services can be provided in one-on-one or small group settings throughout the semester.

Third, universities could implement mindful learning and study groups to help students focus more on their studies and improve their academic performance. The goal is to increase concentration and engagement with the study material. To put this into action, practice mindfulness before studying or taking exams. Sessions may include exercises in mindful breathing and listening. Students could also participate in study groups that include brief mindfulness exercises before beginning their studies. These sessions could last 15 minutes and occur before group study sessions or lectures. Next, mindful walking and meditation breaks can be introduced. The goal is to promote both physical activity and mindfulness while also improving mental clarity. This initiative could include encouraging students to take slow, mindful walks around campus while focusing on their breathing and walking sensations. These sessions could be conducted individually or in groups. Each session would last approximately 10 - 15 minutes, preferably between classes or during breaks.

About compassionate listening and communication skills, workshops can be organized to promote empathy and effective communication among students, faculty, and staff. These workshops would be based on Thich Nhat Hanh's teachings about compassionate listening and mindful speech. The goal is to help students develop the ability to listen to others without passing judgment, resulting in a supportive learning environment. These workshops could be held regularly or as one-time events, particularly in conflict resolution and peer support contexts. Following this, mindfulness in leadership and professional development programs can be added to the university's offerings. The goal is to help students, particularly those in positions of leadership, incorporate mindfulness into their leadership training. This may include emotional intelligence, self-awareness, and deliberate decision-making. Students would learn to approach leadership with compassion and mindfulness, thereby developing their leadership and interpersonal skills. Monthly workshops or sessions could be incorporated into leadership development plans.

As a result, universities can organize mindfulness retreats and immersion programs. The goal is to deepen mindfulness practices and allow students to disconnect from academic pressures. These retreats could be weekend excursions or daylong immersion programs. Meditation, nature walks, and group discussions could be included as activities based on Thich Nhat Hanh's teachings of "interbeing" and mindful living. Retreats could be scheduled during semester breaks to provide students with a refreshing and transformative experience. Next, mindful art and creativity sessions can be offered to students

as a creative outlet for mindful expression. The goal is to allow students to participate in art therapy sessions, such as drawing, painting, or crafting, while focusing on the present moment and their inner thoughts. These sessions allow students to express their emotions and thoughts without being judged. They could be held weekly or biweekly and last 1 - 2 hours. Another significant initiative is faculty mindfulness training. The goal is to provide professors and academic staff with tools to manage stress and incorporate mindfulness into their teaching practices. Training sessions would concentrate on incorporating mindfulness into the classroom, such as mindful teaching techniques, stress reduction practices, and creating a mindful environment for students. These training sessions may be one-time or ongoing professional development workshops.

Finally, collaborative mindfulness initiatives with local communities can help spread mindfulness beyond the university and into the community. The goal is to provide mindfulness workshops or events for community members, promoting social well-being and connecting the university to the larger community. These community-based mindfulness programs could take place all year, with events open to both students and locals.

3.5. Process for mindfulness practices in Vietnamese higher education

To successfully integrate mindfulness practices into Vietnamese universities, a suitable approach is required. The process begins with identifying the needs of students, faculty, and staff in order to understand the specific challenges they face.²⁹ Based on these requirements, a curriculum tailored to mindfulness practices is developed. The next step is to train facilitators who will lead the programs, followed by a pilot program to test and improve the curriculum. Once the program has been tested, a full-scale launch can take place, with ongoing evaluation to determine its impact. Community engagement ensures that the benefits of mindfulness extend beyond the university, while the final stage focuses on the program’s sustainability and expansion for long-term success.

Table 2: A process for mindfulness practices in Vietnamese higher education

Step	Action	Description	Outcome
1. Needs assessment	Conduct surveys and focus groups with students, faculty, and staff.	Identify the mental health challenges, stress levels, and interest in mindfulness practices among students and faculty.	Gather data on the need for mindfulness practices and the areas where support is most needed.

²⁹ Gates & Gilbert (2016): 298; Sheinman & Russo-Netzer (2021): 613.

2. Develop a mindfulness curriculum	Design a mindfulness curriculum based on Thich Nhat Hanh's teachings.	Create modules on mindful breathing, compassionate listening, emotional regulation, and stress reduction. Define the length and format of each session (workshops, retreats, etc.).	A structured curriculum that aligns with Thich Nhat Hanh's teachings and meets the needs of the university.
3. Train facilitators	Select and train faculty and experienced mindfulness practitioners.	Provide training for staff, counselors, and faculty who will lead mindfulness sessions. Training includes understanding mindfulness, communication skills, and leading practices.	Empowered facilitators who can effectively lead and guide mindfulness sessions.
4. Pilot program	Run a pilot mindfulness program for a selected group.	Introduce mindfulness workshops and activities to a smaller group of students, faculty, or staff. Gather feedback to assess effectiveness and make adjustments.	Feedback from the pilot program to refine the curriculum and practices for broader implementation.
5. Full-scale implementation	Launch university-wide mindfulness programs.	Implement the mindfulness curriculum across various departments and for different groups (students, faculty, and administrative staff). Include workshops, study groups, and retreats.	A university-wide mindfulness program accessible to all students and staff.

6. Ongoing evaluation	Continuously assess the impact of mindfulness practices.	Use surveys, focus groups, and academic performance metrics to evaluate the effectiveness of the program. Assess changes in stress levels, emotional regulation, and academic performance.	Data-driven evaluation to measure the success of mindfulness programs and refine practices where necessary.
7. Community engagement	Extend mindfulness programs beyond the campus.	Partner with local organizations, offer public mindfulness events and engage students in community-based mindfulness initiatives.	Strengthened community engagement and extended mindfulness practice to the broader society.
8. Sustainability & Expansion	Ensure the long-term sustainability of mindfulness programs.	Secure funding, integrate mindfulness into the university's culture and expand mindfulness offerings (e.g., online resources, and faculty workshops).	A sustainable mindfulness program that continues to grow and evolve within the university system.

The challenges of implementing mindfulness practices in higher education have significant implications for how these programs are designed and integrated into university life. First, the perception of mindfulness as a religious practice may limit its acceptance among students, faculty, and administrators who do not see it as relevant to their academic or personal lives. This cultural and religious association may cause resistance, so mindfulness programs must emphasize the secular, mental health benefits of these practices. Reframing mindfulness as a tool for emotional regulation, stress management, and cognitive enhancement may help broaden its appeal and increase participation. The lack of physical space and tools for mindfulness activities creates practical challenges. Universities may need to invest in creating dedicated quiet spaces for mindfulness practices or find ways to incorporate mindfulness into existing spaces. This could include simple solutions like providing portable resources like guided meditation apps or online workshops, which would increase mindfulness accessibility without requiring a significant investment in physical infrastructure. The lack of knowledgeable and inspiring facilitators also reduces the effectiveness of mindfulness programs. To address this, universities may need to work with outside mindfulness experts or invest in training faculty,

staff, and students to become certified mindfulness instructors. This would ensure that the programs are led by experts who can guide students through their practice and support their growth in a meaningful way. Cultural barriers to mindfulness practice include a reluctance to open up emotionally or share personal experiences. To address this, mindfulness programs could be designed to be more culturally sensitive, with approaches that respect the student population's values and norms. Involving peer leaders or student ambassadors who are familiar with the culture can help bridge the gap and create a more welcoming environment for mindfulness practices. Finally, the fact that mindfulness is not yet regarded as important as academic knowledge and skill development suggests that mindfulness initiatives will require strong advocacy and support from university leadership. Raising awareness of the relationship between mental health and academic success is critical. By emphasizing the long-term benefits of mindfulness for student well-being and performance, universities can make a compelling case for incorporating mindfulness into their educational framework.

IV. CONCLUSION

This paper investigates the use of mindfulness practices in higher education, with a focus on Thich Nhat Hanh's teachings for developing compassionate, emotionally resilient, and well-rounded students. Today's university students face a variety of challenges, including academic pressure, mental health concerns, and a fragmented sense of purpose. Mindfulness, which focuses on present-moment awareness, compassion, and interconnectedness, provides a solution to these issues. According to research, mindfulness practices significantly reduce stress, anxiety, and depression while also increasing emotional intelligence and empathy. Thich Nhat Hanh's teachings, which include mindful breathing, compassionate listening, and the concept of interbeing, provide a strong foundation for students' personal development and academic success. Mindfulness training in universities has been shown to improve focus, emotional regulation, and interpersonal relationships. Mindfulness interventions are becoming more important in Vietnamese higher education, where students are under increasing academic pressure. By incorporating mindfulness into curricula, student services, and faculty training, universities can assist students in developing emotional resilience, stress management skills, and a stronger sense of purpose and interconnectedness. Furthermore, mindfulness can foster a culture of compassion and understanding, resulting in a supportive and inclusive campus environment. However, challenges to implementing mindfulness in higher education include its association with religion, limited resources, and a scarcity of trained facilitators. Furthermore, students' cultural resistance and the belief that mindfulness is secondary to academic skills may impede its adoption. Despite these limitations, viewing mindfulness as a secular practice for emotional well-being and academic success, as well as addressing cultural barriers, can help overcome these challenges.

BENEFITS OF MINDFULNESS FOR COLLEGE STUDENTS OVERCOMING STRESS AND IMPROVING CONCENTRATION

Arby Ama Jayanto*

Abstract:

Academic stress is a major challenge faced by students due to high task loads, environmental expectations, and limited academic resources. If not managed properly, this stress can have a negative impact on mental health, decreased motivation to learn, and decreased academic performance. One approach that has been proven effective in coping with academic stress is mindfulness. Mindfulness helps students increase mindful awareness of their mental and emotional states, reduce anxiety, and improve concentration in learning. This concept also has a basis in the teachings of the Satipaṭṭhāna Sutta which emphasises awareness of the body (*kayanupassana*), feelings (*vedanupassana*), thoughts (*cittanupassana*), and mental phenomena (*dhammanupassana*). By applying mindfulness in learning, students can better manage academic stress adaptively, improve mental well-being, and create a healthier and more productive academic environment.

Keywords: *academic, stress, mindfulness, students, mental.*

I. INTRODUCTION

Education is the foundation of the nation's development, this makes education a central thing for a country. According to Law No. 20 of 2003 concerning the education system, the purpose of national education is to develop the potential of students to become human beings who have faith and devotion to God Almighty, have noble character, are healthy, knowledgeable, capable, creative, independent and become democratic citizens who are also responsible according to (Desi Pristiwanti, 2022). (Aminudin, 2024).

* Sekolah Tinggi Agama Buddha Negeri Raden Wijaya Wonogiri Indonesia.

Education is an effort to eradicate ignorance and fight poverty in the nation's life, improve the standard of living of all levels of citizens, and the nation, therefore the government is trying to pay serious attention to overcoming various problems in the field of improving education ranging from primary, secondary, to tertiary levels. Although education plays an important role in building the quality of human resources, high academic pressure in the education system often has a negative impact on students' well-being. Heavy academic loads, curriculum demands, and high expectations from the surrounding environment can lead to prolonged academic stress.¹

Based on the explanation above, education has an important role in shaping character and preparing students for their role in the future. However, academic pressure often makes students experience academic stress and there are even many suicides committed by students caused by stress. Academic stress is a condition of mental tension experienced by students when they are faced with difficulties in academics. There are several factors that cause academic stress, such as high academic expectations, difficulty in studying, limited resources, and lack of time management skills (Lampe, Luisa Charlotte & Müller-Hilke, Brigitte, 2021). In Indonesia, academic stress found especially among students is often caused by the expectations set by parents, teachers, and society. Academic stress is often normalised as a pathway to success and future career opportunities (Firth AM, Cavallini I, Sütterlin S, Lugo RG, 2019). Academic stress is often considered a normal part of the educational process. However, if left without proper coping mechanisms, it can develop into serious academic stress. Many students experience mental strain due to task load, parental expectations, and intense academic competition.

Based on data taken from the Asean Professor Journal in WHO (2019). The percentage of students who experience stress due to academic load globally reaches 38 - 71%, while the data on the percentage of academic stress in Southeast Asia is 39.6 - 61.3%. According to (Kemenkes RI, 2019) the academic stress rate in Jakarta reached an achievement of 89.6%. With the data above, academic load has a high percentage of causing student academic stress.

Prolonged academic stress can cause students to experience anxiety, depression, and even burnout which may have an impact on students' mental health. In addition to impacting mental health, academic stress also has consequences for students' physical health. Students who experience severe stress often experience sleep disturbances and headaches. In addition, prolonged academic stress can reduce motivation to learn, making students lose interest in their studies and have difficulty in understanding the material. Another important impact is how academic stress affects social relationships. Students who are overly stressed with academic tasks tend to withdraw from their social environment, reduce interaction with peers, and even experience interpersonal conflicts due to the pressure they experience.

¹ Desi Pristiwanti, 2022; Aminudin, 2024.

Prolonged academic stress has a great negative impact. Depression due to academic burden is likely to make someone attempt suicide. Currently, there are several suicide cases committed by students due to depression, such as the suicide case committed by a student from one of the universities in Malang. The student with the initials MAS (24) who was desperate to throw himself into the Brantas River due to depression. It is known that this was done because the thesis was not over (Aminudin, 2024).² A similar case also occurred by a 5th semester student of the Industrial Engineering faculty at one of the private campuses in Yogyakarta with the initials KAM (20). The victim was desperate to commit suicide by drinking poison that he ordered online, this is strongly suspected to be caused by the victim experiencing stress due to coursework, this is supported because before the incident the victim had told his family and admitted that he was experiencing pressure due to coursework (Kusuma, 2021). This case proves that academic pressure can cause stress and depression which allows a person to attempt suicide.

In addition, the stress experienced by students due to academic pressure also leads to a decrease in student academic achievement. This is supported by data described by (Rosanti, 2022) Based on research conducted, 69.7% of students experienced academic stress in the high category, which can be seen from four main aspects, namely physical, emotions, thoughts, and behaviour. Physical symptoms such as trembling, cold sweat, headache, and palpitations (68.9%) showed obstacles in the learning process. In addition, 60.3% of learners had difficulty managing their emotions, which impacted on concentration and social interactions, while 68% had difficulty concentrating while learning, leading to decreased understanding of material and academic performance. Negative behaviours such as teasing friends (80.5%) contribute to an uncomfortable school atmosphere. All of this shows that high academic loads can trigger stress, which ultimately leads to a decline in students' academic performance. To overcome the negative impact of academic stress, strategies are needed that can help students manage pressure better. One approach that has proven effective in reducing academic stress is mindfulness. By applying mindfulness, students can focus more on facing academic challenges without being burdened by excessive pressure.³

The impacts caused by this academic burden can be overcome by implementing mindfulness or mindfulness in learning. This is supported by research conducted by (Oki Hidayat, 2018) the results of this study show that mindfulness plays a role in reducing academic stress, especially in the dimension of academic stressors. Mindfulness can predict 13.9% of the dimensions of academic stressors ($r^2 = 0.139$, $f = 12.936$, $p = 0.001$). Mindfulness is an approach that can help students deal with academic stress more effectively. By applying mindfulness, students can train themselves to stay focused on academic tasks without being distracted by external pressures.

² Aminudin, 2024.

³ Rosanti, 2022.

mindfulness also helps students manage negative emotions and thoughts that arise due to heavy academic loads.

In religious teachings mindfulness is a practice of focussing attention on what one is doing, feeling or thinking. In Buddhism mindfulness itself is closely related to attention or in Pali it is called 'sati'. Usually when practising mindfulness one will focus on four contemplations, namely; contemplation of the body (*kayanupassana*), contemplation of feelings (*vedananupassana*), contemplation of consciousness (*cittanupassana*), and contemplation of thought forms (*dhammanupassana*).

'Uṭṭhānavato satimato, sucikammassa nisammakārino. Saññatassa ca dhammajīvino, appamattassa yaso'bhivaḍḍhati'ti'.

'One who is energetic, always aware, pure in action, possesses self-control, lives in accordance with the Dhamma and is always vigilant, happiness will increase'.⁴

The above quote from the Dhammapada also teaches that the application of mindfulness can lead one to happiness. Therefore, mindfulness can be a useful practice for students in coping with academic stress. In addition, the application of mindfulness can also improve students' concentration in learning, which in turn can support the improvement of academic performance. This article will discuss how mindfulness can help students manage academic stress and improve concentration in learning. By understanding the benefits of mindfulness, students are expected to deal with academic stress in a healthier and more productive way. Therefore, with the adverse effects that will arise when experiencing academic stress, the author created an article entitled 'The Benefits of Mindfulness for College Students: Overcoming Stress and Improving Concentration' to elaborate on the role of Mindfulness in overcoming academic stress and improving concentration in university students.

II. METHODOLOGY

This research uses a qualitative method which is an approach that uses narratives or words to. According to (Waruwu, 2023) Qualitative research is descriptive and analytical research. Descriptive in qualitative research means describing and describing the events, phenomena and social situations studied. Analysis means interpreting and interpreting and comparing the research data.⁵

The method used in writing this article is the library research method. This literature review method is a method of collecting data by finding information from various sources such as; books, journals, articles, news, and others.

III. RESULTS AND DISCUSSION

3.1. Academic stress in students

Stress is what a person often experiences when he feels depressed and experiences tension. Academic stress is a feeling of pressure commonly

⁴ Dhammapada, Chapter II: Appamada Vagga, 24.

⁵ Waruwu, 2023.

experienced by students either physically or emotionally, which is usually due to academic demands given by lecturers or parents who want good learning outcomes. Completing assignments on time, no direction in doing homework assignments and an uncondusive classroom atmosphere (Mulya, Hantoro Adhi & Indrawati, Endang Sri, 2016). Academic stress is pressure that arises due to various triggering factors in the educational environment (academic stressors). These factors include various aspects of the teaching-learning process, such as pressure to improve grades, study duration, cheating habits, the number of assignments, test scores, bureaucratic systems, competition for scholarships, decision making regarding majors and careers, anxiety during exams, and challenges in time management (Nur Rulifatur Rohmah & M. Mahrus, 2024).⁶

According to research conducted by Ambarwati, Putri Dewi, Pinilih, Sambodo Sriadi & Astuti, Retna Tri (2017) that final-year students experience academic stress with varying degrees, namely 35.6% in the mild category, 57.4% in the moderate category, and 6.9% in the severe category. The emergence of academic stress is caused by increasing responsibility in completing more and more academic tasks. Academic stress is also caused by several factors, including internal and external factors. The following are the factors that cause academic stress according to the data above;

3.2. Internal factors

Internal factors are factors that arise from within the individual, academic stress can also be caused by several internal factors in a person, here are some internal factors that may cause academic stress;

3.2.1. Lack of skills in time management

Students who have difficulty managing time between lectures, assignments, organisations, and personal life often experience pressure due to accumulated work. The habit of procrastination further worsens the situation because they have to complete many tasks in a limited time, which ultimately increases the mental burden

3.2.2. Students' ability to manage academic pressure

Students who do not have good coping strategies often feel overwhelmed in facing the challenges of lectures, so they easily experience stress. They may experience feelings of helplessness, lack of confidence, or even give up before trying. If there is no support or effective strategies to deal with pressure, academic stress can develop into more serious anxiety.

3.2.3. Students' physical and mental condition

Students who experience sleep deprivation due to staying up late to complete assignments or studying for exams tend to experience fatigue, which can reduce their concentration and productivity. Poor diet and lack of physical activity can also contribute to increased stress. In addition to physical factors,

⁶ Nur Rulifatur Rohmah & M. Mahrus, 2024.

mental health such as anxiety, depression, or low self-confidence can also exacerbate academic stress experienced by students.

3.3. External factors

External factors are also one of the causes of someone experiencing academic stress. Factors that include; high academic demands, high expectations from the surrounding environment, and limited resources can cause someone to experience stress.

3.3.1. High academic demands

Students are required to face many assignments, projects, and exams that must be completed within a limited time. This academic burden gets heavier when students have to do a thesis or final project that requires a lot of research and intensive guidance. Unfortunately, not all students get enough academic support from their lecturers or educational institutions, so they have to struggle alone in completing these tasks. This academic pressure often causes students to feel overwhelmed and lose their enthusiasm for learning.

3.3.2. High expectations from parents, lecturers, and society

Many students feel burdened by the expectations of their parents who want them to get high grades or complete their studies according to predetermined targets. In addition, lecturers also often have high expectations of student learning outcomes, which can make them feel that they must always give their best without mistakes. Not only that, but society often uses academic success as a measure of one's success, which further increases the pressure on students. They feel they have to meet the standards set by their environment, which, if not achieved, can lead to a deep sense of failure and stress.

3.3.3. Limited academic resources are also a cause of stress for students

Some students experience difficulties in accessing books, journals, or academic references needed to support their learning. Lack of lecturer guidance in completing assignments or research is also a big obstacle in students' academic process. Not only that, inadequate campus facilities, such as the lack of comfortable study rooms or well-equipped laboratories, can worsen students' learning experiences and add to their academic burden,

The academic stress experienced by students is the result of an interaction between internal factors, such as lack of time management skills and inability to manage academic pressure, and external factors, such as high academic demands and expectations from the social environment. This condition not only impacts students' mental well-being, but also has the potential to significantly reduce their motivation to learn and academic performance. Therefore, the application of mindfulness in learning is a relevant and effective approach in helping students manage academic stress, improve concentration, and strengthen their mental resilience in facing various academic challenges.

3.4. The role of mindfulness in coping with academic stress

Mindfulness is a strategy to deal with academic stress by being aware,

focusing, and remembering to stay focused without getting caught up in anxiety, thus helping students to be calmer and concentrate on learning. According to a statement from Saraswati (2022). Mindfulness mediates the relationship between academic stress and psychological well-being. More mindful students have the ability to manage stress by reducing negative perceptions of stressors. (Setianingrum Prima Intan, Prima Intan Ratna Sari, Risma Ayu Sulityowati, Noer Aini Eldi & Muhammad Ilham Wakita, 2025). Mindfulness acts as a partial mediation which is an important foundation for creating more effective strategies in helping students manage stress.⁷

Mindfulness can be applied in various aspects of students' academic life. One example is by applying mindful breathing techniques before an exam or presentation. By taking a few slow deep breaths and focusing on the flow of the breath, students can calm themselves down and reduce excessive anxiety. In addition, mindfulness can also be applied to study habits, for example by applying mindful studying techniques, where students are completely focused on one task without being distracted by social media or other thoughts. This technique not only improves concentration, but also makes the learning process more efficient. Even in everyday activities such as eating and walking, mindfulness can be applied to help students be more aware of their bodies and reduce unnecessary stress.

The effectiveness of implementing mindfulness in overcoming stress can be seen from research conducted by (Oki Hidayat, 2018). The study was conducted on 82 students consisting of female (72%) and male (28%) respondents and showed that mindfulness has a significant role in reducing academic stress, especially in terms of how students perceive academic pressure. Statistically, mindfulness was able to predict 13.9% of academic stressors ($R^2 = 0.139$, $F = 12.936$, $p = 0.001$). Each one-point increase in mindfulness score contributed to a -0.308 decrease in academic stressor score. The data can be interpreted that mindfulness helps students to regulate emotions and improve concentration in dealing with academic pressure. Students who are more mindful tend to be more aware of their own emotional state, so they can manage stress better. For example, mindful students are more likely to use breathing techniques or meditation to calm themselves down before a stressful situation, such as a presentation or exam. They are also likely to be more reflective and less likely to react impulsively to stress, so they can deal with it more adaptively and less easily overwhelmed.⁸

In Buddhism, it is explained that everything that appears is spearheaded by the mind, this is found in the *Dhammapada* chapter Yamaka Vagga, which reads; 'the pioneer mind, the shaping mind, the mind is the leader.'⁹ The quote explains that everything that happens is spearheaded by the mind. For

⁷ Setianingrum Prima Intan, Prima Intan Ratna Sari, Risma Ayu Sulityowati, Noer Aini Eldi & Muhammad Ilham Wakita, 2025.

⁸ Oki Hidayat, 2018.

⁹ *Dhp I*, Yamaka Vagga, 1.

example; when a student experiences academic depression and stress because he thinks that he is unable to complete his academic assignments. Buddhism also teaches that by having attention and vigilance a person can control their mind, this can be written in the Dhammapada chapter Apamada Vagga which reads; 'With vigilance and fortitude, with patience and self-control, the wise man makes himself like an island that cannot be drowned by floods'.¹⁰ The Dhammapada quote teaches that by developing mindfulness and alertness one can control their thoughts, especially negative thoughts that might cause stress and depression.

In Buddhism, more precisely in the *Satipatṭhāna Sutta* found in the Majjhima Nikaya group; 10. In the *sutta*, mindfulness is referred to as *sati*, which means full awareness of present experience, without being attached to or rejecting anything that arises in the mind and body. This practice allows one to see things as they really are, without being influenced by illusions or excessive emotional reactions. The *Satipatṭhāna Sutta* explains that mindfulness can be developed through four main foundations, namely the body (*kaya*), sensations or feelings (*vedana*), thoughts (*citta*), and mental phenomena (*dhamma*).

3.4.1. *Kayanupassana*

Academic stress has an impact on the body, causing muscle tension, headaches, poor sleep, or even indigestion. With mindfulness of the body, one is taught to be aware of the physical feelings that arise due to stress.

For example, when a student experiences tension before starting an exam, it can start with being aware of his or her breathing (*Anapanasati*). By focusing on the in and out of breath, the body naturally becomes more relaxed, the heart rate slows down, and tension is reduced. In addition, being aware of posture and movement also helps to reduce unconscious stress, such as clenching your fists when anxious or slouching too long when studying.

Through conscious practice of body contemplation, students can be more sensitive in recognising early signs of stress before they develop into more serious health problems. Awareness of the body allows them to identify physical or emotional changes that indicate psychological distress. In addition, students can also utilise breathing and stretching techniques as a strategy to relieve tension arising from hectic academic activities. By breathing regularly and doing light stretching movements, the body becomes more relaxed, so that muscle tension and mental stress can be reduced. Not only that, this exercise also helps students maintain full awareness while undergoing various activities, such as writing or reading. Thus, they can be more focused and calm in completing academic tasks without being distracted by wandering thoughts or excessive pressure.

3.4.2. *Vedanupassana*

In the academic world, one often experiences various emotions such as frustration due to difficulty in understanding the material, anxiety before

¹⁰ *Dhp* II, Apamada Vagga, 25.

exams, or even joy when getting high grades. Mindfulness of feelings teaches one to realise and accept those feelings without overreacting.

When facing academic stress, one can apply *Vedanupassana*, which is feeling awareness, as a way to manage emotions more wisely. The first step is to recognise the emotions that arise during the learning process or when facing an exam. Feelings such as fear, anxiety or frustration often arise in demanding academic situations, so it is important to be aware of their existence without reacting to them immediately.

Furthermore, one needs to understand that negative feelings are temporary and need not be clung to. For example, anxiety before an exam may arise momentarily, persist for some time, and then slowly dissipate. By realising that emotions come and go like waves, one can avoid getting caught up in them and maintain clarity of mind.

As a final step, it is important to neutralise feelings by accepting them without suppressing or venting them to others. One way is to talk to yourself mindfully, for example by saying to yourself, 'Right now I am feeling anxious, and that is normal. I am just observing this feeling without being dragged down by it.' This approach helps one to stay calm and better manage academic stress with a more balanced and mindful attitude.

3.4.3. *Cittanupassana*

The main cause of academic stress is uncontrollable thoughts. For example, a college student facing a large assignment may think, 'I won't be able to finish it,' or 'I'm bound to fail.' These thoughts are often more distracting than the task itself.

Cittanupassana teaches one to observe their state of mind more clearly and objectively, without getting caught up in worries or negative thought patterns. In the academic world, this practice can be applied by raising awareness of the thought patterns that arise during the learning process or when facing academic pressure. One needs to be aware of how one's mind reacts to challenges, whether it is filled with confidence or anxiety and doubt.

In addition, it is important to distance oneself from the negative thoughts that arise so as not to get lost in the disturbing emotions. One way to do this is by reminding yourself that thoughts are just thoughts, not a reality that should always be believed or responded to excessively. By saying to yourself, 'This is just a thought. I don't have to believe them or react to them,' one can develop a calmer demeanour and not be easily carried away by unsupportive thoughts.

To further balance the mental state, focusing on the task at hand is an important step in maintaining peace of mind. Instead of allowing oneself to be distracted by unnecessary worries, one can practice mindfulness of the learning process or academic work being done. In this way, the mind becomes more purposeful, resulting in increased productivity and better management of academic pressure.

3.4.4. *Dhammanupassana*

Dhammanupassana teaches one to observe the law of cause and effect

in one's mental life. In the academic context, one can realise that stress is not something that happens randomly but is the result of mental habits and reactions to situations.

For example, a student who constantly procrastinates his assignments may realise that this stems from the habit of avoiding discomfort. By understanding this mechanism, he can begin to develop new, healthier habits, such as managing his time better and working gradually without feeling overwhelmed.

Dhammanupassana also includes an understanding of the five mental hindrances (*nīvaraṇa*), which often become obstacles to learning and academic achievement. One such hindrance is laziness and sluggishness (*thīna-middha*), which is often the main cause of procrastination and lack of motivation in completing tasks. When one experiences this condition, studying becomes a chore and it is difficult to get started, resulting in decreased productivity.

Doubt (*vicikicchā*) is also a challenge in academia. Thoughts filled with questions such as, 'Am I smart enough?' or 'Can I complete this task?' can inhibit one's action and actually reinforce a sense of insecurity. This uncertainty can make individuals hesitant to take action, hindering progress in learning.

Another obstacle that often arises is restlessness (*uddhacca-kukkucca*), which is a condition in which one constantly feels anxious about their academic results. Excessive worry about grades, exams or high expectations can disrupt concentration and make it difficult to focus on the task at hand. As a result, instead of improving academic performance, this anxiety can potentially reduce learning effectiveness.

By understanding and being aware of these mental barriers, one can more easily recognise them and develop strategies to overcome them. Through the practice of mindfulness, individuals can learn to deal with each obstacle more wisely, resulting in a smoother and more effective learning process.

3.5. Challenges in implementing mindfulness in learning

Mindfulness is a practice that can be implemented in learning. The application of mindfulness has a good impact on both educators and students, especially in this day and age where many are stressed due to heavy academic demands. However, the application of mindfulness in learning still has its challenges. According to Saputro et al. (2023), the implementation of mindfulness also faces various challenges. Many teachers and principals still do not fully understand the benefits of mindfulness, both for themselves and for students. Generally, teachers who understand the concept of mindfulness are those who have undergone specialised training.¹¹ The limited number of professional trainers or teachers trained in mindfulness is one of the barriers to implementation in schools. In addition, the large amount of work that teachers have to do leaves them with no time to train, prepare, and implement mindfulness into learning.

In addition to structural challenges, mindfulness implementation also

¹¹ Saputro et al., 2023.

faces barriers from individual and social aspects. One of the main challenges is the lack of consistency in practice. Many students try mindfulness for a short period of time, but struggle to make it a habit. This is due to the lack of understanding of the importance of continuous practice in mindfulness. In addition, the lack of support from the surrounding environment is also a hindering factor. In many cultures, including in Indonesia, academic success often takes precedence over mental well-being. As a result, students who try to practice mindfulness may not get support from family or friends, as it is considered a waste of time or irrelevant to academic success.

In the opinion of Yani (2024), there are challenges in implementing mindfulness in learning this includes:¹²

3.5.1. Time constraints and academic pressures

Mindful and mindful learning takes somewhat longer than traditional teaching methods. Teachers often feel more pressure to complete all the material according to a tighter curriculum, making it harder for them to make time for more mindfulness-focused activities or more meaningful projects.

3.5.2. Limitations of curriculum and educational structure

More rigid standardised curricula often do not provide enough space to practise more flexible approaches such as mindful and meaningful learning. Curricula that focus more on achieving academic competency standards often give less priority to mental wellbeing or life skills development, which are at the core of mindfulness learning.

3.5.3. Resistance from teachers and students

As teachers often feel unsure or uncomfortable with the concepts of mindfulness and meaningful learning, especially if they have never been trained in these methods, some students also often find it difficult to follow mindfulness techniques or do not see the relevance of meaningful learning if they are not used to more structured traditional methods.

3.5.4. Lack of resources and training

More effective implementation requires training for teachers as well as more supportive resources, such as teaching materials and tools for mindfulness. Without this support, it is often difficult to optimally implement these methods in the classroom.

3.5.5. Evaluation and measurement of learning outcomes

To evaluate mindfulness learning can be challenging as its success cannot be seen in academic scores. Its impact often encompasses aspects that are difficult to measure such as improved mental wellbeing, student engagement, or social skills.

The application of mindfulness in education does face various challenges that require strategic solutions in order to be effectively implemented in learning. One of the main obstacles is the lack of understanding and skills in

¹² Yani, 2024.

implementing mindfulness in the classroom. Many teachers and principals do not have sufficient insight into the benefits and techniques of mindfulness in learning. mindfulness techniques in learning. Therefore, efforts are needed to improve teachers' competencies through specially designed training programmes and seminars, training programmes and specially designed seminars. In addition, building a learning community for educators can be an effective strategy in sharing experiences and best practices, so that mindfulness can be applied more optimally in learning. In addition to limited understanding, time constraints time is also a factor that hinders the implementation of mindfulness in the learning process. The heavy curriculum load often makes it difficult for teachers to incorporate mindfulness practices in learning activities. One of the approach is to integrate mindfulness into the classroom routine without reducing learning time. Into the classroom routine without reducing learning time. For example, before start the lesson, students can be invited to do breathing exercises or a short reflection to improve their focus and readiness to receive the material. In this way, mindfulness can become a part of learning that can improve concentration

The rigid curriculum structure is also an obstacle in implementing mindfulness practices in learning. Learning systems that are more orientated towards academic achievement often do not provide space for activities that focus on students' mental well-being. To overcome this problem, a more flexible policy is needed, where mindfulness can be incorporated in various subjects. For example, in physical education, students can be encouraged to be more aware of their body movements, while in art subjects, they can be trained to be more focused and enjoy the process of creating with mindfulness. With this approach, mindfulness can become part of a more holistic learning process without having to drastically change the curriculum.

Resistance from teachers and students is also a challenge in implementing mindfulness. Many educators feel less confident in teaching mindfulness techniques because they have never received training before. Similarly, students who are used to conventional learning methods may feel that mindfulness is irrelevant to their learning activities. To overcome this resistance, mindfulness can be introduced gradually with more engaging and interactive methods. For example, teachers can start with mindfulness-based games or simple breathing exercises in a fun atmosphere. This way, both teachers and students will be more open to the benefits of mindfulness.

Another factor to consider is the availability of adequate resources and support. Effective implementation of mindfulness requires teaching materials, tools, and training that meet the needs of teachers and students. To fulfil these needs, an educational institution can collaborate with professional institutions or mindfulness experts to provide more comprehensive resources. In addition, the use of technology, such as mindfulness apps or digital modules, can also be an alternative to assist teachers in implementing these strategies in the classroom more efficiently.

Another important challenge is the method of evaluating the success of

mindfulness in learning. Unlike academic subjects that can be measured through test scores, the impact of mindfulness is more subjective and relates to students' mental well-being and engagement in the learning process. Therefore, the evaluation methods used need to be more flexible and holistic, for example through reflection journals, behavioural observations, or interviews with students and teachers.

With this approach, the benefits of mindfulness in improving students' psychological and social well-being can be better measured and recognised as an integral part of education.

With these strategic steps, mindfulness can be applied more effectively in education. Improved teacher understanding, curriculum flexibility, and adequate resource support will contribute to learning that focuses not only on academic achievement, but also on students' mental and emotional well-being. As such, mindfulness can be a supportive approach to learning that may lead to improved student academic achievement.

IV. CONCLUSION

Academic stress is a major challenge for university students due to heavy workload, high expectations, and lack of stress management skills. If not managed properly, academic stress can negatively impact students' mental health, academic performance, and social well-being. One method that has proven effective in coping with academic stress is mindfulness. This practice helps students increase awareness of their mental and emotional states, reduce anxiety, and increase focus in learning. Various studies have shown that mindfulness can significantly reduce academic stress and help students deal with academic pressure more adaptively.

The concept of mindfulness also has a basis in the teachings of the Satipaṭṭhāna Sutta, which teaches mindfulness of the body (*kayanupassana*), feelings (*vedanupassana*), thoughts (*cittanupassana*), and mental phenomena (*dhammanupassana*). By understanding this concept, students can better manage negative emotions and thought patterns that arise due to academic pressure. However, the application of mindfulness still faces challenges such as lack of understanding, curriculum limitations, and resistance from students and educators. Therefore, educational institutions need to play an active role in promoting mindfulness through training, policies, and integration in the learning system. Mindfulness is not just a theory, but a skill that can be practised. By getting used to applying it in academic life, students can deal with academic pressure more calmly, improve concentration, and create a healthier and more productive learning environment.

THE EFFECT OF MINDFULNESS ON STRESS REDUCTION STUDENTS IN SEKOLAH TINGGI AGAMA BUDDHA NEGERI RADEN WIJAYA WONOGIRI INDONESIA

Erma Widyastuti*

Abstract:

The university period is an adaptation stage for students facing academic, social, and personal challenges. Academic pressures, social demands, and parental expectations can trigger academic stress, negatively affecting students' mental health, productivity, and life balance. One method that can be used to cope with stress is mindfulness, which is a mindfulness practice that focuses on awareness of thoughts and emotions without judgment. STABN (Sekolah Tinggi Agama Buddha Negeri) Raden Wijaya Wonogiri, as a faith-based educational institution, has a unique academic environment where students are expected to excel academically and apply spiritual principles in their daily lives. Therefore, it is crucial to understand how mindfulness can help reduce academic stress among students. Mindfulness is efficacious in improving mental well-being, reducing anxiety, and improving focus and concentration. In addition to the psychological benefits, mindfulness also impacts the physiological aspects by lowering the levels of stress hormones such as cortisol. This study aims to review the literature on the impact of mindfulness on reducing student academic stress, especially at STABN Raden Wijaya Wonogiri. This literature analysis is expected to provide an in-depth understanding of the effectiveness of mindfulness in dealing with academic stress and become a reference for educational institutions in designing mindfulness-based programs to help students manage stress better. In addition, this study can also be the basis for further research related to the application of mindfulness in various aspects of students' lives to improve their overall quality of life.

* Sekolah Tinggi Agama Buddha Negeri Raden Wijaya Wonogiri Indonesia.

Keywords: *Mindfulness, students, stress, reduce.*

I. INTRODUCTION

The lecture period is the beginning of students' adaptation to changes in academic, social, and personal activities. During this period, students must face various challenges, such as developing academic abilities, managing time wisely, and balancing personal and social life. These demands cause students to experience academic stress.

Academic stress is something students at STABN Raden Wijaya Wonogiri often experience. Academic pressure, social demands, and parental expectations influence the stress level in the college environment. Students are usually faced with various educational and non-academic assignments, deadlines, and busy lecture schedules, and perform well academically and socially; changing the environment from home to the lecture environment can be a significant source of pressure. If left unchecked, this stress can harm students' academic performance, mental health, productivity, and physical well-being. Not infrequently, this poorly managed stress can cause various health problems, such as fatigue, sleep disorders, anxiety, laziness in activities, and depression. Therefore, multiple strategies to reduce stress are needed to maintain students' mental and physical health.

One of the methods commonly used to cope with stress is mindfulness. Mindfulness is also referred to as the practice of mindfulness practice and the process of observing the in-breath and out-breath¹. In practice, mindfulness involves focusing on thoughts and emotions. One of the goals of mindfulness practice is to improve students' ability to focus on their attention to stay calm and awake in any situation. Familiarising oneself with what it feels like to be more aware and improving the ability to maintain focus fully and control is this technique's most important part.

STABN Raden Wijaya Wonogiri is a religious-based higher education institution with a different academic environment. Students on campus are expected to excel academically and apply spiritual principles in their daily lives. However, it is important to understand how mindfulness can help STABN Raden Wijaya Wonogiri students reduce stress, as they face many challenges that can cause stress, both academically and socially.

Mindfulness has been widely researched in various populations, but research explicitly addresses its impact on college students' academic stress. Most studies have focused on the general or working population. However, those that specifically address its impact on university students have specific characteristics, such as facing increasing academic pressure and having different levels of responsibility to others. Consequently, a thorough analysis is required to understand how mindfulness can be best applied in these situations.

Various perspectives have shown that mindfulness positively impacts

¹ Sugata et al., 2022.

university students' mental and psychological health. Mindfulness helps reduce stress and enhances the ability to manage emotions, improve focus and concentration, and increase a sense of calm and comfort². In the academic context, mindfulness can help students cope well with academic pressure, improve their ability to manage emotions, and reduce excessive anxiety levels about assignment targets; thus, mindfulness can be an effective strategy for students to deal with various challenges they face during lectures.

In addition to its benefits to mental health and stress management, mindfulness has also been shown to impact a person's physiological aspects. Mindfulness can reduce the intensity of stress hormones such as 'cortisol,' reduce emotional tension, and increase responsiveness in the body³. Therefore, mindfulness is a very relevant method to be applied in the lives of university students to help them manage stress and maintain a balance of mental and physical health.

This study aims to gather literature on how mindfulness reduces academic stress in university students. To achieve this goal, it will analyze several relevant studies to find the mechanisms responsible for mindfulness's ability to reduce stress. This study's primary focus is mindfulness's effect on stress reduction in Stabn Raden Wijaya Wonogiri students. Students at this institute, like students in general, face various academic and social pressures that can impact stress levels.

Hopefully, this literature review will provide a deeper understanding of mindfulness's benefits for university students. It aims to emphasize how effective mindfulness is in reducing academic stress and provide guidance on how to do so. Therefore, the results of this study are expected to be an important reference for policies in building a healthier and more supportive learning environment for students.

In addition, it also has the potential to provide insights for lecturers, educators, and others within the institution in designing mindfulness-based programs that can help students cope effectively with academic stress. With a deeper understanding of the benefits of mindfulness, educational institutions can coordinate this practice with students' habits so that students can develop better stress management during the recovery period.

Furthermore, it can serve as a basis for research that focuses on applying mindfulness in various aspects of student life, not only in academic contexts but also in social and emotional life. With the increasing challenges students face in this modern era, a holistic and evidence-based approach such as mindfulness is becoming increasingly relevant in helping students achieve a better quality of life.

Thus, this research is expected to have a real impact on efforts to improve the quality of life of students, both mentally, emotionally, and academically.

² Dika & Widyana, 2024.

³ Robinson, 2024.

The conclusions obtained can later be used as a basis for designing educational policies that focus more on reducing stress in students and mental health so as to create a learning environment that is more supportive, inclusive, and able to support optimal student development.

II. RESEARCH METHOD

According to Creswell John, this research uses a literature study method to analyze the effect of mindfulness on reducing academic stress in STABN Raden Wijaya Wonogiri students. W.⁴, a literature review is a collection of articles from journals, books, and other documents that explain current theories and information and organize the literature into the necessary topics and documents.⁵ literature review is a search and research by reading various books, journals, and other publications related to the research topic to produce writing regarding a particular topic or issue.⁶ defines literature review as a description or description of the literature relevant to a particular field or topic, which provides a review of what has been discussed by other researchers or authors, including theories, hypotheses, research problems, and methodologies used.

This study's approach is descriptive qualitative, which aims to provide an in-depth understanding of mindfulness's effectiveness in reducing academic stress. Through this approach, the research focuses on extracting information from various sources to understand the relationship between mindfulness and academic stress and how this practice can be applied to students in faith-based universities.

The data used in this study were obtained from secondary sources, such as scientific journals, academic articles, books, and previous research reports that discuss mindfulness and academic stress management. Data collection was conducted by document analysis, which is tracing and reviewing relevant academic references. This process included a literature search, selection of references based on credibility and relevance, and identification of the main variables, namely academic stress and the effectiveness of mindfulness in managing stress.

Data analysis was conducted using meta-analysis and content analysis methods. Meta-analysis was used to compare results from previous studies to find patterns or trends that demonstrate the effectiveness of mindfulness in reducing academic stress. Meanwhile, content analysis aims to identify, classify, and interpret the main themes in the literature analyzed.

To ensure the accuracy of the research results, data validity was guaranteed through source triangulation, which is comparing information from various credible and academically tested references. In addition, the consistency of findings was considered by ensuring that the reviewed studies showed similar patterns regarding the benefits of mindfulness on academic stress reduction.

⁴ Hasby Pembimbing & Hendriani dan Sri Indarti, 2017.

⁵ Marzali, 2017.

⁶ Amarullah & Pendahuluan, 2023.

With this approach, the research is expected to provide in-depth insight into the benefits of mindfulness in helping students manage academic stress more effectively and provide a basis for educational institutions to design mindfulness-based programs. In conclusion, this research uses the literature study method to understand how mindfulness can reduce academic stress in STABN Raden Wijaya Wonogiri students. Several experts define literature review as collecting, analyzing, and organizing various relevant written sources.

III. DISCUSSION

Students

According to Sarwono, students are officially registered to participate in higher education, aged around 18-30 years, and are part of a community group with ties to higher education institutions⁷ Students undergoing higher education aim to develop academic and professional competencies, leadership character, and social responsibility⁸ Students are prospective scholars who, through their involvement with higher education, are educated and expected to become intellectuals who benefit the wider community.⁹ Students are prospective scholars who, through their involvement with universities¹⁰ Students are the status carried by a person because of his relationship with higher education with the status of seeking knowledge, which is expected to become intellectual candidates. It can also be defined as students who study or study in higher education, be it universities, institutes, or academics.

It can be concluded that students are individuals who are officially enrolled in higher education, usually aged between 18 and 30, and have an attachment to higher education institutions. They undergo higher education to develop academic, professional, leadership, and social responsibility competencies.

Students can come from public, private, or other equivalent institutions. They are prospective scholars active in academic activities and expected to be part of the future intellectual generation. As knowledge seekers, students play an important role in developing insights and contributing to society.

Stress

According to experts, there are several definitions of stress, one of which is¹¹ stress is a state of physical and psychological distress. Stress is an internal or external response or process that reaches the level of physical and psychological tension to the limit of the subject's ability. Stress is defined as the deterioration of emotional and physical conditions in life; it can be considered the body's response to life. In an increasingly complex modern life, humans will tend to experience stress if students are less able to adapt their desires to reality, both the reality that is inside and outside themselves; in simple terms, stress is a

⁷ Murai, Shinji; Sonota, 1978.

⁸ Fitriana & Kurniasih, 2021.

⁹ Li et al., 2018.

¹⁰ L. Sihombing, 2020.

¹¹ Sudirman, 2019.

form of a person's response, both physically and mentally, to a change in their environment that is felt to interfere and cause them to be threatened¹².

Stress is a situation that humans may experience in general, especially in students in organizations or universities. Stress is an important issue because this situation can affect student productivity and academic ability. Stress does not always have a negative impact; stress also has a positive impact, primarily if the stress can provide an input that has potential, such as personal motivation, stimulation to work harder, and increased inspiration for a better life.

Stress is a feeling of distress and mental strain. Low stress levels may be desirable, beneficial, and healthy¹³. Physical symptoms usually appear in faster breathing, dry mouth and throat, sweaty hands, hot body, and tense muscles. In addition, stress can also cause digestive disorders such as diarrhea or constipation, body fatigue, headaches, and muscle twitching or spasms, especially in the eyelid area. People who experience stress also tend to feel restless for no apparent reason.

On the other hand, stress also affects a person's behavior, especially in social and family relationships. Harmony in the household, for example, is highly dependent on good communication between family members.¹⁴ Emphasizes that effective communication between husband and wife is vital to creating a harmonious family life. Without good communication, misunderstandings and disputes are more likely to occur. The results show that poor communication in the family can lead to stress and depression in older family members. Poorly managed stress can worsen the quality of communication, creating a negative cycle that affects the well-being of all family¹⁵.

Mindfulness

Mindfulness is the capacity or skill of paying full attention¹⁶. Mindfulness is the awareness arising from deliberate attention to present experiences without judgment¹⁷ Mindfulness involves being aware of moment-to-moment experiences in a clear and balanced way. It means being open to the present moment's reality, allowing all thoughts, emotions, and sensations to enter consciousness without resistance or avoidance¹⁸.

Mindfulness is a simple technique that can be done quickly. First, find a comfortable position so that the body is more relaxed. After that, inhale slowly, hold it to a count of six, then let it out slowly. Let the thoughts and emotions that arise just come without the need to fight or avoid them. Feel and accept them. Then, breathe in again, observing every breath of air that comes in and

¹² Sudirman, 2019.

¹³ L. Nur & Mugi, 2021.

¹⁵ Barmawi et al., 2009.

¹⁶ Brajadenta & Fachruddin, 2022.

¹⁷ Dika & Widyana, 2024.

¹⁸ Waney et al., 2020.

out, then release it slowly. By doing this, we can be more aware of ourselves, feel calmer, and better prepared to deal with various situations in daily life.

The practice of applying Mindfulness in the daily lives of students can help us in our efforts to reduce stress, help us to be more relaxed in the present moment, help us believe in ourselves more, and make our minds more focused. In another perspective, mindfulness can be defined as softening the heart by remembering Him (God) and being thoroughly grateful for being His student. An important part of the inner development taught by the Buddha is mindfulness (*sati*). This development aims to achieve happiness and relief from suffering (*dukkha*). According to the Dīgha Nikāya, mindfulness meditation (*sati*) plays a key role in developing concentration and mental stability. This is relevant in the modern context, where distractions from digital technology and academic demands often hamper students' ability to concentrate. Besides its practical benefits, mindfulness meditation has a strong Buddhist philosophical foundation. In the Satipaṭṭhāna Sutta, mindfulness meditation is taught as the practice of paying attention to the body, feelings, thoughts, and phenomena with full awareness. This teaching reflects the relevance of mindfulness in building deep concentration and courage to face mental challenges. By integrating this approach into modern education, students gain academic benefits and the emotional balance needed to deal with the stresses of¹⁹.

IV. MINDFULNESS IN UNIVERSITY STUDENTS

College students, as a population group facing high academic pressure, often experience stress that negatively impacts students' mental health. Various factors, including task load and performance pressure, trigger this stress. Stress in university students not only reduces academic productivity but also triggers various mental health problems, such as anxiety and depression.

Being a student is challenging, and academic demands often become a pressure. Many students feel overwhelmed by heavy course loads, piling assignments, and high expectations from family and society. In addition, competition in the academic environment increases the pressure to achieve and maintain good grades. Factors such as busy class schedules, assignments, and exams that require deep understanding and having to participate in groups or other activities can be sources of this academic pressure. For some students, this pressure is further increased when they have to work while studying or face family demands to graduate with high grades and get a good job.

Students' mental and physical health can be affected by academic pressure if not managed properly. As a result of the ever-increasing burden, many people experience stress, anxiety, sleep deprivation, and even fatigue. Some students also lose interest in studying and doubt their abilities. To cope with academic pressure, students must have skills in managing time, setting priorities, and understanding their limits. Seeking support and motivation from friends, lecturers, and significant others can also help. Students must balance personal

¹⁹ Adhinugroho et al., 2025.

and academic life to stay physically and mentally healthy during lectures.

According to Lusiane and Garvin (2019), education is the primary key to success. Parents often have high expectations of their children, wanting high academic achievement and pursuing fields that are considered promising. These expectations can be motivating, but if they are too high and do not consider the child's abilities, they can cause tremendous pressure. Many children feel burdened by family expectations, especially compared to siblings, cousins, or peers who are perceived to be more successful²⁰.

The fear of disappointing parents or not being able to meet the standards set can lead to stress, excessive anxiety, and even loss of motivation. In some situations, meeting family expectations can also take its toll on students, causing them to become burnt out, lose confidence, or even drift away from the family due to parental demands. Therefore, it is imperative to have free and open communication with the family when facing these difficult situations. Parents can understand that valuing their child's potential and happiness is just as important as fulfilling other people's expectations. Stress and relationships can be reduced with better understanding between family members.

4.1. Time management

Time management (life management) involves achieving life's main goals by setting aside meaningless activities that often take up a lot of time (Kusnul Ika).

^{21, 22} He wrote that time management is an effort made by everyone to use time as much as possible to achieve planned goals so that the efforts made by a person can be successful and provide benefits for himself. Research shows that effective time management can improve the efficiency and effectiveness of individuals in carrying out daily tasks. Working in a systematic and scheduled manner helps avoid wasting time and increases productivity²³. Time management is optimizing optimal time through organized and mature planning of activities²⁴.

With a busy class schedule, piles of assignments, and organizational activities or side jobs, students need to manage their time well so as not to be overwhelmed. Lack of effective time management often leads to stress, anxiety, and even burnout.

Students often face challenges in managing their time, such as procrastination, lack of planning, and difficulty prioritizing. Many are accustomed to working at the last minute before deadlines, which increases mental stress and decreases the quality of their work. In addition, involvement in organizations or social activities can take up much time if not managed well.

To overcome this problem, students can apply various effective time

²⁰ Lusiane & Garvin, 2019.

²¹ Kusnul Ika Sandra & M. As'ad Djalali, 2023.

²² Carolus Borromeus Mulyatno, 2022.

²³ Efektif, 2021.

²⁴ Carolus Borromeus Mulyatno, 2022.

management strategies. Creating a structured schedule by recording daily and weekly activities can help us as students allocate our time more efficiently. Techniques such as Pomodoro can improve focus and avoid boredom while studying. Prioritizing based on urgency and importance is also important in ensuring that the most pressing tasks are done first²⁵.

In addition, maintaining a balance between academic and personal life should not be ignored. Students need to take time to rest, socialize, and maintain physical and mental health. With discipline and good planning, students can manage their time effectively, increase productivity, and live a balanced and comfortable college life.

4.2. Social environment

²⁶Based on the literature, stress in college students not only reduces academic productivity but also triggers various mental health problems such as anxiety and depression. Mindfulness comes as a psychological intervention that helps students manage stress better.

Targeted research shows that mindfulness exercises, such as breathing meditation and body scans, help students increase awareness of feelings and thoughts without pressure²⁷. Thus, mindfulness provides emotional distance between students and the stress they feel so that they can better deal with it rationally and effectively. This result aligns with the findings of²⁸ who mentioned that mindfulness helps individuals deal with stressful situations more consciously and without reacting automatically. Mindfulness is a psychological method that helps students in managing academic stress better. The pressure of university life often has an impact on mental health, such as anxiety and depression, which in turn can reduce academic productivity. Through breathing meditation and body scan exercises, students can increase awareness of their thoughts and feelings without being overwhelmed by pressure. Thus, they can face academic challenges more rationally and calmly. In addition, mindfulness also helps to create emotional distance from stress so that students do not react impulsively in the face of academic and personal life pressures.

In addition to mindfulness, the social environment also plays an important role in students' psychological well-being. The social environment includes interactions with family and friends; the academic environment can provide emotional support or be a pressure source. The influence of this environment is very significant and is characterized by the motivation, expectations, and level of social support students receive. A supportive environment can strengthen the effectiveness of mindfulness in managing stress, while a stressful environment can worsen one's psychological state.

²⁵ Akbar & Margaretha, 2024.

²⁶ Kamaluddin & Junaidin, 2024.

²⁷ Hidayat & Fourianalistyawati, 2017.

²⁸ M. Sihombing et al., 2024.

By understanding the role of mindfulness and the social environment, students can more easily adjust to academic pressure. Mindfulness helps reduce stress and encourages individuals to be more mindful in facing challenges without overreacting. With consistent practice and positive social support, students can achieve a balance between their academic and personal lives and take better care of their mental health.

V. EFFECTIVENESS OF MINDFULNESS TO REDUCE ACADEMIC STRESS

Various studies document the benefits of mindfulness in the context of higher education. A study²⁹ showed that university students who practiced mindfulness for several weeks significantly reduced academic and non-academic stress levels compared to controls who did not undergo mindfulness interventions. In this study, students reported an increased ability to cope with task and deadline stress, feel calm, and concentrate on academic pressures.

Furthermore³⁰ also showed similar results in students who participated in an 8-week mindfulness training program, which noted reduced stress, fear, and fatigue. In his research, Creswell explained that mindfulness helps students deal with stress more consciously and not react impulsively to better cope with academic pressure with more adaptive³¹ - challenges in its application among university students. One of the main challenges is consistent practice.³²

Mindfulness has significantly benefited university students in managing academic and non-academic stress. Based on various studies, students who regularly practice mindfulness show a greater stress reduction than those who do not undergo this intervention. A study revealed that mindfulness helps students deal with deadlines and academic pressure more calmly and improves concentration. Another study³³ supported these findings, showing that an eight-week mindfulness training program effectively reduced stress, fear, and fatigue.

Furthermore, Creswell, in a study cited by³⁴ explained that mindfulness allows students to deal with stress more consciously and not react impulsively. This makes them better able to manage academic pressure with more adaptive strategies. However, despite its clear benefits, the biggest challenge in implementing mindfulness is consistency in practice. As mentioned by³⁵, many college students struggle to maintain a practice routine due to busy academics and lack of motivation.

So, how effective is mindfulness for university students? If applied consistently, mindfulness can be a very effective tool in improving students'

²⁹ Candrawati et al., 2020.

³⁰ Romadlon, 2020.

³¹ Salwa Tadzkirotul Aula et al., 2024.

³² Zuo et al., 2023.

³³ Romadlon, 2020.

³⁴ Salwa Tadzkirotul Aula et al., 2024.

³⁵ Zuo et al., 2023.

mental resilience and psychological well-being. However, without continuous practice, the benefits may diminish. Therefore, support from educational institutions, such as structured training or integration of mindfulness in the curriculum, can help students more easily adopt this habit in their daily lives.

VI. MINDFULNESS AND STUDENTS' PSYCHOLOGICAL WELL-BEING

Mindfulness habits reduce stress and improve psychological well-being.³⁶ The reviewed study found that college students who practiced mindfulness experienced lower levels of anxiety and depression compared to students who did not practice mindfulness. This is due to the ability to help college students let go of negative thought patterns, which often exacerbate stress, by becoming self-aware. Mindfulness helps college students be more present in the moment, reduce rumination, and become better equipped to deal with difficult situations.

In addition, this research has shown that students who regularly practice mindfulness tend to have greater self-compassion³⁷. Self-compassion, also known as self-compassion, is essential to helping students accept academic failures or difficulties well without feeling too much pressure. A study showed that students who practice mindfulness can handle academic challenges more emotionally and reduce stress levels.

According to,³⁸ student psychology studies individuals' psychological changes and development during their lives as students, including how they manage stress, emotions, and academic demands. Students are in the early adult stage of development, where they experience various challenges in adjusting to the academic and social environment.

Explained that university students are at an advanced stage of cognitive development, where they begin to think more abstractly, critically, and reflectively. In addition, the college experience helps them form their self-identity and determine their life goals.

Challenges in Mindfulness Implementation among College Students

Although many studies have shown the benefits of mindfulness, some studies have also highlighted challenges in its implementation among university students. One of the main challenges is consistent practice.³⁹ Most students who participated in mindfulness programs reported difficulties maintaining the practice amidst their busy academic schedules. Other studies also highlighted that the duration of the mindfulness program affects the results achieved. Mindfulness at STAB Negeri Raden Wijaya: Building Awareness, Calmness, and Balance in Academic Life

Mindfulness, or mindfulness, is a practice that aims to train the mind to focus on the present moment by accepting all experiences without judgment.

³⁶ Muzzamil et al., 2024.

³⁷ Istiqomah & Salma, 2020.

³⁸ Komaruddin et al., 2023.

³⁹ M. Sihombing et al., 2024.

In a stressful and demanding academic world, STAB Negeri Raden Wijaya is taking innovative steps by implementing various mindfulness methods to help students and academicians achieve emotional balance, improve focus, and reduce stress levels that often arise from academic routines. One of the main approaches implemented on campus is the Mindfulness Bell, a simple practice that profoundly impacts mindfulness and mental health.

VII. BENEFITS OF MINDFULNESS BELL FOR STUDENTS AND ACADEMIC COMMUNITY

The Mindfulness Bell is implemented regularly every Monday to Friday at 08.00 WIB, 12.00 WIB, and 15.30 WIB. Students, lecturers, and academic staff are encouraged to stop their activities momentarily and become mindful when the bell rings.

Several steps must be followed in this practice. Stopping Activities While either in a sitting or standing position, individuals are asked to stop all forms of activity, be it reading, writing, talking, or using electronic devices. This cessation of activity aims to free the mind from constant academic pressure.

Listening to the Bell with Mindfulness. The sound of the bell is a tool to trigger awareness. Students and academicians are expected to hear and realize the sound of the bell without letting their minds drift into the past or the future. After stopping the activity and listening to the sound of the bell, individuals are directed to focus on their natural breathing. Awareness of each inhalation and exhalation can calm the mind, reduce tension, and improve emotional balance.

Participants may close their eyes entirely or lower their gaze about 45° downwards to aid concentration. This aims to reduce external distractions and increase self-awareness. After the bell rings for the third time, individuals can resume activities with a fresher, calmer, and more attentive mental state. This practice helps to increase productivity and reduce stress that may arise during work or study. The Mindfulness Bell is a daily ritual and a strategy that has various benefits for academicians' mental and emotional well-being. By taking a moment to stop and breathe mindfully, students can reduce the anxiety that often comes with academic pressures, assignments, and exams. This practice helps train the brain to focus more on one thing at a time, improving the quality of learning and understanding of course material.

By increasing awareness of thoughts and feelings, students can develop more mindful ways of responding to challenging situations or stressors in everyday life. A clearer and calmer mind allows individuals to work more effectively without being distracted by unnecessary anxiety or pressure. By being more aware of their own feelings, students can also improve the quality of their communication and relationships with others, including fellow students, lecturers, and academic staff.

According to⁴⁰, students who practice mindfulness can better face academic challenges with a healthier emotional approach, thus reducing excessive stress.

⁴⁰ Neff & Dahm, 2015.

Mindfulness also plays a role in increasing students' mental toughness. With mindfulness practice, individuals can develop the ability to remain calm and focused in the face of academic and social pressures⁴¹.

The impact of mindfulness practice on college students is significant. According to⁴², students who practice mindfulness can better face academic challenges with a healthier emotional approach to reduce excessive stress. In addition, mindfulness also plays a role in increasing mental toughness.⁴³ Added that by practicing mindfulness, students could develop the ability to remain calm and focused despite facing heavy academic and social pressures. Practicing mindfulness helps manage stress and strengthens the mentality to be better prepared to face all challenges in their academic and social life.

Participants may close their eyes entirely or lower their gaze about 45° downwards to aid concentration. This aims to reduce external distractions and increase self-awareness. After the bell rings for the third time, individuals can resume activities with a fresher, calmer, and more attentive mental state. This practice helps to increase productivity and reduce stress that may arise during work or study. Mindfulness Bell is a daily ritual and a strategy that has various benefits for academicians' mental and emotional well-being. In addition, mindfulness also plays a role in increasing mental toughness.⁴⁷ added that by practicing mindfulness, students could develop the ability to remain calm and focused despite facing heavy academic and social pressures. Practicing mindfulness helps manage stress and strengthens the mentality to be better prepared to face all challenges in their academic and social life.

Besides implementing the Mindfulness Bell, STAB Negeri Raden Wijaya has also developed various other methods to promote mindfulness. Specific courses adopt mindfulness sessions at the beginning or end of class to help students focus and absorb the material better. The campus regularly organizes mindfulness training and seminars for students and lecturers to introduce basic meditation and mindfulness techniques. STAB Negeri Raden Wijaya provides a unique space for students to meditate, reflect, or simply calm their minds after a busy day. The campus also utilizes technology such as meditation apps and mindfulness guide recordings that students can use to practice independently.

Implementing Mindfulness Bell and other mindfulness initiatives at STAB Negeri Raden Wijaya is a strategic step in creating a healthier, more harmonious, and mindful academic environment. By getting used to pausing, listening, breathing, and resuming activities calmly, students and academic staff can experience positive changes in various aspects of life.

This practice provides short-term benefits in academic life and equips individuals with essential skills to face future challenges more thoughtfully, mindfully, and without excessive stress. By continuously developing mindfulness in every step of life, college students become more academically, mentally, and emotionally prosperous daily⁴⁸.

VIII. CONCLUSION

Students face various challenges in academic life, such as high academic demands, family expectations, suboptimal time management, and social pressure. These factors are often triggers for stress that can harm mental and physical health. If not handled properly, academic stress can lead to anxiety, depression, sleep disorders, fatigue, and even decreased productivity. Therefore, the right strategies are needed so that students can manage their stress well, stay focused, and live a balanced academic life. One method that has proven effective in reducing stress is mindfulness. This practice helps students increase awareness of themselves and their surroundings to better understand and manage their emotions without acting impulsively. In addition, mindfulness contributes to a more positive mindset, making students less susceptible to academic pressure. Another benefit of mindfulness is its physiological effects, such as lowering hormone levels (cortisol), reducing muscle tension, and improving sleep quality.

Research shows that students who regularly practice mindfulness tend to experience reduced anxiety and depression compared to those who do not.

⁴⁷ Ghozali, 2023.

⁴⁸ Putri et al., 2024.

Mindfulness helps them overcome negative thought patterns and focus more on solving problems constructively. Thus, students can face various academic challenges more calmly and rationally.

From exploring various studies, it is clear that mindfulness has excellent potential to help STABN Raden Wijaya students overcome stress due to college. These studies agree that regular mindfulness practice can reduce stress, calm the mind, and help students focus on learning. One of the mindfulness methods implemented at STABN Raden Wijaya is mindfulness Bell, which invites students to pause from their activities several times a day to do self-reflection and breathing exercises. This practice helps students achieve mental stability and improve focus in completing academic tasks. In addition, educational institutions are also integrating mindfulness into various aspects of academic life through mindfulness training and the provision of dedicated meditation spaces.

Mindfulness also has a positive impact on students' social relationships. With increased self-awareness and empathy, students become more sensitive to the feelings of others, establishing more harmonious interpersonal relationships. In addition, mindfulness helps students accept academic failures more gracefully and reduces the pressure of excessive social expectations.

In addition to the psychological and social benefits, mindfulness improves students' academic performance. With consistent mindfulness practice, students can manage their time well, improve concentration in learning, and absorb information more effectively. Thus, they can face exams and academic assignments more confidently and calmly.

While mindfulness has proven beneficial, some obstacles still exist to its adoption among university students. One of the main challenges is the lack of consistency in practice. Many students struggle to maintain a regular mindfulness practice due to academic commitments. In addition, the lack of understanding about mindfulness hinders its effectiveness in managing stress. Therefore, further efforts are needed to raise awareness of the benefits of mindfulness and provide more structured programs in academic settings.

This study recommends that mindfulness be widely integrated with higher education curricula as part of stress management strategies. Educational institutions can provide regular mindfulness training and make it part of daily academic life. In addition, students are encouraged to apply mindfulness more broadly in their lives, not only in academic contexts but also in social interactions and personal well-being.

In addition to organising mindfulness training on campus, universities can also work with mental health professionals to guide students on managing stress more effectively. Seminars and workshops on mindfulness can be a strategic step to raise awareness of the importance of mental health among students.

But keep in mind that everyone is different. Some feel the benefits immediately, while others take longer. Factors such as how often to practice

and the character of each student also matter. So, further research is needed to find the best way to apply mindfulness to be truly effective for all students in various conditions.

In the future, this research could focus on how to tailor mindfulness programs to the specific needs of students, especially at STABN Raden Wijaya, which has distinctive religious values. For example, it can be done considering different cultural backgrounds or stress levels. In addition, it is also important to look at the long-term effects of mindfulness on students' mental health and overall well-being. With a deeper understanding, we can maximize the potential of mindfulness to create a campus environment that is more supportive and conducive to student development.

Mindfulness is an easy-to-implement and effective method for helping students deal with academic stress. By making it a habit to be more fully aware of present-moment experiences, students can reduce stress, improve their well-being, and achieve balance in their academic and personal lives. Therefore, applying mindfulness in the academic environment is highly recommended to improve student's quality of life and help them achieve their full academic potential.

With consistent mindfulness applications, students can also develop stress management skills that will benefit them during their university years and future lives. With full awareness of emotions, thoughts, and actions, students can become more resilient individuals better prepared to face life's challenges. Therefore, the development of mindfulness programs in academic settings should continue to be encouraged so that more students can feel the benefits in the future.

IMPLEMENTATION OF MINDFULNESS TRAINING AS AN EFFORT TO REDUCE PSYCHOLOGICAL STRESS IN GENERATION Z

Nanis Ajeng Setyowati*

Abstract:

Generation Z faces high stress due to academic, social media, and economic pressures. Mindfulness, the practice of *sati*, effectively reduces stress and improves mental well-being. Rooted in the traditions of Buddhism and Taoism, mindfulness is applied in therapies such as MBCT to help individuals be more flexible in dealing with stress. This research emphasizes the importance of mindfulness as a strategy to overcome stress and improve the quality of life of Generation Z. The method for writing this article is a literature study, namely the collection and analysis of relevant literature. The author reviews various trusted sources, such as journals, books, and news, to develop the framework of the article. This study reviews the effectiveness of mindfulness in reducing mental distress in Generation Z through empirical research, meta-analysis, and literature review. Mindfulness helps reduce stress and improve mental well-being. In Buddhism, *sati* is found in the *Satipaṭṭhāna Sutta*. Research shows that mindfulness training benefits Generation Z by improving emotional regulation and suppressing repetitive thoughts. Buddhist teachings such as the *Ānāpānasati Sutta* and *Dhammapada* support these benefits. Generation Z faces stress from academic, social, and digital media. Mindfulness helps overcome stress by increasing full awareness and practicing understanding *anicca*, *dukkha*, and *anattā* so that individuals are wiser in accepting change and reducing inner suffering.

Keywords: *Generation Z, mindfulness training, stress psychology, Buddhism.*

* Sekolah Tinggi agama Buddha Negeri Raden Wijaya Wonogiri Indonesia.

I. INTRODUCTION

Generation Z, born between the mid-1990s and early 2010s, faces various psychological issues in the fast-paced digital age. This generation's stress levels have increased due to academic pressure, social media exposure, and economic uncertainty.¹ Mindfulness, a meditation technique that focuses on mindful awareness of the present moment without judgment, is one of the increasingly popular approaches to addressing psychological stress. Mindfulness training effectively reduces stress, enhances emotional well-being, and improves focus and emotional regulation.² Mindfulness-based programs, such as Mindfulness-Based Stress Reduction (MBSR) and Mindfulness-Based Cognitive Therapy (MBCT), have been applied in various contexts, including education and work environments, to help individuals better manage stress. These rapid and complex challenges often cause problems, including high levels of psychological stress. Psychological stress is an adverse mental health condition that affects a person emotionally and physically, either directly or indirectly. In Generation Z, high stress, excessive anxiety, depression, and other mental disorders are referred to as mental stress. This phenomenon is a serious concern as it can affect the next generation's quality of life and well-being.

Mindfulness practices that involve being fully aware of present-moment experiences without judgment are one of the proven effective approaches to managing stress. Mindfulness training has been shown to improve adolescents' self-acceptance, self-control, and ability to cope with stress caused by traumatic experiences, such as dating violence. Studies have also shown that mindfulness techniques can help students cope with academic pressure, especially during the COVID-19 pandemic. Research by Prameswari and Yudiarso (2021) found that mindfulness-based cognitive therapy successfully reduced depression levels.³ This was demonstrated by a meta-analysis statistical test conducted on individual studies. An additional study by Aziz Afandi, Hera Wahyuni, and Yudiasari Adawiyah found that research subjects experienced lower stress reactions after mindfulness training; this suggests that mindfulness training can reduce the stress of college students who are victims of dating violence.⁴ Studies

indicate that conducting mindfulness training is a promising solution to reduce psychological stress in Generation Z. They can reduce negative thoughts that cause stress and anxiety by strengthening self-awareness and focusing on the present moment. In addition, people can learn to recognize and manage their emotions, improving overall mental well-being. This research will hopefully provide scientific evidence supporting that mindfulness practice is effective in reducing mental stress in Generation Z. These findings can serve as a basis for the creation of more specialized mental health interventions and programs for Generation Z. Therefore, this study has important implications in improving Generation Z's quality of life and mental well-being. Mindfulness counteracts the tendency to avoid painful thoughts and emotions and allows people to face actual experiences, even if they are unpleasant. At the same time, mindfulness prevents people from excessively absorbing and recognizing negative thoughts or feelings so that they are not trapped and swept away by aversive reactions.⁵

In cognitive psychology, there are two main modes of thinking: the 'doing' mode and the 'being' mode. The 'doing' mode, also known as the 'driven' mode, is goal-oriented and activates when the individual realizes a mismatch between the current and desired state. In contrast, the 'being' mode focuses more on acceptance, where individuals allow experiences to occur without the urge to change them immediately.⁶ One important aspect of cognitive regulation is metacognitive awareness, which recognizes negative thoughts and feelings as passing mental events rather than representations of the individual self. This awareness allows a person to be more flexible in dealing with emotional distress and reduces the risk of psychological disorders such as depression.⁷ Decentering is a form of metacognitive awareness that helps individuals view thoughts and feelings objectively without getting caught up in over-identifying their mental content.⁸

According to recent research, Mindfulness-Based Cognitive Therapy (MBCT) helps improve mental health. A meta-analysis study conducted

by Cheng Jiang et al., 2022 showed that MBCT helps reduce symptoms of depression and anxiety in adults.⁹ This intervention helps people make more adaptive emotion regulation by teaching them to concentrate and meditate. In addition, research on MBCT to reduce depression symptoms in adolescent victims of sexual abuse. Compiled by Yuswikarini found that MBCT might reduce symptoms of depression in adolescents who have experienced sexual abuse.¹⁰ This method helps adolescents overcome rumination and negative emotions as they become more aware of their current experiences. According to research conducted by Mustikasari et al coping strategies in adolescents reduce symptoms of anxiety and depression well.¹¹ These strategies can be applied to reduce the negative impact of anxiety and depression in adolescents and become a reference for health workers in dealing with adolescent mental health patients.

Methods

The method of writing this article is a literature study. According to Mirzaqon & Purwoko, a literature study is a collection of research actions that involve collecting literature sources, processing, reading, and analyzing literature relevant to the research subject or phenomenon.¹² The author investigates and collects relevant information from various sources, including journal articles, books, news, proceedings, and other reliable sources. The author then processed various information to create a basic framework for this conceptual article. Then, search and select articles relevant to the subject the author discusses. These articles include empirical studies, meta-analyses, and literature reviews that address how effective mindfulness practice is for reducing mental distress in Generation Z. In addition, the author analyzed the findings from mindfulness training.

II. RESULTS AND DISCUSSION

2.1. Stress psychology

In psychology, stress is defined as a perceived threat that causes anxiety, discomfort, emotional tension, and adjustment difficulties - Kupriyanov et al divided stress into eustress and distress. Distress is a negative cognitive

response that is unhealthy and harmful because it causes negative feelings.¹³ At the same time, eustress is a positive response to circumstances that can change because they become stressors. Stress is a significant imbalance between a person's physical or mental demands and the ability to respond, which occurs when a person cannot meet these demands Rishon et al.¹⁴ Edward et al stress is a condition caused by a mismatch between a desired state and a person's biological, psychological, or social system. Stress is a feeling that a person experiences because of the difference between a person's abilities and the needs of his environment.¹⁵ According to Glynis et al. Byrne, stress is a physical or psychological event perceived as threatening to physical or emotional health. Symptoms of stress can be put into various categories: physical, such as headaches, high blood pressure, palpitations, insomnia, stomach pain, fatigue, cold sweats, lack of appetite, urination, and lack of appetite, such as unfocused, indecisive, anger, depression, rigid thinking, lack of humor, and irritability, behavioral such as difficulty sleeping, changes in food cravings, social withdrawal, and loss of self-control.¹⁶ People who experience intolerance to uncertainty tend to react negatively to ambiguous or uncertain situations, which can lead to anxiety and psychological stress. A study by Rini et al found that intolerance to uncertainty increases student anxiety.¹⁷ Social Support: Lack of social support can increase stress levels and decrease one's ability to deal with life's pressures. Feeling support from family, friends, and other social environments helps a person feel more able to cope with adversity and reduce the negative impact of stress on mental health. Research by Damanik Nurhayati found a negative correlation between social support and employee work stress. The more social support is received the less work stress employees experience.¹⁸ The emotional distress that a person experiences and is characterized by symptoms of anxiety and depression is known as psychological stress.¹⁹ According to Caron and Liu, psychological

stress is a harmful condition that can affect a person's health directly or indirectly, both physically and mentally.²⁰ The emotional stress response is temporary. It will inevitably impact one's mental well-being and health as well. Some signs of psychological stress include feelings of inability to handle effectively, changing emotional states, discomfort, communicating discomfort, and danger. According to Sheila Ridner in more detail, the explanation of the five components of psychological distress is as follows:²¹ The inability to solve problems effectively is that people who cannot adapt cannot cope effectively with stress. A person's perception of their ability is based on what they consider the problem cannot be solved. The individual believes he cannot overcome his problems, so he remains unpleasant. When a person believes that treatment is possible, then the problem can be solved, and the problem can be overcome. Emotional Change is when an individual experiences mental stress; changes in the state make stable basic emotions, anxiety, depression, lowered, and aggressive. People who experience various negative emotions experience unstable emotions, which affect the mood of those involved in the activity. Feelings of discomfort, i.e., sadness and various other feelings, are described as mental discomfort. Difficulties. Many things interfere with that, causing feelings of discomfort. A person's emotional comfort can change when experiencing Communication that causes discomfort. Changes can cause people to communicate their feelings of discomfort - emotions that are associated with psychological stress. Individuals perceive difficulty in making it uncomfortable to communicate with others to express feelings. Harmful, i.e. psychological stress is harmful to the person experiencing it as it is constantly painful. Individuals experiencing mental stress will affect their lives, for example, in their social relationships and self-esteem.

2.2. The psychological effects that commonly accompany psychological distress include

(1) Physical Health: Psychological stress may increase the risk of developing chronic diseases such as diabetes, hypertension, and heart disease. Prolonged stress can also cause physical symptoms such as headaches, muscle pain, and digestive problems.²² Stress can also weaken the immune system, increasing the chances of infection.²³ (2) Mental Health: Stress is a significant cause of mental health problems such as depression and anxiety. Ross and

Mirowsky state that psychological stress can worsen a person's mental state as anxiety and depression often co-occur.²⁴ (3) Cognitive Function: Stress can impair cognitive functions such as memory, concentration, decision-making, and more. Research shows that people who experience psychological distress tend to be less productive at work or school.²⁵ (4) Emotional Well-Being High-stress levels often lead to emotional symptoms such as irritability, frustration, and feeling overwhelmed.²⁶ These conditions can also cause pain or emotional exhaustion. (5) Behavioral Changes Psychological distress can lead to behavioral changes, such as the use of drugs or alcohol, as well as changes in sleep and eating patterns. This is in line with research conducted by Musabiq and Karimah, which shows that people may refuse to participate in social interactions.²⁷ (6) Relationships: Stress can make personal and professional relationships less effective. Research conducted by Epi Kurniasari, et al shows that increased conflict and poor Communication can interfere with healthy and supportive relationships.²⁸ (7) Work Performance Stress can reduce workers' focus and engagement, reducing overall productivity.²⁹

III. MINDFULNESS TRAINING

Mindfulness is essentially paying attention with openness, curiosity, and flexibility, which is the basic definition of self-awareness.³⁰ Mindfulness involves a gradual and balanced awareness of experience; in other words, remaining open to the present reality and allowing all thoughts, emotions, and sensations to enter consciousness without being blocked or obstructed.³¹ Moreover, according to a recent meta-analysis, mindfulness can reduce anxiety, depression, and stress in children and adolescents. The opposite of mindfulness is mindlessness. This is when one's attention wanders and leads one into a daydream. One's consciousness significantly decreases in mindlessness, where

one reacts automatically without paying attention to what is happening.³² The phenomenon of autopilot, where people automatically deal with various problems in their lives without realizing or appreciating them, is known as mindlessness.³³ Mindfulness helps people break out of automatic patterns of behavior, consciously responding in more productive ways than reacting without thinking. Mindfulness utilizing awareness is more than just using thoughts to avoid difficult circumstances.³⁴ Mindfulness varies from individual to individual and can develop with practice to manage feelings. According to Wanjaree et al, applying mindfulness in Communication allows individuals to express their thoughts.³⁵ It is needed through good Communication or expression, which can help eliminate awkwardness or problems that cause stress in relationships. Mindfulness-based acceptance therapies, such as Acceptance and Commitment Therapy (ACT), seek to address issues of anxiety and depression by helping people become more focused, calmer, and more accepting of themselves. ACT helps people accept one's emotional state while building a commitment to actions that align with life values. Research shows that it reduces anxiety and depression by increasing psychological flexibility and the ability to adjust to difficult situations.

3.1. Ruth Baer says mindfulness consists of five aspects

Firstly, observing: Individuals feel what is happening around them, such as feelings and emotions, and are aware of experiences from within and outside themselves. Describing: the individual's ability to explain the perceived experience.

Secondly, acting with awareness: the individual's ability to maintain focus on some perceived experiences. Thirdly, non-judging of Inner Experience: One's ability to accept the thoughts and feelings that one experiences. Lastly, non-reacting to Inner Experience: One's ability to release the thoughts and feelings one experience without lingering.³⁶

3.2. Elisha Goldstein divides mindfulness meditation into two categories

Formal and informal. The formal category involves doing meditation in a seated position. This type of formal meditation can be done in the following ways: Firstly, mindfulness of breathing: When breathing in and out, one sees

³⁶ Baer, R. (2019). "Assessment of mindfulness by self-report." *Current Opinion in Psychology*, 28, p. 42 – 48.

the quality of breathing. It becomes easier to understand how life changes everything. Secondly, mindfulness of sensation. After doing the breathing exercise a few times, people will become more aware of physical sensations and focus on sensory sensations by identifying each sensation that arises and disappears. Thirdly, mindfulness of hearing. Listening to the sounds that appear and disappear can help you focus on hearing. Try not to judge any sound. Lastly, mindfulness of thoughts and emotions. Once one focuses on the sound, the object of meditation will change to mental events, i.e. thoughts and emotions. Focusing on sound refers to one's ability to observe and feel thoughts and feelings arising, developing, and disappearing; one only sees them as mental forms that arise and disappear, and there is no need to study them. Choiceless awareness, or awareness of the present moment, is mindfulness meditation's last and most common component. The present moment is the main focus of this practice. Choiceless awareness instructs people to become fully aware of whatever arises in the present moment and has no end. Individuals notice anything from their body and mind, such as sensations, sounds, or other sensory phenomena, or mental events, such as thoughts and emotions.³⁷

Mindfulness training has several methods, one of which is: (1) Mindfulness-Based Cognitive Therapy (MBCT): One type of intervention that can be used to reduce depression levels is mindfulness-based cognitive therapy.³⁸ The benefit of this therapy is that it minimizes symptoms of anxiety and depression and can be a reference for health professionals to provide non-pharmacological therapy to patients experiencing symptoms of depression and anxiety. A meditation program that combines mindfulness-based cognitive behavioral therapy (MBCT) and mindfulness-based stress reduction therapy.³⁹ MBCT therapy teaches patients to scrutinize their thoughts and helps them become more aware of their daily lives.⁴⁰ Because MBCT therapy combines cognitive therapy with meditation, it can help people with anxiety and anti-periodic depression. During treatment, the MBCT technique, a self-awareness-based cognitive therapy, has been shown to lower patients' depression. Cladder-Micus.⁴¹ Mindfulness-based therapy (MBCT) has also been shown to be

effective in increasing empathy and reducing levels of anxiety and psychological distress among university students. (2) Mindfulness-Based Stress Reduction (MBSR) is a meditation approach to lower stress levels.⁴² Mindfulness-Based Stress Reduction can also assist adolescents in coping with negative situations and build resilience and toughness to deal with undesirable situations. For centuries, MBSR has been a contemplative tradition practice for therapy. Studies have shown that its therapeutic properties benefit psychology.⁴³ The MBSR approach with therapeutic Communication aims to achieve physical and mental relaxation. Nugroho said that self-awareness means focusing on what is present in the present moment with full awareness without considering the relevance, reason, or impact of the experience.⁴⁴ The Mindfulness-Based Stress Reduction (MBSR) approach teaches patients to notice and relate to thoughts and emotions differently, with compassion for self and others as the foundation of this endeavor.⁴⁵ This approach can also offer effective therapeutic communication techniques to reduce the stress experienced by patients. In addition, the MBSR approach in therapeutic communication practice can track the patient's emotional state from a professional point of view. In particular, tracking these emotional states can enable spiritual directors to anticipate various mental disorders that patients may experience during hospitalization.

In Buddhism, mindfulness is known as *sati* (Pāli) or *smṛti* (Sanskrit), meaning mindfulness or pure attention. *Dhammapada*, Chapter II: *Appamāda Vagga*, verse 24 reads: "If a person is energetic, mindful, pure in his thought, word, and deed, and if he does everything with care and consideration, restrains his senses, earns his living according to the law (*dhamma*), and is not unheedful, then the fame and fortune of that mindful person steadily increase."⁴⁶ The practice of maintaining mindfulness helps avoid wrong actions. It enables a person to distinguish between right and wrong actions. A person with good mindfulness can make careful considerations before making decisions. Mindfulness helps prevent regret over past actions. Mindfulness is a practice that enhances focus on what one is doing, feeling, and thinking.

⁴⁶ D. II. 24. "*Uṭṭhānavato satimato, sucikamassa nisammakārino. Saññatassa ca dhammajīvino, appamattassa yaso 'bhivaḍḍhati' ti.*"

Sati refers to attention and is closely related to mindful awareness. In the practice of mindfulness, one should contemplate or focus mindfulness on four things: the body (*kāyānupassanā*), feelings (*vedanānupassanā*), consciousness (*cittānupassanā*), and mental phenomena (*dhammānupassanā*), as mentioned in the *Satipaṭṭhāna Sutta*. One way to apply mindfulness in daily life is through the practice of meditation. There is nothing to be proud of, as everything is temporary and constantly changing. Change can sometimes bring fear and anxiety. However, for the wise, change is the path to perfection. Being aware of change can bring about tranquility, which leads to happiness. By practicing mindfulness, one can realize the meaning of life and thereby increase happiness. Some *suttas* outline several meditation techniques for training the mind, such as mindfulness of the body,⁴⁷ mindfulness of breathing,⁴⁸ and meditation on loving-kindness, compassion, sympathetic joy, equanimity, and contemplation of death.⁴⁹ In addition, there is the remembrance meditation on the Buddha, *dhamma*, *saṅgha*, moral action, generosity, and *devas*.⁵⁰ There is also meditation on death, the body, and peace. Perceiving the *kaṣiṇas* - earth, water, fire, air, blue, yellow, red, white, space, and consciousness - constitutes the ten *kaṣiṇa* meditations. One should look up, down, and all around, limitlessly and without differentiation.⁵¹ The following meditation, concerned with the elimination of mental impurities, has four foundations of mindfulness: contemplating the body as body, contemplating feelings as feelings, contemplating thoughts as thoughts, and contemplating mind-objects as mind-objects, with clear and mindful awareness.⁵² There are four positions for meditation. Walking, standing, sitting, and lying should all be done consciously - knowledge of different body positions during meditation.⁵³ Walking is one way to increase physical and mental strength. According to the *Caṅkama Sutta*, walking meditation has five advantages: the ability to travel, the ability to make an effort, good health, the ability to digest food and drink well, and the ability to maintain concentration.⁵⁴ Before *Gotama Buddha*, meditation was already widely practiced. Under the guidance of *Ālāra Kālāma* and *Uddaka Rāmaputta*, *Gotama Buddha* achieved mastery over all yogic techniques and attained the same level of concentration as his teachers.⁵⁵ The cultivation of tranquillity meditation (*samatha bhāvanā*) and insight meditation (*vipassanā bhāvanā*) are the two types of *samādhi* or mental development practices.⁵⁶

Samatha Bhāvanā: A meditation technique in which one focuses the mind to achieve inner calm. This method of meditation existed long before Gotama Buddha. Practical Application: It is used to support meditation and help achieve insight (*vipassanā bhāvanā*), as well as provide a quiet dwelling for the mind (*ditṭhadhammasukha-vihāra*) or a tranquil abiding (*santa-vihāra*).⁵⁷ *Samatha* meditation aims to cultivate the ability to access *jhāna*, which serves as a prerequisite for developing *vipassanā*. This process is undertaken to achieve inner calm and make the mind more radiant.⁵⁸ The *Visuddhimagga* states that there are 40 types of meditation objects in *samatha bhāvanā*, which are divided into seven categories:⁵⁹ Ten *kasiṇas* (*kasiṇa*) - earth, water, fire, air, blue, yellow, red, white, light, and limited space; Ten types of foulness (*asubha*) - swollen, bluish-bruised, festering, split, lacerated, wounded, and bloodstained corpses; Ten recollections (*anussati*) - contemplation of the noble qualities of the Buddha, *dhamma*, *saṅgha*, deities (*devas*), morality, generosity, peaceful *nibbāna*, death, bodily impurities, and breathing; Four divine abodes (*appamaññā*) - loving-kindness (*mettā*), compassion (*karuṇā*), sympathetic joy (*muditā*), and equanimity (*upekkhā*); Four formless meditations (*arūpa*) - the base of infinite space (beyond *kasiṇa*), the base of infinite consciousness, the base of nothingness, and the base of neither-perception-nor-non-perception; One contemplation on the repulsiveness of food (*āhāre paṭikkūla-saññā*); One analysis of the four great elements (*catudhātuvavatthāna*) - earth (solidity), water (cohesion), fire (temperature), and air (movement).⁶⁰ Meditators only need to choose the meditation object most suitable for them; they do not need to master all forty objects of meditation.

Vipassanā Bhāvanā: A meditation practice aimed at gaining insight and a deeper understanding of the nature of existence, characterized by *anicca* (impermanence), *dukkha* (suffering), and *anattā* (non-self). Practitioners undertaking this practice should develop a clear understanding of these characteristics and firmly grasp them. The purpose of *vipassanā bhāvanā* is to eliminate mental suffering and internal impurities, including greed, desire, attachment, aversion, indifference, arrogance, and avarice.⁶¹ According to the *Mahāsatiipaṭṭhāna Sutta*, the subjects of meditation in *vipassanā bhāvanā* are as

follows: (1) Contemplation of the body (*kāyānupassanā*): observation of the breath (*ānāpānasati*); observation of bodily postures (*iriyāpatha*); attention and clear comprehension (*sati-sampajañña*); observation of the physical body (*kāyagatāsati*); contemplation of the four elements (*catudhātu-vavatthāna*); contemplation of the process of bodily decay. (2) Contemplation of feelings (*vedanānupassanā*): Observing feelings as pleasant, unpleasant, or neutral. (3) Contemplation of the mind (*cittānupassanā*): Observing the nature of the mind, including mental states such as desire, aversion, distraction, concentration, and equanimity. (4) Contemplation of *dhamma* (*dhammānupassanā*): Awareness of the arising, passing, and cessation of the five mental hindrances (*nīvaraṇa*); Observation of the five aggregates (*pañcakkhandha*); Observation of the six sense bases (*saḷāyatana*); Awareness of sense desires (*kāmacchanda*); Contemplation of the seven factors of enlightenment (*satta bojjhaṅga*); Contemplation of the four noble truths (*cattāri ariyasaccāni*); Reflection on dependent origination (*paṭicca-samuppāda*), which consists of twelve links. Practitioners of *vīpaśsanā bhāvanā* may choose one of the four contemplations as a starting point according to their disposition or inclination.

III. MINDFULNESS TRAINING FOR GENERATION Z TO REDUCE PSYCHOLOGICAL STRESS

One of the ways that can be done to reduce psychological stress is mindfulness training. According to research conducted on students,⁶² mindfulness training can help reduce psychological stress through three mediators: emotion regulation, nonattachment, and rumination.⁶³ Mindfulness practice can help students reduce stress levels, which can help maintain mental health during academic activities. According to Beddoe et al, mindfulness training is a meditation method that combines affective, cognitive, moral, intrapersonal, and interpersonal aspects.⁶⁴ Baer found a positive relationship between mindfulness meditation and the treatment of various types of psychological disorders.⁶⁵ Kabbat-Zinn reinforces Baer's opinion, saying that self-awareness meditation practice aims to increase the ability to stay engaged in current events without giving excessive judgment. Practical self-awareness training can increase a person's ability to adapt well to problems. Research shows that this practice helps people cope with mood disorders, increases mindfulness,

⁶² Coffey, K. A., & Hartman, M. (2008). And psychological distress. (*Publication details incomplete - please verify year, journal, volume, issue, and page numbers for proper citation formatting.*) no. 2003, p. 79 – 91.

happiness, and physical health, and decreases stress.⁶⁶ Seth Robert notes the benefits of mindfulness in the field of psychology, including expanding the area of awareness, increasing the noticing of the body, and the experience of feelings. As such, mindfulness can enhance the ability to control awareness, feelings, and behavior.⁶⁷ Self-monitoring and the release of automatic thoughts, which cause pathological structures, are enhanced through mindfulness. The practice of self-awareness meditation also helps to develop the inner resources of human beings to stabilize feelings and reduce carelessness. There are three significant ways in which mindfulness can play a role in overcoming physical and psychological symptoms, among others:⁶⁸ (1) Intention is related to the importance of setting goals in meditation. Kabat-Zinn said that setting goals (goals) makes something possible to achieve and reminds a person of his intention in doing meditation. For example, if someone has a goal to be able to manage themselves, then they will be able to manage themselves. (2) Attention, which is the observation of present events and internal and external psychological experiences, is significant for healing. (3) Attitude is related to mindfulness, which means less evaluation and judgment, more acceptance, kindness, and openness to whatever one does not want. Here are the steps of mindfulness training that can be done: (1) Self-Talk, at this stage, one begins an internal conversation with oneself, consciously or unconsciously. Self-talk can be positive (increasing motivation and confidence) or negative (causing anxiety and lowering performance).⁶⁹ (2) Visual Imagery, you will perform a mental technique where one imagines a particular situation, action, or outcome in vivid detail. This technique is often used in sports, meditation, and psychological therapy to improve performance or reduce stress.⁷⁰ (3) Deep Breathing, this method teaches you to perform a relaxation technique in which a person consciously regulates his or her breathing to slow the heart rate, calm the nervous system, and reduce stress. This technique is often used in yoga, meditation, and psychological therapy.⁷¹

Practical Steps for Cultivating Mindfulness: (1) Breathing Meditation (*Ānāpānasati*) 5 – 10 Minutes a Day. Sit comfortably with your back straight but relaxed. Close your eyes and focus on the natural rhythm of your breath. Feel the air entering through your nose and exhale slowly. If your mind wanders, gently bring your attention back to the breath without judgment. Practice this for 5 – 10 minutes daily. (2) Body Scan - Noticing Body Tension (5 – 10 Minutes): Find a comfortable and quiet place. Lie on your back or sit cross-legged. Close your eyes and focus on your breathing, noticing how the air fills and leaves your lungs. Bring your attention to different parts of your body, starting from the top of your head. As you focus on each area, take deep, slow breaths. Observe any sensations such as pain, tension, or discomfort without criticism or resistance - simply acknowledge them with acceptance. (3) *Mettā* (Loving-Kindness) Meditation - Reducing Overthinking and Conflict: Begin by generating feelings of loving-kindness toward yourself. Recall a time when you were happy and allow that warmth to arise. Once you feel this warmth, silently wish yourself well: “May I be happy. May my mind be calm and peaceful. May I experience joy? May I be free from suffering?” Truly feel these wishes in your heart. Once you have cultivated loving-kindness for yourself, extend it outward to others - family, friends, and eventually all beings. (4) Mindful Walking - Walking with Awareness: Before you begin walking, take a deep breath and do a quick body scan. Notice your physical and mental state, mood, and thoughts without judgment. As you walk, maintain a steady pace and focus on one sensory experience at a time. For example, first, observe the sensations in your feet touching the ground, then shift your awareness to the warmth of sunlight on your skin, the sounds of nature, or the movement of the breeze. After walking, take a moment to focus on your breath and conduct a brief body scan. (5) Mindful Journaling - Writing to Release Emotions: Write freely without restrictions, allowing your thoughts and emotions to flow. Focus on your current feelings and use reflective questions to deepen your self-awareness. Conclude your journaling session by expressing gratitude. (6) Digital Detox - Reducing Stress from social media: Set designated gadget-free periods, such as one hour before bedtime. Use ‘Do Not Disturb’ mode to minimize distractions. Replace social media scrolling with mindful activities such as reading or meditation. If a full detox feels challenging, start with 10–15 minutes a day and gradually increase the duration.

The teachings found in various Buddhist suttas provide valuable guidance for teenagers struggling with stress, anxiety, and emotional challenges. The *Ānāpānasati Sutta* introduces breath awareness meditation, which helps calm the mind and improve focus, making it particularly effective for reducing overthinking.⁷² The *Satipaṭṭhāna Sutta* emphasizes mindfulness of the body, feelings, and thoughts, equipping teens with tools to navigate academic and social pressures wisely.⁷³ Similarly, the *Karaniya Metta Sutta* encourages loving-kindness

⁷² MN 118.

⁷³ MN 10 & DN 22.

meditation, fostering positive relationships, and alleviating feelings of loneliness.⁷⁴ The *Vedhavitakka Sutta* teaches how to replace negative thoughts with wholesome ones, promoting emotional resilience.⁷⁵ The *Dhammapada* offers further wisdom, such as the importance of mindfulness,⁷⁶ taming the mind for inner peace,⁷⁷ and cultivating patience.⁷⁸ Additionally, *Paritta chants* like the *Ratana Sutta* protect from anxiety, while the *Metta Sutta* and *Bojjhanga Sutta* help reduce stress and promote healing. Together, these teachings offer a holistic approach to mental well-being, guiding Gen Z toward inner peace and emotional strength.

IV. CONCLUSION

In psychology, stress is defined as a response to a perceived threat that induces anxiety and tension. There are two types of stress: distress (negative stress) and eustress (positive stress). Stress arises when there is an imbalance between external demands and an individual's capacity to cope. Psychological stress can contribute to anxiety, depression, and both physical and mental health issues. The impact of stress includes physical symptoms (headaches, indigestion), emotional (frustration, overwhelm), behavioral changes (substance use, sleep disturbances), and decreased work productivity. Mindfulness and mindfulness-based interventions, such as Acceptance and Commitment Therapy (ACT) and Mindfulness-Based Cognitive Therapy (MBCT), are effective in reducing stress, anxiety, and depression, particularly in Generation Z. Mindfulness techniques enable individuals to cultivate present-moment awareness, enhance psychological flexibility, and develop healthier responses to stress. Meditation (*bhāvanā*), especially *vipassanā* meditation, fosters awareness of thoughts and emotions without attachment, thereby reducing stress. Various *suttas*, such as the *Ānāpānasati Sutta*, *Satipaṭṭhāna Sutta*, and *Karaṇīya Mettā Sutta*, emphasize the importance of mindfulness, breathing meditation, and loving-kindness (*mettā*) in managing stress, anxiety, and negative emotions. These teachings provide practical guidance for teenagers facing academic, social, and emotional pressures. Additionally, verses from the *Dhammapada* highlight the significance of discipline, mind control, patience, and virtue in attaining happiness and inner peace. Reciting parts such as the *Ratana Sutta*, *Mettā Sutta*, and *Bojjhanga Sutta* can serve as a source of mental protection and resilience. These Buddhist teachings offer a holistic and practical approach for Generation Z to navigate life's challenges with greater wisdom and serenity.

MINDFULNESS IN TREATING ACADEMIC STRESS AT HIGHER EDUCATION

Nurull Fatimah*

Abstract:

Higher education is the highest level; it helps individuals reach their desired potential, trains them to think critically, and increases career opportunities. Although the world of education is developing rapidly, it cannot be denied that there are challenges in the world of education, especially for students with academic demands; this can cause stress, health problems, and even mental distress. Therefore, mindfulness practices can help reduce stress in students. The practice of mindfulness itself is adapted from the teachings of Buddhism, namely meditation. The writing of this article uses the literature study method. The purpose of writing this article is to find out the benefits of mindfulness in overcoming and relieving academic stress experienced by students; mindfulness practice is one of the solutions that can be done because this practice aims to control human emotions and get calm in order to control stress. There are many obstacles in implementing mindfulness practices, and internal and external factors can affect the success of mindfulness. A person who regularly applies mindfulness can feel significant benefits in terms of mind, physical, and mental health.

Keywords: *Mindfulness, education, higher education.*

I. INTRODUCTION

Buddhism is widely known as a way of wisdom, and many Buddhist teachings have been adapted to life, including meditation. In modern times, meditation is in great demand. Buddhists and the general public participate in meditation for various reasons, such as psychotherapy, calming the mind and stress, and even for health.¹ Mindfulness is adapted from the Buddha's

* Sekolah Tinggi Agama Buddha Negeri Raden Wijaya Wonogiri.

¹ Bikkhu Dhammavuddho Maha Thera, *Mindfulness Recollection & Concentration*, ed. Nyanna Suriya Johnny (Dewan Pengurus Daerah Pemuda Theravada Indonesia Sumatera Utara, 2019).

teachings in the *Satipatthana Sutta*, meditation, or contemplation; mindfulness is also defined as awareness, focus, and calmness. According to Gibbons & Morgan, mindfulness is one way to improve psychological well-being by playing with feelings of happiness, namely positive emotions, to live a fulfilling and meaningful life.²

Mindfulness is a form of mind and body regulation with full awareness that includes the present moment and reaches awareness in a non-judgmental way to train individuals to realize and observe emotions without reactions that change these emotions.³ In education, mindfulness can be a solution to overcome the stress of academic demands. Competition in the academic sphere can trigger stress that is often felt, and everyone's capacity to manage different thoughts affects performance and reduces focus in study activities. According to Turner, excessive stress spikes can affect a person's academic state (lack of attention to focus, decreased enthusiasm for learning, and laziness in learning something), health, and psychological condition.⁴

According to Gibbons & Morgan, meditation in mindfulness is a strategy for managing stress and easing one's psychological pressure by creating a happy feeling to improve the quality of life; if someone feels happy, it will have a significant impact on physical well-being, mental and passion.⁵ Mindfulness can be one of the solutions to managing thoughts and improving concentration. Meditation done for 10 or 15 minutes focusing on breathing meditation can reduce stress intensity. Research related to mindfulness and meditation in recent years has grown rapidly, and many discussions have emerged, such as reducing stress and preventing the recurrence of depression, increasing attention, and even improving academic performance.⁶ Mindfulness practice in higher education has been implemented at STABN Raden Wijaya Wonogiri. This practice is carried out at the beginning of lecture hours. At certain hours, a mindfulness bell is rung, which aims to calm the mind, rest the brain, return to the present moment, realize their identity, and improve cognitive function and self-regulation.

However, the application of mindfulness as an effort to overcome academic stress is not as easy as imagined; there are many obstacles in the implementation of mindfulness, both from internal factors and external factors. Individual

⁶ Yuzheng Wang and others, 'A Bibliometric and Visualization Analysis of Mindfulness and Meditation Research from 1900 to 2021', *International Journal of Environmental Research and Public Health*, 18.24 (2021), doi:10.3390/ijerph182413150.

internal factors are the most crucial cause. The physical and mental condition of each human being is essentially different; for example, when someone is sick or has many mental problems, the second is the awareness of the individual's perspective of the person with mindfulness itself can affect focus. External factors are factors that come from the surrounding environment and other individuals. Outside noise and distractions from people around can trigger someone not to be focused on mindfulness practice. Therefore, peace of mind and a conducive environment are very influential in the effectiveness of mindfulness practice. With the problems described, the author will focus on writing an article to investigate the role of mindfulness in training, focus on education, and the obstacles faced when practicing mindfulness with solutions and suggestions.

II. METHODS

The type of research in this article uses a library research approach, namely data collection from various relevant literature sources, including scientific journals, articles, books, theses, and other publications. According to Milya and Asmendri,⁷ a literature study is a research activity that collects information and data from various materials in libraries or journals related to the problem to be solved. This activity systematically collects, processes, and concludes data using specific methods to find answers to the problems. According to Mardalis, a literature study is a study that collects information and data with the help of materials in documents, books, historical stories, libraries, and other sources.⁸ Meanwhile, according to Rosita,⁹ the literature study is an information collection technique by reading and reviewing previously published written materials, such as books or other works that explain the theoretical foundations.

So, it can be concluded that a literature study is a systematic research method for collecting, processing, and analyzing data and information from various relevant written sources, such as books, journals, articles, and other publications, to discover, understand, and solve the problem being studied.

III. RESULTS AND DISCUSSION

3.1. Mindfulness: Meditation in Buddhism

Buddhism is a religion in Indonesia that existed around 2,500 years ago. As a great teacher, Siddharta Gautama played a very noble role in giving birth to and developing Buddhism in the 6th century BC in India. As one of the oldest

religions in Indonesia, dating back to the 5th century CE, Buddhism has also developed into a religion with spiritual customs passed down from ancestors to the present day by emphasizing mental and physical freedom from suffering (*dukkha*) that is continuously present in the body and soul if humans have not been able to achieve that final liberation or *Nibbana*.

In the *Dhammacakkappavattana Sutta*; *Samyutta Nikaya* 56.11 (S 5.420), the Buddha taught the Four Noble Truths (*Cattari Ariya Saccani*), which includes the path that can eliminate suffering (*dukkha*) called the Noble Eightfold Path (*Ariya Atthangiko Magga*) or commonly known as '*Hasta Ariya Magga*'. The eight elements contained are (1) Right View (*sammâ-ditthi*), which is a form of deep knowledge of the Four Noble Truths, namely, *dukkha*, the cause of *dukkha*, the cessation of *dukkha*, and the path leading to the cessation of *dukkha*. Sariputta asserts that Right View concerns not only the Four Noble Truths but also four other aspects of life namely the interdependent law of cause and effect, the three roots of evil and the three roots of good, the three general patterns, and the three taints, (2) Right Thought (*sammâ-sankappa*) this element relates to our intention and motivation to reduce suffering and rid ourselves of hatred, there are three important aspects namely one who has no thoughts of worldly matters, one who has no harmful thoughts, and one who has thoughts of non-violence, (3) Right Speech (*sammâ-vācā*) this element reflects truth and love with this can avoid hurting others or harmful speech, right speech requires one not to lie, incite or divide, speak harshly and boast, there are five important elements that need to be considered in speaking, namely speech delivered at the right time, the speech must be true, the speech is delivered gently, the speech is useful, and the speech is expressed with affection, (4) Right Action (*sammâ-kammanta*) in this element a person acts ethically and does not harm others, Right action includes avoiding murder, not committing theft, staying away from behaviour that deviates from decency, maintaining good speech, and avoiding the use of prohibited items that can weaken consciousness, such as alcohol and narcotics, (5) Right Livelihood (*sammâ-ajiva*) right livelihood means trying to seek and maintain life in the right way, in the context of household livelihood in the field of trade, there are five types of trade that should be avoided, namely: trade in weapons, trade in living beings, trade in meat, trade in alcoholic beverages, and trade in poisons, (6) Right effort (*sammâ-vāyama*) is one's effort in trying to abandon all forms of evil done through thought, speech, and deed in order to condition oneself to better things, (7) Right mindfulness (*sammâ-sati*) the ability to understand intensely the physical body, feelings, thoughts, and mental or mental forms, these four mindfulnesses are often referred to as deep clear insight (*vipassanā*), (8) Right concentration (*sammâ-samādhi*) refers to the process of centering the mind or concentration, through four different levels. This concentration is often referred to as 'calmness' (*samatha*).

As one of the essential paths or elements towards liberation, mindfulness (*sammâ-sati*) is indispensable as the most solid foundation in the spiritual practice of Buddhism, as the Buddha explained in the *Satipatthana Sutta* (MN 10.1).

“*Evaṃ me sutāṃ. Ekaṃ samayaṃ bhagavā kurūsu viharati kammāsadhammaṃ nāma kurūnaṃ nigamo. Tatra kho bhagavā bhikkhū āmantesi: ‘bhikkhavo’ti. ‘Bhadante’ti te bhikkhū bhagavato paccassosum. Bhagavā etadavoca:*”

“*Ekāyano ayaṃ, bhikkhave, maggo sattānaṃ visuddhiyā, sokaparidevānaṃ samatikkamāya, dukkhadomanassānaṃ atthaṅgamāya, ñāyassa adhiḡamāya, nibbānassa sacchikiriyāya, yadidaṃ cattāro satipaṭṭhānā.*”

“*Katame cattāro? Idha, bhikkhave, bhikkhu kāye kāyānupassī viharati ātāpī sampajāno satimā vineyya loke abhiijhādomanassaṃ, vedanāsu vedanānupassī viharati ātāpī sampajāno satimā vineyya loke abhiijhādomanassaṃ, citte cittānupassī viharati ātāpī sampajāno satimā vineyya loke abhiijhādomanassaṃ, dhammesu dhammānupassī viharati ātāpī sampajāno satimā vineyya loke abhiijhādomanassaṃ.*”

The main point of this sutta is the Buddha’s teaching on the “Four Foundations of Mindfulness” as a direct path to the cleansing of the mind, the restriction of sorrow and grievances, the removal of pain and suffering, and the attainment of *Nibbāna*. The Buddha explained that a monk should contemplate the body, feelings, thoughts, and mental objects with mindfulness, attention, and diligence while giving up desire and sorrow for the world. Through this practice, individuals are expected to achieve a deeper understanding and spiritual realization.

With this statement, it is concluded that the four foundations of mindfulness (*Satipatthana*) include mindfulness of the body (*kayanupassana*), mindfulness of feelings (*vedananupassana*), mindfulness of thoughts (*cittanupassana*), and mindfulness of mental objects (*dhammanupassana*). These are closely related to practicing mindfulness of the body and developing mindfulness of the breath (*anapanasati*), posture, and physical activity. As the Buddha taught in the *Anapanasati Sutta*, ‘Mindfully he breathes in, mindfully he breathes out,’ the practice of developing mindfulness in this context can help one to increase mental and physical stability by understanding the impermanence (*anicca*) of the human body.

In its application, meditation is one of the most effective ways to achieve mindfulness. In Buddhism, meditation, which is often referred to as ‘*Samadhi*’ or ‘*Bhavana*,’ is one part of Buddhist spiritual realization. Meditation is a method of focusing the mind on an object to achieve tranquillity and full inner awareness. It is closely correlated with mindfulness, which focuses the mind on being aware and fully present in the present moment.

Meditation is a practice that has many types and purposes, including (1) Serenity meditation (*Samatha Bhavana*) is a meditation practice that prioritizes inner calm, achieving concentration (*Jhana*) and insight (*Vipassana*) is the goal of *Samantha Bhavana*. There are 40 types of meditation objects, each of which is divided into seven categories, including; 10 kinds of material forms (*Kasina*) consisting of earth, water, fire, air, blue, yellow, red, white, light, and limited space; 10 kinds of disgusting forms (*Asubha*) consisting

of 10 different conditions of corpses, namely swollen corpses, corpses full of bruises, festering corpses, split corpses, corpses whose bodies are torn apart, corpses scattered, corpses full of blood, corpses gnawed by animals, corpses infested with maggots, and corpses in the form of skulls; 10 kinds of contemplation (*Anussati*) including contemplation of the sublime qualities of Buddha, Dharma, Sangha, Gods, Precepts, generosity, true peace, death, bodily defilements, and breathing; four kinds of limitless states (*Appamanna*) including contemplation of loving-kindness (*Metta*), compassion (*Karuna*), sympathy (*Mudita*), and equanimity (*Upekkha*); four kinds of immaterial contemplation (*Arupa*) on voidness, infinite space and consciousness, and perception and non-perception; one kind of contemplation of disgusting food (*Arahapatikulasanna*); one kind of analysis of the four bodily elements (*Catudhatuva Vathana*) including solid, liquid, heat and motion, (2) Insight meditation (*Vipassana Bhavana*) is a meditation that refers to the development of insight by deeply observing the mind and body, this method provides an understanding of the three modes of life (*Tilakkhana*), namely Impermanence (*Anicca*), Suffering (*Dukkha*) and Core-lessness (*Anatta*). A person practicing *Vipassana Bhavana* can create positive thoughts and escape from *dukkha*. (3) Mindfulness meditation on the breath (*Anapanasati*) is a commonly practiced type of meditation. *Anapanasati* refers to focusing on the in and out of breath. In addition to relaxing the mind, *Anapanasati* has health benefits, namely lowering blood pressure, improving the immune system, reducing the risk of mental illness, and improving sleep quality (4). Loving-kindness meditation (*Metta Bhavana*) is a type of meditation that focuses on developing loving-kindness. In practice, *Metta Bhavana* meditation is done by visualizing an object that makes the practitioner happy (for example, parents); after focusing on the object, say silently, 'May I be happy, may my parents be happy, may all beings be happy.' Practicing this straightaway makes the practitioner's mind happy. (5) Meditation on the establishment of awareness (*Satipatthana*) consists of four main foundations: awareness of the body, feelings, thoughts, and mental phenomena, in this practice, paying attention to every aspect of experience in a non-judgmental way; (6) Meditation on the contemplation of the body (*Kayanupassana*) this practice includes various techniques in paying attention to breathing, feeling sensations in the body, and analyzing the elements of the body, with this contemplation one will gain a deeper understanding of the temporary nature of the physical, (7) Meditation on the contemplation of feelings. (*Vedanupassana*) focuses on observing feelings or sensations arising from the body, whether positive, negative, or neutral. With this observation, one can reduce excessive emotional reactions and develop inner calm. (8) Meditation on the contemplation of thoughts (*Cittanupassana*) This practice involves observing the thoughts that arise that can affect feelings and actions. With this, one can understand the nature of the mind. (9) Meditation on the contemplation of mental phenomena (*Dhammanupassana*) focuses on observing broad mental phenomena, including ideas and thought patterns; this meditation contemplates various life-related teachings and principles

However, in this case, the *Satipatthana* type of meditation is indispensable in developing and attaining mindfulness in this context. On the other hand, breathing meditation (*Anapanasati*) plays a role in attaining this mindfulness. *Anapanasati* performs the role of being the first step or gateway to achieving awareness of the body (*kayanupassana*), feelings (*vedananupassana*), mind (*cittanupassana*), and mental phenomena (*dhammanupassana*). Along with mindfulness of the process of the breath entering through the nose and spreading throughout the body, then exiting again can be a supporting process practiced to deepen the development of mindfulness and understanding of the impermanent (*anicca*), unsatisfactory (*dukkha*), and no-self (*anatta*) characteristics of life¹⁰.

3.2. Mindfulness: a general perspective

The concept of mindfulness is rooted in the Indian Pali language, “*sati*”. In Buddhist *sati*, it is defined as “awareness, alertness, and mindfulness,” and *sati* refers to both “memory” and “remembrance.” Specifically, *sati* means “awareness of events from time to time” and “remembering to become aware of something.” “In early Buddhism, *sati* referred to mindfulness. Consciousness in Buddhism understands thoughts and desires that arise within oneself rather than experienced thoughts.”¹¹ When a person wants to achieve the goal of mindfulness, it starts with a sense of attraction to the goals and hopes in his heart. A person is attracted to the benefits provided by mindfulness, such as clearing the mind and preparing the mind to face what is happening in the present, so it becomes a person’s goal in doing mindfulness.

According to Shapiro and Carlson,¹² mindfulness is divided into three main aspects: attention, namely, observing experiences that occur both internally and externally by involving awareness in focus; Intention, in this aspect, a person connects his focus with what is the biggest goal, achievement or value in his life and creates an urge in himself to achieve mindfulness. The attitude aspect is when someone understands the quality of something with a sense of acceptance, spaciousness, curiosity, openness, and kindness. According to another opinion from Klussman,¹³ mindfulness is paying attention to something intentionally in the present moment and without judgment of inner emotions. Mindfulness is the full power of well-being and compassion, improved quality of life, anxiety,

depression, and a better mindset. Research conducted by Timothy¹⁴ mentioned that mindfulness can encourage one's experiential engagement; this is because mindfulness can increase one's positive affect.

3.3. Education in a Buddhist perspective

Education is an essential thing that every human being should obtain. In Indonesia, the government has a program requiring every citizen to have a minimum of 12 years of education. This program aims to develop each learner's potential. This initiative is designed to foster the development of each learner's potential. In addition, education is also necessary to form a superior generation for a more advanced Indonesia in the future by developing the intelligence, ways of thinking, and even creativity of students.

From the Buddhist perspective, education is also crucial for every believer. "Education" in Buddhism comes from the term '*sikkha*' defined as learning, practicing, studying, developing, and acquiring knowledge.¹⁵ The Buddha, as the great teacher (*sattha*) or supreme teacher in Buddhism, emphasized in the *Anguttara Nikaya* that the primary goal of education is not merely the acquisition of knowledge but the cultivation of wisdom (*pañña*) that frees one from suffering (*dukkha*).¹⁶

Based on the concept of the Three Trainings (*Tri Sikkha*), education in Buddhism has a system that includes morality (*sīla*), concentration (*samādhi*), and knowledge or wisdom (*pañña*). These three types of training mean proper education must contain character development, mental discipline, and deep understanding.¹⁷ The concept of education in Buddhism is different from the concept of education in general. Buddhist education emphasizes the development of thinking with direct experience and proof as the primary way rather than pushing students to pre-existing material; this learning method is quite effective in improving students' understanding of the material being taught rather than just passively memorizing and receiving information and without knowing why things happen, how they arise and take place, and

various other questions.

In *Kalama Sutta* (AN 3.65), The Buddha told the people of *Kālāma*, “*Iti kho, kālāmā, yaṃ taṃ avocumhā: ‘etha tumhe, kālāmā. Mā anussavena, mā paramparāya, mā itikirāya, mā piṭakasampadānena, mā takkahetu, mā nayahetu, mā ākāraparivitakkena, mā diṭṭhinijjhānakkhantiyā, mā bhabbarūpatāya, mā samaṇo no garūti. Yadā tumhe kālāmā attanāva jāneyyātha: ‘ime dhammā akusalā, ime dhammā sāvajjā, ime dhammā viññugarahitā, ime dhammā samattā samādinna ahitāya dukkhāya samvattanti, atha tumhe, kālāmā, pajaheyyāthā’*”ti, *iti yaṃ taṃ vuttaṃ, idametaṃ paṭicca vuttaṃ.*

*Etha tumhe, kālāmā, mā anussavena, mā paramparāya, mā itikirāya, mā piṭakasampadānena, mā takkahetu, mā nayahetu, mā ākāraparivitakkena, mā diṭṭhinijjhānakkhantiyā, mā bhabbarūpatāya, mā samaṇo no garūti. Yadā tumhe, kālāmā, attanāva jāneyyātha: ‘ime dhammā kusalā, ime dhammā anavajjā, ime dhammā viññuppasatthā, ime dhammā samattā samādinna hitāya sukhāya samvattanti’*ti, *atha tumhe, kālāmā, upasampajja vihareyyātha.*

Taṃ kiṃ maññatha, kālāmā, alobho purisassa ajjhataṃ uppajjamāno uppajjati hitāya vā ahitāya vā”ti?

“*Hitāya, bhante*”.

“Aluddho panāyaṃ, kālāmā, purisapuggalo lobhena anabhibhūto apariyādinna citto neva pāṇaṃ hanati, na adinnaṃ ādiyati, na paradāraṃ gacchati, na musā bhaṇati, na parampi tathattāya samādapeti, yaṃ sa hoti dīgharattaṃ hitāya sukhāya”ti.

“*Evaṃ, bhante*”.

“Taṃ kiṃ maññatha, kālāmā, adoso purisassa ajjhataṃ uppajjamāno uppajjati ...pe... amoho purisassa ajjhataṃ uppajjamāno uppajjati ...pe... hitāya sukhāya”ti.

“*Evaṃ, bhante*”.

“Taṃ kiṃ maññatha, kālāmā, ime dhammā kusalā vā akusalā vā”ti?

“*Kusalā, Bhante*”.

“Sāvajjā vā anavajjā vā”ti?

“*Anavajjā, bhante*”.

“Viññugarahitā vā viññuppasatthā vā”ti?

“*Viññuppasatthā, bhante*”.

“Samattā samādinna hitāya sukhāya samvattanti no vā? Kathaṃ vā ettha hoti”ti?

“Samattā, bhante, samādinna hitāya sukhāya samvattanti. Evaṃ no ettha hoti”ti.

“Iti kho, kālāmā, yaṃ taṃ avocumhā: ‘etha tumhe, kālāmā. Mā anussavena, mā paramparāya, mā itikirāya, mā piṭakasampadānena, mā takkahetu, mā nayahetu, mā ākāraparivitakkena, mā diṭṭhinijjhānakkhantiyā, mā bhabbarūpatāya, mā samaṇo no garūti. Yadā tumhe, kālāmā, attanāva jāneyyātha—

ime dhammā kusalā, ime dhammā anavajjā, ime dhammā viññuppasatthā, ime dhammā samattā samādinna hitāya sukhāya samvattantīti, atha tumhe, kālāmā, upasampajja vihareyyāthā'ti, iti yaṃ taṃ vuttaṃ idametaraṃ paṭicca vuttaṃ.

This *sutta* focuses on the Buddha's instruction to the *Kālāmas*, emphasizing that tradition, authority, or logic should not determine moral ideals. The Buddha advised them to judge deeds based on understanding and experience, emphasizing negative traits such as greed, hate, and illusion. In contrast, actions that are free from these negative qualities are recognized as exemplary, irreproachable, and praised by the wise, and have the potential to bring happiness and well-being. Therefore, individuals are expected to live according to principles that provide benefits based on their knowledge and experience.

Thus, several ways can be used as a simple and efficient guide in discerning the truth, including not believing something just because of tradition. Not everything that has been taught for a long time is accurate. Information obtained is not immediately swallowed raw, but it is better to research first to find out what is in the tradition. Likewise, information that many people have known also does not guarantee its truth, and the truth must be based on evidence and logic, not just the number of people who believe in it. Moreover, do not believe that just because it comes from an authority, sources considered authorized are not always true, but do research and cross-verify the information received. Likewise, believe if something is aligned with goodness, knowing that it can reduce suffering or even increase it. One should hold beliefs that can be substantiated through empirical experience while also considering the potential impact of those beliefs on oneself and others. It is essential to evaluate whether such beliefs will foster inner peace and contribute positively to the well-being of the individual and the broader community.

3.3. Education in general perspective

Education is a process of obtaining balance and perfection in the development of a person in society; education is an effort in the formation of awareness and personality of a person or society in addition to the transfer of knowledge and skills¹⁸. The interpretation by Sumaatmadja from the opinion of T. R. McConnel and Titus is that general education focuses on several subjects with a curriculum directed at developing logic following the systematic flow of knowledge fields aimed at intellectual development. It is part of the mission of all expressions of personality and allows reflection¹⁹.

Education, in the broadest sense, is all learning knowledge experienced by all individuals throughout life in all places and situations, positively influencing

¹⁸ Amit Saepul Malik et al., "Perspektif Visi Pendidikan Dari Sudut Pandang Agama, Filsafat, Psikologi Dan Sosiologi," *EDUKATIF: JURNAL ILMU PENDIDIKAN* 4, no. 2 (March 4, 2022): 2523 – 37, <https://doi.org/10.31004/edukatif.v4i2.2194>.

¹⁹ TR Burhanuddin, "Pendidikan Umum Dalam Prespektif Pendidikan Islam Dan Pendidikan Kewarganegaraan," 2015.

the growth of all living things. The meaning of education is education carried out by teachers to students who can provide role models, learning, directing, and improving ethics and morals. In a narrow sense, education results from efforts made at the institution for students who are submitted to have good competencies and full awareness of student social relationships and problems²⁰.

The education system in Indonesia is contained in the 1945 law (UU) article 31 paragraphs 1 - 5 which reads: (1) Every citizen has the right to education; (2) Every citizen is obliged to attend basic education and the government is obliged to pay for it; (3) The government seeks and organizes a national education system that increases faith and piety and noble character in order to educate the nation's life which is regulated by law; (4) The state prioritizes an education budget of at least twenty percent of the state revenue and expenditure budget and of the regional revenue and expenditure budget to meet the needs of national education; (5) The government advances science and technology by upholding religious values and national unity for the advancement of civilization and the welfare of humanity. It can be concluded that the Indonesian state prioritizes the implementation of education, and the government guarantees the implementation of education in Indonesia ²¹.

Opinion from Suryaningrum in ²² the first education obtained at the earliest is PAUD or Early Childhood Education. As the name implies, PAUD is intended for children aged 0-6 years. In PAUD, children are educated to develop themselves both physically and spiritually. PAUD will be followed by (Elementary School) or Sekolah Dasar SD education for six years, from grade one to six. After that, children will take their first three years of education at Junior High School (SMP) and continue with Senior High School (SMA) or Vocational High School (SMK) for three years. The higher levels of education are extensive, as there are D3, S1, S2, S3, and specialists.

IV. CONSTRAINTS IN EDUCATION

Stress is a person's reaction to overcome stressors (obstacles/problems that cause stress) that are being faced, whether it is internal stressors or external stressors. According to Geeta Jain and Manisa Singhai, academic stress experienced by many students has a negative impact, and prolonged stress has an impact on physical and emotional aspects, such as mental disorders. Meanwhile, according to Julika and Setyawati, stress is a person's response to pressure, subjectively interpreted by academic conditions; this causes physical and behavioral reactions to negative emotional responses due to academic

demands.²³

Many factors can be a factor in implementing educational obstacles; among students, academic stress is a reasonably common problem experienced. The college years are a transitional period where students must adjust to the learning environment, friendships, competition, and new pressures. The academic pressure experienced by students and other things such as social and new changes can affect high levels of stress, especially if students experience psychological development that is vulnerable to emotional changes in themselves so that an identity crisis arises and difficulties in overcoming the problems faced.

Identifying stress in students is the first step to overcoming this problem. Academic stress can be caused by several factors, both from internal factors and factors external to students, for example on internal factors: (1) Poor time management skills cause students to be exhausted in dividing tasks, the burden of tasks borne such as deadlines that are too piling up or the level of difficulty of the assignments given so that students feel very depressed and sometimes think that their lack of ability to understand the material previously delivered is a trigger for difficulty in doing assignments, (2) The exam pressure faced by students is related to stress because students feel they are unable to answer the exam so that when the exam period begins their minds are frantic, keep in mind that working on a test requires a feeling of confidence in one's own abilities so that in answering a question students will be more relaxed, (3) Academic competition between students is the most common cause found in students, students often assume that their ability to master a material or skill is not equal to their peers, thus reducing the level of confidence in not daring to rely on themselves in doing something, but this can be prevented through support from classmates or close friends by providing assistance in the form of encouragement and suggestion that setbacks or obstacles are common in the lecture process, (4) Expectations for oneself that are too high, students often put pressure on themselves with high standards so that students will have enough difficulty achieving the standards that have been made, this triggers stress and pressure, (4) Expectations for oneself that are too high, students often put pressure on themselves with high standards so that students will have enough difficulty in achieving the standards that have been made, this triggers stress and high pressure on the minds of students, (5) Thoughts of future uncertainty, concerns about careers after graduation are one of the stresses that are often faced even before stepping into college.

On external factors faced by students: (1) Environmental factors also affect academic stress, such as an uncomfortable living environment such as noisy dormitories and cramped rooms can cause stress and inadequate learning environments such as inadequate libraries and noisy classrooms can interfere

²³ Endang Mei Yunalia et al., "KECERDASAN EMOSIONAL DAN MEKANISME KOPING BERHUBUNGAN DENGAN TINGKAT STRES AKADEMIK MAHASISWA," *JKJ: Persatuan Perawat Nasional Indonesia*, vol. 9, 2021.

with concentration, (2) Financial problems experienced by students can be one of the stress factors, for example students who are short will work part-time to meet their daily needs, (3) Social relationships such as conflicts with friends or partners cause emotional stress such as dispute problems that interfere with learning concentration, (4) Pressure factors from parents, students are often required to get perfect grades or even all-rounders, students are willing to use the time that should be used for rest to study, time for sleep and rest will be reduced so that health and conditions drop more often resulting in higher stress experienced by students (5) pressure factors from lecturers, lecturers often demand students to be able to complete all assignments given, sometimes one lecturer can give two to three assignments at once so that the burden supported by students is very heavy.

4.1. Application of mindfulness in dealing with Academic stress

According to Wuryansari and Subandi²⁴ students are often faced with various kinds of tasks with short deadlines and then demands for good academic and non-academic grades. The academic pressures experienced by students create a heavy burden on the mind, and the number of tasks divides the focus of thought and reduces the time to rest. If this continues, it will interfere with student health. As a result, they will experience a decrease in academic performance. Therefore, mindfulness is very influential for stress reduction. According to Handayani et al,²⁵ mindfulness does not only include relaxation but also accepting life experiences consciously and more openly is included in mindfulness. Reducing academic stress in students can be helped by mindfulness practices; in research, students who have the skills to manage stress better are students who apply mindfulness practices.

Although mindfulness has many benefits that can be applied in everyday life, there are still challenges in applying mindfulness to students. The challenge that is often encountered is consistency when practicing. As a result, students frequently believe they do not have the time or desire to practice, and mindfulness's long-term stress-reduction benefits are diminished. Students who struggle to balance their academic obligations and mindfulness practice are to blame for this ²⁶. In implementing mindfulness, many obstacles are found, such as a lack of ability to regulate the concentration of thoughts and body position, such that the mind is divided by other things from within and outside. Factors that can trigger obstacles to mindfulness include internal factors such as body condition and personal awareness, while external factors include conduciveness and activities around the environment.

The first is from internal factors, conditions that are less supportive when undergoing mindfulness: (1) Physical conditions that are less supportive, such as illness so that individuals are easily distracted by their pain so that they are not calm

²⁴ Maria Sihombing, "Pengaruh Mindfulness Terhadap Pengurangan Stres Pada Mahasiswa," 2024.

²⁵ Sihombing.

²⁶ Sihombing.

in undergoing mindfulness, (2) Mental conditions that are being experienced by students so that in undergoing mindfulness cannot be done calmly because of confused thoughts, (3) Too often thinking about various things, both that have happened and those that might happen, can make practitioners trapped and have difficulty concentrating because they cannot focus on the situation when undergoing mindfulness, (4) Laziness often arises in students when going to practice mindfulness, especially after completing tiring tasks; this condition hinders consistency in carrying out the mindfulness practice.

External factors are also an obstacle in doing mindfulness: (1) The environment is not conducive, such as noise from outside and an uncomfortable place can interfere with concentration, in addition to disturbances from surrounding friends who cannot be calm and disturb can divert attention from practicing mindfulness., (2) Distraction from gadgets, many people have an addiction to the use of gadgets. Therefore, students will find it difficult to break the habit of doing mindfulness; they cannot concentrate.

4.2. Application of mindfulness

Properly practiced mindfulness can increase effectiveness in practice. In practice, mindfulness requires several steps that are very important in order to achieve an entire focus on self-awareness in the current moment. Some of the steps can start with (1) Finding the right and conducive place and time, (2) Making sure all electronics such as gadgets are deactivated, (3) A relaxed and comfortable sitting position as well as body can help individuals to step into the next stage of seeking complete focus, (4) Place the hands on the crossed legs or the right and left thighs by being aware of all stages, (5) Then start the next step by closing the eyes slowly and gently.

The practice requires full awareness of the in-breath and out-breath as the central aspect of the contemplation. As discussed in the Satipatthana Sutta, when practicing mindfulness, one should contemplate or focus on four things, namely: (1) Contemplation of the body (*kayanupassana*), being aware of everything related to the body, for example, being aware of all body movements such as walking, sitting, standing or lying down, (2) Contemplation of feelings (*vedananupassana*) recognizing the feelings felt whether pleasant, unpleasant or neutral to be aware of feelings arising and passing away, (3) Contemplation of consciousness (*cittanupassana*) by realizing the existence of greed or the absence of greed for example when one feels a sense of laziness that envelops the self, (4) Contemplation of thought forms (*dhammanupassana*) realizing the many thought forms that arise from the self such as lust and realizing the existence of lust.

For this reason, when internal obstacles arise during mindfulness practice – such as drowsiness, wandering thoughts, and discomfort from sitting positions – these challenges can be addressed through physical stretching, refocusing on the breath, and adjusting the sitting posture to facilitate a more comfortable meditation experience.²⁷ Implementing meditation practice will be more

²⁷ Thera, *Mindfulness Recollection & Concentration*.

effective with the correct application method, such as the abovementioned procedures.

As an example of mindfulness practices carried out in higher education, mindfulness practices have been routinely applied at STABN Raden Wijaya Wonogiri, and mindfulness is carried out at the beginning of lecture hours by reading aspiration prayers first and followed by a moment of silence, aiming to calm the mind so that students are expected to focus during lectures. In addition to the application of mindfulness in class, at certain hours, the mindfulness bell is rung as an effort to remind mindfulness, not only aimed at students but also at all campus residents, such as lecturers, staff, and education personnel. The central concept of mindfulness applied at STABN Raden Wijaya Wonogiri is to rest the brain from all activities that are being carried out, both standing and sitting, and positioning the body to stop for a moment and then do mindfulness, returning to the present moment by realizing what is being experienced at this time, realizing his identity, and improving cognitive function and self-regulation. In mindfulness, attention to the current situation with a feeling of acceptance without a sense of rejection aims to train the ability to realize and observe individual emotions as they are without changing the emotional experience.²⁸

V. BENEFITS OF MINDFULNESS

In practicing mindfulness, many benefits are obtained, especially among students to reduce the pressure of academic stress, the benefits that can be obtained if you regularly do mindfulness²⁹: (1) Reducing stress and anxiety, mindfulness can help reduce panic and anxiety, on what to do first and completing according to their own capacity is something that must be done, (2) With mindfulness students can increase focus and concentration, many of the tasks given can break concentration, so managing time in order to complete their tasks, for example by sorting which tasks have the closest deadlines or which tasks have the lightest weight, (3) Build students' cognitive abilities by focusing all attention on knowledge, application, analysis, understanding synthesis, and evaluation so that students are more responsive in completing their assignments on time, (4) Improve emotional and social intelligence for the better, the practice of mindfulness can make students more sensitive to various things around them, such as the presence of others and feelings of empathy, so that students can respond according to the situation, (5) Mindfulness can improve memory, this ability to remember is quite helpful for students, especially to retain the lecture material received every day, this ability also has a positive impact in determining academic success, so that student's focus will be trained and can quickly absorb information delivered in a structured manner.

²⁸ Wu et al., "Brief Mindfulness Meditation Improves Emotion Processing."

²⁹ Thera, *Mindfulness Recollection & Concentration*.

Research conducted by Safitri & Nugroho³⁰ shows that when a person's mindfulness increases, the way to manage emotions and emotional skills increases. For example, someone who is more grateful and loves himself, proving a positive relationship between a person's emotional intelligence and mindfulness so that someone with a high level of mindfulness is more straightforward in expressing himself and managing emotions and has a low-stress level.

According to other studies,³¹ practicing mindfulness can allow someone to explore their internal resources that have not been realized to be more optimal. Someone who routinely or often practices mindfulness shows awareness of positive self-responses both physically and mentally; this shows that someone who often practices mindfulness has a choice in responding to an event to see stressors through a new perspective.

Someone who practices mindfulness regularly certainly gets more significant benefits. Based on some of the benefits above, it can be concluded that mindfulness has many benefits, from physical to mental, for someone who lives it, especially for students who are experiencing burnout or stress due to academic stress. Mindfulness can relieve stress by regulating the management of emotions within a person, and mindfulness is also valuable for building cognitive abilities such as memory and focusing thoughts on more valuable things.

VI. CONCLUSION

Buddhism has been present in Indonesia since 2,500 years ago; it is the oldest religion in Indonesia and is known for its spiritual customs passed down from ancestors. Focusing on mental and physical freedom from suffering (*dukkha*) that continues to be present in the human body and soul, if not yet able to achieve final liberation or *Nibbana*. In the *Dhammacakkappavattana Sutta; Samyutta Nikaya* 56.11 (S 5.420) it can be concluded that there are four foundations of attention (*Satipatthana*) which include attention to the body (*kayanupassana*), attention to feelings (*vedananupassana*), attention to the mind (*cittanupassana*), and attention to mental objects (*dhammanupassana*). The result has a tight connection to the body-mindfulness practice.

Meditation is a mindfulness practice that is done in order to gain calmness and awareness. In this context, meditation is indispensable in relieving the stress that students often experience. Students will more readily accept life experiences consciously and more openly by meditation. So that students can have better stress management skills. In practicing mindfulness, namely meditation, there are many internal and external obstacles. These obstacles include physical and mental conditions that are less supportive, difficulty

³⁰ Meta Hasanah Safitri and Indra Prapto Nugroho, "Mindfulness Dan Emotional Intelligence Pada Remaja Panti Asuhan," *Psychology Journal of Mental Health* 4, no. 2 (2023): 92 – 109, <https://doi.org/10.32539/pjmh.v4i2.76>.

controlling thoughts, laziness that is difficult to eliminate, an unfavorable environmental atmosphere, and gadget distractions that are difficult to ignore. For this reason, the right solution to this problem is to find a location with a suitable atmosphere, condition the ideal body, maintain health, and turn off gadgets when meditating. People who practice mindfulness regularly can feel many benefits, starting from physical and mental factors such as a clearer mind because they can control their emotions. Mindfulness practice is accessible to all individuals; however, internal and external factors – such as personal intention, ambient noise, the comfort of the environment, and external distractions – can significantly influence the effectiveness of this practice. Mindfulness is often practiced at the onset of activity to promote mental relaxation and enhance focus or when the body is unwell, such as in states of anxiety or mental confusion.

CHALLENGES AND OPPORTUNITIES OF MINDFULNESS IN EDUCATION DURING THE DIGITAL ERA

Yuni Nur Widiaastuti*

Abstract:

This article discusses the challenges and opportunities of implementing mindfulness in education in the digital era. The digital era has made access to information and technology easier, but it has also introduced new mental and emotional challenges for students. Cyberbullying and high academic pressure have led to increased stress, anxiety, and depression among students. As a practice of self-awareness and emotional regulation, mindfulness is believed to help address these issues. However, its application in education faces various challenges and opportunities. One of the main obstacles is the lack of understanding of mindfulness among teachers and education personnel, along with limited time and resources. Additionally, adapting teaching methods to suit the characteristics of students in the digital era remains a challenge. Differences in perception and acceptance of mindfulness among parents and society also act as inhibiting factors. Despite these challenges, the application of mindfulness presents significant opportunities in education. It can enhance students' concentration, focus, and learning abilities. Moreover, mindfulness helps students manage emotions, reduce stress, and improve mental well-being. With increasingly sophisticated digital technology, including mindfulness applications and educational games, the implementation of mindfulness in schools can become more effective and accessible. This article also examines the benefits of mindfulness for both physical and mental health, its application in daily life, education, and the workplace, as well as the challenges and opportunities it faces in the digital era. Additionally, it provides solutions and strategies to overcome these challenges, including teacher training, integrative curriculum development, parental involvement, and the effective use of digital technology.

I. INTRODUCTION

Students face challenges in the fast-paced and stressful modern era, such as high academic demands, intense social pressure, and rapid technological developments. These conditions contribute to increased rates of stress, anxiety, and even depression among young people. According to Hadi et al., depression is a condition in which a person feels sad and disappointed when experiencing change, loss, or failure. It becomes pathological when one is unable to adapt. In the digital era, some major causes of depression among young people include dependence on social media, which disrupts sleep quality, and exposure to harmful content that leads to cyberbullying, exacerbating depression among today's youth¹. Additionally, parental expectations regarding students' academic achievements further add to students' mental and emotional burdens. Students are often expected to excel academically while simultaneously adapting to technological and social changes. To address this situation, education must implement an effective and efficient approach to support students in developing mental and emotional well-being. One such approach is mindfulness. According to Handayani Sutanto and Grace Immanuel², Mindfulness is a method that involves fully focusing on the present moment. This practice enhances awareness and responsiveness when experiencing distress. Hadi et al. argue that mindfulness involves paying attention with openness, curiosity, and flexibility. A person can effectively engage in an activity when their mind is in a state of awareness³. Meanwhile, Riza Adi Wicaksono, Rian Rokhmad Hidayat, and Ulya Makhmudah state that mindfulness is a form of meditation in which a person meditates to focus the mind on an object to regulate attention and concentration⁴. This practice helps enhance the experience and cultivate full awareness. Based on the opinions of the experts mentioned above, mindfulness is a form of training that can help individuals increase their awareness and energy. In practice, mindfulness can be developed through meditation by using an object as a reference point to focus the mind. This verse in the Dhammapada, "The wise person

⁴ Riza Adi Wicaksono, Rian Rokhmad Hidayat, and Ulya Makhmudah, "Studi Kepustakaan Penerapan Teori Mindfulness Untuk Mereduksi Stres Akademik," *Jurnal Psikoedukasi Dan Konseling* 5, no. 2 (2022): p. 89. <https://doi.org/10.20961/jpk.v5i2.55745>.

who is always full of attention and free from desires will attain incomparable nibbāna⁵,” Mindfulness is the practice of mindful awareness of the mind, body, and feelings and has been at the core of Buddhist teachings for centuries⁶. In Buddhism, mindfulness is usually called meditation, which focuses the mind on an object; training oneself by practicing meditation can help calm the mind and heart⁷. However, in modern education, mindfulness is not only seen as a spiritual practice but one of the effective psychological strategies to manage stress and emotions. Mindfulness is gaining importance in education today as it helps children and adolescents cope with the various challenges of the modern era. In modern education, mindfulness offers a holistic approach to help students develop self-awareness, improve focus, and cultivate moral values such as compassion and wisdom. Applying mindfulness in the school environment can provide considerable benefits, such as reducing stress, increasing learning motivation, and improving social relationships between teachers and students. One example is the application of mindfulness at the Buddhist College, where the college implements mindfulness practices before learning. Practicing mindfulness before learning will make the mind and body more focused, relaxed, and ready to receive learning materials. This shows that mindfulness is very relevant to education because it has a positive impact. The digital era is a period of transformation characterized by rapid changes in various aspects of life, ranging from how to work and communicate to social interaction. This change offers various forms of opportunities that can be utilized to improve the quality of life, but it also presents tantrums that require serious handling.⁸ This development is driven by technological innovations such as the internet, mobile devices, social media, and AI intelligence that have changed how communication learns to work. In its development, technology also has challenges that arise, as the use of increasingly sophisticated technology excessive use of technology can divert a person’s focus, which causes a person to lose his attention. Although there are challenges, the digital era also has quite good opportunities, one of which is easy access to broader and easier information. The internet, which allows individuals to access various sources of information and knowledge without restrictions, can support independent learning and skill development. This technology also encourages changes in learning, teaching, and implementation. The digital era has changed the way people live and interact. Although it provides convenience for users, the digital era also poses challenges that make its use difficult. The current digital era

⁷ Kaustubh Kamalesh Bhandarkar and Charusheela Ramesh Birajdar, “Meditation Practices: Impact on Mind and Body Safety,” Towards Excellence 13, no. 2 (2021): 472–89, <https://doi.org/10.37867/te130237>.

⁸ Jurnal Ilmiah et al., “Perkembangan Teknologi Informasi Dan Komunikasi Diera Digital : Perspektif Masa Depan” 2, no. 12 (2024): p. 25 – 35.

shows that mindfulness is increasingly relevant to be applied given that the flow of information is accelerating and students are exposed to various types of technology, such as social media and digital games. This is often the cause of attention disorders and anxiety in students; these conditions cause awareness in students to become unstable. Therefore, it is necessary to apply mindfulness to the school environment to overcome problems among students. Some research shows that applying mindfulness exercises can help students manage emotions and mindsets and increase resilience.⁹ This article discusses the challenges and opportunities of mindfulness in the school environment in the digital age. By understanding the various barriers and benefits, mindfulness can be effectively implemented to support students' academic development and emotional well-being. This article aims to understand mindfulness in education in the digital age. The practice of mindfulness, known as mindfulness, is one of the practices that can relieve stress, anxiety, and depression. Furthermore, this article aims to help readers understand mindfulness's meaning, challenges, and opportunities in today's digital age.

Research method

This article uses the literature review research method to analyze reading materials related to the challenges and opportunities of applying mindfulness in education in the digital age. The data collection process is done by searching Google Scholar sources and WEB and reading books about mindfulness. A literature review was chosen based on a method that is effective enough to collect, analyze, and synthesize information from various relevant reading sources. Using the literature review method, the author hopes that this article can provide information to help understand the application of mindfulness in education in the digital era.

II. DISCUSSION

Mindfulness is a concept that emphasizes full awareness of the present moment without judgment of what is happening. Experts say that mindfulness itself has various definitions. According to Jon Kabat-Zinn, mindfulness is awareness from moment to moment, not judging what is in the thoughts and feelings of oneself and others.¹⁰ According to Psychology Today, mindfulness is training oneself to focus on what is happening now without reacting to and overthinking the conditions around you.¹¹ Experts agree that mindfulness connects to the present moment, accepting what is without judgment and developing awareness of thoughts, feelings, and bodily sensations. *Spiritual Roots of Buddhism: Mindfulness is deeply rooted in Buddhist meditation,*

especially in the Theravada school.¹² Gautama Buddha's teachings emphasized the importance of self-awareness and observation of the mind and body as the path to liberation from suffering (*dukkha*). "The mind is hard to control; it is agile and likes to move everywhere. Therefore, it is wise to tame the mind; a tamed mind brings happiness."¹³ This verse emphasizes that it is important to control the mind to achieve true happiness. In Buddhism, there is a meditation practice that laypeople often practice; meditation has several techniques in its application. One is the Vipassanā meditation technique, which means "to see clearly," which is the core of mindfulness practice. Vipassanā involves careful observation of physical sensations, emotions, and thoughts without getting carried away or judging them.¹⁴ Vipassanā meditation is the oldest technique in Buddhism, especially in the Theravāda school. In its practice, vipassanā meditation is performed by continuously observing phenomena that arise in the body and mind. The techniques used usually involve the following steps: (1) Breath observation (*ānāpānasati*) – A practice that involves noticing the breath naturally without controlling it. Attention is focused on the air entering and leaving through the nose or the movement of the abdomen. (2) Observation of body sensations (*kāyānupassanā*) – After developing concentration, practitioners can observe bodily sensations from head to toe. Every sensation is perceived as a manifestation of impermanence (*anicca*). (3) Observation of thoughts and emotions (*cittānupassanā*) – At this stage, practitioners observe their thoughts and emotions, such as anxiety, anger, or happiness, with a calm and non-reactive attitude. (4) Observation of mental phenomena (*dhammānupassanā*) – The final stage in the practice of vipassanā involves observing how mental experiences arise and pass away, thereby deepening the understanding of the law of causation (*paṭiccasamuppāda*). This technique aims to develop a deeper understanding of the transient and impermanent nature of experience, cultivate an awareness of *anicca* (impermanence), reduce attachment and suffering (*dukkha*), purify the mind, and attain wisdom (*paññā*). In conclusion, vipassanā meditation is a technique that focuses on the direct observation of experience without judgment, helping individuals gain insight into the nature of life. "Mindfully breathing in long, mindfully breathing out long, and in short, breathing out short. 'I will train myself to experience the whole body while breathing in,' thus he trains himself. 'I will train myself to experience the whole body while breathing out,' thus he trains himself."¹⁵

Developed in the West, Mindfulness only became widely known in the West in the 20th century. Jon Kabat-Zinn, a professor of molecular biology, played an

¹⁵ MN 118.

important role in popularizing it. Jon Kabat-Zinn developed the Mindfulness-Based Stress Reduction (MBSR) program in 1979 at the University of Massachusetts Medical Center, which adapted Buddhist meditation techniques to address stress and other health issues.¹⁶ The (MBSR Mindfulness-Based Stress Reduction) program emphasizes practicing mindfulness in daily life using techniques viz: First, sitting meditation, which focuses on breathing and body sensations to develop self-awareness. Second, body scan meditation directs attention to different parts of the body systematically and helps increase awareness of the body. The third is mindful yoga, which involves gentle body movements combined with mindful awareness of the body and breathing. Research shows that MBSR is quite effective in reducing stress, anxiety, and depression and helps in improving mental and emotional well-being. In addition to the health field, mindfulness exists in psychology and neuroscience. Mindfulness-Based Cognitive Therapy (MBCT) was developed as an approach that helps in preventing depression in the morning who experience depressive disorders. Besides health and psychology, mindfulness can also be applied in the workplace and in education¹⁷. It was mentioned that several prominent companies, such as Google, Intel, and General Mills, use mindfulness programs to improve employee well-being and productivity. Mindfulness has benefits for mental health. Firstly, it can reduce stress and anxiety; by focusing on the present moment, mindfulness helps us detach ourselves from worries about the past or future, which are often triggers for stress and anxiety. Secondly, it can overcome depression by increasing self-awareness; mindfulness helps individuals recognize and accept negative thoughts and feelings without getting carried away. This allows for developing a healthy distance from those thoughts and avoiding over-identification with negative emotions. Third, it improves emotion regulation; observing emotions without judgment can develop a deeper understanding of emotional patterns and how they affect one's behavior. This allows one to respond to emotions more thoughtfully and avoid impulsive reactions that can exacerbate mental health issues. Benefits include improved quality of life, reduced anxiety, less pain, relief from stress and evil thoughts, change of bad habits, and emotion regulation. Mindfulness is also helpful for self-development processes, such as learning new things and helping to understand different perspectives¹⁸. Besides being beneficial for mental health, mindfulness is also beneficial for physical health. Here are some benefits of mindfulness for physical health: The first is to reduce stress and calm the nervous system, which can help lower blood pressure. Mindfulness

¹⁷ The Centre et al., "Mindfulness-Based Interventions in the Workplace . A Case Study .," no. June 2014 (n.d.).

¹⁸ Masfi Sya'fiatul Ummah, "Meditasi Buddha Theravada Dalam Perspektif Mahasi Sayadaw," *Sustainability (Switzerland)* 11, no. 1 (2019): p. 1 – 14.

is effective in reducing the intensity and frequency of chronic pain, including low back pain, tension headaches, and fibromyalgia (a chronic condition that causes muscle pain and widespread fatigue, sleep, mood, and memory problems). Moreover, the third can improve sleep quality by reducing anxiety and disturbing thoughts before bed. In this modern era, adolescents experience physical, psychological, and social differences, which can bring up several problems that can interfere with psychological well-being.¹⁹ In today's modern era, the changes are significant among adolescents experiencing various problems. Research by Savitri and Listiyandini confirms that mindfulness has a positive role in adolescent well-being, especially environmental mastery. Thus, practicing mindfulness not only benefits mental health but also has a good impact on psychological well-being, especially for adolescents who often experience challenges in growth²⁰. Generation Z, or Gen Z, born between the mid-1990s and early 2010s, grew up in a digital era that is fast-paced and full of information²¹. Gen Z's life is filled with academic pressure, social media, and uncertainty about the future. This condition makes Gen Z vulnerable to stress, anxiety, and depression. Therefore, Gen Z needs to practice mindfulness as a practice of self-awareness and offer potential solutions to overcome it. Gen Z also faces various challenges in implementing mindfulness. Implementing this practice can be done through various methods such as meditation, yoga, or paying attention to the in-breath and out-breath. For Gen Z, who are used to technology and instant information, implementing mindfulness practices requires a different approach. Technology-based mindfulness apps, such as meditation apps that integrate with social media, can be an attractive entry point. More personal interactions, such as discussion groups or professionally led mindfulness workshops, are also important for creating community and support. Even though the benefits of mindfulness are enormous among Gen Z, they also face various challenges. First, Generation Z's fast-paced and fragmented lifestyle can make finding time to practice mindfulness difficult. Second, the stigma around mental health is still a barrier for some Generation Z individuals from seeking help and practicing mindfulness. Third, a lack of access to resources and accurate information about mindfulness can hinder its effective implementation. Research shows a positive relationship between mindfulness and mental well-being among Generation Z. A study by Annisa Zahronita Utami and Khoirudin Ismail showed that mindfulness practices can reduce stress and anxiety levels and improve sleep quality in Generation

Z students.²² Another study by Gale M Lucas et al. revealed that the use of technology-based mindfulness applications can increase self-awareness and the ability to regulate emotions in Generation Z youth.²³ However, more research is still needed to understand the effectiveness of various mindfulness methods and the factors influencing their successful implementation in the diverse Generation Z population. To increase mindfulness among Generation Z, there needs to be a holistic approach involving various parties. Schools and universities can integrate mindfulness programs into the curriculum. Governments can provide broader access to mental health services and mindfulness resources, and parents and families also play an important role in supporting Generation Z children in practicing mindfulness.²⁴ It is also important to continue to develop and disseminate accurate and accessible information about mindfulness, primarily through digital media familiar to Generation Z.²⁵ So, mindfulness practices offer great potential to improve the mental well-being of Generation Z. However, its implementation requires an innovative and comprehensive approach considering this generation's lifestyle and unique challenges.

Mindfulness, or *sati* in Pāli, is at the core of Buddhism. Mindfulness is not simply a relaxation technique; it is the practice of being fully aware of present thoughts, feelings, and bodily sensations without judgment. Its application in daily life can bring inner peace and well-being.²⁶ Ways of applying mindfulness rooted in Buddhist teachings include: Firstly, *vipassanā* meditation, the foundation of mindfulness. The focus is on observing the breath, body sensations, thoughts, and feelings without judgment. By practicing regularly, we train the mind to stay focused on the present moment, reducing worry about the past and anxiety about the future. Through this practice, Buddhism emphasizes the importance of developing *samādhi* (concentration) and *paññā* (wisdom). Example: Sit comfortably, close your eyes, and focus on the sensation of the breath coming in and out. Observe each inhalation and exhale without trying to change it. When the mind

²⁶ Ayu Rahmawati Tirto and Yohanis Franz La Kahija, "Pengalaman Bisku Dalam Mempraktikkan Mindfulness (Sati/ Kesadaran Penuh)," *Jurnal EMPATI* 4, no. 2 (2015): p. 126–34, <https://doi.org/10.14710/empati.2015.14904>.

wanders, acknowledge it and refocus on the breath. Second, mindfulness in daily activities. Mindfulness is not just limited to formal meditation sessions. We can practice it in everyday activities such as eating, walking, or working. By paying attention to every detail of the sensations and thoughts that arise during the activity, we can increase our appreciation of the experience and reduce stress. Buddhism emphasizes the importance of understanding and managing emotions wisely. Mindfulness helps us observe emotions without getting carried away, which aligns with the Buddhist teaching of the middle way, avoiding attachment and denial of emotions. Example: When angry, observe the accompanying physical sensations (e.g., heart palpitations, muscle tension). Acknowledge the emotion without judging it. Find ways to calm down, for example, by breathing deeply or walking. Fourth, be compassionate and forgiving. Mindfulness can also increase compassion and the ability to forgive. We can develop empathy and compassion by being aware of our own and others' suffering. Buddhism emphasizes the importance of *mettā* (loving-kindness) and *karunā* (compassion) as the path to liberation.²⁷ Example: When someone hurts us, observe our thoughts and feelings without judging them. Try to understand the person's perspective and develop compassion. The application of mindfulness in daily life can foster inner peace, well-being, and wisdom through the core teachings of Buddhism. Mindfulness is one of the practices that is gaining increasing attention in education. This concept applies mindfulness to the present moment to provide assessments that help improve students' emotional and academic well-being. Applying mindfulness in education can help improve learning focus and reduce excessive stress. This practice can be applied not only to students but also to teachers. It is relevant in education because it has proven to be both effective and efficient. Christine A. Burke argues that students who practice mindfulness exhibit emotional improvements and better mental well-being.²⁸ However, the application of mindfulness in education is not without challenges. The growing digital age has introduced distractions, such as electronic devices and social media, which can hinder students from developing mindfulness in their learning environment.²⁹ Beyond education, mindfulness can also be applied in the workplace. The modern work environment is often characterized by high pressure and demanding expectations, which, for some individuals, lead to stress, depression, and mental fatigue. Applying mindfulness in professional settings can help reduce stress, enhance work engagement, and improve

²⁹ Lisa Flook et al., "HHS Public Access Author Manuscript Dev Psychol. Author Manuscript; Available in PMC 2015 June 28. Published in Final Edited Form as: Dev Psychol. 2015 January ; 51 (1): p. 44 – 51. Doi:10.1037/A0038256. & Promoting Prosocial Behavior and Self-Regulatory Skills I," *Dev Psychol* 51, no. 1 (2015): p. 44–51, <https://doi.org/10.1037/a0038256>.

interpersonal relationships. A study by Hülshager et al. showed that employees who regularly practiced mindfulness experienced lower job burnout and greater psychological well-being.³⁰ However, integrating mindfulness into the workplace also presents significant challenges. Many employees still perceive mindfulness as irrelevant to professional settings, leading to resistance from individuals and groups. Additionally, organizations often struggle to allocate sufficient time and resources to support mindfulness initiatives. In conclusion, mindfulness offers numerous benefits in both education and the workplace, particularly in enhancing mental well-being, focus, and productivity. However, challenges such as technological distractions and a lack of understanding continue to hinder its widespread implementation. Nevertheless, with the support of digital technology and growing awareness of its importance, mindfulness has significant potential to be more broadly integrated into academic and professional life in the digital age.

In the digital era, the application of mindfulness is quite a challenge. The development of technology that provides easy access to information makes social media users focus on one thing, which causes them to lose focus on other things³¹. Mentioned that confusion in using digital media causes attention disorders and causes users to lose focus on more valuable activities. The abundance of information and instant stimulation from the internet, gadgets, and social media can lead to attention disorders and digital addiction. In addition, in the digital age, academic pressure, cyberbullying, and information overload can also trigger stress and anxiety. Dependence on technology can inhibit self-awareness and the ability to understand emotions and thoughts. Enhancing mindfulness is essential in the digital age to address issues related to distraction, addiction, stress, and lack of self-awareness. By practicing mindfulness, individuals can be more balanced, calm, and happy amidst the ever-evolving flow of information and technology.³² Argue that applying mindfulness and meditation can help individuals overcome stress and anxiety problems caused by digital technology addiction. However, mindfulness in education in the digital age also has many challenges and opportunities. One example of a significant challenge is the integration of mindfulness into a technology-heavy curriculum. Some schools are often burdened by the pressure to achieve specific academic standards, making it difficult to allocate dedicated time to implement mindfulness practices. In addition, addiction to

³⁰ Ute R. Hülshager et al., "Benefits of Mindfulness at Work: The Role of Mindfulness in Emotion Regulation, Emotional Exhaustion, and Job Satisfaction," *Journal of Applied Psychology* 98, no. 2 (2013): p. 310–25, <https://doi.org/10.1037/a0031313>.

³² Priyadarsini Samanta et al., "Mindfulness as a Path to Freedom from Internet Addiction in Adolescents : A Narrative Review" 16, no. 10 (2024), <https://doi.org/10.7759/cureus.72544>.

digital technology can lead to distraction and dependency, which is contrary to the principles of mindfulness. Students accustomed to instant stimulation from gadgets have difficulties focusing and calming down during mindfulness sessions. However, the lack of teacher training in more effective mindfulness teaching methods is an obstacle. Teachers need to understand the principles of mindfulness and how to adapt them to various subjects and lesson contexts. Without adequate training, implementing mindfulness may not be effective and may generate teacher resistance.³³ Adapting mindfulness practices to the diversity of students is also a challenge, as each student has a different backgrounds, experiences, and needs. According to Diana Koszycki et al, implementing mindfulness programs must consider these factors and design inclusively and efficiently for individual differences.³⁴ Some students must have differences, namely differences in culture and religion. Mindfulness is a universal practice often associated with certain Buddhist or spiritual traditions³⁵. Students with different backgrounds or religions will feel uncomfortable because they may be tied to a particular spiritual context, resulting in obstacles and discomfort. Secondly, special needs, students who have special needs, such as anxiety disorders, autism, and even ADHD (attention deficit hyperactivity disorder) or so-called anxiety disorders, in applying mindfulness may need significant changes in mindfulness practice. Structuring the session duration, selecting the type of guidance, and designing the practice environment may require collaboration with specialized therapists to align with the child's abilities and sensitivities. Thirdly, language and literacy: The use of clear and explicit language that is easy for students to understand is essential. For students who have difficulty reading or are bilingual, materials should be adapted to their level of comprehension. Fourth, readiness and trust: Not all students may be ready or willing to participate in mindfulness practices. Building trust and creating a safe environment is a gradual process. A participatory approach should be implemented to help students feel comfortable and engaged. Fifth, access and resources: Some schools may face challenges in providing adequate resources to support effective mindfulness practice. This includes teacher training, appropriate materials, and a quiet, safe space for practice. Given these challenges, a holistic and collaborative approach is necessary. Teachers, parents, and counselors must work together to develop mindfulness practices tailored to individual student needs. Customizing strategies appropriately ensures that all students have equal opportunities to benefit from these practices. Additionally, the process should be continuously evaluated and improved based on feedback from students and stakeholders. By doing so, schools can

³⁵ Katherine Weare, "The Evidence for Mindfulness in Schools," no. July (2018): p. 1 – 36.

ensure that mindfulness programs effectively support students' well-being.

Despite its challenges, the digital age also has opportunities to promote mindfulness in education. Technology can be used to facilitate mindfulness practices. The use of mobile applications and online platforms provides meditation guidelines, breathing exercises, and other resources that can be easily accessed by teachers and students.³⁶ Mindfulness offers benefits that students can experience firsthand, including helping them develop healthy digital habits. By becoming more aware of their thoughts and emotions, students can learn to regulate their use of technology and reduce the risk of digital addiction. Additionally, mindfulness helps students improve focus, concentration, and time management skills - essential abilities for navigating digital learning environments. These practices also enhance students' ability to cope with stress and anxiety, which are increasingly common in the digital era. For instance, academic pressure, cyberbullying, and information overload can contribute to stress and anxiety among students. Mindfulness provides a valuable tool to help them manage these challenges effectively. Rowan argues that mindfulness helps students develop a healthy mindset and improves students' mental well-being³⁷. Finally, mindfulness has also been shown to support collaborative and practical learning by creating a calm, safe, and supportive classroom environment that helps students work together and learn more effectively. Based on this presentation of the opportunities for mindfulness in the digital age, it is clear that mindfulness offers excellent potential to improve student success and the quality of learning in the digital age. However, successful implementation also requires attention to the existing challenges and utilization of the opportunities provided by technology. Teacher training, effective curriculum development, and further research are essential to ensure mindfulness becomes integral to future education.

The digital age presents new challenges and opportunities in education. The application of mindfulness helps students to overcome digital distractions and improve their mental well-being. Solutions that can be implemented are: Firstly, technology integration; in education, teachers can utilize digital platforms and apps to introduce mindfulness to students – for example, guided meditation apps, mindfulness games, and educational content about mindfulness. Secondly, teacher training should provide training on the benefits and methods of implementing mindfulness in the classroom. The training should cover the theory of mindfulness practice and strategies to overcome challenges in the digital era. Thirdly, collaborating with parents and organizing workshops and seminars for parents on mindfulness and its benefits for children. Share online resources such as videos and apps to help parents understand and support

³⁶ Antonietta Manna et al., "Neural Correlates of Focused Attention and Cognitive Monitoring in Meditation," *Brain Research Bulletin* 82, no. 1 – 2 (2010): p. 46–56, <https://doi.org/10.1016/j.brainresbull.2010.03.001>.

³⁷ Rowan Publication, "The Role of Emotion Regulation in Early Intervention and Prevention of Mental Health Problems in Adolescents," 2022.

mindfulness practice at home. Fourth, research and evaluation should be conducted to evaluate the effectiveness of mindfulness practices in improving students' mental health and learning achievement. Based on the evaluation results, adapt and modify mindfulness practices to be more effective and relevant to the needs of students in the digital era³⁸.

III. CONCLUSION

A review of the challenges and opportunities of implementing mindfulness in education in the digital era highlights its great potential but also the complexities that must be considered. Successfully integrating mindfulness into education requires a comprehensive strategy. First, continuous and standardized training for teachers and educational personnel is essential. This training should cover both the theoretical foundations of mindfulness and practical methods for implementing it in the classroom. Second, curriculum development should integrate mindfulness principles into relevant subjects, ensuring that these practices become a natural part of students' learning experiences. Third, the active involvement of parents in supporting mindfulness practices at home is crucial for creating consistency and maximizing effectiveness. Fourth, leveraging digital technology - such as mindfulness apps and educational games - can facilitate access and enhance student engagement. Fifth, further research is needed to examine the effectiveness of different mindfulness methods in education within the digital era and to adapt them to the diverse needs of students. The application of mindfulness in education is crucial for addressing the challenges of students' mental and emotional development amid the constant influx of information and technological advancements. Studies show a positive correlation between mindfulness practices, improved academic performance, and reduced stress and anxiety levels. By enhancing students' ability to focus and regulate their emotions, mindfulness positively impacts both learning outcomes and overall well-being. Therefore, investment in teacher training and curriculum development that incorporates mindfulness is essential. Utilizing digital technologies, such as mindfulness-based educational apps and games, offers an innovative solution to overcome time and resource constraints. These tools can provide broader access and more interactive learning experiences. However, it is crucial to ensure that technology use remains balanced and does not become another source of distraction. The active involvement of parents and the school community is also vital for the successful implementation of mindfulness. Effective communication and a shared understanding of its benefits will help create a supportive environment for students to practice mindfulness consistently. Overall, challenges should not deter efforts to integrate mindfulness into education. With the right strategies, commitment from various stakeholders, and the mindful use of technology, mindfulness can become a key factor in cultivating a more resilient, capable, and well-rounded younger generation prepared to navigate the complexities

³⁸ Riska Putri et al., "Efektivitas Mindful Education Dalam Meningkatkan Kesejahteraan Mental, Prestasi Akademik, Dan Keterampilan Sosial Siswa" 4, no. 2 (2024): p. 66 – 72.

of the digital era. Implementing mindfulness is not just a passing trend but a long-term investment in a more holistic and sustainable future for education.

MINDFULNESS IN EDUCATION BASED ON BUDDHIST INSIGHTS TO BUILD A MORE SUSTAINABLE WORLD

Yona Intan Zariska*

Abstract:

This article highlights the role of mindfulness, rooted in Buddhist philosophy, as a transformative practice in education. Using library-based research, it explores the impact of mindfulness on students' concentration, emotional well-being, and academic motivation, while also supporting teachers in creating inclusive learning spaces. The findings show that students involved in mindfulness programs experience reduced academic stress, improved focus, and better social interactions. However, challenges remain in adapting curricula for diverse student backgrounds and ensuring proper teacher training. Overall, the study emphasizes the need for consistent implementation and increased awareness of mindfulness benefits. A culturally informed and sustained mindfulness practice is seen as key to building a healthier, more productive, and compassionate learning environment.

Keywords: *mindfulness, education, mental health, students, teachers.*

I. INTRODUCTION

Buddhism is an outlook and spiritual system that began with the enlightenment experience of Siddhartha Gautama in the sixth century BCE, it has been a source of valuable and profound knowledge throughout human history.¹ This teaching, which developed in the area we now know as Nepal and India, not only presents a distinctive perspective on human existence but also builds a strong foundation for developing ethical values.² In the context of ethical development, it provides several important and detailed concepts.

¹ Muditya Ratna Dewi and Budi Utomo, "Ajaran Buddha Dalam Pengembangan Etika," *JERUMI: Journal of Education Religion Humanities and Multidiciplinary* 2, no. 1 (2024): 544–51, <https://doi.org/10.57235/jerumi.v2i1.2019>.

² Dewi and Utomo.

One of the main foundations is that with the practice of mindfulness, each individual should focus on thoughts, emotions, and physical experiences without passing judgment (this is known as mindfulness). The impact of mindfulness on students includes several important aspects. Firstly, there is improved concentration and focus; students who follow a mindfulness practice program show a better ability to concentrate. Next, mindfulness helps in stress management; practicing mindfulness techniques teaches students how to manage stress and create a balanced mental space, which is very important for emotional well-being. In addition, mindfulness practice enhances empathy and social skills; students become more aware of their thoughts and feelings and understand the feelings of others. Finally, school mindfulness programs are effective in improving students' mental health, reducing anxiety, and improving the quality of the learning environment. Secondly, the impact of mindfulness on teachers is that the content of the training material is too heavy, especially when there are participants with unequal cognitive abilities, which can result in stress. If stress is not managed well, it can hurt the quality of teaching; a teacher can lose enthusiasm for teaching, which, in the end, only carries out their duties mechanically.

The implementation of mindfulness meditation in education does face various challenges. One of the most important aspects is maintaining consistency in implementing meditation in schools. Nonetheless, this approach has enormous potential to improve the overall quality of education.

The practice of mindfulness in Buddhism has its roots in two texts: the *Ānāpānasati Sutta*, which discusses breath awareness, and the *Satipaṭṭhāna Sutta*, which discusses the foundations of mindfulness. In addition, the practice of mindfulness is derived from two meditation methods, namely, *samatha bhāvanā* and *vipassanā bhāvanā*.³ *Samatha bhāvanā* is a meditation method that aims to achieve peace of mind, while *vipassanā bhāvanā* is a meditation method that aims to gain a clear understanding.⁴

In *Samyutta Nikaya* II 105, it is stated that *Samma Sati* is the rediscovery of a long-established method of practice, which was practiced by the Buddhas in the past. Similarly, *Anguttara Nikaya* II 29 emphasizes that the *samma sari* is an ancient practice method. Furthermore, in *Digha Nikaya* II 35, it is explained that Bodhisatta Vipassi practiced dhamma contemplation (*dhammanupassana*) based on the five sets (*pancakhandha*). *Pancakhandha*, which consists of five aggregates, encompasses several different aspects. Firstly, there is *rupakhandha*, which is the craving for forms or shapes that can be perceived by the senses. Secondly, there is *Vedanakhandha*, which refers to the passion for feelings. Thirdly, *Sannakhandha* describes the craving for absorption, which relates to the intensity with which the senses respond to external stimuli. Fourth, *Shankharakhandha* encompasses indulgence in various forms of thought. Fifth,

³ Biksu Nyanabandhu Shakya, "Kompetensi Pribadi Buddha," n.d.

⁴ Shakya.

Vinnanakhanda focuses on the craving for consciousness itself,⁵ asserting that satipatthana is a practice that has existed for a long time and was implemented by previous Buddhas before finally disappearing and being rediscovered by Gotama Buddha.

The opening and closing sections of this sutta emphasize that satipatthana is the direct path to attaining Nibbana. Next, there is a brief explanation of the main aspects of the direct path. In the 'definition' section, four *satipatthanas* must be contemplated: the body, sensation (*vedana*), *citta*, and *dhamma*. In addition, this section also identifies mental qualities that are essential for the practice of satipatthana, including perseverance (*atapi*), clear understanding (*sampajana*), Sati, and freedom from desire and aversion (*vineyard abhijjhadomanassa*).⁶

After the 'definition' section, the Satipatthana Sutta provides an in-depth explanation of the four satipatthanas, namely, contemplation of the body, sensation, *citta*, and *dhamma*. The scope of the first *satipatthana*, contemplation of the body, begins with attention to the in-breath and out-breath, observation of posture and bodily activities, and analysis of the body consisting of various parts and elements, to the contemplation of a decaying corpse. The next two *satipatthanas* include contemplation of sensation and the *citta*. In the fourth *satipatthana*, five types of *dhammas* worthy of contemplation are mentioned: mental obstacles, sets (*khandha*), sensory spheres (*cayetana*), evocative factors (*bojjhanga*), and the Four Ariya Realities. After detailing these, the sutta path reminds us of the direct path, ending with a prediction of the timeframe to achieve such realization.⁷

Developing mindfulness through specific meditation techniques automatically increases overall mindfulness, thus strengthening the ability to keep mindfulness present outside of meditation sessions. Thus, aspects of *satipatthana*, although not deliberately made the object of contemplation, still bring about *sati* as a by-product of the primary practice. However, the explanation in the *Anapanasati Sutta* does not necessarily imply that *sati* relates to the in and out of breath, which includes all aspects of *satipatthana*. The Buddha meant that the overall development of mindfulness can range from a focus on the breath to diverse objects, encompassing various aspects of reality from the subject's point of view. It is clear that these vast aspects are the result of deliberate practice; otherwise, the Buddha would not have discussed specific suttas on how to achieve them.⁸

Some meditation teachers and experts emphasize the importance of practicing all four *satipatthanas*. Arguing that even one meditation practice can be used as the main object, as expressed by,⁹ who integrates the four

⁵ (Problems & Indonesia, 1945).

⁶ Analayo.

⁷ Analayo.

⁸ Analayo.

⁹ Dhammadharo, *Satipatthana Jalan Langsung Ke Tujuan* (11 park road, 1997).

satipatthanas in one practice.¹⁰ expressed a similar opinion, explaining that since the ‘body’ is experienced through ‘sensation,’ which is at the same time related to the ‘citta’ as a ‘mental object,’ then by observing bodily sensations, the four satipatthanas can also be included.

These two meditation methods are interconnected and have fundamental characters and functions that complement and reinforce each other. The focus on mindful breathing becomes the object of meditation, while the mind acts as the subject, resulting in a profound experience and understanding of breathing. With awareness of the breath done in a certain way, it will be able to connect the entire presence of the breath with the mind. The conscious breath and the body are one; the body can relax, creating harmonization between body and mind. In this harmonized state of body and mind, one can feel and realize ‘joy’ and ‘happiness’ through practices that can transform existing ‘suffering.’ Breath awareness practice enlivens the energy and power of alertness in the body and mind so that mindful breathing serves as an ‘anchor’ for stability in the present moment. This practice’s calm, peaceful, and relaxed state leads to meditative focus and concentration, accompanied by correct understanding and insight. It provides the opportunity to ‘stop’ and ‘look deeper.’ This quality invites us to be fully present in the moment.¹¹

The *samatha bhāvanā* approach discussed in the *Ānāpānasati Sutta* teaches methods to increase awareness of breathing.¹² In the *sutta*, there are techniques and steps consisting of 16 breathing practices grouped into four categories, namely: awareness of the body while breathing, awareness of feelings, awareness of thought forms, and awareness of perception.¹³ In addition, the *Ānāpānasati Sutta* presents seven methods to practice, which include maintaining breath awareness in daily activities, being aware of the body, understanding the interrelationship between body and mind, filling oneself with happiness and joy, being aware of feelings, paying attention to and liberating the mind, and contemplating deeply to understand the essence of all phenomena (dharma).¹⁴ By consistently practicing and developing breath awareness, one can fulfill the four foundations of mindfulness.

The *Satipatṭhāna Sutta* explains that the practice of mindfulness serves as an excellent method to cleanse all living beings, to help overcome anxiety and sorrow, and to eradicate suffering, both physical and mental, to attain wisdom and understand nirvana through the four foundations of mindfulness.¹⁵ The four foundations of mindfulness include awareness of the physical, awareness

¹⁵ Shaky.

of feelings, awareness of thoughts, and awareness of the object of thought (all phenomena or dharma, meaning ‘all things’). With mindfulness, we will be able to recognize what is happening, both within ourselves and in our surroundings, whether mental or physical awareness is more prominent or not in our daily activities. In addition, through training and developing the practice of the four foundations of mindfulness to a higher level, we will be invited to the seven elements of enlightenment.¹⁶

Being fully mindful means being aware of the present moment and choosing to stay in the moment. Mindfulness refers to attention directed deliberately, in the present moment, and without judgment. Mindfulness is also the ability to stay present and alert in the present moment so that we can be aware of everything happening both inside and outside of us. Mindfulness is also known as the ability to recognize and notice things as they are.¹⁷ By increasing mindfulness, we can connect better with ourselves and the environment through consistent practice. As we become fully aware, mental engagement develops, with the quality of awareness often described as genuine attention. In essence, mindfulness can be summarised as one’s ability to be fully awake and present in the present moment without judgment and to see things as they are.

Practicing mindfulness and meditation in response to the phenomena around us, especially regarding differences and diversity, can create mindfulness and gratitude towards individuals and things of value. Managing internal thoughts and observing feelings without judgment supports our connection to the present moment, as well as to real life, which in turn can provide many benefits.¹⁸

Implementing mindfulness can begin by utilizing the five senses of being aware of what is seen, heard, felt, smelled, and tasted. Individuals who practice mindfulness know the sensation of the fabric on their body, the flow of air in and out of their nose, and the sounds and smells around them. Observing without passing judgment and becoming aware of these things is the core concept of mindfulness. In a more complex form, mindfulness includes ‘awareness of thoughts and feelings without judgment.’ Mindfulness is one of the self-skills in the personal abilities of Buddhists. One should always practice mindfulness in the various activities he or she does daily and be able to observe every moment of his or her life.

Awareness or mindfulness serves as the primary tool for dealing with reality intelligently and without distortion. The concept of mindfulness can serve as

¹⁶ Hery Gunawan, Dhammanando, Kabri, “Kebudayaan Buddhis Dan Gaya Hidup,” *Ta-jug: Jurnal Pemikiran Islam, Sosial Dan Humaniora* 1, no. 1 (2023): 11 – 16.

One promising approach is Mindfulness-Based Stress Reduction (MBSR)

the basis for more effective self-improvement. Mindfulness practice not only improves focus and coping skills, but also supports individuals to connect more deeply with themselves. With a clearer understanding of themselves, individuals can optimize their personal potential and achieve significant goals.¹⁹

Amidst the complex challenges facing the modern world, mindfulness, rooted in the Buddhist meditation tradition, offers a new perspective that can be applied in various aspects of life, particularly education.²⁰ Mindfulness, or full awareness, is the ability to be fully present in the present moment, aware of thoughts, feelings, and the environment without judgment.²¹ In the context of education, the application of mindfulness not only contributes to the individual development of students but also has broader implications for society and the environment in which they live.

Today's world is increasingly complex, with sustainability challenges encompassing environmental, social, economic, and cultural issues. Threats to the health of our planet, social injustice, and climate change are issues that require serious attention from the current generation. In this context, education is no longer just a tool to acquire academic knowledge but also a platform to mould the character and skills necessary for individuals to think critically and act, not only for their own benefit but for the good of society as a whole.

An effective education system must be able to prepare students to face these challenges with strong social and emotional skills. This is where mindfulness emerges as a promising strategic approach. By introducing mindfulness practices into the education curriculum, schools can support the development of skills such as empathy, resilience, and the ability to manage stress, all of which are vital in shaping future generations capable of contributing to a sustainable world.

A holistic approach to education emphasizes the importance of balance between academic and non-academic aspects. Mindfulness, focusing on observation without judgment, allows students to be more aware of their thoughts and feelings and those of others. This not only helps students to manage their own emotions but also enhances their ability to interact with others positively. Research conducted by²² Mindfulness practices can significantly

impact students' mental health, reduce stress, and improve concentration all important factors in creating a productive learning environment.

Furthermore, mindfulness approaches in education emphasize collaboration, understanding, and cooperation. In a classroom that applies mindfulness principles, students are taught to respect each other and collaborate, building the social skills necessary for success in the real world. By creating a supportive and inclusive environment, students not only feel safer but also more motivated to learn.

Mental health is an important aspect of educational success.²³ Stress and anxiety often interfere with students' ability to learn and achieve. By implementing mindfulness, students are taught techniques to manage stress and create a more balanced mental space, which is important for their emotional well-being. Mindfulness programs in schools are effective in improving students' mental and emotional resilience. For teachers, mindfulness training is also highly beneficial. When teachers are equipped with the skills to manage their stress and emotions, it can create a more positive and supportive classroom climate.

Applying mindfulness in education is not only of interest to schools and teachers but also to parents and the wider community. A deep understanding of the benefits of mindfulness practices can encourage all parties to work together to create an environment that supports students' holistic development. With strong support from the whole community, mindfulness initiatives in schools can flourish and provide wider long-term benefits.

Looking ahead, the integration of mindfulness in education is expected to create not only a generation of academically intelligent but also socially aware and responsible individuals. A generation that can adapt to change, take conscious actions towards sustainability, and be able to contribute to a better society. With a broader view, mindfulness-based education can catalyze positive societal change.²⁴

In integrating mindfulness into the education system, challenges and necessary steps must also be considered. Schools need to design programs that not only teach the concept of mindfulness but also implement it in daily life. This involves training teachers, developing appropriate teaching materials,

es in 12 databases were performed in August 2012. Further studies were identified via hand search and contact with experts. Two reviewers independently extracted the data, also selecting information about intervention programs (elements, structure etc.

and creating learning spaces that allow mindfulness practices to take place on an ongoing basis. Continuous research will help identify best practices and demonstrate the successes and challenges of this approach. With strong data and evidence, more schools and education systems will be motivated to adopt and implement mindfulness.

II. METHODS

This research method is based on a literature study and uses an approach by existing theories. In preparing this article, we chose the library research method. This research utilizes various library sources to obtain data by reading, recording, and processing relevant information.

By the approach taken, this research method is deductive, concluding general principles to specific statements through systematic reasoning. The method used includes several stages, including (1) determining the location and time of the research, (2) collecting data, (3) analyzing data, and (4) developing a conceptual framework.

This article results from thoughts and a literature review based on Buddhist insights to build a more sustainable world. The preparation process was carried out by collecting data and information from various books and journals related to mindfulness and research in Buddhist education. One of the issues discussed is mindfulness in education, with a focus on the application of mindfulness in an educational context that departs from Buddhist principles to create a more sustainable environment. Type and nature of research.

This type of research is a literature study, in which the study is organised by collecting data and information from various textbooks related to statistics and research on Buddhist education.

First, the method of data collection is that data is obtained from various sources that support this research, including textbooks, scientific journals, theses, theses, dissertations, the internet, and other relevant sources. Second, the sources of literature used. There are three sources of literature, namely primary sources, secondary sources, and tertiary sources. Primary sources are textbooks that discuss mindfulness in education and Buddhist education research. Secondary sources are journals that discuss mindfulness, education, and Buddhist education research. Tertiary sources are audio and visual data archives that serve as supporting references for the writing. This source is important to strengthen the interpretation of the information contained in primary and secondary sources. Third, the data analysis technique used is content analysis, which is carried out by discussing in depth the contents of the writings of various existing sources.

III. RESULTS AND DISCUSSION

In today's modern era, education faces various challenges that are not only academic but also rooted in students' social, emotional, and mental development. Therefore, implementing mindfulness into the education system is becoming increasingly important. Based on the analyses conducted, we can categorize the results and discussion into several main sections: (1) the impact

of mindfulness on students, (2) the impact of mindfulness on teachers, and (3) the challenges in implementation.

One of the most significant impacts of mindfulness practice on students is that)²⁵ showed that students who underwent a mindfulness practice programme had better concentration skills compared to students who did not engage in the practice. This is because mindfulness trains the brain to be more present in the present moment so that students can absorb information more effectively.

In addition to improving focus, mindfulness contributes to students' learning motivation.²⁶ Stated that students involved in mindfulness programmes experienced a significant increase in intrinsic motivation. They were more eager to attend lessons and do schoolwork and were more involved in extracurricular activities. This suggests that mindfulness not only plays a role in academics but also in students' character development.

Furthermore, mindfulness practices assist students in building strong social and emotional skills.²⁷ Noted that students who underwent regular mindfulness sessions showed higher levels of empathy. They are more able to put themselves in the shoes of others and contribute to creating a respectful learning environment. These skills are crucial in establishing a harmonious and productive school community.

A longitudinal study showed that students who practiced mindfulness experienced significant improvements in emotional well-being. The study found a reduction in symptoms of anxiety and depression while improving students' ability to cope with daily stresses. By implementing mindfulness practices, schools can equip students with the necessary skills to overcome various challenges in life, thus becoming more resilient.

Mindfulness itself refers to the presence of a focused mind, which contains the ability to remember past experiences as well as expand present attention and awareness in order to gather wisdom. A person who has wisdom will feel a sense of calmness within. Over time, if students commit to practicing mindfulness earnestly, they will feel peace in the soul and body while undergoing lectures. Through this practice, students will get used to developing a more creative, innovative, and responsible mentality in their studies.²⁸

²⁵ Manuscript and Studies, "NIH Public Access."

Systematic searches in 12 databases were performed in August 2012. Further studies were identified via hand search and contact with experts. Two reviewers independently extracted the data, also selecting information about intervention programs (elements, structure etc.

²⁷ Q. R. Shaqia, "The Power of Mindfulness in Education: Enhancing Focus and Emotional Well-Being" 3, no. 3 (2023): 1–20, <http://pustakailmu.id/index.php/pustakailmu/article/view/338>.

²⁸ Gondo Saputro et al., "Analisis Penerapan Mindfulness Dalam Pembelajaran Siswa

The changes resulting from mindfulness practice also positively impact interpersonal relationships, such as the emergence of benevolence, compassion, and empathy. All of these will naturally develop from the experience of mindfulness practice. Any individual who has the determination to practice mindfulness will experience changes within themselves. In addition, if students are accustomed to doing it in a lecture environment, they will be more focused on academic activities, such as reading material, completing assignments, presenting information, listening to lecturers, and others.²⁹

Thus, student learning outcomes will be much better, and knowledge growth will increase. This knowledge growth will also further strengthen the correct practice of mindfulness, resulting in significant spiritual development.

The results of the analysis on the effect of mindfulness on students' interest in learning showed significant findings. The evidence generated through research using questionnaires and analysis of the respective variables yields a conclusion that can be tested and accounted for. Therefore, these results can be used as a basis for making decisions and drawing conclusions in research. Mindfulness plays an important role in education. By applying a mindful attitude to various learning activities, such as completing tasks, expressing opinions, asking questions, and showing enthusiasm while learning, students will feel calm, which helps them focus more on the learning process.³⁰

Not only for students, mindfulness practices have a significant impact on teachers' well-being. Teachers' mental health plays an important role in creating a positive learning climate. According to,³¹ teachers who apply mindfulness in their daily lives feel better able to manage stress and face challenges in the classroom. By increasing mental resilience, teachers become more effective in managing the classroom and interacting with students.

The practice of mindfulness also enriches the teaching patterns that teachers implement. By having a deeper understanding of the interconnections between emotions and behavior, teachers can better implement approaches that are more sensitive to students' needs. This was seen in a study by,³² which showed that teachers who engaged in mindfulness training tended to be more responsive to student behavior and more patient in dealing with challenges in the teaching and learning process.

Despite the many benefits, not all teachers have equal access to mindfulness practices. This is mainly due to the lack of support from institutions.³³ To integrate mindfulness into the classroom, support from education policy and proper skills training for teachers should be prioritized. Schools must provide resources and time to support teachers in adopting this practice.

Mindfulness has an important role as a protective factor that can help teachers to increase awareness of natural emotional states. Thus, when faced with pressures from the environment, teachers can respond appropriately and control emotional reactivity, which in turn can reduce the risk of emotional exhaustion and burnout. In addition, mindfulness can also increase teachers' confidence in managing various activities and handling students' problematic behavior at school so that its effectiveness in preventing burnout becomes more optimal.³⁴

Teachers with a high level of mindfulness tend to be more confident in carrying out teaching and classroom management tasks.³⁵ They can also build positive relationships with students during the learning process. All these conditions help teachers manage the demands of the work environment and avoid the risk of burnout. There are four effects of mindfulness on teachers, namely (1) Increased mindfulness and stress reduction: mindfulness training aims to improve the mindfulness ability of teachers, which is expected to help them cope with stress arising from work.³⁶ In this analysis, individuals are taught to be aware of physical and psychological reactions to respond to stressful experiences with acceptance without passing judgment. (2) Results: The analysis showed a significant difference in teachers' stress levels before and after the training, with the most notable decrease in stress occurring in the physical aspect, followed by emotions, behavior, and cognition. (3) Stress coping strategies: Mindfulness is recognized as one of the effective strategies for dealing with stress, allowing teachers to respond to work pressures in

In addition, scoring of the poses was improved by post-processing with physics-based implicit solvent MM-GBSA calculations. Using the best RMSD among the top 10 scoring poses as a metric, the success rate (RMSD ≤ 2.0 Å for the interface backbone atoms

a healthier way. It gives them choices in responding to stressors instead of reacting automatically. (4) Training success: Teachers who participated in the training reported that mindfulness practice provided new awareness and the ability to explore internal resources. This enhances the ability to deal with stress more adaptively and productively.

Several previous studies have also shown that mindfulness can help teachers cope with the demands of the job. A study by³⁷ revealed that following the training, there was a significant reduction in levels of anxiety, feelings of isolation, and emotional and physical exhaustion. Further assessment also showed that the study participants experienced increased self-compassion and significantly decreased fatigue and sleep difficulties. Overall,³⁸ this research indicates that mindfulness can have a positive impact on the teaching profession.

Although the benefits of mindfulness integration in education are clear, some challenges in its implementation still need to be highlighted. Firstly, time is one of the main constraints. Many teachers report that they do not have enough time in their class schedule to insert mindfulness sessions, usually focused on the busy academic curriculum.³⁹ For this, it is necessary to ensure that the curriculum can accommodate mindfulness sessions without burdening students' learning hours.

Secondly, there are also challenges in terms of understanding and acceptance of mindfulness practices. Not all teachers and administrators understand the value of mindfulness in an educational context. Education and awareness about mindfulness needs to be continuously disseminated among educators.⁴⁰ Also noted that professional training for effective teachers is essential in order to integrate mindfulness confidently and competently.

Thirdly, student diversity also affects the way mindfulness can be applied. Students with diverse cultural backgrounds and experiences may require different approaches in the implementation of mindfulness strategies. Therefore, adapting the mindfulness curriculum to suit the needs of different students is very important. This can be done by inviting students to contribute to designing relevant mindfulness activities.⁴¹

The challenge faced by educators is to find effective methods to help students improve concentration and learning achievement. Several previous studies have shown that mindfulness practices can significantly improve the quality of student learning at the high school and college levels.⁴² For example, mindfulness-based learning models have been shown to help students manage academic stress and increase motivation to learn. In addition, another study revealed that mindfulness practice contributes to reducing academic anxiety levels and improving students' ability to focus on understanding learning materials.⁴³

Mindfulness, or mindfulness, is a practice rooted in the Buddhist tradition that aims to increase an individual's awareness of thoughts, feelings, and bodily sensations experienced in the present moment. At Raden Wijaya, Wonogiri, mindfulness is often integrated into the context of education and personal development. The aim is to help students and the community manage stress, improve concentration, and achieve mental well-being. Mindfulness practice at Raden Wijaya includes various activities, such as meditation, breathing exercises, and self-reflection. These activities are designed to help individuals be more present in each moment, reduce anxiety, and overall improve their quality of life.⁴⁴

Mindfulness teaches students to be more aware and connected to the present moment, which serves an important function in reducing mental disorders such as anxiety and stress, two factors that often become major hindrances in learning concentration. This finding aligns with previous research showing that mindfulness practices can improve attention and executive ability, which is highly relevant in the educational context, especially for students who struggle to maintain focus while learning. However, challenges remain in ensuring the sustainability of this mindfulness program's benefits.⁴⁵

IV. CONCLUSION

The application of mindfulness in Buddhist education provides a new and practical perspective to address the challenges faced by students and teachers in the modern era. Through mindfulness practices, students can experience significant improvements in concentration, stress management, and social skills that support positive interactions in learning environments. Mindfulness not only serves to improve academic performance but also contributes to students' emotional well-being and mental health, which is important for their

holistic development.

For teachers, despite the challenges of workload and variations in participants' abilities, the application of mindfulness can assist in managing stress and improving teaching quality. Mindfulness invites educators to create supportive and inclusive spaces, facilitating respectful interactions both in the classroom and within the school community.

However, successfully implementing mindfulness in education requires consistency and adaptation to diverse students' backgrounds. Curriculum adaptations that include student input are crucial to ensure the practice is relevant and impactful.

Therefore, awareness of the importance of mindfulness in education needs to be raised, as well as the need for ongoing training and support for educators to effectively implement mindfulness principles. Thus, by integrating mindfulness into the education system, it is hoped that a more sustainable, healthy, and productive learning environment will be created, which not only facilitates academic achievement but also shapes students' character to face the challenges ahead.

INNOVATION OF BUDDHIST RELIGIOUS LEARNING MEDIA BASED ON GAMIFICATION AS A CATALYST FOR PEACE AND SOCIAL HARMONY

Joko Adi Pradana*

Abstract:

This study examines the integration of gamification in Buddhist education as an innovative approach to fostering peace and social harmony. Although digital technology has revolutionized the educational landscape, its application in religious education, particularly Buddhism, remains relatively limited. Therefore, this research focuses on the development and evaluation of an interactive gamification-based learning media designed to teach material on World Peace Figures to ninth-grade students in the Gladagsari District, Indonesia. Using the ADDIE development model (Analysis, Design, Development, Implementation, Evaluation), this gamification application is designed by integrating a Reward System and content tailored to the Buddhist religious education curriculum. Data collection was conducted through expert validation, questionnaire distribution to students, and a limited trial involving 23 students and two Buddhist education teachers. The results indicate that this learning media received positive evaluations from validators and students, with an average score of 79.6, categorized as good. Additionally, the implementation trial showed a 15% improvement in students' average scores compared to pre-implementation scores. These findings suggest that effectively applied gamification elements can enhance student engagement and their understanding of the principles of peace in Buddhist teachings. However, the effectiveness of this media implementation greatly depends on the proper application strategy, including teacher supervision and the integration of game elements with the learning material. This research contributes to the

* Smaritungga Buddhist College, Central Java, Indonesia.

development of technology-based learning models in religious education, particularly in the context of peace education. The findings also highlight the importance of balancing digital technology integration in religious education to support the achievement of holistic learning goals and create a conducive learning environment for cultivating values of peace and social harmony in a multicultural society.

Keywords: *Gamification, interactive learning media, Buddhist religious education, social harmony, religious education technology, educational innovation.*

I. INTRODUCTION

Education plays a key role in human resource development. In the digital era and information technology, the application of innovative learning methods has become increasingly relevant to improve the quality of education.¹ Technology-based learning can enhance students' abilities in aspects of knowledge, attitude, and skills.² Therefore, teachers, students, and educational institutions need to utilize technology appropriately.³ Their readiness is a key factor in the implementation of technology-based learning, which contributes to the current development of education.⁴ As technology continues to develop, the use of smartphones has become increasingly widespread, encompassing various functions such as business, office work, entertainment, communication, and learning.⁵ The portability of smartphones is a major advantage compared to laptops and PCs, making them widely used by various groups, including students.⁶ Although smartphones are often used for learning activities, their utilization is still suboptimal compared to other features such as social media and chatting. The researcher conducted interviews

to understand the needs in learning with several junior high school Buddhist education teachers in the Gladagsari District as case studies. The interview results revealed that most teachers feel students are more interested in using smartphones for entertainment purposes than for learning, which indicates a need for more innovative strategies, such as gamification, to enhance the effectiveness of smartphone use in education.⁷ Based on the needs analysis conducted, it was found that teachers require an interactive gamification-based learning tool to improve students' understanding of Buddhist religious education materials as well as their ability to answer questions correctly. In response to this need, the study proposes the development of a gamification-based quiz application that includes features such as a Leaderboard to create a competitive atmosphere, a Reward System to appreciate student achievements, and content aligned with the textbook as the source of quiz questions. This approach aims to enable students to understand the material while practicing answering questions more effectively. Learning media plays a crucial role in the teaching and learning process as a means of delivering messages.⁸ Media that are used flexibly can increase student engagement, motivate them to be more active, and help them better understand abstract concepts.⁹ Furthermore, learning tools also serve to focus students' attention on the material being taught, thus enhancing the overall effectiveness of learning. One interesting learning media is the use of gamification.¹⁰ Gamification integrates game elements into learning to improve student motivation and engagement.¹¹ This approach makes learning more dynamic and interactive, providing students with the flexibility to learn without being bound by time and location. Game elements such as challenges, rewards, and grading systems can increase the

appeal of learning.¹² The researcher reviewed various previous studies related to the application of gamification in learning to strengthen the foundation of this research. A study by Galuh Romadhoni Supra et al. demonstrated the advantages of presenting material by combining visual and audio elements, but it had limitations in updating the questions.¹³ Meanwhile, the study by Anang Pramono and Martin Dwiky Setiawan on a fruit recognition application showed effectiveness in delivering information, but it still had limitations in the database size and the responsiveness of the Augmented Reality (AR) feature.¹⁴ Theoretically, the concept of gamification in education has received widespread attention in various academic literature. According to Juho Hamari, Jonna Koivisto, and Harri Sarsa, gamification has been proven to increase student engagement in learning if the game elements are well-designed.¹⁵ Katie Seaborn and Deborah Fels define gamification as the use of game elements in non-game contexts to enhance the user experience.¹⁶ Furthermore, Michael Sailer et al. stated that game elements such as challenges, rewards, and social interactions have a positive impact on students' psychological satisfaction in gamified learning.¹⁷ Several other studies further reinforce the argument about the effectiveness of gamification in education. According to Sujit Subhash and Elizabeth A Cudney, gamification can enhance student engagement and motivation by providing a more enjoyable and engaging learning experience.¹⁸

Khe Foon Hew et al. emphasize that gamification not only increases engagement but also improves learning outcomes when combined with effective pedagogical strategies.¹⁹ Michael Sailer and Lisa Homner mention that the use of appropriate game elements can enhance students' conceptual understanding.²⁰ Koivisto and Hamari reveal that gamification has a significant positive impact on engagement and learning retention in academic settings. In the context of Buddhist education, the use of gamification can strengthen students' understanding of Buddhist values while providing a deeper and more interactive learning experience.²¹ From these various studies, it is evident that they provide comprehensive insights into different aspects of applying gamification in learning, including the strengths and weaknesses of each approach. This information serves as a consideration in developing an effective gamification-based learning application. Practically, gamification learning materials are used to capture students' interest in the subject matter and inspire them to continue learning. This approach incorporates game elements, such as images, within the material to provide practical solutions and foster student interest. Gamification is defined as a concept that utilizes game mechanics, aesthetics, and play thinking to engage students, promote learning, and address various challenges in the learning process. Referring to the rapid development of smartphone technology, which has brought changes in students' learning behaviors and interests, this study aims to design an educational game in the form of an interactive Buddhist education learning media based on gamification. This media is developed for both Android and Laptop platforms with content on world peace figures for ninth-grade students. With this approach, it is hoped that the educational game can enhance students' enthusiasm for learning and make it easier for them to understand and master the material of Buddhist religious education more enjoyably and effectively.

Research methodology

The research method used in this study is Research and Development (R&D). Sukmadinata states that R&D is a procedure for developing a new product or improving an existing product, ensuring that the data can be accountable to specific groups or the general public. In its implementation, the research development design refers to the development steps of Brog and Gall, which have been modified by Sukmadinata.²² The development steps are

simplified into three main stages: preliminary study, product development, and product testing. The research model used to develop this gamification-based interactive learning media is the ADDIE development model, which consists of five stages: analysis, design, development, implementation, and evaluation. Based on the analysis results, the developed learning media is evaluated to ensure its effectiveness in enhancing students' understanding of the material on world peace figures.

II. RESULTS AND DISCUSSION

2.1. Development of gamification-based interactive learning media

The development of gamification-based interactive learning media for Buddhist Religious Education, specifically the material on World Peace Figures for ninth-grade students, is an innovation aimed at improving the quality of learning. This study applies the ADDIE development model (Analysis, Design, Development, Implementation, Evaluation), which consists of five systematic stages to produce effective and engaging learning media for students. The analysis stage was conducted to understand the needs and characteristics of the students. The results of the preliminary study showed that students had difficulty understanding the material on World Peace Figures, exhibited low learning interest, and faced challenges in solving questions related to the material. Additionally, learning in junior high schools generally still relied on textbooks provided by the government, with few innovative teaching materials. Interviews with teachers revealed that students often felt bored when studying this material due to its unengaging presentation and their limited active involvement in the learning process. Therefore, the application of gamification is expected to enhance students' understanding and motivation by offering a more interactive and enjoyable approach. The social constructivism principle proposed by Vygotsky supports this approach, where active interaction can strengthen students' conceptual understanding.²³ In the design stage, the learning media was developed based on the results of the needs analysis. The design process involved creating storyboards and flowcharts to illustrate the interaction flow within the learning media. The media was designed in 25 frames, including a main page, learning materials, game-based practice questions, and developer profiles. In this stage, aesthetics and user interface were the primary focus. An attractive visual design was applied, utilizing colors, animations, and gamification elements such as points, levels, and challenges to make the learning experience more appealing to students. Additionally, a user-friendly principle was implemented to ensure the learning media could be easily used by students with varying levels of technological proficiency. Research by Hamari et al. (2014) shows that effective gamification can enhance students' intrinsic motivation by providing challenges that match their skill levels. The development stage includes product validation by a team of experts to assess the feasibility of the learning media before it is tested with

²³ Vygotsky, Lev S. "Mind in Society: The Development of Higher Psychological Processes." Harvard University Press, 1978. <https://www.jstor.org/stable/j.ctvjf9vz4>.

students. Content evaluation is conducted by a subject matter expert who assesses the suitability of the content, presentation, and relevance within the learning context. The validation results indicate that the content, presentation, and contextuality were rated as good, with an average score of 3.7, suggesting that the material can be used with some minor improvements. Suggestions from the subject matter expert included revisions to some illustrations that were deemed unclear and improvements in text presentation to make it easier for students to understand. The media aspect validation was carried out by an expert in educational technology, who assessed the interface design, layout, and other graphic elements. The validation results showed that this learning media is highly feasible for use, with an average score of 4.5. The media expert provided feedback regarding more intuitive navigation and enhanced graphic quality to support a more optimal learning experience.

Table of Media and Content Expert Validation

No	Aspect Evaluated	Average Score	Category	Suggestions for Improvement
1	Content Suitability	3,6	Good	Improve unclear illustrations and refine text presentation for better student comprehension.
2	Material Presentation	3,8	Good	Reorganize some parts of the material to make it more systematic.
3	Contextuality	3,7	Good	Adjust some examples to be more relevant to students' experiences.
4	Interface Design	4,5	Very Good	Enhance navigation to make it more intuitive.
5	Layout and Graphics	4,5	Very Good	Improve graphic quality to support a better learning experience.

After the validation and revision stages, the learning media was tested in a real learning situation. This limited trial involved two Buddhist Religious Education teachers and 23 junior high school students. The trial process was conducted with students using their smartphones to access the learning media while the teacher guided them through a projector to ensure better

understanding. The results of the trial and the improvement in test scores are presented in the table below:

Table of Learning Media Trial Results

No	Aspect Evaluated	Results
1	Student’s Response	Positive, more interested in the material
2	Teacher’s Response	Supports the use of media in teaching
3	Average Trial Test Score	79,6

Category	Challenges	Solutions Implemented
Good	Students were more focused on the game elements rather than the understanding of the material.	The teacher provided reinforcement instructions before playing and facilitated discussions after the game session
Good	A strategy is needed to ensure students not only play but also understand the material.	A strategy is needed to ensure students not only play but also understand the material
Good and Feasible for Use	-	-

The trial results show that this learning media received positive responses from both students and teachers. Students found the material more engaging due to the interactive elements and appealing visuals. The average trial test score reached 79.6, which falls into the good category and is deemed suitable for use in teaching.

Table of Test Score Improvement Before and After Using the Learning Media

No	Category	Average Score Before	Average Score After	Improvement (%)
----	----------	----------------------	---------------------	-----------------

1	Students	68,2	78,5	15%
---	----------	------	------	-----

However, several challenges arose during implementation. Some students tended to focus more on the gaming aspect rather than understanding the content, which required additional guidance from the teacher. To address this, the teacher applied strategies such as reinforcing instructions before gameplay, conducting discussions after the game session, and awarding students who correctly answered the questions. Furthermore, an evaluation was conducted to analyze the effectiveness of the media in improving students' understanding. One method used was comparing test scores before and after the media was used. The results showed an average score increase of 15%, indicating that gamified learning media was effective in enhancing students' learning outcomes. The evaluation phase involved analyzing feedback and suggestions from both students and teachers. Some of the challenges identified included students focusing more on the game elements rather than the understanding of the content. To overcome this, the teacher needed to play an active role in guiding students to stay focused on the learning objectives. The evaluation also involved analyzing the effectiveness of the media in improving students' understanding. Test results showed an average score increase of 15% after using the media compared to before its use. This suggests that gamified learning media can improve learning outcomes when implemented with the right strategies. Overall, the development of gamified learning media shows significant potential in increasing students' interest and learning outcomes. However, its effectiveness still depends on proper implementation. Some strategies that could be applied to optimize the use of this media include providing an initial explanation of the importance of understanding the game rules before using it, integrating content understanding with progress in the game, offering additional rewards for completing competency tests, and holding reflective discussion sessions to connect gaming experiences with content comprehension. Additionally, further research can be conducted to explore the long-term impact of gamification on Buddhist education, particularly in terms of student engagement and deeper understanding. With the right approach, gamified learning media can serve as an effective tool in enhancing students' learning experiences while supporting more innovative and enjoyable education.

2.2. Educational innovation as a catalyst for peace and social harmony

The development of gamification-based learning media not only focuses on enhancing the effectiveness of education but also serves as an instrument for fostering peace and social harmony. Through the gamified approach in Buddhist education, students not only gain knowledge about world peace figures but also develop values that support the creation of a peaceful and harmonious society. First, the implementation of gamification in education encourages the development of social-emotional skills essential for peace. The healthy competition system within the application teaches students about sportsmanship, appreciating others' achievements, and collaborating

to achieve common goals. This aligns with the research of Hikmah, Hapidin, and Syifa Aulia, which shows that interactive learning can enhance students' empathy and social awareness.²⁴ Second, the content on world peace presented through gamification media helps students internalize the values of peace more effectively. Through challenges and missions within the application, students not only memorize facts about peace figures but also experience decision-making simulations that reflect peace values. For example, in one learning module, students are presented with a conflict scenario and asked to choose the most insightful resolution based on Buddhist teachings and the examples set by the peace figures they have studied. Third, the gamification approach creates an inclusive learning environment that values diversity. The personalized reward system and progress tracking allow each student to progress according to their abilities without feeling left behind or marginalized. This creates a learning atmosphere that supports equality and appreciates differences, in line with universal peace principles. Fourth, the use of technology in Buddhist education opens opportunities for cross-cultural dialogue and global understanding exchange. Through achievement-sharing features and online discussions, students can interact with peers from various backgrounds, building bridges of understanding across cultures that are essential for world peace. This experience enriches students' perspectives on diversity and global interdependence. Fifth, this interactive learning media also encourages the development of critical thinking and conflict resolution skills. Through various challenges and scenarios presented, students learn to analyze situations from different viewpoints and find solutions that benefit all parties. These skills are crucial in building a peaceful and harmonious society. The implications of this approach for peacebuilding can be seen in the changes in students' attitudes after using the learning media. Observation results show an increase in: (1) Awareness of the importance of dialogue and communication in resolving conflicts. (2) Appreciation for diversity and differing viewpoints. (3) Empathy and understanding of others' perspectives. (4) Cooperation and collaboration skills within groups; (5) Understanding of the importance of peace in a global context. The development of this gamification-based learning media aligns with the vision of sustainable development, emphasizing the importance of quality education (SDG 4) and peace, justice, and strong institutions (SDG 16).²⁵ By integrating technology and Buddhist values, this media not only transforms the way Buddhist education is delivered but also contributes to building the foundation for a more peaceful and harmonious society.

2.3. Effectiveness of gamification in Buddhist education

The effectiveness of gamification in Buddhist education has shown very positive results based on various trials conducted. The use of gamification-based media has proven capable of creating a more dynamic and engaging learning environment for students. Through the application of game elements such as point systems and rewards, students' motivation to learn has increased by 45.²⁶ The implementation of interactive quizzes in learning allows students to learn directly from their mistakes, thus strengthening their understanding of the material taught. Students also have the opportunity to explore the material independently in a fun environment. The elements of challenge and healthy competition in learning encourage active student participation, transforming them from passive information receivers into engaged learners in the learning process. For teachers, gamification-based media offers a variety of teaching methods, which can reduce the monotony of conventional teaching. The interactive features available make it easier for teachers to deliver material and ensure students' understanding of the concepts being taught. A competitive yet healthy learning environment is created through gamification, where students are motivated to improve their achievements both individually and through collaboration with peers.²⁷ The engaging mechanisms of gamification also promote student independence and perseverance. They are encouraged to complete various challenges and continue striving to improve their understanding of Buddhist teachings. The use of attractive visuals, challenges that sharpen critical thinking, and the reward system further enhance the appeal of learning. Students' ability to access materials and practice without time or location constraints via the application also supports independent learning.²⁸ Overall, the application of gamification in Buddhist education has a very positive impact on increasing student interest, understanding, and participation. This approach not only creates a more enjoyable learning experience but also contributes to achieving better academic results. Through the integration of gamification elements in learning, students can develop a deeper understanding of the values of Buddhist teachings and appreciate them more effectively.

2.4. Challenges and limitations in media development

The development of gamification-based learning media faces various challenges and limitations that must be considered to ensure its effective implementation. One fundamental issue is the limitation of technology access, as not all students and schools have the necessary devices or adequate internet access, particularly in remote areas.²⁹ This can create a gap in learning experiences between students in urban and rural areas. The process of adapting to the existing Buddhist Education curriculum also requires special attention. Christo Dichev and Darina Dicheva emphasize that time and continuous evaluation are needed to ensure that the gamification content aligns with learning objectives and does not neglect important aspects of education.³⁰ This challenge becomes even more complex considering the varied technological skills of teachers, where not all educators possess the necessary proficiency in operating digital learning media. The diversity of students' learning styles also becomes an important consideration in the media development process. Pratama and Setyaningrum reveal that each student has different preferences in absorbing information, whether through visual, auditory, or direct interaction.³¹ The learning media must be designed comprehensively to accommodate these diverse learning styles, which, of course, requires significant development time. From a technical perspective, the development of gamification-based learning media faces various issues such as bugs in the application, device compatibility problems, and limitations in features.³² This requires ongoing maintenance and development, which inevitably demands a significant investment in terms of technology, human resources, and supporting infrastructure. Schools with limited budgets may struggle to implement this system comprehensively. Armando M. Toda et al. identify that resistance to change is also a challenge, where some teachers and students may still be reluctant to adopt new technology in learning.³³ A proper approach to

²⁹ Vertirico Thong et al., "Tinjauan Literatur: Peluang Dan Tantangan Pendidikan Berbasis Digital," *Jurnal Literasi Digital* 3 (November 2023): 211–20, <https://doi.org/10.54065/jld.3.3.2023.368>.

³⁰ Christo Dichev and Darina Dicheva, "Gamifying Education: What Is Known, What Is Believed and What Remains Uncertain: A Critical Review," *International Journal of Educational Technology in Higher Education*, vol. 14. (2017), <https://doi.org/10.1186/s41239-017-0042-5>.

³³ Armando M. Toda, Pedro H.D. Valle, and Seiji Isotani, "The Dark Side of Gamification: An Overview of Negative Effects of Gamification in Education," *Communications in Computer and Information Science* 832, no. August (2018): 143–56, https://doi.org/10.1007/978-3-319-97934-2_9.

socializing and educating all parties is needed to help everyone understand the benefits and ease of using gamification. To address these various challenges, Islam Alomari, Hosam Al-Samarraie, and Reem Yousef suggest the need for thorough planning and a phased implementation strategy. Collaboration between media developers, teachers, and other educational stakeholders is crucial to ensuring that the developed learning media can meet the needs of all parties and provide maximum benefits in the Buddhist education process.³⁴

III. CONCLUSION

Based on the research findings, it can be concluded that the development of interactive gamification-based learning media has a positive impact on students' motivation and understanding in studying the material on World Peace Figures. The use of gamification elements such as challenges, rewards, and ranking systems successfully increased student engagement in the learning process. The ADDIE model applied in the development of this media proved effective in producing a product that meets the learning needs. The validation results show that this learning media is suitable for use with some minor improvements. The trials with students indicate that this media can enhance student interest in learning and their understanding of the subject matter, with an average score increase of 15% after using the media. However, some challenges in implementation were still found, such as students' tendency to focus more on the game elements rather than understanding the material. Therefore, additional strategies are needed, such as reinforcing instructions by the teacher, integrating discussions after the game sessions, and providing rewards based on material comprehension to ensure the effectiveness of the learning process. As a recommendation, further research can be conducted to explore the long-term effects of using gamification in Buddhist education. Additionally, the development of more adaptive features, such as a personalized question system and integration with Augmented Reality (AR) technology, could improve the quality of this learning media in the future.

MINDFULNESS-BASED EDUCATION: CULTIVATING COMPASSION AND ENVIRONMENTAL AWARENESS

Dapri Nanda Manggala*

Abstract:

This study discusses the role of mindfulness-based education in fostering compassion and environmental awareness. *Mindfulness*, or mindfulness, helps students to be more aware of their thoughts, feelings, and actions so that it can increase empathy and concern for the environment. In Buddhism, the concept of mindfulness is closely related to *mettā* (love) and *karuṇā* (compassion), which encourage an attitude of caring and social responsibility. This study uses a qualitative method with a literature study approach to analyze the effectiveness of mindfulness in the world of education. The results of the study show that the application of mindfulness can reduce deviant behavior, improve psychological well-being, and form individuals who are more aware of the impact of their actions on the environment. Therefore, the integration of mindfulness in education not only helps to improve academic achievement but also builds a generation that has high social and ecological awareness.

Keywords: *Mindfulness, education, compassion, environmental awareness, Buddhism.*

I. INTRODUCTION

Education has an important role in shaping individual character and determining the future of a nation because through the educational process, a person not only acquires the knowledge and skills necessary to face life's challenges but also experiences the process of internalizing the values that shape mindsets, attitudes, and behaviors. More than just a means of transferring knowledge from one generation to the next, education also functions as a strategic vehicle in instilling ethical and moral values that are essential for the life of society, nation, and state. These values, such as honesty, responsibility,

* STAB Negeri Raden Wijaya Wonogiri Central Java.

cooperation, and social and environmental concerns, are the main foundation for individuals to interact harmoniously with their fellow humans and the surrounding nature. Thus, education is not only oriented towards academic achievement but also has a crucial role in shaping individuals who have integrity, high social awareness, and the ability to contribute positively to social life and nation building.¹

The cultivation of ethical values in the world of education still faces various complex challenges, both from an internal and external perspective, which include factors such as the family environment, social environment, and the dynamics of the rapid development of technology and information. Several studies show that there are indications of moral degradation among students, which is reflected in various forms of behavior that do not reflect the ethical and moral values that should be instilled from an early age. This moral degradation can be caused by various factors, such as the lack of parental participation in guiding their children, the weak application of character education in the learning system, and exposure to negative content from social media and the internet that is not properly controlled.² Some examples of behavior that show moral degradation include a lack of respect for educators and older people, an increase in cases of bullying or bullying in the educational environment, a lack of awareness of the importance of honesty in teaching and learning activities such as in doing assignments or exams, and a low level of concern for cleanliness and social responsibility in the surrounding environment.

Data from the Indonesian Child Protection Commission (KPAI) reveals that throughout 2023, there were over 3,800 incidences of bullying in Indonesia, with almost half of them occurring in educational facilities, including schools and Islamic boarding schools. One of the examples that emerged was at a Junior High School (SMP) in Cilacap, Central Java, when a kid experienced physical and verbal bullying by his peers to the point of enduring significant psychological damage. This incident was videotaped and went popular on social media, revealing the lack of the application of compassion ideals in the educational environment. This tendency is further substantiated by a report by the Federation of Indonesian Teachers' Unions (FSGI), which observed that during 2023 there were 30 officially documented occurrences of bullying, with the majority happening at the junior high school (SMP) level.³

To overcome the problem of moral degradation in the world of education, one of the approaches that can be applied is the practice of Mindfulness. Mindfulness, or mindfulness, is a technique that helps individuals to be more aware of their thoughts, feelings, and actions in the present moment without getting carried away by negative impulses or environmental pressures. In the world of education, the application of *Mindfulness* can be an effective strategy

¹ Krimananti (2024): 174.

² Hairiyah et.al.2021: 54

³ Mashabi (2023): FSGI: 30 Kasus Perundungan Terjadi di Sekolah Sepanjang Tahun 2023. Akses 18 February 2025.

in instilling ethical and moral values and reducing deviant behaviors such as *bullying*, dishonesty, and lack of responsibility.⁴ In addition, *Mindfulness* also plays a role in increasing focus and discipline in the learning process. Students who are fully aware of their learning activities will better understand the importance of academic honesty and have better self-control not to commit cheating acts such as cheating or lying. On the other hand, educators who apply *Mindfulness* in their teaching methods tend to be more able to create a harmonious learning environment, support the development of students' character, and manage conflicts with a more thoughtful approach.⁵

Furthermore, in Buddhism, *Mindfulness* is not only concerned with self-control and moral discipline, but also becomes the primary means of cultivating compassion (*karuṇā*) and awareness of the environment. Buddhism emphasizes the four main virtues (*brahmavihāra*), namely love (*mettā*), compassion (*karuṇā*), sympathy (*muditā*), and equanimity (*upekkhā*). By developing⁶ *Mindfulness*, a person will better understand the suffering of other beings and be more sensitive to the impact of their actions. The practice of loving-kindness meditation (*mettā bhāvanā*) combined with *Mindfulness* can also strengthen empathy and social care.

In addition, *Mindfulness* can increase awareness of the environment, Buddhism emphasizes the principle of the interconnectedness of all living beings (*paṭiccasamuppāda*). Overexploitation of nature is often rooted in human greed and unawareness of the negative impacts caused. By practicing *Mindfulness*, individuals can be more thoughtful in their consumption and more aware of their responsibilities in maintaining the balance of the ecosystem. Research shows that *Mindfulness* techniques can affect a person's psychological state, improve feelings of calm, and thoughts which can ultimately improve psychological well-being.⁷

Therefore, integrating *Mindfulness* in the education system is no longer just an additional option, but an urgent need in the midst of increasing moral degradation, social indifference, and environmental crises. Education that is only oriented to academic achievement without being balanced with character formation based on compassion and ecological awareness will produce intellectually intelligent individuals, but lack concern for others and nature. *Mindfulness-based education* is present as a comprehensive solution that not only teaches students to be more focused and calm, but also fosters deep empathy and awareness of the interconnectedness of all living things. *Mindfulness-based education* must be designed systematically and sustainably, not only in the form of meditation exercises in the classroom, but also through the development of a school culture that values diversity, fosters empathy, and instills ecological responsibility. Thus, education not only plays

⁴ Chowmas (2021): 28.

⁵ Abdurrochim et al., (2024): 398.

⁷ Chowmas (2021): 29.

a role in producing academically superior individuals, but also gives birth to a generation that is wise in thinking, compassionate in acting, and has a deep awareness of environmental sustainability.

II. METHODOLOGY

This study uses a qualitative approach with a literature study method to analyze the role of Mindfulness-based education in fostering compassion and environmental awareness.⁸ Literature studies were chosen because they allow for in-depth analysis of concepts, theories, and previous research results relevant to this topic. The data sources used consist of primary data, such as scientific journal articles and academic books, as well as secondary data, including research reports and education policies. The data collection technique is carried out through documentation by filtering literature published in the last five years to maintain the relevance of the findings with the latest developments. With this method, the research is expected to provide deeper insights into the effectiveness of the implementation of Mindfulness-based education in building the character of students who are compassionate and have high environmental awareness.

III. RESULTS AND DISCUSSION

3.1. Mindfulness-based education

Mindfulness or mindfulness is a practice that focuses on paying attention to the present experience with an open and non-judgmental attitude. In the world of education, the application of Mindfulness is increasingly being paid attention to because of its benefits in improving the psychological and academic well-being of students. Education that integrates Mindfulness is a habituation process in which the practice of Mindfulness is consciously incorporated into the curriculum and applied on an ongoing basis, rather than just an addition that is done only when there is free time. In classroom learning, the practice of Mindfulness helps teachers and students to stay present and involved in the ongoing teaching and learning process. Ellen Langer emphasized that the practice of Mindfulness in learning is characterized by several factors, including: (1) openness to new things; (2) awareness of emerging differences; (3) sensitivity to various contexts; (4) awareness of various perspectives; and (5) focus on the present moment.⁹

Mindfulness in Buddhism is explained by Gautama Buddha through the *Satipaṭṭhāna Sutta* and the *Mahā Satipaṭṭhāna Sutta*. In the teachings of the Dhamma, the concept of *Anattā* teaches that there is no fixed core of the self, so that man can free himself from evil and hatred. Mindfulness becomes an effective method (*upāya*) to erode the self-centered ego (*attā; ahaṃkāra*), which is rooted in attachment and hatred. The purpose of this practice is to suppress greed (*lobha*), which arises from attachment, as well as to overcome anger or hatred (*sin*), which stems from hatred. Both attachment and hatred

⁸ Sugiyono (2020): 15.

⁹ Hattu (2021): 61.

come from delusion (*moha*), which is a misunderstanding that arises from a wrong view (*micchā diṭṭhi*) of the self and the world. Beings who experience spiritual confusion are unable to comprehend reality as it is. Ignorance of reality causes individuals to easily fall into various forms of worldly illusions.¹⁰

The definition of *Mindfulness* is reviewed from the *Abhidhamma*, the practice of Mindfulness can be traced in several main texts, namely the *Ānāpānasati Sutta*, which emphasizes attention to breathing; The *Mahā Satipaṭṭhāna Sutta*,¹¹ which serves as the main frame of reference in this practice; and the *Kāyagatāsati Sutta*, which teaches mindfulness of the body. These three *Suttas* systematically outline the stages in the practice of authentic Mindfulness. Among the three texts, the *Mahā Satipaṭṭhāna Sutta* is considered the most fundamental source of teachings traced directly from the Buddha in the Buddhist tradition. Based on the explanation of the practice of true mindfulness, *Mindfulness* is a comprehensive system of practice with distinctive characteristics. In *Theravāda* teachings, this practice not only plays a role in the attainment of *samatha* (meditation serenity) and *vipassanā* (deep understanding), but more than that, it becomes a key element in the attainment of the highest goal in Buddhist practice.

The Buddha taught the *Ānāpānasati Sutta*, known as the teaching on mindfulness of breathing, as the basis for practicing *Mindfulness*. The practice is systematically designed in 16 stages that begin with the awareness of the breath and end with the attainment of freedom from worldly attachments and desires. These 16 stages are categorized into four meditation groups, each of which corresponds to the four ways of building mindfulness (*Satipaṭṭhāna*).¹² Although it was taught more than 2500 years ago, the *Ānāpānasati Sutta* remains the simplest, most direct, and effective method of training and developing the mind. This practice not only helps in facing various tasks and challenges of daily life but also aims to achieve freedom of mind that is completely free from greed, hatred, and delusion. The guidance given in this *Sutta* is taken directly from Buddhist teachings and can be practiced in practice. If one follows the instructions in this *Sutta* correctly, the results can be clearly felt.

The *Ānāpānasati Sutta* gives profound meditation instruction, including how to apply the “Four Foundations of Mindfulness” (*Satipaṭṭhāna*) and the “Seven Factors of Enlightenment” (*Bojjhaṅga*), as well as how all of these aspects are fulfilled through the practice of mindfulness of breathing. This practice allows one to attain the various stages of meditation (*jhāna*). Interestingly, in the original Buddhist teachings, there is no separation between different types of meditation such as “full concentration meditation” (*appanā samādhi*), “access concentration” (*upacāra samādhi*), or “momentary concentration” (*khaṇika samādhi*). This classification is found more in later commentaries rather than

¹⁰ Meshram (2020): 152 – 160.

¹¹ Bodhi (2020): 55.

¹² Bodhi (2020): 55.

in the original text of *the Sutta*.¹³ Therefore, it is important for practitioners to refer directly to *the Sutta* to ensure a more accurate understanding of the practice of Mindfulness¹⁴ meditation.

Satipāṭṭhāna Sutta is considered to be one of the main teachings that play a role in the development of mindfulness. This teaching emphasizes the importance of building attention to the four main aspects, namely the body (*kāya*), feelings (*vedanā*), mind (*citta*), and other mental phenomena (*dhamma*).¹⁵ These four aspects serve as the basis or foundation in the process of strengthening awareness and observation of life experiences that take place from time to time. However, the application of the teachings of *Satipāṭṭhāna* in various cultural contexts has given rise to a number of debates. Although this practice has become the primary method in modern meditation teaching, the adaptations and interpretations that have developed in various traditions are often influenced by specific cultural factors. One example of the dominance of *Satipāṭṭhāna* in contemporary practice is the great influence of Burmese meditation teachers, who sought to make Buddhism more accessible to the wider community. In its development, this approach tends to focus more on *vipassanā* meditation or deep insight into reality than *samatha*, which is meditation oriented towards tranquility and deep concentration.

One of the main goals of the modern approach to *Satipāṭṭhāna* is the development of higher consciousness, often referred to as *jhāna*. *Jhāna* is understood as a state of deep concentration that allows one to experience full awareness of the current stream of experience that is happening in the moment, without distortion of illusion or emotional attachment. Practitioners who follow this method often refer to the concept of “naked consciousness,” referring to a direct understanding of phenomena in the absence of judgments or perceptions distorted by ego and false self-concepts. *Satipāṭṭhāna* not only serves as the main foundation in the practice of meditation but also becomes part of the development of the modernization of Buddhism. As this teaching has expanded, the practice of Mindfulness is no longer limited to specific cultural boundaries but has been adopted in a variety of global contexts, including psychology and contemporary therapy.

More than that, Mindfulness plays an important role in improving the quality of learning. By practicing focus and attention, students can more easily understand the material being taught and reduce internal disorders such as anxiety or overthinking. The application of learning in schools began to expand, with one aspect that received special attention being religious education, especially Buddhism. In the learning process, students are encouraged to start with concentration exercises through breathing observation. This exercise aims to help students develop better focus so that they can more easily understand the material being taught. By involving the practice of conscious

¹³ Mukti (2020): 264.

¹⁴ Meshram (2020): 152 – 160.

¹⁵ Mukti (2020): 220.

breathing before starting learning, it is hoped that students can increase their self-awareness and ability to think clearly in absorbing religious values and Buddhist teachings more deeply.¹⁶

In the world of education, Mindfulness has been developed as an approach to guide students in improving concentration, developing self-awareness, and deepening involvement in the learning process. In addition, the practice of Mindfulness also plays a role in building empathy for others. These exercises serve as adaptation strategies that help students adjust to new environments as well as improve their academic skills. For students who are just starting their studies in different educational settings, Mindfulness can help them in forging quality interpersonal relationships, adjusting to new environments, as well as meeting the academic and social expectations inherent in their role as learners.¹⁷

3.2. Compassion

Humans naturally have a tendency to feel the suffering of others and show concern by providing help. This attitude is known as compassion, which is awareness of the suffering of others accompanied by encouragement to ease their burden. Compassion is not only limited to empathy, but also includes concrete actions aimed at helping others overcome the difficulties they face. With compassion, a person not only understands the feelings of others, but is also encouraged to provide direct support, both in the form of emotional and practical help.

The concept of compassion has similarities with the cultural values of compassion that develops in Javanese society. Compassion describes the attitude of a person who has a deep concern for others and is able to understand the feelings of others. When seeing others in difficulty, someone who has compassion will feel the urge to help sincerely without expecting anything in return. This attitude is rooted in the values of social solidarity that teach the importance of helping each other, even to those who do not have kinship or personal closeness. In practice, compassion can be manifested in various forms, such as providing material assistance, emotional support, or simply a soothing presence for people who are experiencing difficulties.¹⁸

The real manifestation of the attitude of compassion in the life of the Javanese people to this day can be found in the tradition of *splatan*. This tradition reflects the spirit of mutual cooperation, where individuals voluntarily help other citizens who need help for specific purposes. This assistance can be in the form of energy, time, or resources, especially in activities such as weddings, community service, or home building. The main purpose of the *splice* is to ease the burden on individuals who are carrying out an activity so as to create a more harmonious and shared life in society.

¹⁶ Sari (2023): 185.

¹⁷ Hattu (2021): 61.

¹⁸ Endraswara (2013):8

The tradition of mutual cooperation has become an integral part of people's lives in various regions of Java, reflecting the strong value of togetherness in the local culture. One of the tangible manifestations of this spirit of togetherness is the *rewang* tradition, where residents volunteer to help neighbors who are holding celebrations or big events, such as weddings, circumcisions, or religious events. In this practice, the division of duties is carried out based on gender and age roles: the mothers are responsible for the preparation and cooking of the dishes, the fathers handle the logistics and equipment, while the youth and women of the village help serve the invited guests and ensure the smooth running of the event. In addition to *rewang*, the *sinoman* tradition also has an important role in the social life of the Javanese people. *Sinoman* involves youth groups who voluntarily help with various social activities, especially in organizing traditional events. They are in charge of preparing the event venue, welcoming and serving guests, to ensure the event runs without obstacles. These traditions are not transactional, but are based on a sense of empathy and social concern, which not only eases the burden on the individual or family who is holding the event, but also strengthens social relations and maintains harmony in the community. Through the practice of *rewang* and *sinoman*, the Javanese people continue to instill the values of mutual cooperation, responsibility, and concern for others.¹⁹

The concept of compassion in Buddhism has similarities with the social values that developed in Javanese society. In Buddhism, compassion is directly related to the term *mettā*, which in Sanskrit is called *maitri* and translates as love. *Mettā* is a pure and universal feeling of affection, selfless, without attachment (*upādāna*), and encompassing all living beings.²⁰ This love is not only in the form of sympathy, but also manifested through concrete actions to alleviate the suffering of others, which is in line with the value of mutual cooperation in Javanese culture.

In Buddhism, *mettā* is practiced through three main aspects, namely thoughts, speech, and deeds. In the aspect of the mind, a person who develops *mettā* seeks to shun anger, envy, and prejudice against others, and replace them with goodwill and happiness for all beings. This is similar to the Javanese philosophy of practicing *spledges*, where a person helps others sincerely without expecting anything in return. For example, in the *rewang* activity, villagers voluntarily help neighbors who hold celebrations, show caring and empathetic attitudes towards others.

In the aspect of speech, *mettā* teaches the importance of speaking honestly, avoiding slander, not speaking rudely, and not speaking in vain. In the context of Javanese society, this can be seen in the *Sinoman* culture, where the youth who help the celebration also maintain social harmony through good and polite speech. They not only help physically, but also ensure that the atmosphere

¹⁹ Daniswari (2023): engenal Tradisi Sinoman di Jawa dan Manfaatnya. Akses 19 Februari 2025.

²⁰ Mukti, 2020: 61.

remains conducive by talking and interacting politely with guests and fellow group members.

While in the aspect of deeds, *mettā* teaches to stay away from violence, not to steal, and to always help other beings in need. This is in line with the value of mutual cooperation in Javanese society, which emphasizes togetherness in helping others, both in social, economic, and spiritual affairs.²¹ For example, in the practice of *splatan*, village communities help each other in building houses or repairing public facilities without expecting anything in return. This concept reflects Buddhist teachings that emphasize compassion as a tangible act to create harmony and common prosperity.

Thus, compassion in Buddhism through the concept of *mettā* is not just a moral teaching, but also has a strong relevance to the socio-cultural practices of Javanese society. Both in *mettā* and in traditions such as *rewang* and *sambatan*, the essence of compassion is selfless care, which aims to maintain harmonious social relations and strengthen togetherness in society.

IV. ENVIRONMENTAL AWARENESS

The environment is a gift from God Almighty for the people and nation of Indonesia, which functions as a space for life in various aspects in accordance with the concept of archipelago insight. In an effort to utilize natural resources to improve people's welfare, as mandated in the 1945 Constitution of the Republic of Indonesia, sustainable development oriented to environmental sustainability is needed. This development must be carried out in an integrated and comprehensive manner by considering the balance between the needs of the current generation and future generations. Therefore, harmonious, harmonious, and balanced environmental management needs to be implemented to support the realization of sustainable and environmentally sound development. According to Regional Regulation Number 8 of 2011 concerning Environmental Protection and Management, the environment is defined as a spatial unity that includes all elements of objects, energy, conditions, and living things, including humans and their activities, which affect nature, the sustainability of life, and the welfare of humans and other living things. This spatial unity means that all these elements are in one ecosystem that affects each other, either directly or indirectly.

In its use, the term "environment" is often used interchangeably with "environment." Although there are literal differences, these two terms are generally used in the same meaning, namely as the environment in a broad sense that includes physical, chemical, and biological aspects. This includes the environment of humans, animals, and plants. In addition, the environment has a different concept with ecology, ecosystem, and environmental carrying capacity, although the three terms remain closely related to the concept of the environment as a whole.²²

²¹ Mukti, 2020: 218.

²² Wihardjo & Rahmayanti (2021)

Consciousness refers to an individual's awareness of surrounding events as well as cognitive processes such as memory, thoughts, feelings, and physical sensations. Another definition states that consciousness is a condition in which a person is aware of his behavior, with a mind that controls the intellect and is able to make choices as he wishes. Environmental awareness is a condition in which individuals have sensitivity and concern for the environment around them. This sensitivity is not only limited to understanding environmental conditions passively, but is also reflected in real behaviors and actions in protecting and preserving nature. Environmental awareness involves individual preparedness for various aspects of the environment, both abiotic ones, such as soil, water, and air, as well as biotic ones, such as flora, fauna, and the wider ecosystem. With this awareness, a person is able to control himself so as not to damage the environment and contribute to maintaining the balance of the ecosystem.²³

In practice, environmental awareness can be categorized into five main aspects. First, awareness of the causes of pollution, namely an understanding of factors that pollute the environment and efforts to reduce it. Second, awareness of soil and air conditions, which includes an understanding of the importance of soil and air quality for life and steps to maintain it. Third, awareness of energy protection, which involves the wise and efficient use of energy resources to reduce negative impacts on the environment. Fourth, awareness of wildlife protection, which highlights the importance of maintaining the survival of wildlife and biodiversity so that it does not go extinct. Fifth, awareness of animal extinction, which emphasizes the need for conservation efforts to prevent the loss of certain species due to irresponsible human activities (Here & Priyanto, 2014)

Environmental awareness in Buddhist teachings is rooted in the understanding that humans and nature are part of an interdependent whole. One of the main teachings related to environmental awareness is *Pañcasīla*, specifically the first precept, which is not to kill or damage the life of other beings. This principle teaches that all living things have the right to exist, so humans must maintain the balance of nature and not take actions that damage the environment such as poaching, deforestation, or water and air pollution. In addition, the teachings of *Kamma* (the law of cause and effect) emphasize that every human action will have consequences, including in relation to nature.²⁴ If humans overexploit natural resources and pollute the environment, the negative impact will return to humans themselves, both in the form of natural disasters, climate change, and reduced quality of life.

In addition, the teachings of *Metta Bhavana* (the development of love)²⁵ emphasize that love and compassion should not only be applied to fellow humans, but also to animals, plants, and entire ecosystems. In the practice

²³ Here & Priyanto (2014): 13.

²⁴ Mukti (2020): 224.

²⁵ Mukti (2020): 260.

of *Metta* meditation, a practitioner prays for happiness for all beings without exception, including the surrounding environment. This is in line with the *Ahimsa* (non-violent) principle which emphasizes the importance of living in harmony with nature, avoiding overexploitation, and maintaining the sustainability of natural resources. Buddhism also teaches the concept of *Paticca Samuppada* (the law of interdependent cause and effect) which states that everything in this world is interconnected. Environmental damage caused by human actions will have bad consequences for all life on earth. Therefore, life practices that are in harmony with Buddhist teachings, such as a simple lifestyle, avoiding excessive consumption, and respecting nature as a part of life, are the main keys in maintaining environmental balance and preventing ecosystem damage. Environmental awareness in Buddhism is not only an ethical concept, but also part of the path to happiness and inner peace.

V. MINDFULNESS RELATIONALITY TOWARDS COMPASSION AND ENVIRONMENTAL AWARENESS

Ellen J. Langer²⁶ in her book identifies three main approaches to mindful learning: the continuous creation of new categories, openness to new knowledge, and awareness that there are various points of view in understanding things. The creation of new categories involves observing the differences and nuances in the information received, allowing for a deeper and more flexible understanding. Meanwhile, openness to new knowledge encourages individuals to accept different information and perspectives, thus enriching their insights and understanding. Awareness of various points of view helps a person in seeing situations from various perspectives, improving adaptability and problem-solving. These approaches emphasize that individuals who develop mindfulness tend to have more mature personalities, broad knowledge, and flexible and innovative thinking abilities in facing various life challenges. In addition, they also have more comprehensive insights, both in national and global contexts, which allows them to adapt to the changing times.²⁷

One of the practices that supports the development of mindfulness is mindfulness practice, which is a method that focuses on paying attention to the body, feelings, thoughts, and various mental objects that appear in consciousness. With consistent and mindful practice, individuals can reduce their tendency to mental disorders, such as negative emotions and adverse thought patterns. There are five main aspects of *mindfulness* that are the goal of achievement, namely: (a) *observing*, which is the ability to observe and be aware of the existence of thoughts, feelings, perceptions, and sensations that arise; (b) *describing*, which is the skill of expressing the experience into words; (c) *acting with awareness*, which means acting with full awareness of the situation being faced; (d) *nonreactivity*, i.e. the ability not to react impulsively to personal experiences; and (e) *nonjudging*, i.e. the attitude of accepting

²⁶ Carson (2006): 33.

²⁷ Davenport & Pagnini (2016): 3.

experiences without giving subjective judgments.²⁸

These five components of mindfulness will be developed in the research subject through psychoeducational approaches and mindfulness exercises, both in the form of formal and informal practices. To support the effectiveness of mindfulness implementation in the context of education, optimal classroom management is needed. This includes a good classroom setting, both in terms of the availability of facilities and infrastructure, the creation of a comfortable learning atmosphere, and last but not least, attention to psychological aspects for both educators and students. By applying a mindfulness approach, teachers can be more aware and responsive in managing the classroom, while students can learn with more focus and without excessive pressure. This is expected to create a more conducive learning environment, improve psychological well-being, and help students develop better self-awareness and emotional regulation.

According to²⁹ Sutanto and Immanuela (2022), mindfulness has various benefits that can contribute to improving a person's quality of life. Some of the benefits that can be obtained include reduced anxiety levels, reduced pain, and the ability to manage stress and avoid negative thoughts. In addition, *mindfulness* also plays a role in helping individuals change bad habits and improve their ability to regulate emotions. Thus, the application of mindfulness can have a positive impact on a person's psychological and emotional well-being.³⁰

Mindfulness exercises in the world of education have various potential benefits, especially in increasing student engagement in tasks without distracting them from the challenges they face. In addition, mindfulness practices have been shown to develop cognitive skills, which play an important role in achieving learning outcomes. This increased cognitive ability can also complement other educational intervention methods. Further, various practical recommendations and best strategies in implementing *mindfulness* in the academic environment show that mindfulness-based interventions have promising prospects for improving the quality of learning in the future.³¹

The practice of mindfulness has been shown to assist individuals in reducing stress, anxiety, and depression and improving overall well-being. On the other hand, compassion involves feelings of empathy and a desire to alleviate the suffering of others. Compassion is not only directed to others but also to oneself, which is known as self-compassion. Self-compassion plays a role in improving self-esteem, life satisfaction, and interpersonal relationships, so that a person is better able to deal with the pressures of life in a healthier way. The relationship between mindfulness and compassion lies in mindfulness's ability to increase self-awareness, which in turn allows individuals to better

²⁸ Sari (2023): 185.

²⁹ Sutanto and Immanuela (2022) Getting to know mindfulness for high school students. <https://www.researchgate.net/publication/360996568>

³¹ Sari (2023): 185.

understand and respond to suffering lovingly. The practice of mindfulness helps individuals recognize moments in which they or others are struggling, thus facilitating a more empathetic and compassionate response.

In Buddhism, the concepts of *mindfulness* and compassion (*karunā*) have a very important role in spiritual practice. *Mindfulness* allows a person to be fully present in every moment without getting caught up in judgments or over-emotional reactions. This is in line with the Buddhist teachings about mind control and awareness of suffering (*dukkha*) experienced by oneself and other beings.

One form of compassion emphasized in Buddhism is *mettā*, which is often translated as universal love. *Mettā* is practiced through three main aspects, namely, thoughts, speech, and deeds. In the aspect of the mind, a person who develops *mettā* seeks to keep his mind positive and free from hatred, envy, or prejudice against others. For example, when a person feels jealous of his partner's success, he can practice self-awareness by being aware of his emotions and changing his thoughts to be more positive. He can replace envy with a sincere feeling of support and a wish for the success of his colleagues while also trying to improve his own abilities with a more thoughtful attitude. In the aspect of speech, *mettā* is reflected in words that are gentle, understanding, and encouraging to others. A person who practices *mettā* will avoid abusive, hurtful, or hateful speech. For example, a teacher who finds that his student is having difficulty understanding a lesson will not scold him but instead give encouragement with constructive words. Patiently, the teacher can say, "It's okay, let's try again together. I'm sure that with a little practice, you'll be able to understand this material." This kind of speech not only motivates students but also reflects love and patience in guiding others. In the aspect of deeds, *mettā* is manifested through concrete actions that aim to help alleviate the suffering of other beings. For example, when someone sees an elderly person having trouble carrying his groceries, he or she can offer sincere help without expecting anything in return. This kind of action is a tangible form of *mettā*, in which one acts with care and empathy for others.

In addition to being applied in human relationships, *mindfulness* and compassion also have an important role in increasing environmental awareness. Mindfulness, which emphasizes full awareness of every thought, speech, and action, can help a person better understand the impact of their behavior on nature. By applying mindfulness, a person will be more careful in using natural resources and more sensitive to the balance of the ecosystem. For example, when a person wants to buy a product, he or she not only considers the benefits for himself but also the impact on the environment, such as whether the product contributes to the exploitation of nature, produces excessive waste, or actually supports environmental sustainability. With full awareness, individuals can make more informed decisions, such as reducing the use of single-use plastics, choosing recycled products, or supporting businesses that apply environmentally friendly principles.

In addition, compassion for the environment can be manifested in concrete actions that reflect concern for the welfare of nature and the living things in it.

If in a social context *mettā* is realized by helping fellow humans, in the context of the environment, *mettā* can be applied by preserving nature, such as planting trees, cleaning up garbage in public spaces, or educating the community about the importance of preserving ecosystems. A person who has compassion for the environment not only cares for himself but also seeks to protect the earth so that it remains sustainable for future generations. This attitude also reflects the awareness that humans and nature are interdependent on each other.

One clear example of the application of *mindfulness* and compassion in protecting the environment can be seen from the *Pandawara Group* movement, a community that is active in cleaning rivers and beaches of garbage. *Pandawara Group*, which started as a group of young people who cared about the environment, has inspired many people to be more aware of the environmental conditions around them. With full awareness and concern, they went directly to various locations filled with garbage to clean it up, not only for the sake of physical hygiene but also to restore the balance of the disturbed ecosystem. Their actions reflect the values of *mindfulness* because they understand that every action, no matter how small, can have a big impact on the environment. In addition, this movement is also a form of compassion for nature, where they not only think for their own benefit but also for the good of the environment and future generations.

Movements such as *the Pandawara Group* teach that caring for the environment is not only an individual responsibility but also a collective movement that can bring about real change. By practicing *mindfulness* and compassion, everyone can contribute to preserving the environment, both through simple actions such as sorting waste and reducing waste, as well as by joining in larger social actions. This awareness is the key to creating a more harmonious world, where humans not only coexist with others but also with nature in a sustainable manner.

In addition to being in line with Buddhist teachings, environmental awareness based on *mindfulness* and compassion is also closely related to local wisdom values in Indonesia, one of which is the tradition of *splac* in Java. *Sambatan* is a form of mutual cooperation carried out by the community voluntarily to help others in various aspects of life, including protecting the environment. This tradition is rooted in the spirit of togetherness and helping each other without expecting anything in return, which actually also reflects the principle of *Dana* (generosity) in Buddhism, which is to provide sincere help for the common good. In the context of environmental conservation, the spirit of *Sambatan* can be seen in the community's efforts to clean rivers, improve irrigation systems, and maintain village forests so that they are sustainable. This shows that collective awareness of the environment is not a new concept, but has become part of the culture of traditional societies that unfortunately began to be displaced by modernization and increasing individualism.

The concept of *mindfulness* in Buddhism emphasizes the importance of being fully aware of the impact of every action, including maintaining the balance of nature. In the tradition of *splatan*, this collective awareness is

manifested through real actions carried out together for the common good. When people consciously work together to keep rivers clean or prevent environmental pollution, they not only improve natural conditions but also strengthen social relationships based on compassion and care. This spirit is also reflected in the *Pandawara Group movement*, a group of young people who volunteer to clean the environment of garbage in rivers, beaches, and areas affected by heavy pollution. This movement revitalizes the values of mutual cooperation that are on the verge of extinction, as well as building public awareness that protecting the environment is not only an individual task but a collective responsibility that requires the cooperation of all parties.

What the *Pandawara Group* does is very much in line with the principles of Buddhism, especially the concept of *Paticca Samuppada*, which emphasizes that everything in this world is interdependent. Environmental damage caused by river pollution, excessive plastic use, and deforestation not only impacts humans but also other living things. *Pandawara Group* shows awareness that small actions such as cleaning up garbage can have a big impact on the sustainability of the ecosystem. In addition, their actions also reflect the principle of *Karuna* (compassion), where they care not only for the environment but also for the communities affected by the pollution. They do not expect anything in return for their actions but act out of concern and social responsibility, as also reflected in the tradition of *splinter*.

In addition to environmental awareness, Buddhism also emphasizes the concept of simplicity and non-attachment to material things. This concept is in line with the life philosophy of the Javanese people, which is known as the principle of *nrimo ing pandum*, which is to accept sincerely and not excessively in the pursuit of worldly treasures. This philosophy encourages a person to live in harmony with nature and only take what is needed without damaging the balance of the ecosystem. In daily life, people who still carry out the tradition of *splatan* tend to be wiser in managing natural resources because they understand that land, water, and forests are not just private property but are trusts that must be protected for future generations. Thus, both in Buddhism and in local wisdom, there is an awareness that humans have a moral responsibility to the environment that must be maintained in order to be sustainable.

By combining Buddhist teachings on mindfulness and compassion with local traditions, communities can create a more effective and community-based model of environmental sustainability. Movements such as the *Pandawara Group* as a *nukti* show how these principles are applied in collective actions that bring benefits to many people. If environmental awareness continues to be instilled through the practice of mutual cooperation and social care, then the hope of creating a cleaner, healthier, and more sustainable environment will be more real. Therefore, the revitalization of traditional values such as *shimatan*, *sinoman*, and *rewang*, which is reinforced with Buddhist teachings on mindfulness and compassion, can be an important strategy in facing environmental challenges in the modern era. Change cannot be done by just one individual but requires collective awareness, as exemplified by traditional

societies in splatan, sinoman, rewang, and revitalized by the Pandawara Group movement. If this principle is applied more widely, future generations can enjoy a healthier and more sustainable environment, as taught in Buddhism and the local wisdom of the archipelago.

VI. CONCLUSION

Mindfulness-based education plays an important role in shaping individuals who are more aware, caring, and responsible for others and the environment. Through mindfulness practices, students can increase empathy, reduce deviant behaviors such as bullying and academic dishonesty, and improve psychological well-being and concentration in learning. In Buddhism, mindfulness is closely related to *mettā* (love) and *karuṇā* (compassion), which foster social awareness and concern for the environment. This mindfulness helps individuals understand the impact of each of their actions, whether on themselves, others, or the ecosystem as a whole. Thus, the integration of mindfulness in education is not only a solution to moral degradation and environmental crises but also forms a generation that is wiser, compassionate, and socially and ecologically responsible. Therefore, the application of mindfulness in the education system must be carried out systematically and continuously through curriculum, learning methods, and school culture that instills the values of empathy, social responsibility, and environmental sustainability, so that education can produce intellectually superior individuals, have strong character, and have a high awareness of social and ecosystem welfare.

ABOUT THE EDITORS

Most Ven. Dr. Thich Duc Thien obtained his Ph.D. in Buddhist Studies from Delhi University in 2005, currently is Vice President-Secretary General of Executive Council of National Vietnam Buddhist Sangha (VBS); Vice Chairman of Vietnam – India Friendship Association; Head of the Department of International Buddhist Affairs of VBS; Vice Rector of Vietnam Buddhist University in Hanoi; and Senior Lecturer of Vietnam National University, Hanoi (Tran Nhan Tong Academic Institute). He served as Secretary General of the 2014, 2019 and 2025 United Nations Day of Vesak in Vietnam. He has published, edited, and translated many books in Buddhist studies and history. He has received many prestigious recognitions from the Government of Vietnam (the Third-Class Labor Order), from the Royalty of Cambodia (the General Order), and from the Government of India (the Padma Shri Order).

Most Ven. Dr. Thich Nhat Tu obtained his D.Phil. in Philosophy from Allahabad University in 2002. He currently serves as the ongoing Vietnamese Tripitaka Translation Project and chief editor of the Buddhism Today Series (with over 250 published titles). A prolific author, he has written over 80 Vietnamese books on applied Buddhism. He has traveled extensively across Vietnam, Canada, the United States, Australia, and Europe to deliver public Dharma talks, and has produced more than 5,000 VCDs on various Dharma topics. Most Venerable Thich Nhat Tu is currently the Vice Rector of the Vietnam Buddhist University and Vice Chairman of the National Department of International Buddhist Affairs. Several universities have conferred upon him the honorary degree Doctor Honoris Causa in recognition of his outstanding contributions to Buddhist education, academic research, and international Buddhist leadership. He has also received numerous awards, titles, and honors from the governments of Vietnam, Myanmar, Thailand, and Cambodia.
